Library Orders

We have conducted a special department for many years that has been exceptionally successful in handling book orders from

PUBLIC LIBRARIES SCHOOLS, COLLEGES *and* UNIVERSITIES

Our Monthly Bulletin of New Books, with annotations and brief descriptions of each title recorded, is one of the most helpful aids in book selection.

Library Department

The Nation.

NEW YORK, THURSDAY, JANUARY 6, 1910.

The Week.

Thousands of friends of William H. Taft the country over have included in their New Year's wishes the hope that 1910 will give more power to his elbow. We are not among those ready now to pass finally upon the success or failure of his Administration; time will tell that story. We feel strongly, too, that sufficient credit has not been given to the President for many genuine achievements—the high character of his appointments to office, as a whole; the purifying and elevating of the census; the return to government by law; his insistence upon economy in national expenditure. These matters will more and more redound to his credit as time passes. Yet chroniclers of public opinion must record the widespread disappointment in Mr. Taft's Administration to date; the belief in many circles that it lacks vigor and administrative force. People would like to see more of the qualities not of Roosevelt so much as Cleveland; a little less good-nature and kindliness, and a great deal more strength in dealing with situations like the Pinchot-Ballinger imbroglio. But, after all, the most disheartening thing is Mr. Knox's Nicaraguan blunder, which has undone in a day the labor of years in South America, and upset all the great work of Mr. Root. Herein is revealed a genuine political shortsightedness, a lack of statesmanlike quality, to make the judicious grieve.

There is an inevitably comic aspect of the visit of the railway presidents at the White House. They were invited to give their aid in framing amendments to the interstate commerce law, but the only assistance they offered was stout opposition to all the amendments proposed. On the other hand, it is reported that President Taft "cheerfully" accepted a few minor verbal alterations urged by the railway men, but was sadly disappointed at their general attitude of hostility to the large changes he has in mind. But was anything else soberly to be expected from the conference? Was it a real conference at all? To some of the rueful presidents it might appear as if Mr. Taft had merely summoned them to ask them graciously in what sauce they preferred to be cooked. That they should then have protested that they did not wish to be cooked at all, ought not to have struck him with surprise. There was, in truth, an air of unreality about the whole proceeding. Men do not actually put their heads together under such circumstances. Besides, all concerned know that the real business is to be transacted elsewhere. Congress will be the true battlefield. Monday's meeting was only a preliminary flourish.

The point made by Dr. Immanuel Pfeiffer, president of the Postal Reform League, in an open letter to President Taft, regarding the price paid by the Post Office Department for the carrying of mail, is one which has been urged again and again in the past twenty years, but which seems to have great difficulty in gaining official attention. The big deficit on the carrying of second-class matter may be partly accounted for by a too liberal policy in the way of low postage rates, but it seems to be much more largely caused by high railway charges. This is a matter that should be promptly and energetically looked into and acted upon. Dr. Pfeiffer points out that the rate paid by the post office to the railways is the same as it was in 1878, while freight charges in general have been cut in two since that time.

The wise decision of the new Director of the Census, Mr. E. Dana Durand, to employ negro enumerators to deal with the negroes in the South will give the greatest satisfaction to the colored people of that section. It is not merely that they wish the offices as a means of getting ahead, but that they feel that there will be more accurate reporting of their progress if the work is in the hands of their own people. The coming census means much to them. In the face of widespread criticism of their usefulness as citizens and laborers, they naturally wish all of their advance as a race recorded in time for the semi-centennial of emancipation. That Mr. Durand's decision will be popular in the South is not probable; since he is, however, to employ white enumerators for the whites, the edge will be taken off any open fault-finding there may be.

The announcement Monday evening of the proposed amalgamation, under the auspices of Messrs. J. P. Morgan & Co., of three trust companies, with something like $150,000,000 aggregate resources, illustrates from one point of view a tendency quite as characteristic of recent English and German banking as of our own. Both at home and abroad the movement has had its origin, first, in belief that greater strength and efficiency would be obtained through union of the sort than through separate existence of the institutions; secondly, in access to such facilities of capital and credit as may make acquisition of control of these separate institutions feasible; thirdly, in the wish of powerful groups of financiers to increase their power. The first-named motive is the most valid economic argument for the tendency, here and elsewhere. The second shows why the achievement has been possible to-day as it has not been in former periods when it might have been equally desired by banking interests themselves. The third is the point on which discussion of the matter by the general public will probably converge.

It is not possible to overlook the view of the movement entertained by the average man as he reads of the successive amalgamations, and it would not be reasonable to overlook that view, if it were possible; because public opinion is bound to be an essential factor in the matter. In so far as our own banking mergers of the sort are steps towards consolidating, in the hands of a few already very strong capitalists, a wholly unprecedented power over capital and credit, they will inevitably be regarded with more or less reserve. In any case, the question whether acquisition of such power is an economic evil, or not, depends for its answer on the use which would probably be made of it. It is easy to see how the concentrating and conservative use of resources so enormous might go far to correct or restrain some admitted evils of our banking system generally. The theory of a

Central Bank is itself based largely on the assumption that an institution of overshadowing power, conducted with the utmost conservatism, may be of the highest value, not only in providing a proper currency, but in averting financial crises and laying a firm restraining hand on speculative excesses. The phase of the present movement, therefore, which will appeal most strongly to the thoughtful mind, is the use to which the increased influence is likely to be applied. It is not always fully recognized by our great financiers how grave are the personal responsibilities which come with this acquisition of indirect control over such masses of fiduciary funds.

It is not Charles W. Morse's true friends that are already speaking of a speedy pardon for the convicted banker. He has enjoyed every advantage that ingenious legal counsel and our complex judicial procedure afford the man of wealth. After having the justice of his sentence practically affirmed by the highest tribunal in the land, it does not help a man's case to assert that, courts or no courts, he is bound not to stay in prison. It is a particularly unfortunate attitude to take at the present moment when public opinion is extraordinarily sensitive to the need of punishing crime in high places. Morse's lawyers did not exaggerate the wrathful condition of the public mind when they argued that their client should be tried elsewhere than in the community that knew him best. But whereas public anger had nothing to do with the banker's conviction in court, it must count heavily when the question of a pardon comes up. So long as there are Sugar Trust cases before the courts, it will be difficult for men like Morse to profit by executive clemency.

The Harvard Faculty of Arts and Sciences has adopted rules for electives in pursuance of the resolutions recently passed by the governing boards modifying the elective system. As might have been expected, a great breadth of choice still remains. The essence of the change consists in the requirement, on the one hand, of concentration of a considerable part of the student's work in one department of study, and, on the other hand, of so wide a distribution of the remainder of his work as will result in a certain rounding of his education. At least six of his courses—approximately one-third of the whole—must be "in some one department, or in one of the recognized fields for distinction"; and of these six at least four must be of an advanced character; that is, not beginners' courses. On the other hand, at least six of the remaining courses must lie quite outside the general group of studies in which the main work of the student is carried on; and, furthermore, must be widely distributed in those outside groups. For the purpose of securing this object in a systematic way, all the subjects of study in the college are divided into four great groups; and of the six outside courses at least one must be chosen in each of the three groups other than that in which the student's chief work lies.

The four great groups are, first, Language, Literature, Fine Arts, Music; second, Natural Sciences; third, History, Political and Social Sciences; fourth, Philosophy and Mathematics. These are subdivided, and concentration in the chief work of the student must take place mainly within one subdivision. There can be no question that the new regulations will have the effect of preventing both an aimless scattering of attention with little disciplinary training and an over-specialized education. That these results will be attained without any sacrifice of a salutary freedom of choice is equally evident; indeed, it is likely that further restriction of choice will prove desirable. The rules that went into force a year ago in relation to the attainment of a "degree with distinction" pointed in the direction of placing more emphasis on the disciplinary value of college work than had been the fashion in recent years, the changes now made in regard to the baccalaureate degree in general will prove a powerful agency in restoring the idea of such value to its proper place.

As though the newspapers had not enough to answer for in connection with the affairs of this planet on which we live, the superintendent of the solar department of the Royal Observatory at Greenwich, Mr. E. W. Maunder, seeks to put on their broad shoulders the guilt of spreading false intelligence about our neighbor planet Mars. Speaking at the recent meeting of the British Astronomical Association on the canal theory, he declared that "if the newspapers had not adopted the notion for the sake of sensationalism, nothing would ever have been heard of it." This is pretty hard on Schiaparelli, the father of the canal theory, and on Prof. Percival Lowell, the American champion of it. Moreover, it might be pointed out that if the newspapers have not suppressed the arguments of these and other astronomers as unfit for publication, they have been sinning in good company. "Meyers Konversations-Lexikon," for example, says, in its edition of 1906, that although the doubling of the lines of the canals is very difficult to see, and was therefore doubted at first, "the observations of the latest oppositions have completely established it." The only trouble about the newspapers' part in the affair is that they certainly do reach a large number of readers

---

Americans will not, we trust, overlook the riots in Havana over the application to Havana negroes of the color line as drawn by American hotel keepers, or fail to notice that the dispatches speak of the intense bitterness of the anti-American feeling of the Cubans as a whole. After all we have done for them we have failed to win their affection or regard, for the simple reason that we can no more sympathize with their point of view than we can with that of the Filipinos. No color line was ever drawn or thought of in Cuba until the Americans came. Now that there is already burning resentment caused by it, Americans who desire the annexation of the island ought seriously to consider what a happy family, what contented new citizens, we should be acquiring. Curiously enough, those who desire to see American sovereignty established in Cuba are the very ones who have the poorest opinion of the Cubans. The average American in Cuba does not hesitate to let all the Cubans know just how contemptibly inferior he thinks them; yet he is quite willing to consider their being incorporated into this Union as fellow-citizens in a Territory which party exigency might at any moment change into a State.

Writs for the general election in England will issue from the Crown Office next Monday, January 10. The first pollings, under the law, cannot take place

before the following Friday, the 14th. It is expected that several boroughs will vote on that day. The Conservatives will be anxious to have as many London constituencies as possible elect their members early, for the sake of the "moral effect" which their expected gains may have upon the later pollings elsewhere. But a large number of the boroughs will pretty surely have their election on Saturday, the 15th. Saturday is regarded as the best day, for the reason that workingmen can take advantage of the half-holiday. With returns in from Lancashire and the most of London by Sunday, the 16th, we ought to be able to form a fairly accurate idea of the general result.

The position in which clear-headed Conservative statesmen find themselves in the present struggle in England is very sharply indicated in a letter from Lord St. Aldwyn, better known as Sir Michael Hicks-Beach, Chancellor of the Exchequer at the time of the Boer War. He had been silent in the House of Lords, and in reply to a request for an explanation of his position, he states his views with equal frankness and force. He feels that the Lords were not justified in rejecting the Budget, it having always been held by "the wisest Conservative leaders of the past" that the objectionableness to the Peers of any taxes voted by the Commons was not a sufficient ground for their rejection; the only adequate justification would have been the incorporation of legislation foreign to the needs of the budget, and this Lord St. Aldwyn does not see in the present proposals. But while he had felt that rejection of the budget would be a mistake, he is emphatic in support of the Conservative position in the issue concerning the status of the House of Lords that is actually before the people. That issue is, of course, as it was bound to be, far broader than the question of the right of the Lords to reject a supply bill; a Liberal victory would threaten the impairment of their power in an infinitely more vital way. To Lord St. Aldwyn's mind, the reduction of the House of Lords to the position which he understands to be assigned to it by the policy of the Liberal party would "mean despotism under the mask of popular government"; and it is easy, therefore, to appreciate the feelings with which he, in common with others of the wisest Conservatives, witnessed the rash determination of the great majority of the Lords that resulted in putting the British Constitution into the melting-pot.

So many doleful things are said about the condition of the people of England that there is no harm in drawing attention to facts which every now and then come to the front and which are hard to reconcile with the view of a progressive increase in wretchedness. Among these are the statistics of mortality. When, for instance, we read that the deaths for the third quarter of the past year in England and Wales gave the astonishingly low annual rate of 11.6 per 1,000, we can hardly fail to conclude that people who are in a state of destitution cannot form a preponderant part of the population. When it is further stated that this rate is the lowest on record, and 3.4 below the average for the same quarter in the past ten years, we are confirmed in the disposition to believe that things are not growing worse at quite the rate that is sometimes represented. And if we turn to the statistics of mortality for whole years, we find that, while the total number of deaths in England and Wales in 1890 was 562,000, the number in 1907 was only 524,000—an absolute *decrease* of 38,000, or 7 per cent., in the deaths, while the population had *increased* from 28,763,000 to 35,348,000, or 23 per cent. And since it appears that lowering of the death-rate has been especially marked in the case of infants, the pessimist has not the refuge of ascribing the apparent improvement to the decline in the number of children born. It looks as though a great deal of steady progress was quietly going on, in some directions at least, alongside of the unsatisfactory developments we hear so much of.

The rare sort of patriotism which consists in subordinating special interests to the public interest was invoked by Joseph Reinach in the French Chamber of Deputies in his denunciation of alcoholism and his statement that the regulation of the liquor-trade is a national necessity. In France, the average consumption of alcohol is about three and a half litres; at Paris, the consumption is twice as great; at Rouen it is ten litres, and at certain northern maritime towns from twelve to fifteen litres. What are the consequences?

The increase of criminality and of insanity; of tuberculosis, of rickets, and of suicides; of the number of conscripts declared to be incapable of service. *C'est la race qui est atteinte.* And the national defence is compromised.

The propaganda against alcoholism is so sane in France (as in Germany) that it merits success. "We do not condemn the use of good alcoholic beverages in moderation," says M. Reinach. "We condemn the abuse of adulterated alcohols, scientifically poisoned. Finally, we wish to favor, by the reduction of the price of licenses, those drinking-places which sell only hygienic beverages." The reformers who seek to lift a great yoke from French labor are men of practical sense.

Constantinople reports another ministerial crisis. The Cabinet organized last May by Hilmi Pasha has resigned, and as usual the change is attributed to the "intrigues" of the Committee of Union and Progress. On the face of events that is not the case. The specific issue on which the Ministry has come to grief is the concession creating a monopoly of navigation on the Tigris and Euphrates rivers, which the Cabinet wished to grant to an English company. The leaders of the Committee of Union and Progress in the Chamber opposed the concession, not so much on the ground of the exclusive rights it created as for the reason that the Cabinet refused to lay the convention before the Chamber for ratification. A resolution to that effect was passed some weeks ago in spite of the fervent protests of the Minister of Finance, who argued that the economic development of the Empire would be seriously hampered if every commercial concession had to be submitted to tedious parliamentary discussion. The Chamber has remained firm, and the resignation of the Ministry followed. Far, therefore, from being another instance of the secret manipulation of cabinets by the Committee of Union and Progress, the event rather indicates a healthy state of independence on the part of the late ministers. It is a better augury for the parliamentary system in Turkey that the Government should be beaten in open debate than it would be to have its policies forced upon it by unofficial pressure from the Committee of Union and Progress or any other committee.

MONOPOLIES AND THE LAW.

Signs multiply that we are on the eve of the most serious attempt that has yet been made to grapple with the Trust problem. Attorney-General Wickersham's brief, presented last week to the Supreme Court in the Tobacco Trust case, is the latest manifestation of the spirit that has been asserting itself in so many directions. It is still far too early to predict with any confidence what will be the full result of all this activity, administrative and judicial; but there is one tendency which is becoming more and more manifest, and which historical experience gives reason to believe will have abiding and far-reaching results. This is the tendency toward the creation of a body of "judge-made law," which, as time goes on, will become more and more definite and authoritative, and which will accomplish, so far as any kind of law can accomplish, the desired object of keeping down monopolies in fields where competition is possible.

The great problem of the courts is to supply, by the establishment of precedents and by the comment accompanying their decisions, what the written law lacks in definiteness. The language of the Sherman Anti-Trust act is extremely broad. It has been ridiculed on the ground that if its literal terms were interpreted with full rigor, it would make impossible the most innocent, and the most necessary or useful, of business arrangements; and in some cases the decisions of the courts have been pointed to by critics as asserting that such undiscriminating rigor must be applied. But this view has been falling more and more into the background precisely when the courts have been manifesting the greatest energy in the enforcement of the law. This may seem strange, but in reality it is perfectly natural. So long as the courts were dealing only with the outlying questions, it was possible to suppose anything as to what they might do when they got to the heart of the matter; but when they grapple with the most vital issues, it becomes plain that they are going to do just what they, and especially the Supreme Court, have always done—that they are going to deal with the great question before them as a problem for statesmanlike insight no less than for technical skill.

Nor is it difficult to point out the predominant character of the definition that is being given to the law by the courts. It may, perhaps, be best indicated by a contrast. In determining whether a given contract or combination is unlawful, they do not adopt as a criterion the actual economic effects that it has brought about; they look rather to the nature of the means employed. The Tobacco-Trust brief of the Attorney General is addressed emphatically to this aspect of the question. It declares that "the defendants have persistently exercised duress, have practised wicked and unfair methods, and used their great power in oppressive ways"; it asserts that as a consequence of those methods "competitors have gradually disappeared, and the combination, now strongly entrenched, unduly restricts the business of those in the trade and prevents others from entering." Along these lines, and not in pursuance of any inquiry as to the "goodness" or "badness" of a Trust in its real or supposed effects upon prices or upon the country's prosperity, the courts have been determining whether the law against monopolization and against restraint of trade has or has not been violated. And along these lines must be sought any development, either of legislation or of judicial interpretation, that shall be consonant with the essential spirit of our laws. Not the apparent promotion of prosperity in each particular instance, but the prevention of kinds of conduct which, on broad grounds, have been decided to be inimical to the general welfare, must be the aim of the law.

From the economic standpoint one argument is made more conspicuously than any other against a general anti-monopoly law. It was put forward with force and clearness at the meeting of the American Economic Association by Professor Jenks in replying to Mr. Morawetz, who, both as a lawyer and as a practical railway man, had expressed unqualified approval of the Sherman act. Substantially the argument is that in some industries the economic forces that tend to the creation of monopoly are inherently so dominant that monopoly should in these be recognized as inevitable, and, in general, beneficent; and that the law should, in these cases, let monopoly take its course, reserving only the power to supervise and to tax. This, of course, is something quite different from the crude distinction between "good and bad Trusts"; but the argument is nevertheless seriously defective. It would have much weight against a prohibition based upon the mere magnitude of a combination; but against a prohibition relating to methods rather than results, it loses its virtue. If economic conditions are such as of themselves to make monopoly inevitable, what harm is there in forbidding recourse to devices expressly directed toward the suppression of competition? Let the proof of the pudding be in the eating. Let monopolies arise where, in the ordinary course of things, and without resort to unfair means, competition dies away; but do not let competition be killed with a club. The law does not *ordain* competition; it merely proposes to give it a chance to live. In any industry which is truly and in good faith a field marked out by nature for monopoly, monopoly you will have, even if the right of competition be guarded never so jealously; what we do not want is to see monopolies built up under protection of the law, upon some colorable plea of economic predestination.

THE BOSTON ELECTION.

The whole country has a deep interest in the outcome of the Boston Mayoralty contest, because of its experiment in city government which, if successful, will doubtless exert a wide influence upon municipal reform. This is an era of civic groping for light. In the West government by commission is the rage; here in New York a conservative new charter is under discussion and the experiment of direct primaries about to be tried. In Boston, according to President Lowell, the present system is a result of dissatisfaction with direct primaries. But already there are murmurings that all is not well with the new method of nomination, because there are not two, but four, candidates in the field. The recently adopted charter prescribes that anybody may become a candidate for Mayor who can file a petition bearing 5,000 signatures. It effectually does away with conventions and the ordinary nominating machinery, and is intended to obliterate all partisan lines.

This it may accomplish at some future time; to-day there are practically two Republicans running against one Democrat, for though James J. Storrow

is an Independent Democrat, he has of late years been so frequently on the other side that it is hard to make people feel that he is other than a Republican. A man of high character and standing, of considerable wealth, a prominent member of the strongest banking house in Boston, a graduate of Harvard who was seriously considered for the presidency of that institution, Mr. Storrow would be certain of election were there but two candidates in the field. Although open to attack by demagogues as representing the capitalistic class, he has given evidence of a patriotic and unselfish spirit, notably in his years of service as chairman of the Boston School Board. Against him is campaigning primarily an arrant Democratic mountebank, John F. Fitzgerald, ex-Mayor, whose government of the city has been widely stigmatized as the worst in its history. It was, in fact, so bad as to lead directly to the recent change in election methods. The Finance Commission appointed by Fitzgerald himself, found genuine Tammany Hall conditions in the favoring of friends, the building up of a personal machine, and an endless amount of "honest" as well as dishonest graft in the Fitzgerald administration. These facts about it are daily appearing in the Boston newspapers, virtually all of which, the *Transcript*, *Herald*, *Post*, *Advertiser*, *Record*, and *Traveller*, are working for Storrow, with the *Globe* not taking sides.

Fitzgerald makes no serious attempt to deny the detailed graft charges: his only boast is that the Finance Commission "couldn't find the money on him." One of the shocking features of his candidacy, to Boston especially, is that no doubt exists in the minds of many of its best citizens that he is supported by certain large financiers, who apprehend that under Mr. Storrow they will obtain no especial favors at the City Hall. They know this because of Mr. Storrow's character. They know by experience what kind of mayor Fitzgerald makes, and what kind of grafting goes on among his subordinates when he is in office, for five of those subordinates are now in prison at hard labor on account of their breach of trust. One source of his wealth was the *Republic*, a weekly newspaper which was ostensibly edited to meet the scanty intellectual needs of the City Hall bummers and heelers, and the other birds of prey who flock with a politician like Mr. Fitzgerald. But the *Republic* was not issued to be read; it was issued as an instrument of political blackmail. Its methods were thus described by Mr. Moorfield Storey—a man who does not make random statements—in a public address the other evening:

> There was a certain man who needed a permit from the city, and, after waiting some time for it, he called up the Mayor on the telephone and inquired about it. Mr. Fitzgerald, who was then Mayor, said that he had the permit right under his thumb, and remarked that the other party was not an advertiser in his paper, the *Republic*. When the other party signified his willingness to advertise, the Mayor said he would send a canvasser down right away. The permit and the advertisement were both granted.

Were it not for the candidacy of Mayor Hibbard, a weak and unsatisfactory executive, there would be no possibility of Fitzgerald's success. But Hibbard, vain as he is, and smarting under criticisms of his administration, has declined to take himself out of the race, despite great pressure and considerable outspokenness on the part of some of the Republican leaders. He deliberately declares that the only issue is between himself and Storrow; to which Senator Lodge has frankly responded that he is for Storrow's election. Gov. Draper has let it be known that his sympathies are also with Storrow. But the more Hibbard's party has disowned him, the closer he has stuck, and as the time for a candidate's withdrawal has passed, he must now remain in the race and may, perhaps, reimpose upon Boston, as the *Transcript* puts it, "one of the very worst régimes of graft known in American municipal history." It is not surprising that Hibbard's refusal to withdraw has filled Boston with rumors that, as in the old days in New York, the Republican organization is at heart desirous of Democratic success.

It is not an unfamiliar spectacle that is now seen in Boston. On the one hand is a demagogue, "a master of the arts of popularity," posing as the people's champion, promising parks, playgrounds, baths, everything he can think of; on the other, we have a candidate ideal in many ways, who will truckle to no class of men; who, when asked to promise that only "masters of the English language" would clean the streets, if he should be elected, flatly declined. If Mr. Storrow succeeds, the better and nobler Boston will rejoice; if he is defeated, the baser elements will have their innings, and another period of disgrace is in store for the Massachusetts capital. But this is the risk democracy ever faces. Men may construct the best of governmental schemes on paper; what the people will do for the working out of that scheme in practice is an entirely different question. Yet that is no reason for despair or for ceasing to experiment; for democracy learns by its mistakes, however slowly.

MAKING HASTE TO BE FAMOUS.

It is reported that Gardner Symons's fine landscape, The Opalescent River, which won the Carnegie prize at the current Academy exhibition, has been bought by an admirer who will present it to the Metropolitan Museum. True or not, the rumor has the merit of being highly characteristic of our way of doing things. Mr. Symons has just won his spurs, and we hasten to promote him to the company of Ruysdael, Gainsborough, Old Crome, Constable, and the men of Barbizon.

Now, it is doubtless better to show this confidence in his inspiriting work than to fail to see its quality. Yet Mr. Symons, we understand, is a young man, and will presumably paint pictures more meet for the company of the masters than his prize picture of this year. We raise the issue, agreeing that The Opalescent River is an uncommonly fine thing, because it suggests at once an inconsiderate attitude towards the Metropolitan Museum in particular, and even more strongly the vice of hurry that affects all our more ambitious efforts in art and life.

In a certain way, there is no reason why anything should not be given to the Metropolitan Museum. It already is passing full of collections—historical, ethnological, or merely curious—which have absolutely no relation to its purpose as a museum of art. We hope the future may effect a transfer of some of these alien exhibits to institutions where they properly belong. Meanwhile we must deal with facts as they are. There is, we repeat, no reason why anybody should not try to give anything to the Metropolitan Museum. But there is a reason why great and especial scrupulousness should be observed toward what in the language of retail commerce we may style its department of art.

There at least the usual standards and the decorous procedure common to art museums must be upheld. To make admission to the galleries a usual compliment for every youngster who paints a striking picture will be to divest that compliment of all significance and gradually to lower the level of the American collections. It is well to pay to the immediate achievement of a young artist the heartiest meed of admiration, and it is well also to show confidence in his future by not railroading him prematurely into a museum, as if his first success might be his only opportunity. Club committees of admission are justly cautious about candidates whose proposers cannot brook the customary delays.

Everywhere haste mars art among us. What is the reason for so resplendent a failure as the Congressional Library at Washington? Simply that haste precluded a thorough maturing of the general scheme and prevented the mural painters either from harmonizing their work with the whole or even doing their individual best. Why is the average tall building, in spite of its imposing mass, a poor thing to look at? Simply because the architect has hurriedly applied irrelevant ornament to the work of the engineer. Under commercial conditions these makeshifts may seem inevitable. But the vice of precipitancy runs through our whole social structure. Academe and Parnassus suffer violence, and the violent take them by force. How many university chairs have been occupied by glib young scholars whose achievement was mostly verbal, while sound learning languished in obscure position? How many an actress has rolled her pretty eyes at an audience to be extolled promptly as a star of magnitude? Young X drags paint slashingly across canvas, and we hasten to cite Goya and Manet to do him honor. Y has preached an appealing set of Lenten sermons; let us hasten to find a college presidency for this coming talent. Z has wonderfully tickled the post-prandial ribs of high finance—shall he be the secretary of a Trust, or pass merely for the greatest wit of our times?

Now, it is this amiable disposition to promote all our vociferous geese to swanship that makes America the land of opportunity. And it is fair to say that a certain number of swans do come of such heroic metamorphosis. On the whole, we think, more geese essay the finer rôle for a brief moment and disappear. Indeed, it is a question if the lavishness of applause and promotion is not a disadvantage to our real talent. An artist is frequently exalted to worse and demoralizing company, and forced to assume in his nonage the air of a master. Moreover, the readiness with which acclaim is conceded is only surpassed by the fickleness of our enthusiasms. Many a writer and painter has found himself famous by his thirties only to reach the forties a forgotten and disillusioned man. Where are the lions of yesteryear? is a question that a prospering talent may well ask itself constantly; and the prayer to be saved from one's friends may safely be added.

INFANT LITERATURE.

The appearance of the first number of the *American Baby*, a monthly magazine devoted to everything its name presumably calls for, reminds one of a similar enterprise recently propounded by the ingenious Mr. E. V. Lucas. Starting out with the self-evident proposition that no baby is admired sufficiently to please the mother, Mr. Lucas believed that there was room for a publication entitled the *Babies' Review*, modelled after one of the great London literary weeklies. As an example of its contents he cites the following:

NEW GIRLS.

"Gwendoline Frances Wilkinson," who has just been published by Mrs. Wilkinson of No. 23 Milton Mansions, Bedford Park, is one of the most perfect works we ever remember to have seen. The style is simple but wholly effective, the utmost finish being given even to trifles. The keynote of the work is sweetness and placidity, although a pleasant impression of something a little more positive is not lacking. The work is uniformly so healthy that a long life may confidently be hoped for it. England cannot have too much of this kind of boon.

Mr. Lucas's magazine would have based its appeal on flattery and addressed itself to young mothers only. A more serious purpose animates the *American Baby*, and it aims at a wider range. It addresses itself to fathers as well as mothers, and to sisters, brothers, grandmothers, grandfathers, aunts, uncles, cousins, and friends. It is one of the drawbacks of a magazine about babies that its readers must come from every class except the one to whose interests the magazine is devoted. On the other hand, once it is admitted that a baby's magazine appeals to everybody except babies, there are no limits to the circulation such a periodical may attain. If the new publication succeeds in divining what the babies want and in impressing it upon their natural protectors, it will have more than justified its existence. It will also warrant the fond hopes entertained of it by Mr. John Bigelow, who writes to the editor:

I am happy in learning that The American Baby is to have an Organ of Its Own, where the public can hear from it when it cries. I was once a baby myself, as most of my acquaintances pretend to have been, and I know what it is to bring up two parents, however well disposed they may be, in the way they should go, and not depart from it.

The only exception that may be taken to Mr. Bigelow's statement is that the *American Baby*, unlike the real thing, does not cry and get red in the face when it wants something. The prevailing tone is one of reason and good temper, and its list of contributors is impressive.

Yet it is striking testimony to the selfishness of grown-up people that the first signed editorial in the very first number of a magazine about babies should be entitled, "The Baby, the Problem of the Future." In other words, the article is not about babies at all, but about babies when they have grown up to be men and women. The editorial deals with the world's decreasing birth-rate, refers to its effect on the "social structure" in France, and emphasizes the danger in this country to the "native stock" which, "having created an empire, has about run its meteoric course." But, if babies could speak, they might say to the editor of the *American Baby*, "Look here now, are you interested in us *as* babies, or are we to you only an isolated factor in the general movement for the conservation of our natural resources? Are we to be treated as transitory phenomena in the evolution from nothingness to grown-uphood or are we, as Immanuel Kant would put it, Things-in-Themselves? The problem of the future—huh! The problem of the milk-bottle and the safety-pin is what we are interested in." And many parents will be inclined to join in the criticism. The hope of the future—yes, babies are that. But they are more conspicuously the midnight-marauders of the present, and the power behind the doctor's bills of the past. The amount of immediate outside attention the av-

erage baby can concentrate on itself compels most parents to let the future take care of itself.

As a matter of fact, our hypothetical baby might have gone on to point out that it does play a tremendously important rôle in the affairs of grown-up men and women, in our "social structures," and our "empires." But it plays that part in the present and without ceasing to be a baby; or better still, by virtue of its being a baby. Who holds together the Family, now that we know that Marriage is an outworn survival and that man's natural condition is, at the very least, polygamy? The baby. Who proves that woman-suffrage is or is not absurd—we are not quite sure which—if not the baby? Who is behind the hundreds of millions that are put every year into suburban real estate and subways? The baby. Who guides the hand that levels tenement blocks and puts in their place parks and playgrounds? The baby. Who organizes voluntary leagues to clean the streets which its elders cannot clean? The baby. Who contributes its pennies to build monuments and battleships? The baby. Who cures fathers with a moderate income of the vice of smoking expensive cigars? Again the baby. The amount of uplift and optimism contributed by our babies to the progress of mankind would fill a volume in the Library of the World's Boost Literature.

THE AMERICAN HISTORICAL ASSOCIATION.

It was inevitable that the twenty-fifth annual meeting of the American Historical Association, December 27-30, at New York, should take on many of the characteristics of a celebration, and that social functions should assume an unwontedly large place in the programme. New York presents too many distractions to visitors to be an ideal convention city; but everything that a generous and well-planned hospitality could do to make the meetings a success was done, to the grateful satisfaction of all concerned. A meeting of welcome and felicitation at Carnegie Hall, presided over by Mr. Choate and addressed by Gov. Hughes, Mayor McClellan, and President Butler; a breakfast at the Waldorf-Astoria in honor of the foreign representatives; luncheons tendered by Columbia University, the Teachers College, and the Metropolitan Life Insurance Company; a smoker at the City Club, and a reception by Mr. and Mrs. Clarence W. Bowen, vied with innumerable private functions in filling the scanty leisure between sessions; while clubs as different as the Grolier and the Metropolitan opened their doors to members. A novel feature of the programme was a series of historical tableaux, illustrating scenes and events in the early history of New York, presented under the direction of Mrs. Robert Abbé, of whose remarkable work with the City History Club some of the members of the Association then learned for the first time.

The presidential address of Prof. Albert Bushnell Hart discussed the use and abuse, chiefly the latter, of imagination in history. Professor Hart had no difficulty in citing numerous illustrations in support of his assertion that inaccuracy is a prevailing vice of the American people, not merely in historical writing, but also in the ordinary affairs of life; though one could but wonder at the necessity of reading such a lesson to a group of scholars and teachers who, for at least a generation, have been supposed to be devoting themselves to the study of "scientific" history. On the other hand, Professor Hart did not fail to point out with equal clearness, though hardly with so much pertinent illustration, the indispensable service of imagination to the historian who would really reconstruct the past, or awaken, in either himself or his readers, a vivid interest in a nation's annals. If the interest aroused by the address, as by the presidential address of Prof. George B. Adams, with a somewhat similar incidence, a year ago, is significant of the attitude of American historians toward their subject, there is ground for hope that the volume of historical writing that can be both read and enjoyed is destined to increase.

Of the general sessions, particular interest attached to the one which discussed, jointly with the American Political Science Association, British constitutional and political development with special reference to the centenary of Gladstone. Prof. George M. Wrong of the University of Toronto, in an admirable paper, sketched the growth of nationalism in Canada. At the same time he pointed out the various influences which, in spite of the enjoyment of practical independence, still hold the colony in affectionate loyalty to the mother country. Edward Porritt, speaking particularly from the standpoint of the reporters' gallery in the House of Commons, touched lightly some of the paradoxes of Gladstone's career, especially his general aloofness from the rank and file of his party. Ambassador Bryce, the only honorary member of the Association, emphasized Gladstone's conservatism and the contrast between his unrivalled acquaintance with the practical workings of the British Constitution and his comparative ignorance of English constitutional history; while Herbert L. Fisher of New College, Oxford, found an illustration of English political methods, as likewise of the strength of the imperial bond, in the achievement of political union in South Africa.

There was a notable attendance of European scholars, the list including, besides Mr. Fisher, Prof. G. W. Prothero of London, Prof. Eduard Meyer of Berlin, Prof. Camille Enlart of Paris, Prof. H. T. Colenbrander of Voorburg, Holland, and Prof. R. Altamira of Oviedo, Spain. A special session devoted to a discussion of the work of historical societies in Europe proved, unfortunately, somewhat of a disappointment, the papers being too long, and their contents hardly more than an enumeration of boards, commissions, and publications already quite familiar to scholars on this side of the water. Elsewhere, the visiting scholars took part freely and informingly in the discussions, while Henry Higgs of London, speaking for them all at the breakfast, gave felicitous expression to the debt of Europe to American learning, especially in economic fields.

More and more of the work of the Association is each year carried on in conferences, in which members interested in particular lines of work discuss their specialties. No less than ten such conferences, including one held jointly with the American Society of Church History, and two with the New York State Teachers' Association, were arranged for this year. Those on ancient history, and on the contribution of the Romance nations to the history of America, testified to a growing interest in historical fields which hitherto have not been much represented on these programmes. The conference on modern European history had before it such up-to-date topics as the political situation in Bosnia and Herzegovina, Bismarck as historiographer, and a proposed college course in contemporaneous history; the last a subject in regard to which there seems to be, in both colleges and high schools, a pronounced demand. Political history, apparently, is being left more and more to the political scientists, while social and economic matters occupy increasingly the attention of the historians. As for Constitutional history, once regarded as the highest aspect of the subject, about all that can be said is that its hold is not strong, notwithstanding a hopeful interest awakened by a conference on constitutional questions at the Madison meeting, two years ago. A conference of archivists, held under the auspices of the Public Archives Commission, brought together a considerable number of custodians, the main topic of discussion being the practical lessons to be drawn from the management of archives in the leading European countries. The conference of State and local historical societies, now an annual institution, showed gratify-

ing progress in the unification of work and the improvement of society publications. Lastly, the pedagogical work of the Association was represented by conferences on the recently published report of the Committee of Eight, on the teaching of history in the grades; and on the forthcoming report of the Committee of Five, in revision of the famous report of the Committee of Seven, on history in secondary schools, of which a preliminary account was presented.

The multiform activities of the Association, long since outstripping those of any other learned society in this country, continue to increase. Plans for a bibliography of English history, to be carried out jointly by a committee of the Association and a similar body of English scholars, are well in hand. A committee has also been created to make a preliminary investigation of the status of historical sites and buildings. The financial success of the series of special monographs, intended to contain the essays to which are awarded the Justin Winsor and Herbert B. Adams prizes, seems to be assured. A pressing need, for which, however, the funds of the Association are inadequate, is an index to the reports and other publications of the past twenty-five years. The Association goes next year to Indianapolis, with Prof. Frederick J. Turner as president.

PHILOLOGISTS AND ARCHÆOLOGISTS AT BALTIMORE.

Philologists have recently been pronounced by very high authority to be a gay folk, and doubtless the devotees of archæology, which is but the handmaid of philology, may be placed in the same category. The joint meeting of two such divisions of merry wights was, of course, bound to be most diverting, and in very truth it was so, from its first session on Tuesday, December 28, to its last, on the following Friday. The American Philological Association was celebrating the fortieth anniversary of its birth, and the Archæological Institute of America, the thirtieth of its own creation. The Johns Hopkins University welcomed its guests with all the courtly attention that its vicinity to the Southland naturally breeds, and out of special honor to Professor Gildersleeve, who was filling for the second time the presidency of the association, a very large number of his friends and former pupils came from near and far to the meeting. Numbers were present from Maine and from California, from Texas and from Wisconsin, and—a specially welcome sight—a number of delegates from the very active Canadian societies of the Institute had found their way across the imaginary boundary between their land and the rest of America. Despite the congestion of "papers" which has become chronic at the meetings, much more time than usual was given, or stolen away, for the quite as important renewal of old personal associations and formation of new ones. An afternoon was given up to a visit in a body to the Walters Gallery, the richness of which in amount and character of its treasures was a great surprise to most of the guests. An evening was devoted to the most formal of the birthday celebrations, a dinner attended by nearly two hundred of the initiated, and illumined particularly by the bright humor of Principal Peterson from over the border, and by the stately Hellenic eloquence of the Greek ambassador.

The annual address before the combined bodies, which was given, according to precedent, by the president of the Philological Association, harmonized most beautifully with the repute of philology as a gay science. It was a survey from the Galata-tower of all the varying mental landscapes upon which the windows might look. The tower became a light-house with a swiftly-shifting beam that darted, now here and now there, out into the vagueness of the surrounding dark.

News from the various archæological schools under the care of the Institute was most encouraging. The present director of the school in Rome, Jesse B. Carter, was reëlected for a term of five years, his administration for the past three years having been most brilliantly effective. Special gifts during the past year have made possible large additions to the growing library of the school. The endowment fund has now reached the sum of nearly one hundred thousand dollars, but more is urgently needed to obviate the necessity for constant appeals for subscriptions to meet current expenses. The school at Jerusalem has obtained two acres of land close to the city for a building-site, and hopes earnestly for the speedy gift of means for the erection of a permanent home. In our own country, the School of American Archæology has taken up its settled quarters in the old Governor's palace at Santa Fé, and is pushing vigorously its work of investigation. A generous gift by Mrs. John Hays Hammond makes possible the complete publication of the striking work in the Southwest, carried on by Dr. Bandelier now some twenty years ago.

Five new societies have been added to the Institute during the past year, located respectively in Winnipeg, St. John, Halifax, Buffalo, and Portland (Oregon). The Institute now includes thirty-two societies, with an aggregate membership of about three thousand. Prof. F. W. Kelsey of the University of Michigan was reëlected to the presidency. The gift of Mr. Loeb to endow a lectureship in honor of Charles Eliot Norton, founder of the Institute, has already been mentioned in these columns. The lectureship is to be filled from time to time by distinguished foreign scholars, who will lecture in various cities of this country and Canada. The first incumbent will soon be selected, and is expected to enter upon his task in the autumn of 1910.

The Philological Association received a report from its Commission on College Entrance Requirements in Latin, and continued the existence of the commission for another year. A committee was appointed to invite conference with representatives of other American, British, and German associations of kindred character, looking toward the holding at regular intervals of an international meeting. Interest in the scheme has already been expressed by distinguished members of the Classical Association in Great Britain, and of the Versammlung deutscher Philologen und Schulmänner. To both Association and Institute was reported the action of their committees in union with similar committees from a dozen other learned societies, and with the express support of the presidents of a considerable number of the larger universities of the country, in urging upon the trustees of the Carnegie Institution the support of approved projects of research in other fields than merely the physical and natural sciences.

The next joint meeting of the association and the institute will be held at Brown University during the Christmas holidays of 1910. The president of the American Philological Association for the coming year is Prof. Paul Shorey of the University of Chicago; the vice-presidents are Profs. John C. Rolfe of Pennsylvania and Thomas D. Goodell of Yale.

The papers presented at the various sessions were too many (nearly a hundred titles) and on too varied themes to render possible a brief characterization of them even by classified groups. Of some significance was the indication that Greek is by no means a dead, or even a dead-and-alive, subject in America. As one of the distinguished Canadian members wittily put it, the dead people are those who have not this wide intellectual outlook on humanity.

THE MODERN LANGUAGE ASSOCIATION.

More than one hundred and fifty members were present at the twenty-seventh meeting of the Modern Language Association, held at Cornell University, December 28-30. Both in the fraternity houses where the majority of the members were housed and in Goldwin Smith Hall where the meetings were held, ample opportunities were afforded for that social intercourse which is for many the chief attraction of such an occasion. President Schurman, in welcoming the Association as the guest of

the university, struck a note which is sometimes forgotten by students of language and literature. The modern languages, he said, must, if they are to hold their place in a course of liberal culture, be treated not as mere material for linguistic study or for purely utilitarian purposes, but as a content of thought in literature. Greek, he said, is gone and Latin no longer holds its own, partly because they were treated as fields for linguistic study; there is danger lest the modern languages meet a similar fate. From the difference in structure they do not give the same linguistic training as Latin, but the modern literatures have a cultural value superior to Latin, if not to Greek, and this culture the Association and its members must make the possession of the youth of America. Somewhat the same idea was voiced by Prof. M. D. Learned of the University of Pennsylvania, who gave the president's annual address on the subject, "Linguistic Study and Literary Creation." A rapid survey of the history of literary creation shows a corresponding energy in linguistic study. The work of certain authors would have been greater had they possessed wider and deeper knowledge of other languages and literatures. To increase literary production in America, which is the inheritor of the culture of Europe, the study of the European languages should be pursued effectively in the secondary schools, so that when the student enters college he may not be hampered by ignorance and carelessness. In college he may rise to an understanding of the message of great literature, and in the world he may thus become a creator of literature.

As usual, more papers were presented in the field of English than in that of any other language; in fact, about half the total number were primarily concerned with English, and of these the majority dealt with subjects of the seventeenth and earlier centuries. Problems of Shakespeare study were discussed in four papers. One of these, on "Shakespeare's Use of Prose," by Prof. Morris W. Croll of Princeton, contended that Shakespeare was not subjective in his use of prose, as some have maintained, but merely followed contemporary fashion. The new convention was to use prose for courtly conversation, as the old convention had been to use it for vulgar speech. The foreign courtly drama and the court plays of Lyly influenced Jonson, Chapman, and Day, and Shakespeare followed along. A similar protest against certain aspects of modern Shakespearean criticism was made by Prof. E. E. Stoll of Western Reserve University. Shakespeare is still interpreted as if he were familiar with the conceptions of modern science and philosophy, and as if his art were not three centuries old. This criticism traces the influence of such forces as heredity, and, setting at naught Elizabethan technique, discovers suggestions of subconscious thought and the subtle distinctions of racial, criminal, and morbid psychology.

Two papers, one dealing with the origin of the ballad, the other with the ballad or song in the making, were presented respectively by Prof. Arthur Beatty of the University of Wisconsin and Prof. John A. Lomax of the Agricultural and Mechanical College of Texas. The former showed that the prose tale, which the upholders of the communal origin of the ballad maintain is late, is really earlier than the ballad, and that it is just as much the product of the folk as the ballad. The second paper was the direct outcome of Professor Lomax's collecting of orally transmitted cowboy songs found for the most part in Arizona, Texas, and New Mexico, with Texas predominant. These songs have been taken down from the lips of ex-cowboys, from students, and from old Texas newspapers. In some cases, they exist in from five to twenty versions. Many of them are fragments, and one consists of an immense number of stanzas as if it were intended to last from one end of the trail to the other. These songs are a curious composite of conventional diction and a vital phrasing born of the ballad instinct of the race. In subject, they range from thoughts of home and mother to the heroism of outlaws like Jesse James, from love and religion to fighting and death. In some cases, the vernacular is remarkably poetic. The majority were written in the last sixty years and they are fast disappearing as the trail vanishes before the railway.

The unsolved problem of the teaching of rhetoric and composition always arouses discussion, and two papers, one by Professor Scott of the University of Michigan, the other by Prof. Lane Cooper of Cornell, brought up anew the vexing question. Professor Scott treated the subject of rhetoric as a science for graduate study and research. Professor Cooper inveighed against the fetich of the freshman composition, in which mere words are usually substituted for thought, and questioned whether the art of written composition could be taught at all. Matter should take priority over expression, since errors of thought are worse than errors of speech. The task is to get the student to clothe thought in expression. The general criticism expressed in the discussion was that even immature writing was worth while, if only as a preparation for newspaper work and business correspondence. The most immature student has something to say, if he can be made to say it; he has a personality to reveal.

Prof. J. E. Spingarn of Columbia University, the chairman of the committee appointed at the meeting last year to consider the form and content of the publications, presented a report recommending that the committee be continued for another year, that all dissertations for the degree of doctor of philosophy be excluded from the publications, and that a committee of not less than three or more than five publish a brief bulletin, containing among other things matters of personal interest concerning members of the association, and have power to spend, if necessary, not more than $400 in one year. The report was accepted.

The officers for the ensuing year are: President, Prof. Brander Matthews of Columbia; vice-presidents, Profs. J. W. Cunliffe of the University of Wisconsin, J. D. M. Ford of Harvard, and A. B. Faust of Cornell. The present secretary and treasurer were continued. The next meeting will be held at the College of the City of New York.

NEWS FOR BIBLIOPHILES.

Every bibliographical task to which Alfred W. Pollard puts his hand is certain to be well done. Now we have his "Shakespeare Folios and Quartos, a Study in the Bibliography of Shakespeare's Plays, 1594-1685," published by Methuen & Co., to accompany their facsimile of the Folios. Like these, it is issued in blue boards with linen back, and contains full-sized reproductions of title-pages of twenty-nine of the rarer quartos published prior to 1623. We are sorry to notice that the recently discovered "Titus Andronicus" of 1594 is not among them, though a lined transcript of the title is given.

The bibliographical information is fuller than that given by any previous writer and comprises some unusual particulars. In every case where a play was entered in the register of the Stationers' Company the entry has been quoted, and in the same way all transfers are entered in their chronological order. When a facsimile is not given, the transcript of the title is printed in types of different sizes showing approximately the variety of types on the original title-page. Head-titles (that is, the name of the play as set forth at the beginning of the text) and running titles (the form used at the top of each page or pair of pages) are added. Whether or not the play is divided into acts and scenes is indicated, and stage directions, except simple exits and entrances, are printed in full. Information as to the source of the text and its relations to earlier and later editions in quarto and to the first folio are also given. This, Mr. Pollard is particular to state, represents the conclusion of the editors of the Facsimile Quartos. The printer's name where indicated by initial letters or not given at all has been determined, so far as possible, by the typography. The same information is given for the later quarto editions, for the four folios, and for the spurious plays first collected in the third folio.

So much for the bibliography. More orlginal and more interesting is Mr. Pollard's story of the publication of the quartos and folios. He has, in a word, come to the defence of the editors of the first folio and the printers and publishers of the days of Elizabeth and James First, against the charges made by the "bibliographical pessimists" of whom Sidney Lee is chief.

This school, Mr. Pollard says, seems "to have piracy on the brain." By them the Shakespearean printers and publishers are set down as "equally stupid and dishonest, and none escape condemnation"; and they claim that the first folio was made up with "clumsiness and an excessive and inexplicable haste" from "the prompt-copies made by the playhouse scrivener," from "even less authentic transcripts in private hands," and from the quartos "tainted with . . . carelessness, incapacity, and surreptitiousness." But, again to quote from Mr. Pollard's Preface:

Optimism thinks the part assigned to the playhouse scrivener and the importance of the private transcripts dangerously exaggerated; it has heard of a prompt-copy in an author's autograph; it remembers that Shakespeare was himself an actor and manager as well as a playwright; it believes in the human dislike to throwing property away, even when it seems to have become useless. Lastly, it . . . finds that they [the editors] exercised care and discrimination in forming their canon, in substituting good texts for bad ones and in restoring passages which had been omitted. Doubtless everything might have been much better done, but, doubtless, everything might have been much worse.

An account of publishing in Shakespeare's day, the origin of the Stationers' Company, and the rules governing licenses granted by them, and the transference of the same, with a record of several piratical books, threatened or published with efforts for their suppression, make up the interesting first chapter. In The Good and Bad Quartos, Mr. Pollard examines the various quarto editions of the seventeen plays published before the first folio, and finds that of "Romeo and Juliet" and of "Hamlet" there were two widely different texts, giving, for the seventeen plays, nineteen texts, of which five are, "by universal consent, thoroughly bad." Two of these five were never entered on the Stationers' Register, two were not entered by the firm that printed them, and the other, "The Merry Wives," was entered and transferred the same day. In consequence the expression "diverse stol'n and surreptitious copies" of Heminge and Condell could only have referred to "Henry V" and "The Merry Wives," of which no authentic text was printed before 1623, and to the first editions of "Romeo and Juliet" and "Hamlet," of which corrected texts had already appeared.

Another chapter, on the quartos of 1619, tells of the nine common quartos, with various dates, supposed to have been printed by Thomas Pavier in that year. This chapter is illustrated by reduced facsimiles of the title pages. A tabulated census of existing copies of these nine quartos, compiled by George Watson Cole, is given in an appendix. But the chapter on the printing of the first folio brings out some new facts. A study of the use of the brass rules used to frame the pages satisfies Mr. Pollard that the book was virtually all printed at Jaggard's own office, and continuously, not in three sections at three or more shops, as has been claimed. The arrangement of the preliminary leaves of the first folio in the Grenville copy is decided upon as probably correct.

There is less to be said, of course, of the second, third, and fourth folios. Mr. Pollard, however, seems not to have noticed that the types of the fourth folio were almost certainly set at three different shops from a copy of the third folio, which was broken into three sections, as pointed out by this Bibliophile some two years ago. The first printer received the Comedies (pages 1-303 of the third folio); the second pages 305 (page 304 is blank) to 664; and the third pages 665 to the end. The act and scene headings are constantly printed throughout in each section in a distinct type. These headings throughout the first portion are printed in plain italics, the capitals measuring about 5-32 of an inch in height. In the second section a somewhat similar, but larger type, the capitals measuring a full 3-16 inch in height, was used. In the third section a still larger type was used, the capitals having prominent kerns: what the printers call "swash" letters. The printer of the first part had a set of large initial letters, about one and one-fourth inches high, the prominent decoration being a sunflower. One of these initials is used at the beginning of each play from "The Tempest" to "The Winter's Tale." The printer of the second part started out by using a smaller ornamental initial N for King John, much like that used in the third folio, but in the case of all the other plays he used only a plain block letter, and not always uniform in size. The printer of the third part also used only plain block letters of different sizes for his indented initials.

The Baconians are always able to give us startling news about Shakespeare's books; otherwise, it seems as if Mr. Pollard's volume were almost "the last word" on the subject.

Correspondence.

THE ASTUTENESS OF THE LORDS.

To the Editor of The Nation:

Sir: After all, what is the action of the House of Lords in throwing out the Budget bill and appealing to the country but a case of that reputed panacea of all ills, so much heralded by experts in government—the Referendum? And that, too, at the hands of an "effete, obsolete, antiquated, superfluous" branch of legislature that advanced thinkers have long since desired to abolish as an anachronism and a relic of barbarism, etc.! Really, at this distance it looks as if the pampered minions of mediæval feudalism had stolen a march on the pushful sociologists of to-day. The Commons are professedly solicitous for the welfare of the common people, whom theoretically they represent. "Very well," say the Lords, "let us hear from the common people; this is a novel and revolutionary scheme of taxation, involving vast economic and social changes in this country; before we approve the scheme, let us hear from your friend, the common man, whom you profess to represent." Logically considered, the position is unassailable. If the country on appeal should favor the original Budget, the Lords could then pass it with perfect consistency on the ground of having received the information they desired from the country. But if it should happen that the country did not favor the bill, the position of the Commons would be awkward indeed; they did not correctly represent their constituents, and were forced to appeal to them—disastrously.

Thoroughgoing democrats in America will sympathize with the Commons in their efforts to tax the unearned increment of land values. Defending the Budget lately in a speech at Albert Hall, Mr. Asquith described that measure as consisting chiefly of "Taxes on the accumulations of the rich and the luxuries of the less well-to-do, and a moderate toll on monopoly values which the community itself has, either actively or passively, created." An absolutely just system of land taxation would undoubtedly appropriate for the benefit of the community all increase in land values arising from the labors and necessities of the community at large. The House of Lords naturally opposes such a scheme as Lloyd-George's, which is frankly a move against the unearned increment, and the House of Commons naturally approves of it. The Lords probably know as well as the rest of the world that a reform in land taxation is in the air. Whenever the nation demands it, the Lords will accede to the popular will, as they have always done. If they had thrown out the bill without making an appeal to the country, the Commons would have appealed; if the Liberals had won at the polls, the cry for the abolition of the House of Lords would have been heard again with redoubled vehemence. Lord Lansdowne's amendment anticipated all that, and set the Lords in an absolutely correct position before the country; they have vindicated the wisdom of the existence of a second chamber, whatever be the result of the election. To an American student of party manœuvres the inference is irresistible that all the political astuteness of the realm is not lodged in the House of Commons.

E. L. C. Morse.

Chicago, December 30.

ENGLISH FOOTBALL.

To the Editor of The Nation:

Sir: Permit me to comment on the letter entitled "English Football" which appeared in your issue of December 2. Those remarks are fairly applicable if they were confined to the college alone, but are not applicable to "English football," for the simple reason that the colleges, whether Eton, Harrow, Oxford, or Cambridge, are an insignificant factor. The absorbing interest of the football "fans" in Great Britain is centred not on the college, but on the great professional teams, and professional football in England arouses greater enthusiasm and attracts far more spectators than does professional baseball in America. "There is no game which occupies in England the position held by football in America," says your correspondent. Any one familiar with games in England knows that football dominates outdoor sports. During the autumn, winter, and early spring months, in fact, it is the national game. Three codes are played, namely, soccer, Rugby Union, and Northern Union, the last being a modified form of Rugby on a professional basis. The cream of British Rugby talent is to be found in the ranks of the Northern Union clubs, whose strongholds are the industrial centres of the northern counties. But the popular game is "soccer," as fully 95 per cent. of the professional clubs and fully 90 per cent. of the amateur clubs in Great Britain play

football as governed by the laws and regulations of the English Football Association, which is now the recognized authority not only in the British Isles, but in France, Germany, Holland, Belgium, Denmark, Sweden, Austria-Hungary, South Africa, Argentine Republic, in fact anywhere where "soccer" as a sport is played. Your correspondent is not favorably placed—geographically—to pass judgment on 'English football," else he would not say that "soccer" is not exciting enough for most Englishmen. Had he lived in Liverpool, Manchester, Sheffield, Newcastle, Birmingham, and witnessed the immense crowds—crowds greater than ever attended any Harvard-Yale game—that flock to see the professional league teams, or had he seen the still more exciting struggles in the annual contests for possession of the historic English cup, which have several times attracted more than a hundred thousand spectators, he would never have said that "soccer" is not exciting enough.

As regards the alarming increase of fatalities in the American game, something ought to be done. This season of two short months, with its comparatively few games, has above thirty deaths to its credit, or rather discredit; more than have occurred on all the British Isles for the *last twenty-five years*, although there are more football matches played in England alone on one ordinary Saturday afternoon than in America during the whole two months of the intercollegiate season. Again, the season is four times as long in England and during the winter not a dozen or two, but scores of matches—important ones at that—are played on frost-bound ground, where it is not only difficult to maintain a foothold, but is in a sense dangerous for both life and limb. Strenuous games are played under such conditions, yet no one ever hears of a fatal accident. One reason for this is that in England, no player can be tackled or interfered with in any way, unless in actual possession of the ball. Mass plays, piling up, bucking the line, and other such hooligan tactics are unknown, and would not be tolerated by either referees or spectators. The rules committee, after the agitation of 1905, has signally failed in evolving reforms to open out and make the game safer; so the only real and lasting solution is to eliminate the intercollegiate game and displace it with Rugby as now played in Great Britain, California, British Columbia, Australia, South Africa, and New Zealand. Your correspondent is wrong, where he states that Rugby as played in the colonies tends to something like the American game, the only difference being in New Zealand, where they play eight backs, seven forwards, as against the orthodox eight forwards and seven backs.

JEREMY INDEX IN CAMBRIDGE.

To the Editor of The Nation:

Sir: It was my privilege to receive by post the following magnanimous offer. I retain the punctuation as well as the wording of the original, and would comment only that the varied vocabulary of the letter might well have justified the author in including English composition in his list of courses.

Cambridge, 12—10—'09.

Dear Sir: Situated as I am, here in Cambridge, Mass., I can supply you with courses, *as given in Harvard Univ.*,—in English Literature, History, Gov—ec—Philosophy, Fine Arts, etc.—I can supply these courses in outline or in minute detail.

If you will write me stating the subjects, and the particular part of these subjects, in which you are most interested, I will let you know just what I can supply you, and on what terms.

yours Very truly.

———.

P. S. *Strictly confidential.*

The worthy labors of this purveyor of other men's brains surely deserve wider publicity than his modest postscript would imply that he expected. If his methods are perhaps more surreptitious than those of Jeremy Index in the appended bit of dialogue from Fielding's "Author's Farce," at any rate our worthy Cambridge gentleman, like his eighteenth century ancestor, may plead that he only desires to live by his goods, and that you cannot get them cheaper at either of the universities.

Bookweight. So, Mr. Index, what news with you?

Index. I have brought my Bill, Sir.

Book. What's here? . . . Hum! hum! hum! Sum total, for Thirty-six Latin motto's, Eighteen Shillings; ditto English, One Shilling and Nine-pence; ditto, Greek, Four, Four Shillings. These Greek motto's are excessively dear.

Ind. If you have them cheaper at either of the Universities, I will give you mine for nothing. . . .

Book. Well . . . I desire you wou'd be a little more reasonable in your Bills for the future, or I shall deal with you no longer; for I have a Fellow of a College, who offers to furnish me with Second-hand Motto's out of the Spectator for Two-pence each.

Ind. Sir, I only desire to live by my Goods, and I hopo you will be pleased to allow some difference between a neat, fresh Piece, piping hot out of the classicks, and old thread-bare worn out stuff that has past thro' ev'ry Pedant's Mouth.

E. K. Broadus.

University of Alberta, Strathcona, Alberta, Canada, December 31.

POE AND COLERIDGE.

To the Editor of The Nation:

Sir: Undoubtedly, as Professor Woodberry ("Edgar Allan Poe," I, 178) and Professor Prescott ("Poe's Critical Essays," xxxi) have pointed out, Poe had been reading Schlegel in Black's translation when he declared, in the *Southern Literary Messenger* for June, 1836, that in the short poem the "effect will depend, in a very great degree, upon the perfection of its finish, upon the nice adaptation of its constituent parts, and especially upon what is rightly termed by Schlegel, the *unity or totality of interest.*" Yet even here it seems likely that Coleridge had preceded Schlegel as Poe's teacher. Schlegel (in Black's translation) says: "De la Motte, a French author, . . . would substitute for Unity of action, the *Unity of interest*"; and approves the substitution. *Totality*—a rather unusual word then, if one may judge from the fact that the examples of its use in the Century and Standard Dictionaries (with one significant exception, a quotation from the seventeenth century divine T. Adams) are from later writers—is not used by Black in this connection. But Coleridge, as far back as 1796, had written and printed a little disquisition on the sonnet in which the following passage occurs:

> The sonnet then is a small poem, in which some lonely feeling is developed. It is limited to a *particular* number of lines, in order that the reader's mind, having expected the close at the place where he finds it, may rest satisfied; and that so the poem may acquire, as it were, a *Totality*—in plainer phrase, may become a *Whole*. It is confined to fourteen lines, because, as some particular number is necessary, and that particular number must be a small one, it may as well be fourteen as any other number. (Globe edition of Coleridge, p. 543.)

This little essay, originally printed in 1796, was reprinted as "Introduction to the Sonnets" in the 1797 edition of Coleridge's Poems. The book may not have reached the libraries of Baltimore or Richmond or the University of Virginia or West Point in Poe's time, but if it did we may be sure that Poe read it. There is something about the style of this youthful dash at criticism—its particularity, its assurance, what Coleridge afterwards characterized as its "petulant presumption"—that sounds much more like Poe than Coleridge. And there is the apparently unusual word *totality*, marked as such by the explanatory parenthesis, "in plainer phrase, . . . a *Whole*."

Literature.

TWO HISTORIES OF GERMAN LITERATURE.

A Brief History of German Literature. By George Madison Priest. Preceptor in modern languages, Princeton University. New York: Charles Scribner's Sons. $1.50.

A History of German Literature. By Calvin Thomas, LL.D. Professor of Germanic languages and literatures in Columbia University. New York: D. Appleton & Co. $1.50.

Causes of various kinds, deeply rooted in the country's past, have tended to darken and confound the writing of German literary history and criticism. Political, social, racial, religious animosities have often, in Germany, displaced the calm contemplation of artistic values, and, to this day, German men of letters quite unashamedly confess that the rival tendencies of literature assume in their eyes the nature of a deadly combat or *Kampf*.

The foundation of the new empire merely changed the quality, but scarcely weakened the force, of those extraneous conflicts into which literature is so ruthlessly cast. The now dominant Prussian ideal, so attractive in itself, of the state as not only a political, but a cultural, entity to whose quite rigid nature all currents of the national life shall and must contribute, has led further to produce criticism that is almost fiercely blind and consciously unliterary. Ernst Moritz Arndt, to take an extreme example, must be made out to be an eminent poet; Heinrich Heine must be a sounding brass and a tinkling cymbal. For these are the estimates which the welfare of the *Kulturstaat* demands.

Men of such high repute as Goedeke and Scherer have not been free from these secondary preoccupations; such a man as Gotthold Klee (upon whose popular "Outlines of German Literary History," Mr. Priest has based his volume), simply sees nothing in a work of art save its tendency. Hence it is that a look upon German literature by a thoroughly instructed non-German like Professor Thomas is, in a high degree, refreshing and valuable.

Herr Klee and Mr. Priest have made no attempt at vital literary history. The book is a bare chronicle of facts interspersed with brief characterizations, which are either patriotic or empty. If, for a moment, the authors become interpretative, their phrases are stereotyped. On De la Motte Fouqué, their chief comment is that "a true and patriotic heart beat in his breast"; for the versification of two lyrists so sharply divided in their metrical effects as Mörike and Geibel, they have but the same facile adjective; and this ingenuous method culminates when we are instructed that the "Westöstliche Divan" is "a remarkable series of poems in which Goethe mingled personal experiences and thoughts from his reading," and are asked to accept as a description of a highly individual style—Schiller's—that it is "refined and full of feeling, majestic, rich in figures of speech and melodious." The few passages for which Mr. Priest alone is responsible are far more intelligent, but Herr Klee's breast is impervious to any but the patriotic emotions.

The final chapter of the volume demands a special word of warning. Contemporary production is always a perilous field for the historian. But in this instance, the judgments delivered on that interesting and vital literature which has arisen since 1888 seem hardly in any case to represent the critic's personal contact with his authors. To call Max Halbe "a clever playwright" is to invite the accusation that one has not read him. "Jugend," "Mutter Erde," and "Eisgang" may not be masterpieces of the first order; but that piercing regret, that intimate love of the soil, that earnest search for inner freedom from which these plays sprang are anything one pleases—except clever. Equally inadequate are the judgments on Sudermann, Fulda, Liliencron, and, especially, on the admirable Viennese Arthur Schnitzler, whose novels are not even specified. Nor, since place was found for, say, Busse and Ompteda, is it possible to account for the omission of Otto Erich Hartleben, whose "Rosenmontag" performs, at least for us his contemporaries, that noble catharsis through pity and terror, which is the aim of tragedy, and of Otto Julius Bierbaum, who, in "Gugeline," has struck out melodies as plangent and haunting as the strains of his own magic Fiddler.

As a brief reference book on the mere facts of German literature—but as such alone—has Mr. Priest's volume a positive value. From this point of view only a few corrections need be suggested. It is a mistake to say (p. 41) that in the "Nibelungenlied" stanza "the first half of the line contains four stresses throughout." Only the last hemistich of each stanza has four stresses; all the others have three. Nor is it accurate to assert unqualifiedly that "the rhyme is masculine," since the very opening stanza of the epic contains three pairs of feminine or double rhymes. The account of Wilhelm Hauff (p. 282) is a sad muddle. Hauff's famous fairy-tale is not "Das steinerne Herz," but "Das kalte Herz"; the "Phantasien im Bremer Rathskeller," far from being a "collection" of short stories, is not even a single short story, but a quaint and rather longish prose phantasy; and one looks in vain for any mention of Hauff's "Memoiren des Satan," as excellent a piece of imaginative satire as the language possesses.

Quite different from Herr Klee's careful guarding of the patriotic flame in the domain of letters is Professor Thomas's "German Literature." Here the two dangers of the brief history—unbased theorizing or else sterile list-making—are equally avoided. A sufficient but not unduly severe exclusion has left space for the most significant facts and for a fairly full interpretation of them. Above all, from these interpretative passages there speaks—a rare phenomenon in the world of scholarship—a human voice! To illustrate this as well as Professor Thomas's fine and flexible insight one cannot do better than quote from his account of Luther:

> Whether the abuses which he sought to remedy were exaggerated by him, as Catholic writers have always contended; whether the evils complained of might have proved remediable by a patient and temperate effort within the church, as Erasmus and his friends believed; whether Luther's substitution of bibliolatry for ecclesiolatry made matters fundamentally better for the religious progress of mankind—all these are questions on which the modern mind can hardly fail to have an opinion.

One hesitates to take exception to any of Professor Thomas's judgments. It is quite clear, however, that he has permitted himself to be somewhat influenced by the virulence against Heine with which a whole class of German critics is afflicted. He writes:

> What wonder is it if the Germans of today decline, on the whole, to concede to him that towering importance commonly ascribed to him in English books? He was a great lyric poet, they say, but what else? . . . Where are the great imaginative works which entitle him to be regarded as the inheritor of Goethe's mantle? . . . Heine's fame must rest on his verse, and not on what he chose to call his service in humanity's war of liberation.

To this criticism several answers suggest themselves. If Heine was a great lyric poet, a singer of the race and lineage of Catullus and Shelley, his towering importance in the history of literature is at once conceded. He may not have been a soldier in humanity's war of liberation. It matters as little as that Shelley was not the inspired social philosopher he dreamed himself. Great imaginative works, architectonically great at least, Heine did not produce. But did Goethe, with the single exception of "Faust," produce an imaginative work of authentic and universal appeal? Could one not, with certain changes of phrasing, justly apply to Heine Professor Thomas's own admirable warning in regard to Goethe—to look for his preeminence in no one period of his life, in no one phase of his work, rather in the totality of his many-sided, richly impassioned, marvellously flexible genius? Nor should it be forgotten that Heine, however debatable the substance of his controversial prose, was a stylist of the first order—the earliest German man of letters to seek and invariably to find, not the typical adjective, but the *mot juste*, the inevitable and electrical word, and that he is still the foremost German practitioner of rhythmic and impassioned prose—the rival of Flaubert on the one hand, of De Quincey on the other.

But it is not upon a note of disagreement that one cares to take leave of Professor Thomas's "History of German Literature." By the simplicity of its style blended with an occasional happy trenchancy of expression, by temperate wisdom, by the ripeness of its scholarship, the book is the best English contribution to the subject with which it deals.

CURRENT FICTION.

Ann Veronica. By H. G. Wells. New York: Harper & Bros.

This is not an improvement on "Tono-Bungay." It takes us into that realm of Mr. Wells's mind which is peopled by creatures almost as fantastic and remote from nature as Mr. Shaw's. However delightful it might be to have everything in this world changed into something else, we cannot conceal from ourselves the dull fact that at present everything is what it is. Ann Veronica is a reduction to absurdity of a current and experimental phase of feminine experience. She has more brains than her brothers or her father, and does not see why she should not have equal liberty of judgment and action. The father is a pompous fool, who relies on platitudes and arbitrary commands. His ideal is the swan-like middle-Victorian maiden, and he does not

know what to make of his ugly duckling. But she, being endowed with the hard common-sense of a Vivie Warren (to whom her creator more than once compares her), presently comes to open revolt. She abandons the paternal and suburban roof, and sets up for herself in London. Here she falls into the toils of a clever married man, and escapes him only because she is temperamentally stronger than he, and because she is unembarrassed by the ordinary feminine qualms and facilities. It is true that she has a special safeguard in her love for another man. Her discovery that he also is married leads her into a truly feminine debauch among a band of riotous suffragettes. She comes from her month in prison with no desire to reassert her right to the ballot, but otherwise unchastened.

Up to this point the story, with the exception of an uncompromising scene with the would-be seducer, is rather whimsical than anything more. But the rest of it—the last fifth or so—belongs to that species of modern fiction which can only be described as harassing. Ann Veronica finds it doesn't matter that the man she loves is not legally free. Nor does it matter that his bondage is due to his wife's refusal to divorce him on statutory grounds. They need each other. He has made no advances to her, but she virtually proposes to become his mistress. He loves her, and after saying (one is not quite sure that Mr. Wells sees the humor of this) that "this is very sudden," and that Ann Veronica has "placed him in a very exceptional position," he accepts her. They go off together to Switzerland, and we participate in a rapturous honeymoon, and eavesdrop at some appallingly intimate conversations. There are no qualms or penances on either side. Then, after a gap of four years, we find them again in London. The elopement has put an end to his career as a scientist; but he has become the dramatist of the hour. Something has happened to put their relation upon a legal basis. The curtain falls upon them dining Ann Veronica's now meek and complaisant father, who remarks that all's well that ends well, and praises the wine. Perhaps it should be said that such persons, such incident, such a scene as this final one, are not so much remote from nature as from art—the lightsome and ingenious art, at least, of Mr. Wells.

The Glimpse. By Arnold Bennett. New York: D. Appleton & Co.

Again the Protean Mr. Bennett shifts his form. Only the other day we were expressing surprise that that severely realistic masterpiece (as it seemed to us), "The Old Wives' Tale," should have come from the rather wildly romantic pen which wrote "Hugo" and helped write "The Statue." In "The Glimpse" is effected a sensitive, mystical, Bensonian kind of thing. It is a study of life from the standpoint of one who has passed beyond life. To make the contrast as strong as possible, the central figure and story-teller is represented as a modern of the utmost sophistication. He has exhausted the resources of society and of culture. Successful authorship has left him indifferent. Only the rarest refinements of literature and music please him; and his satisfaction in them is embittered by the gross contempt in which the world at large holds them. Marriage has defrauded him: the woman to whom he has been united by a great and mutual passion has, in course of years, become only a friend.

In a mood which bids him find hope for the future in a renewal of devotion to his wife, he discovers that she has a lover. The shock tells upon a weak heart, and he apparently dies. Here begins the real experience, which we shall not try to describe. It differs from other imaginary experiences of the sort in that the freed spirit hovers for a time, helpless and alone, near the husk from which it has been thrust rather than escaped. It has a jealous interest in the attitude of other and moving bodies toward that still one. Gradually it detaches itself from the body and from the world, and lives through eons of a sort of sublimated human experience in some vague other-world. On the verge of a new existence, it is called back to the human body. Only a few hours have passed, and the wife has, from grief and remorse, attempted suicide. In brief, he recovers and she dies. The conclusion, which involves the bringing together of the dead wife's lover and her sister-in-law, is something of an anticlimax. The book as a whole lacks the masterly certainty of touch that marks "The Old Wives' Tale," which, we must suppose, represents the real and mature artist among these numerous Arnold Bennetts.

A Gentle Knight of Old Brandenburg. By Charles Major. New York: The Macmillan Company.

Since the startling and somewhat inexplicable success of "When Knighthood Was in Flower," Mr. Major has stood in the foremost ranks of Purveyors Extraordinary to Her Majesty The Public, of predigested history, sweetened to taste, and adorned with a frosting of romantic inaccuracy. In the present volume, however, there is a minimum of frosting. The author has wisely selected a period of absorbing dramatic interest, and transcribed it with spirit and comparative simplicity. The tempestuous wooing of the gentle Wilhelmina is in itself a romance, and to its present setting forth unaccustomed interest is given by assigning the hero's place to the unsuccessful suitor, the Margrave of Schwedt, the Gentle Knight of Brandenburg. It is indisputable that in this perverse world of ours true courtesy, unimpeachable integrity, and unselfish love may coexist in an unwieldy and grotesque body with conceit and an unseemly taste for beer; but when that fact is exploited in a romantic novel, it is a healthful sign that demands recognition. So finely does the fat little Margrave play the god of the machine, that there is no incongruous note in the close of the book, which crowns his noble sacrifice with the tragic dignity of death. The majority of the personages represented are the graceful and well-costumed puppets to which we have grown accustomed, but there are many touches of delicate humor and pathos in the figures of Adolph and his mother the Margravine.

Putting on the Screws. By Gouverneur Morris. New York: Doubleday, Page & Co.

The dainty binding of this book is the fit garment of a tale both pretty and pleasant, making no undue demands upon either the mental or the monetary exchequer. It is one of those modern fairy-tales so popular in the magazines as an anodyne after a harrowing exposure of social evils, where goodness prospers beyond the dreams of avarice, and every one is good. The Coles family, to be sure, do undergo a period of probational anxiety before Aunt Margaret casts aside her mask of deafness and poverty, and stands revealed as a dispenser of gifts as liberal as Tarapatapoum herself; but when they meet each fresh test of adversity with renewed fortitude and grace the reader is in no doubt of the ultimate apotheosis. This gentle story of triumphant virtue, penny-dip though it be, shines like a good deed in a naughty world of fiction.

MARIE ANTOINETTE AND LOUIS XVI.

Marie Antoinette. By Hilaire Belloc. New York: Doubleday, Page & Co. $2.75 net.

Louis XVI and Marie Antoinette. By Lieut.-Col. Andrew C. P. Haggard, D.S.O. Two volumes. New York: D. Appleton & Co. $6 net.

The interest of most persons is, not in history, but in people; and they are impatient of any interpretation of history which tends to subordinate the individual. So the Protestant movement means Luther and Calvin, the fall of Rome means Alaric and Theodoric, and the French Revolution means Marie Antoinette, Louis XVI, Mirabeau, Danton, and Robespierre. It is needless to point out the folly of such a reading of history, for it meets a demand at once genuine and universal. The most the historian can do is to see that the biographer, in adjusting his focus for the

one life in which he is interested, does not wilfully distort the whole picture.

This canon of criticism is at once invoked in dealing with the biographies of Marie Antoinette and Louis XVI. Many a time have their lives been written, but seldom with impartial judgment, and never with a full study of the influences that moulded them, and determined their fate. The present volumes are no exception. They are absolutely dissimilar in style, treatment, scope—everything but prejudice. Both are frank apologies for the life of the queen; both misinterpret history in their sympathy with her. Or rather, let us say, they view the Revolution so exclusively from her standpoint as to mislead a reader who is not forewarned. In the overthrow of ancient privilege, in the establishment of middle-class rule, the greatest individual obstacle was, undoubtedly, the strong-willed woman who called in the troops around Paris and Versailles, and so caused the attack upon the Bastille; she who nerved the King to whatever action he could be nerved into taking, against the new order. There was every reason, to be sure, why she should betray the French plans of campaign to the enemy, her brother. But that does not make her the less guilty. The tragedy of her life began in its gay and self-indulgent youth. She was no person upon whose caprice the welfare of a nation should depend. The King, that acme of kindly stupidity, managed fairly well during the first years of his reign, before the Queen gained her ascendency. Her whims, if indulged in private life, would have been more or less innocent. In a queen they were worse than a blunder. This is the true tragedy of her life—her irresponsible responsibility, her failure to understand, and consequently her own deliberate choice of the road to destruction. Of course, these biographies do not go into this. They are concerned with the brilliant fortunes of the gay young Austrian; the gossip and life at the court of Versailles; the relations between King and Queen; the darkening of social life at court during 1789; the march of the women in October; the gilded prison of the Tuileries; the tragic close with its strong human appeal.

Yet nothing could be more unlike than these volumes. Mr. Belloc is a master of style. His rhetoric is graphic. His thought is direct and incisive, his virile and masterful presentation of men and events is a triumph of literature. Yet his book is just so much more dangerous than the long, garrulous, and quite uninspired biography of king and queen by Col. Haggard. For Mr. Belloc is not a simple-hearted gentleman, amusing his leisure with a courtly tale; he is a deliberate apologist who chooses to pervert history in order to arrange his *mise en scène*. His book is about as untrustworthy a performance as ever came from the pen of a master of rhetoric—which is saying a good deal. It opens with the attempt to prove that the "Diplomatic Revolution of the middle of the eighteenth century sprang, like every other major thing in modern history, from the religious schism of the sixteenth!" That Reformation was to him the great catastrophe. Had it succeeded all over Europe, "The spirit of Rome would have vanished as utterly from her deserted provinces, as had that of Assyria from hers." Humanism, according to M. Belloc, is a Catholic thing. This is on a par, as an interpretation of history, with his attempt later to prove that the reason Marie Antoinette developed a liking for gambling was because of the lack of an heir to the throne! It is natural that such playing with events should be careless of detail and of statement. When Turgot entered upon his ministry "the Republic was in sight; already Napoleon was born!" (p. 114). What connection have Turgot's reforms with Jacobinism? "There is not one of us but has come upon a dozen such unions" (p. 62) as that of an imaginary marriage of Louis XV and Madame du Barry! That lady was not the spiteful piece Mr. Belloc makes her out to be, and it is absurd to suppose that she owed her influence over the king to the fact that she had "the same brow and forehead" as Pompadour (p. 63). How does the author know that, at the end of her last day's journey to Versailles, Marie Antoinette's "curiosity and the vitality of her years had forbidden her to feel fatigue" (p. 64.)? Or that her mother had carelessly passed by the mention of Du Barry in the note of Mercy (p. 43)? Or that when she danced with Chartres (Orleans), at her first ball at court, the young *dauphine* felt that "something chilled her"? Frequent indeed are the demands here made upon the imagination. And yet Mr. Belloc is a most brilliant writer, and capable of thought; and one enjoys his bad book—as a romance.

Col. Haggard talks to one as he would to a child. He takes you into his confidence. "Now, dear reader," he almost says, "if it were possible I should like to have this story turn out differently, but don't blame me!" In offering you his confidences, however, he wins your own. He is a good, old-fashioned story-teller. His biography in its two good-sized volumes, leaves little out that can well go in. He has read history to advantage, too, in spite of his failure to understand what the Revolution was all about, or in any case to convey a correct impression. He at least has read the decree of August 11, 1789, and other such documents. It is a better book than its inspired neighbor, because it is so straightforward that only the utterly uninitiated will be led astray by it.

A life of Marie Antoinette remains to be written.

The Mystery of Education and Other Academic Performances. By Barrett Wendell. New York: Chas. Scribner's Sons. $1.25 net.

In these four addresses the persuasive qualities of Mr. Wendell's wit appear once more to advantage. The title essay and that on the Study of Literature have a gradual Socratic approach that is charming and enlightening. One may doubt if the paradox of a higher education which leaves no perceptible residuum in actual acquirement will ever be wholly elucidated. Here we learn chiefly that intelligent sympathy and its wise radiation as power are the real aims, and both the latter-day dispersion of undergraduate courses and the eccentricity of much postgraduate research are held up for disapproval. This address was delivered before the Phi Beta Kappa Society of Johns Hopkins University, and, unless the gentleness of the manner prevented, it should have done them good. What the Newark school teachers thought when they were insidiously led on to the perilous brink where the simple study of literature goes over into Comparative Literature, we have no means of knowing. It should have encouraged them to hitch their pedagogical wagons to the star of the humanities.

Most interesting to those who have followed Mr. Wendell's career at Harvard was the address on the Study of Expression delivered before the College of Charleston, South Carolina. In most respects it is a recantation, an admission of bankruptcy of that elaborate system by which all comers were supposed to learn how to write. The results of an unsuccessful experiment, which he stalwartly insists had to be tried, is that it is futile to teach English composition "as a thing apart." It must grow out of personal interests which cannot be improvised at certain hours of academic schedules. Proficiency comes out of much reading, thinking, and feeling. In a sound education all courses would make for workmanlike expression. Since they do not, we may possibly believe instruction in composition to be still a necessary evil.

The address on Poe, given at the University of Virginia, seems to us at once the most ingenious and sophistical of these academic performances. What is said about the specific gift of the man, his isolation, his keen romantic glamour, his moral indifference, is excellent; but when Mr. Wendell goes on to say that a genius which had nothing of North or South in it is therefore a precious bond between the sections, he implies false axioms of equivalence. For fairness' sake we quote the statement upon which the cirenicon of Poe is based:

> No other romanticism of the nineteenth century was ever so serenely free from

limitation of material condition and tradition; none, therefore, was so indisputably what the native romanticism of America must inevitably have been.

If we are to argue so, we must also concede that American romanticism began and ended with Poe—a fact which rightly makes his talent precious, but hardly constitutes a bond between Puritan and Cavalier. By the same token we would engage to prove, say, at the University of Durham, that Shelley, being at once wholly detached and the quintessence of British individualism, is a tie between the hearts of Wessex and Northumberland. Public speakers are usually under the burdensome obligation of proving something agreeable and socially expedient.

For good measure is added a poem in heroic couplets, "De Præside Magnifico," to wit, President Eliot. It is genial and witty, and doubtless served its turn well; but it was possibly a mistake to reprint it. The rhymes fail to answer each other with a satisfying bang. It gives the impression of having been thought out in blank verse to which rhyme has been added subsequently and without relish.

Journals of the House of Burgesses of Virginia, 1742-1747 and 1748-1749. Edited by H. R. McIlwaine. Richmond, Virginia.

This is the second volume of the Journals of the House of Burgesses of Virginia published during the year 1909, and the seventh in the series. It contains the Journals for two Assemblies, or six sessions. The editor gives in the preface a useful summary of the most important acts of each session.

The first session of the former Assembly began on May 6, 1742. Gov. Gooch had returned in 1741 from the unsuccessful expedition of Admiral Vernon against Carthagena, in which he had commanded the Virginia troops, instead of Gov. Spotswood, who had died June 7, 1740, just before the expedition was ready to sail. During the Governor's absence, the Rev. James Blair, commissary of the Bishop of London and President of the Council, acted as Governor (1740-41). In the meantime, the House of Burgesses appointed the usual standing committees, and the committee of claims was busy with claims of the widows of those whose lives were lost in the unfortunate affair of Carthagena. Furthermore, a tobacco law was passed, and other legislation of considerable importance.

The second session opened September 4, 1744, more than two years after the first closed. The tobacco law was again changed, and a special act for the suppression of gambling was passed. The number of laws passed was forty-six, as against the thirty-three of the previous session. An act laying an increased tax on skins and furs for the support of William and Mary College was passed, and an act allowing free negroes, mulattoes, and Indians, "being Christians," to testify in cases involving these classes. The county of Albemarle was formed from Goochland in this year, and the town of Port Royal on the Rappahannock was established. The third session (from February 20, 1745) was called by the Governor on hearing the news of the uprising of the followers of the Young Pretender. In its course, both Governor and House manifested their strongly Protestant sentiments and sympathies. As in an earlier session, the House of Burgesses now showed its jealousy of the Council and zeal in maintaining its rights and privileges. One need not discuss in detail the acts of the fourth session of this Assembly, of only six days' duration (from July 11, 1747). Finally, the fifth and last session of this Assembly opened March 30, 1747, to make provision for rebuilding the Capitol, which had been destroyed by an incendiary fire. Now began in earnest the dispute between the House and the Council as to the removal of the capital. The House favored a site on the Pamunkey; the Governor and Council preferred Williamsburg. The Governor finally dissolved the Assembly, and called a new one to meet on October 27, 1748, which continued in session to May 11, 1749, though a recess was taken from December 17, 1748, to March 2, 1749. The Governor recommended Williamsburg as the site for the Capitol, and action on the report of the committee on revision of the laws. The first subject was discussed as bitterly as before. The bill for a town on the Pamunkey was defeated by five votes, and that for rebuilding the Capitol at Williamsburg was passed by two votes. Later, a bill for a town at Newcastle, and the erection of public buildings there, was passed by two votes, but was rejected by the Council, the Williamsburg bill having already received the Governor's signature. The dispute continued, and the Governor prorogued the Assembly. The editor remarks that the acts passed by this Assembly "constituted a mass of well-digested legislation which is a worthy monument of the ability of the leaders of the colony at the middle of the eighteenth century."

Whatever criticism may be made of the House of Burgesses of Virginia, especially for their disputes with the Council, and their stickling for their rights and privileges, it must be conceded that it was a working body, patriotic and energetic, and much more democratic than the Council itself. The last action taken by this Assembly was the appointment of a committee of five of the most prominent members to see to the printing of the revised laws, and to the disposition of official copies of them. As for the Governor himself, one is impressed by his religious attitude throughout his administration, and, in his final address to the Assembly, by his exhortation that this body "continue steadfast in the communion and doctrines of the Church of England," in "a religious regard for the clergy," and in "a legal indulgence to Dissenters." These last were not yet regarded as on an equality with members of the Church of England, for the recommendation with respect to them reads, "there is not anything can contribute more to the reformed interest, or the public weal, than a legal indulgence to such Dissenters, who, under the required proof of their fidelity to our civil establishment, lead quiet and inoffensive lives." Yet the events of the next twenty-five years welded the people of Virginia politically into a united whole.

Essai sur Leconte de Lisle. By Jean Dornis. Paris: Librairie Paul Ollendorff. 3 fr. 50.

There is a good deal of the card catalogue about M. Dornis's essay—the kind of thing an attentive reader might make by partitioning his author into topics such as sense of color, feeling for nature, and so on, and noting apposite quotations, which are then sorted and connected by a tissue of comment and transition. To be sure, this process, if persisted in as M. Dornis does persist in it for 350 pages or thereabouts, will finally give the reader a kind of familiarity with the poet; though it does not orientate him particularly or quicken his critical ideas. But, then, M. Dornis's attitude toward his author is not precisely critical; it is unreservedly enthusiastic, even rhapsodic. Though he recognizes, as far as it is admirable, the poet's grandiosity—the singular atmosphere of vastness or spaciousness diffused through such poems as "le Sommeil du condor"—he fails to recognize the equally curious sense of unreality which makes even the poet's Greek pieces so un-Greek, and which in connection with the former characteristic lends all his figures a singular air of something seen in a fever—large, remote, and vivid, but somehow fantastic and insubstantial like pasteboard *cartons*.

Besides, the cautious reader cannot fail to suspect M. Dornis in his enthusiasm of exaggerating his author's importance as a philosopher. As a matter of fact, Leconte de Lisle was deeply interested in the successive religious beliefs of the world—indeed, he is occasionally, when his inspiration flags, rather too much of a cosmologist. But it was always the panorama of faith that interested him; and it is going too far to make his main preoccupation religious—it was so obviously something else: what he himself would have called ar-

tistic. As he says in his own person: "Le premier soin de celui qui écrit en vers ou en prose doit être de mettre en relief le côté pittoresque des choses extérieures." And his frequent luridness, ferocity, and satanism, particularly in his pictures of mediævalism, confirm his confession. It is, no doubt, an inverted sort of picturesqueness that he elicits from his subject in such cases; but in this respect it has its parallel in Baudelaire; while as for his zoölogy or natural history, it would be interesting to compare him with La Fontaine. In reality, then, it would probably be nearer the mark to reverse these relations and make his philosophical development depend upon his artistic; for iconoclast as he was, he carried his idolatry of art so far as to believe no statesman proper to his office without a clear vision of artistic beauty. It is always a little dangerous to convert poetic themes into philosophical theses; and M. Dornis, like many other critics, does not seem to have escaped entirely unscathed.

On the other hand, while his enthusiasm has in this way thrown his critical faculty into partial eclipse, it has also led him into faults of taste which are sometimes more English than French —*emphase* and in particular expatiation and the kind of development into which he has been drawn by the conscientious desire to make the utmost of every hint and suggestion of the poet's. These failings are more or less evident everywhere, though they are painfully obtrusive in such chapters as "la Vie passionnelle" and "la Conception de l'amour." In these matters we shall probably never understand the Frenchman. In short, the great defect of the book is that it is too long; it would be better digested, better in every way, if it were a third of the size.

Fernando Cortes. By Francis Augustus MacNutt. (The Heroes of the Nations Series.) New York: G. P. Putnam's Sons. $1.35 net.

This book is virtually an expansion of a biographical introduction which the author prefixed to his two-volume edition of the "Letters of Cortes," published more than a year ago (see the *Nation*, July 16, 1908). To judge from his preface, Mr. MacNutt had a chance to profit by the reviews and criticisms of his earlier work before the present one saw the light; if this be so, it is unfortunate that he failed to avail himself of his opportunity, for his latest production, far from being an improvement, is really not the equal of its predecessor. In that work Mr. MacNutt showed clearly that the earlier verdicts on Cortes were far too severe; in the present one, he almost topples over backwards in his anxiety to defend his hero, and, in our judgment, is as much too favorable in his verdicts as his predecessors were the reverse. That the conqueror of Mexico was a great soldier and statesman no well-informed person to-day is disposed to deny, and to judge from his preface, Mr. MacNutt (who is "not aware of having glossed over or condoned either the regrettable flaws in Cortes's private morals or the several acts of duplicity and excessive cruelty which so seriously detract from the admiration his great achievements would otherwise unreservedly command") does not seek to do more than represent him as such. But when we come to the book itself we find that its initial promise of impartiality is scarcely fulfilled. No amount of "judging according to the standard of contemporaries" justifies the author in absolutely ignoring the strong evidence that Cortes strangled his first wife, Catalina Xuarez, in bed, and in speaking casually of her "unlamented death." The whole story of the arrival and suspiciously timely death of the visitador, Don Luis Ponce de Leon, is treated with almost equal inadequacy. Moreover, the book will prove disappointing to those who are interested in Cortes from other points of view than that of conqueror of Mexico. His career in Spain and North Africa as a lieutenant of Charles V has never been thoroughly worked up, and, as there are abundant materials available for so doing, it is a matter of surprise and regret that Mr. MacNutt has not utilized them; he has dismissed in less than 30 of his 475 pages the entire European career of his hero. Edward Armstrong, in his life of Charles V, gives quite as much information concerning Cortes in the disastrous expedition against Algiers in 1541, for instance, as does Mr. MacNutt in this biography. The index is inadequate. Many important names are omitted, and the references under those that do appear are almost invariably incomplete.

We have dealt much in criticism, but should be unwilling to leave the impression that the book is utterly without value. Its bias in favor of Cortes makes it a salutary corrective to the older writers who erred in the opposite direction; the author has used a considerable amount of material not accessible to his predecessors (it is a pity that the last volume of the Hakluyt Society's publications, with its admirable translation of one of the four extant accounts of the conquest of Mexico by eye-witnesses, appeared too late for his purposes); he tells his story in a straightforward and on the whole attractive manner; and the errors of detail are not numerous. But the reader instinctively feels at every turn that Mr. MacNutt has not "read all around his subject," that his background is insufficient, that he is not, in short, a really trained historian. We cannot conclude, however, without remarking that his book, with all its shortcomings, deserves much better paper and printing than its publishers have apparently been willing to afford; certainly it cannot compare, in these respects, with the earlier volumes of this series.

Notes.

President Nicholas Murray Butler's lectures at the University of Copenhagen have appeared at Paris (Cornély), in a translation by Mme. Emile Boutroux, and with a preface by Emile Boutroux, under the title "Les Américains."

From Boston is announced the early publication of "In Unfamiliar England," by Thomas D. Murphy (L. C. Page & Co.). The new volume will be uniform with its author's "British Highways and Byways."

Elliot Stock will publish on February 1, for David Cuthbertson of the Library of Edinburgh University, a volume entitled "Thirty-three Years' Adventures in Bookland."

An endowment of one thousand dollars annually for three years has been made to the Glasgow University for special lectureships in Scottish history and literature. In 1912, it is hoped, a chair of Scottish history will be permanently endowed from the surplus of the Historical Exhibition to be held in 1911.

Owing to the death of Vernon Harcourt and other unforeseen circumstances, no publication for the present year has yet been issued by the Selden Society. The work is only delayed, and the Council hopes that two volumes will be completed at an early date and distributed to subscribers for 1909, one being a volume of the Year Book Series and the other being Star Chamber, Vol. II.

Two volumes are added to the new Scott published by Henry Frowde: "Waverley" and "Guy Mannering." Inexpensive as are these reprints, they combine the attractions of clear type, fair white paper, and woodcuts which, in their quaintness of tone and lack of the hard, photographic finish, are thoroughly in character.

"What is the use, in the little time we have, of trying to read books? Dr. Hornbrooke gives us the cream of literature with no bother to ourselves." Such was the testimonial, says the "foreword," of a busy business man to the author of "The Ring and the Book, an Interpretation" (Little, Brown & Co.). Perhaps that is about all that needs to be said for this posthumous volume by the fourth president of the Boston Browning Society. Written in 1903, five years before the publication of "The Old Yellow Book," it contains one or two errors of fact, such as the statement that the original source gives us no information about Pietro and Violante. Otherwise, so far as it goes, Dr. Hornbrooke's work is impeccable. It is almost entirely free from silly moralizing, and it attempts practically nothing in the way of criticism. In fact, the main difference between "The Ring and the Book" and "The Ring and the Book, an Interpretation," is that Browning's version is 477 pages long, and in verse, while Dr. Hornbrooke's version is only 235 pages long, and is, for the most part, in prose. If that is the way to get the cream of literature, why, then, this should be the cream of "The Ring and the Book."

An essay on travels, through the ages, with due attention to the sentiments on the subject expressed by worthy men and scholars, could hardly fail to be an interesting work. One would find material enough, were he to neglect all but English and American sources. Richard Lassels, Gent., was right in thinking, long ago, that "travelling makes a man sit still in his old age with satisfaction." Such are one's musings in rereading James Russell Lowell's "Fireside Travels," issued by Henry Frowde, in the Oxford Library of Prose and Verse. It is true that this kind of writing has been thoroughly commercialized nowadays, and that its worst enemy is the so-called "three-color process." Yet nothing can blind us to the excellences of that small portion of travel-literature which pleases and lives. Perhaps the best of travel books might have been written without even "going a journey." You may find your antipodes without a voyage to China, as the author of "Fireside Travels" himself assures us, and one of the best books in this same genre is, assuredly, the "Voyage autour de ma Chambre." As for the book by Lowell, what part of Lowell's writings is more charming than the initial essay on Cambridge Thirty Years Ago? As E. V. Lucas writes in the introduction to this pleasing reprint, one would not be surprised to hear a reader remarking on it that it is very like Stevenson in parts, "and no doubt it is like Lamb, too, in others."

In preparing his edition of Gower's "Confessio Amantis" for the Clarendon Press and the Early English Text Society in 1900, G. C. Macaulay's attention was called by J. Fitzmaurice-Kelly and by the librarian of the Escorial to the existence of an old Spanish translation in manuscript, almost contemporaneous with the original (see his Introduction, pp. clxvii-clxviii). This Spanish translation has just been published, under the title: "Confision del Amante, por Joan Goer, Spanische Uebersetzung von John Gowers Confessio Amantis, aus dem Vermächtnis von Hermann Knust nach der Handschrift im Escorial herausgegeben von Adolf Birch-Hirschfeld" (Leipzig: Seele). The volume is a portly one of 510 pages of text, 22 pages of contents (also from the MS.), and a glossary of 18 pages for the peculiar Spanish words and for the proper names. An interesting feature of the translation, made by one Juan de Cuenca, is that it rests upon a Portuguese version from the English, made by an Englishman, Robert Payne, canon of Lisbon. The Spanish manuscript is of about 1400, and Robert Payne's Portuguese conforms to the earlier, 1390, version of the English "Confessio."

The general significance of this Spanish version is self-evident; for its value in detail we must wait until Gower students in Europe and America have had time to compare it line by line with the original. Meanwhile, Professor Birch-Hirschfeld's remarks (p. iv) strike us as too meagre even for a provisional note. At any rate, the book will force us to reconstruct some of our current views. The genius of Chaucer has so completely overshadowed Gower's labored efforts that one feels startled at the discovery that in the eyes of what the French call "contemporaneous posterity" the "Confessio" should have totally eclipsed "Troilus and Cressida" and the "Canterbury Tales." The sobriquet, "Moral Gower," gains for us fresh significance. From Sidney Lee's admirable study of the "Beginning of French Translation from the English" (Bibliographical Society Transactions, 1907), one learns that Continental renderings of English were quite late, namely, from the end of the sixteenth and beginning of the seventeenth centuries. But now we know that Spain, in her "Confision," was ahead of France by nearly two centuries. In every respect the present publication marks a new point of departure in English literary study.

Dr. Benjamin Rand has brought out a companion volume to his "Modern Classical Philosophers," giving us this time a series of selections from "The Classical Moralists" (Houghton Mifflin Co.). By "classical" he does not mean Greek and Latin, but standard, for his authors range from Xenophon to James Martineau; and the present volume would perhaps have been better distinguished by title from its predecessor if he had called the earlier group "metaphysicians" rather than "philosophers," for much of the writing of his "moralists" is philosophy in the purest form. As in the earlier volume, the selections are of sufficient length and significance to offer a rapid yet fairly complete survey of ethical theory from its beginnings in Greece down almost to the present day. A few pages at the end might have been added, we think, to exhibit what Socialists and a certain type of reformers are pleased to call the New Morality, but, with that possible exception, Dr. Rand has, in our judgment, displayed rare tact in choosing and discarding. Two of the texts, Abelard's "Ethics, or Know Thyself," and Henry More's "Enchiridion Ethicum," appear here for the first time in English, having been translated for this work by Prof. E. K. Rand of Harvard. Altogether, these two volumes are invaluable as text-books and as agreeable summaries for the general reader. In particular, we have been impressed by a characteristic difference between the "Philosophers" and the "Moralists." In the former the lion's portion went to the Germans from Kant to Schopenhauer, who made a section of 296 pages, while the only considerable stretch occupied by the English was 132 pages, which went to Locke, Berkeley, and Hume. In the volume of "Moralists" the proportions are quite reversed. Here the German school does indeed fill 108 pages, but against them are the three great English groups: from Hobbes to Cumberland (44 pages), from Locke to Adam Smith (177 pages), and from Mill to Martineau (144 pages). The present reviewer has in particular taken the occasion to read carefully the pages of the deistic group (Locke, Clarke, Shaftesbury, Mandeville, Wollaston, Butler, Hutcheson, Hartley, Hume, Smith); he has been struck anew by the richness of meaning and the sanity of expression that characterize the movement, and by the value of such a bird's-eye view as is afforded in these selections.

In "The Spirit of Youth and the City Streets" (Macmillan) Jane Addams gives another collection of human examples which seem to assert the malorganization of our society. Here are young girls driven by love of gayety and the normal gregariousness of sex into the streets, and thence into the only rendezvous for young folk—the dance hall. Here are boys normally full of love of adventure rebelling against the treadmill work of the factory. Again, a whole population is left to take its notions of romance and the ideal from the moving-picture shows, whose staple is revenge or dishonest mirth. Finally, in the Jewish immigrants who have carried ideals of national regeneration from Russia, we have an imposing body of political idealism, which if directed might be potent for good, but as it is dies into the prevailing commercialism or smoulders in dangerous discontent. Miss Addams knows her people, and no one will gainsay that here are perils of mind and body that want vigilance. Whose vigilance? That is the bitter question that after all must be asked, and never is satisfactorily answered. Miss Addams imagines cities that will provide for and regulate the recreation of the young. Something of the sort is already done in playgrounds and halls. Hull House and many another settlement have proved the theatrical enthusiasm and capacity of working people, but here is evidently the very slenderest offset to the biograph. In short, so far as Miss Addams's purpose is not descriptive, she appeals to a sort of collective humanized wisdom that simply has never existed. What she imagines to be the better regulation of life in classic and mediæval times was not imposed by authority, but was the instinctive demand and product of the people it benefited. That the people must learn, is the hard lesson of history. One may substitute only in a very limited measure the superior for the average intelligence. The soundest suggestion in this book, to our thinking, is that, if young workers were shown the relation of their task to the whole process of making the finished product, intelligence would relieve the necessary drudgery of work. Again, one asks, Who is to teach? but this time more hopefully. It might actually pay the manufacturers to make such an appeal to mind. In general we welcome such studies of the normal and exceptional hazards of a civilization become too precipitately industrial. We believe there is a great work of social readjustment and rehabilitation to be done. We regret merely the obsession of an omniscient State or city that is to set the crooked things straight. Social movements have always worked piecemeal, from person to person. No government has done much more than to confirm a beneficence already existing. Miss Addams's authority rests, not upon her visions of a prescient democracy, but upon the fact that she has pursued valiantly the usual hand-to-mouth task of social reform, quite as St. Francis undertook it seven hundred years ago.

Bits of the verse, and an occasional story or legend, of Gustavo A. Becquer have been done into English, but now we have a good section of his collected *obras* translated by Cornelia Frances Bates and her daughter, Katharine Lee Bates, under the title "Romantic Legends of Spain" (Thomas Y. Crowell & Co.). This group of "Leyendas" represents the solidest and most enduring part of Becquer's work, though his "Rhymes" must be studied by one who would know the affinities of his talent, and his "Cartas Literarias desde mi Celda" for the higher reaches of his style. The pres-

ent translation has been executed with elegance and accuracy, if we may judge by the few comparisons we have made with the original. Remarkable is the fact that this version of Becquer was begun and partly done by Mrs. Bates after she had first taken up the study of Spanish at seventy. Professor Bates put the finishing touches to what thus becomes a pious memorial of her mother.

In the "Cathedral Cities of Spain," by W. W. Collins (Dodd, Mead & Co.), the illustrations by the author are what make the book. There are more than sixty reproductions in color, and as these are from sketches of the noblest architectural monuments of Spain, the result is striking and often very beautiful. We instance the cathedral of Leon shown by starlight and Segovia at sunset. The text gives dryly the historical and artistic details, but it is the artist's work that constitutes the charm of the volume. It is one which all who have seen the originals, here so brilliantly rendered, would be glad to possess.

The reader of William Dean Howells's earlier sketches of residence and travel on the Continent and in England turns with eagerness to his new book of "Seven English Cities" (Harper & Bros.). In the first of these papers, the traveller confesses to "a modest liking for Liverpool," which is, however, tempered by the reflection that Liverpool "and the like English towns" lack "any social consciousness." The six other cities are Manchester, "Smokiest Sheffield," York, "the mother of the American Athens," and a brace of Welsh resorts. There is a word, too, of racing and royalty at Doncaster, and some rural excursions, and a final chapter called "Glimpses of English Character"—with more than its share, this last, of interest and of meatiness. Neither his references to the harmless necessary Baedeker, nor those to his notebook, contribute so much to the attractiveness of these sketches as does Mr. Howells's exquisite stylistic skill. It is the artfulness and the artistry of the performance—and nothing more—which keep one from yielding to the temptation to call it, finally, perfunctory. There are a great plenty of photographs as illustrations, and a few drawings.

"In the Abruzzi," by Anne Macdonell (Stokes), is something more than a book of travel. While it betrays only passing personal acquaintance with the self-contained folk who inhabit the dorsal eminence of Italy, it is informed by a keen sympathy and a real enthusiasm. Moreover, the histories and collections of folksongs and tales have been drawn on freely. The result is a blend that should be useful to the intending visitor, and agreeable to the stay-at-home. In the journal of Keppel Craven, a peculiarly insensitive and stately Briton, who from his coach disapproved of the Abruzzi nearly a hundred years ago, a real treasure of a humoristic sort has been disinterred. Twelve color prints after aquarelles by Amy Atkinson give a fair notion of the scenery. Where the author has been particularly successful is in suggesting the romance of the region. In an Italy chiefly material it has been a perpetual reservoir of enthusiasms. Thomas of Celano, of the "Dies Iræ"; John of Capestrano, who made "the great refusal" of the Papacy—these are typical figures. Rienzi fled thither for peace, and later Tasso. Zealots of the impossible readily arise there. The elder Rossetti, Don Oreste de' Amicis (for a time a Messiah), Gabriele d'Annunzio are characteristic figures of the century past. Ancient mystery is still alive in these mountains. Near Scanno you may see St. Dominic adored with accessories of serpent worship of a suspiciously pagan sort. Or are the snakes merely a pious reminiscence of the thaumaturgy of Moses? Witches and warlocks still abound. Pilgrims traverse the barren uplands on foot. Yet who would see this primitive country should do so soon. The "American money" is trickling in; the young people have views; Socialism shows its face. In general our author has been careful to give references, but the compilatory character of the book makes it at times difficult to be sure of the distinction between what has been seen and what merely read.

It is a satisfaction to commend the translation of Rudolf Eucken's "Lebensanschauungen der grossen Denker," produced by Williston S. Hough and W. R. Boyce Gibson, which bears the English title, "The Problem of Human Life, as Viewed by the Great Thinkers from Plato to the Present Time" (Scribner). Eucken was in 1908 awarded the Nobel prize for literature and his philosophical writings are distinguished, not only for clearness and penetration, but also for chasteness and elegance of style. Dean Hough and Professor Gibson have rendered his eloquent pages exceedingly well, and it is interesting to note that both Mrs. Gibson and Mrs. Hough collaborated in the work. A better introduction to the history of philosophy than this volume of Eucken would be difficult to find. The discussion is clothed with vital interest, and the criticism of the chief systems of thought from Plato to Nietzsche and the Socialists is sustained on a high level by the constant relation of philosophical opinions to their practical embodiment in literature and religion, and in the lives of nations and individuals. Eucken is a spiritual idealist, and his idealism is held with an intensity, and an appreciation of the truth and force of opposing tendencies, which few have equalled. In its German form his work has long been known to the discerning. It has passed through seven editions in the original, and it may be hoped that it will gain like vogue among English readers, a result which the character of the translation is designed to further.

One may have an aversion to all attempts to portray the religion of a particular class or condition of men, in the conviction that humility before God is not served by the assumption that college men, or Englishmen, or haberdashers, or any other part or parcel of humanity, stand in need of a particular type of faith; yet one may find much to commend in President David Starr Jordan's essay on "The Religion of a Sensible American" (The American Unitarian Association). Very wisely, President Jordan has not handled his subject abstractly, but has set forth the religious convictions and teachings of a colleague, Prof. Wilbur Wilson Thoburn, who died some ten years ago at the early age of forty. Professor Thoburn, a biologist, was in the habit of making addresses on earnest subjects to the students at Stanford University, and from the notes of these addresses, with much discriminating comment and essay of his own, President Jordan has described a useful type of piety, not Isaian in passion, nor Johannine in vision, but kindly and gentle, insistent on the moralities, and above all things sincere and candid.

The Theological Translation Library, which has introduced to English readers a large number of valuable works of German critical scholars, now includes a second volume of Pfleiderer's "Primitive Christianity," translated by W. Montgomery (G. P. Putnam's Sons). This volume, following the first on the work and writings of Paul, treats of the gospels of Mark, Luke, and Matthew, and contains sections on the Acts of the Apostles, the Preaching of Jesus, and the Faith of the First Disciples. Pfleiderer holds more closely to the views of Baur than many recent scholars, but his "Urchristentum" has won high place as one of the most discerning studies of the origins of the Christian religion, and this volume should be studied by those who are inclined to grant too ready acceptance to Harnack's opinions on the character of Luke as historian.

The most scholarly convert from Roman Catholicism to Protestantism for several decades is doubtlessly Count Paul von Hoensbroech, who, before his change of church relations, was a prominent Jesuit. He now publishes a work entitled "Vierzehn Jahre Jesuit," of which the first volume, called "Persönliches und Grundsätzliches," with the sub-title "Das Vorleben: Die Ultramontan-Katholische Welt, in der ich aufwuchs," has been issued by Breitkopf & Härtel of Leipzig. The work is particularly valuable for the discussion of the pedagogical principles of Jesuitism and the practical way in which these are applied. All things considered, the discussion seems fair and objective. The book is a real contribution to pedagogical literature.

The University of Leipzig received on the occasion of its recent semi-millennium celebration endowment funds amounting to almost one and a quarter million marks. The most characteristic jubilee volume issued in this connection is the work entitled "Die Universität Leipzig, 1409-1909; Gedenkblätter," the joint product of Profs. Erich Brandenburg, Count Georg Vitzthum zu Eckstädt, Albrecht Kurzwelly, Jakob Strieder, Theodor Brieger, Ernst Kroker, Max Brahn, Paul Kühn, and Wilhelm Bruchmüller. It is issued by Meyer & Quelle (Leipzig).

Hirzel and Bernays published in 1875 the first edition of "Der junge Goethe," which contained, in chronological order, almost every known product of the young poet's pen, including letters, up to September, 1776. The idea appealed to scholars and the work began at once to be referred to as a standard publication. As time went on, more manuscripts of early writings and many important letters of that period were discovered and the work sank in importance because of the gaps in it. A second, revised, edition is now being published by the Insel-Verlag of Leipzig, with Max Morris as editor. Judging by the first volume, which recently appeared, the new edition will be a worthy successor to the first. It is the editor's plan to incorporate in this collection all known products of young Goethe's various activities up to the time

of his departure for Weimar. The only exception to be made is in the case of the drawings of the Swiss journey. Of these enough of the most characteristic are to be included to give an adequate idea of the young man's gifts in this field. Apart from this omission (which is excused on the ground that Vol. XXII of the Publications of the Goethe Society contains all these drawings, and the reproduction of all of them here would incur too much expense), the series will include all the writings of the period, together with all the letters, school exercises, diaries, note books, public utterances, printed articles, legal documents, book dedications, album verses, etchings, drawings, and conversations. The sixth volume is to be a commentary on the five volumes of text. This will be the first time that such a comprehensive commentary has been undertaken, and it is badly needed, particularly for the early letters. Merris's last volume will be eagerly awaited by Goethe scholars.

William Arnold Steevens, who for thirty years occupied the chair of New Testament interpretation in the Rochester Theological Seminary, and was a writer on philological and Biblical subjects, died January 2 at Rochester. He was born at Granville, O., in 1839, and was graduated in 1862 from Denison University. Later he studied at the Rochester Theological Seminary, at Harvard, Leipzig, and Berlin. Among his publications were "Select Orations of Lysias," "Commentary on the Epistles to the Thessalonians," "Outline Handbook of the Life of Christ" (with Ernest D. Burton), "Harmony of the Gospels for Historical Study" (with Ernest D. Burton), and "Life of the Apostle Paul."

From Germany is announced the sudden death of Karl Krumbacher, professor of mediæval and modern Greek at the University of Munich. Born in 1856, he made several voyages to the Orient, published numerous important articles on Greek mediæval philology in the memoirs of the Academy of Munich, and founded in 1892 the *Byzantinische Zeitschrift*.

Science.

Sir Joseph Banks, the "Father of Australia." By J. H. Maiden. London: Kegan Paul, Trench, Truebner & Co.

To call Banks the Father of Australia brings surprise to readers who are unfamiliar with the important part which he took in the exploration of the southern continent. Banks accompanied Capt. Cook in his famous voyage to Tahiti to observe the transit of Venus in 1769. After accomplishing successfully the object of their visit, they sailed around New Zealand, and then decided to push west in order to see something of the Continent, which had been already touched by the Portuguese and the Dutch. In the council which arrived at this decision to sail westward, Banks had undoubtedly great influence, and in the subsequent activities along the eastern coast he held a prominent place. But although we learn from his modest journals how hard he worked and how much he accomplished, his name and fame were wholly overshadowed by the reputation of the commander, James Cook. Banks was apt to give too much credit to others, and his friends often protested against his too great modesty. But, on the other hand, Linnæus went too far and claimed too much for him when he wrote to his botanical correspondent Ellis in 1771 that "the new-found country ought to be named Banksia from its discoverer, as America was from Americus." Cook and Banks reached the mainland on April 28, 1770, at a place which was so rich in unknown plants that it was offhand named Botany Bay. After a short time they sailed northward, just missing by the merest chance the magnificent harbor lying a few miles from Botany Bay, and now known as Sydney. From the first hour of his landing until the last of his life, Banks never lost his great interest in the natural history and the development of Australia, and his efforts to improve the welfare of the young colony were never relaxed. But he did not, during his lifetime, receive due credit for this interest and these efforts. It is therefore proper that Australia, and especially the mother colony of New South Wales, should add to existing memorials of Banks another which shall express more fitly the high esteem in which he should be held.

The present volume by Mr. Maiden is to aid in this purpose. The author says in his preface:

> To be quite frank, the work has only two objects: to disseminate information concerning Australia's greatest early friend, and to suggest that my readers may be pleased to open their purse-strings for the purpose of establishing a memorial to him.

He who thus expresses himself is the government botanist of New South Wales and director of the Botanic Gardens, Sydney. He has long been a resident of the mother colony and is familiar with its early history, rich in botanical traditions. To no better hands could have been entrusted the charge of bringing together the interesting features in the life and work of Banks.

By his long connection with museums, Mr. Maiden has learned what will interest the public, while his training as a systematist has taught him the value of perspective and proportion in arrangement. Therefore we find that many of the striking points in the career of Banks are brought out in strong relief But the author has felt so fully the necessity of keeping his volume within narrow limits that he has sometimes, so to speak, merely labelled a fact or an inference, much as he would deal with his specimens in an exhibition case, whereas, with more room at his disposal, he would have given a more detailed account.

It was not so much, however, by his own journeys as by his direct contributions to the journeys and work of others that Banks is most widely known. He supported many botanical assistants and artists of the first order, one of the chief workers under his patronage being "princeps botanicorum," Robert Brown. He spent his ample income generously and very discriminatingly and withal most modestly. Banks was president of the Royal Society from 1778 to 1820, an age in which some of the most important advances in natural and physical science were made. Mr. Maiden has described clearly and with good taste certain peculiarities possessed by Banks as presiding officer, but he justly emphasizes the fact that he possessed broad scientific sympathies.

One of the most attractive features of this interesting volume is a chart of the Admiralty survey of the east coast of Australia, on which is given for comparison the marvellous chart by Capt. Cook. It is not too much to say that one could safely sail along the eastern coast by Cook's chart alone, the positions and soundings are so well given. We congratulate the Memorial Committee upon the excellence of the volume which they entrusted to Mr. Maiden, and we wish them great success in their endeavor to establish in New South Wales a dignified memorial of their great benefactor.

Drama.

Rudolf Besier's "Don," the latest production at the New Theatre, is one of the best light comedies that have come out of England in some time. Although lacking in proportion and improbable in spots, owing to exaggerations of a kind common to youth and inexperience, it is a genuine and, in the main, consistent study of life and character, written in a bright satirical vein, very neatly constructed, and full of effective situation. The hero, nicknamed "Don" by his betrothed, on account of his Quixotic disposition, is an idealistic scholar and poet, and a practical humanitarian. Almost on the eve of his own wedding, hearing that a young woman, to whom he had more than once played the good Samaritan, had been driven to desperation by the cruelty of her husband, Albert Thompsett, a fanatical Calvinist, he deserts his betrothed to rush to her rescue. Finding her in a state of abject misery and terror, he promptly carries her off from her home, watches over her by night, in all brotherly innocence and tenderness, at a hotel, and conducts her the next day to the rectory of his own father, a high dignitary of the Church of England.

Strong in the consciousness of his own integrity, and in his belief that beneath the roof of a Christian priest his companion will find the sympathy and succor of which she is so much in need, he expects the heartiest welcome and commendation. Actually he encounters a storm of reprobation. And it is in the nice discrimination of character exhibited in the behavior of the personages assembled that the peculiar merit of the comedy consists. General Sinclair, a pom-

pous, blustoring, thick-headed brigadier, the prospective father-in-law, instantly puts the worst possihle construction upon the whole affair, ridicules grossly the possibility of any other explanation, and declares the engagement with his daughter at an end. Mrs. Sinclair, a sharp-witted woman of the world, though no less incredulous than her husband of Don's story, is much amused by it, and, mindful of her daughter's future and of scandal, counsels deliheration. The Rev. Canon Boddington, Don's father, while unwilling to admit his son's guilt, denounces him vigorously for breaking the law of God and man by separating man and wife. Mrs. Boddington, Don's doting but silly mother, vows that her boy is spotless, but evidently the victim of a designing woman. None of them for an instant dreams of accepting Don's story at its face value. Ann Sinclair, the bride-to-be, is indeed eonvinced at last of her lover's good faith, but vows that she will never marry him if the injured husband gets a divorce, as in that event he will be bound to marry the rejected wife. In the end truth prevails, and there is a general and logical reconciliation. But the chief artistie worth of the play does not reside in its story, interesting and life-like as it is—in spite of the weaknesses previously alluded to—but in the legitimate outgrowth of incidents from the prescrihed conditions and the conflict of character. Here is a real eomedy of life and manners, satirical, witty, vivacious, amusing, and freighted with a pregnant moral. The management of the New Theatre is entitled to warm congratulations upon its acquirement and capital performance of such a piece.

At one of the cheaper Chicago theatres an interesting experiment has been successfully made in the production of William Vaughn Moody's "Great Divide." According to witnesses, both in applause and in discreet silence an audience, to whose judgment many of our so-called "popular" successes are not submitted, thoroughly appreciated the play.

Henry Arthur Jones, having written the one-act piece, "The Knife," in whieh Mr. and Mrs. Arthur Bourchier are acting in the Palace Music Hall, in London, is inclined to think that there is a great dramatic future for the halls. "Serious plays are just now at a very great discount with English playgoers," he says in an interview; "while the same thing in one act forms only an isolated item among many in the evening's entertainment at a variety theatre, and offers the audience a chance of escaping from their serious mood as quickly as possible. For this reason I think we shall see serious plays more and more finding their homes at variety theatres." He quickly adds, however, that he has not himself given up writing longer plays—and that he has finished "a serious comedy," which will be produced as soon as he can get "the right people and the right theatre."

Sir Arthur Conan Doyle's latest play, "The House of Temperley," was produced in the London Adelphi Theatre ten days since, and deals with the prize ring and its patrons. The old British champion, Tom Cribb, is one of the personages, being impersonated by Bassett Roe.

What is most interesting ahout the new play by Marcel Prévost, at the Théâtre du Gymnase, in Paris, is the fact that, though its staging follows the successful puhlication of the novel of the same name, the play was written first, as was the ease with Ohnet's "Maître de forges." The new Prévost production, "Pierre et Thérèse," discloses, however, few dramatic elements. On the issue of the romance, its theme was exposed in our Paris correspondence: it deals with unsavory high finance and the relations of a masterful husband and his wife after the disclosure of the husband's lack of integrity. Like much of current French fiction, "Pierre et Thérèse" is tarred with the stick of Nietzscheism, and Nietzsche is. just now, a name to conjure with.

At the Comédie Française Tristan Bernard has read to the players his new comedy, "Le Peintre exigeant," which will have for its two principal interpreters Mme. Kolb and Georges Berr. Romain Coolus's comedy, "Le Risque," is to be succeeded at the Théâtre Réjane by an historical piece, "La Reine Margot," and at the Théâtre Antoine is announced the acceptance of a new play by Gabriel Trarieux, "L'Aveu."

The death of Agnes Booth (Mrs. John B. Schoeffel) is reported from Boston. She was in her sixty-third year, and had been one of the most eompetent actresses of her time. In tragedy, she established a permanent reputation hy her thrilling Constance; and she scored notable successes also in Juliet, Julia, and other parts. Upon such melodrama as "Jim the Penman" or "Captain Swift" she conferred artistic value by her picturesque and vivid acting, while in such a dainty piecc of domestic comedy as Bronson Howard's "Old Love Letters" the delicacy of her execution was delightful. She possessed, also, a large amount of eomic force. Her performance in W. S. Gilbert's "Engaged" must be recognized among her most finished achievements. Her life work was finished several years since, hut old playgoers will not soon forget her graces of manner and of utterance.

Music.

A Book of Operas. By Henry Edward Krehbiel. New York: The Macmillan Co. $1.75 net.

Stokes's Encyclopædia of Music and Musicians. Revised and enlarged by L. J. de Bekker. Frederick A. Stokes Co. $3 net.

A year ago, Mr. Krehbiel issued a book entitled "Chapters of Opera," invaluable for reference and entertaining for those, in particular, who have attended performances in the New York opera houses during the last quarter century, of which it presents a record. His new volume is of an entirely different character. It might be said of it that, as music begins where words end, so it begins where other books on the opera (by Upton, Singleton, Davidson, Annesley, etc.) leave off. Like those writers, he gives the stories of the operas, but these are merely the pegs on which he hangs diverse comments and information. From Streatfeild's and Apthorp's admirable books on the opera it differs in not attempting a complete survey of the field from earliest times to the present, but in selecting seventeen of the best and most popular operas and subjecting them to a much more complete analysis than any of the other writers referred to had space to indulge in. The operas here chosen are "Il Barbiere di Seviglia," "Le Nozze di Figaro," "Die Zauberflöte," "Don Giovanni," "Fidelio," "Faust," "Mefistofele," "La Damnation de Faust," "La Traviata," "Aïda," "Der Freischütz," "Tannhäuser,""Tristan und Isolde,""Parsifal," "Die Meistersinger," "Lohengrin," "Hänsel und Gretel." To these operas, Mr. Krehbiel applies the method he used in his "Studies in the Wagnerian Drama," not only presenting the plot, but delving into its sources and giving details about other versions. His chapters are thus made interesting to students of mythology and folklore, as well as to musicians. To illustrate these aspects, quaint facsimiles of mediæval documents are introduced, together with abundant citations in musical type. No one can fail to enjoy these operatic masterworks more thoroughly after reading about them in such a volume. One may think the author hypercritical in his strictures on the later version of "Tannhäuser," which gives Elizabeth insufficient time to go up the hill, die, and come down again on a bier; but theatric exigencies were more important in this case than considerations of time and space, and the change made was necessary to avoid an anti-climax.

The Stokes "Encyclopædia of Music and Musicians" appears in a revised version which is brought up to date in an appendix of eleven pages, containing topics overlooked in the first edition, as well as others which time has added. Among the latter are "Elektra," Strauss's new opera, which is to have its American première this month, and Frederick S. Converse's "Pipe of Desire," which may possibly also be heard before the end of the season. Three columns are given to this unheard opera by Converse—an amount of space contrasting oddly with the single columns given to two of the most important composers of the last century, Grieg and Franz. This disproportion, which affects other topics in this enclopædia, is its chief blemish.

Before Mr. Hammerstein built his Manhattan Opera House the operas of Massenet were heard here infrequently. Now we have them once or twice a week, and extremely well done. Every year, too, Mr. Hammerstein adds new ones. Since November we have heard for the first time "Hérodiade" and "Sapho." To-morrow occurs the American première of "Griséli-dis," a *conte lyrique*, in three acts and a prologue, the book by Armand Silvestre and Eugène Moraud, and first produced in Paris in 1901.

The Richard Strauss week arranged for Munich at the Prince Regenten Theater puts "Feuersnot" on June 23, "Salome" on June 24, "Elektra" on June 26, three festival concerts in the new hall at the exposition on June 25, 27, and 28, and two matinées at the Künstler Theater on June 24 and 26. The Vienna Philharmonic Orchestra will, on this occasion, play in Germany for the first time.

The successor to F. G. Edwards in the editorship of the *Musical Times* of London is Dr. W. G. McNaught.

Carl Zerrahn died December 29 at Milton, Mass., in his eighty-fourth year. Born in Mecklenburg-Schwerin, he began the study of music in his twelfth year under Friedrich Weber, and later pursued his studies at Hanover and Berlin. In 1848 he came to this country. His uninterrupted record of forty-two years as the successful conductor of the Handel and Haydn Society is perhaps unparalleled in musical history.

Art.

ART MUSEUMS AND EDUCATION.

Simultaneously the official bulletins of the Metropolitan Museum and the Boston Museum of Fine Arts contain news of educational endeavor. These activities correspond in an interesting manner to the contrasting types of museum involved. At Boston, by thinning out the public exhibits, giving the fine objects space, light, and emphasis, the work of popular education is done in the very arrangement. Special guidance is still offered, as it was in the old building, but it is less needed. So the Museum, having in its new home established an ideal series of study collections, now takes the next step and offers courses of collegiate rank. It is still only a promising beginning, but, evidently, as the staff grows with the collections, there gradually might be formed a school of higher technical study in the history of art comparable to the Ecole du Louvre at Paris.

It ought to be a bit humiliating to New Yorkers to recall that a matter of five years ago Columbia University, the Metropolitan Museum, and the National Academy of Design, with some fanfare of publicity, formed an alliance for precisely the work that Boston has quietly begun without preliminary advertisement. In New York the movement has halted at the sounding manifesto, we are forced to conclude less for want of money than of ideas. Possibly a responsibility split in three inherently makes rather for good intentions than for substantial achievements. In any case, the work that the Metropolitan Museum might and should do for higher education in art is as yet not even a well digested project. It is fair to add that the staff had been overburdened with a mass of acquisitions superadded to collections in disorder. The initiative for academic instruction should have come from its allies. One may envy the Boston Art Museum a staff of trustees which at a pinch can supply lecturers of authority when a new educational enterprise is in hand.

Meanwhile the Metropolitan Museum has been gradually perfecting a humbler but very necessary work, that of conducting the average visitor through the labyrinth of the galleries. Jumboism rules supreme at Central Park East. The Museum is already one of the largest, and will probably be the very largest existing. It has refused to temper its plenitude to the average capacity, after the Boston precedent. Naturally, it becomes and will increasingly become bewildering to the plain man. We are satisfied that the time will come when it will envy Boston its division into exhibition and study collections. Yet at present the Metropolitan does a plain duty in offering competent guidance to all who are enterprising enough to desire it. The plan, which is possibly not so familiar as it should be, is a simple one. On previous appointment small groups of persons are shown the collections by an expert guide. When desirable, such visits are preceded by informal illustrated talks in the lecture-room. Already this service has found a gratifying response from the public. Aside from this work, the Museum has begun and hopes rapidly to extend a more specific instruction among school teachers, schools, and social settlements. We are convinced that much of this work might be accomplished more successfully by an arrangement so select and eloquent that there should be small need of words to emphasize its meaning. But since the Metropolitan, by its tradition, the nature of its building, and the conviction of its authorities, is committed against so radical a reform, we welcome all compensatory efforts to make the collections more useful.

Landscape Painting. By Birge Harrison. New York: Chas. Scribner's Sons. $1.50 net.

This book is made up chiefly of informal talks given before art classes, with the addition of a few magazine articles. Mr. Harrison justifies the somewhat casual quality of these studies by saying that they are "straight from the shoulder." But, alas, such a forthright blow may be delivered into the air, and such seems to be the present case. Landscape painting was not made out of whole cloth by Crome and Constable. Both drew largely from the Dutch, whose quality is strangely underrated. Nor was vibration discovered the other day by the French. Not to mention Velasquez, the Italians Guardi and Tiepolo knew all the modern tricks except that of consistently juxtaposing the primaries. In fact, almost everything said about the old masters evinces insufficient knowledge and appreciation.

But the book is frankly modernistic and must be judged on that basis. A certain heartiness and anecdotal freshness doubtless made these talks interesting. In cold type they are painfully thin. Take the summary and wholly negative treatment of the big theme of composition. Is "refraction," with its definite scientific meaning, a happy term to describe the interaction of adjoining colors? As for "values," Mr. Harrison accepts the orthodox definition which supposes reference to a monochromatic scale. We are aware that this is the accepted view among painters, and as a rough and ready rule it does well enough. But it seems also an inadequate explanation of what is essentially a balancing of colors. There certainly are true values which if photographed isochromatically would appear false, that is, are not referable to the imaginary black-and-white scale. "Refraction" in Mr. Harrison's sense, should cover values as well. The whole matter is one of give and take between adjacent color areas. It is good news that values can be successfully taught in the art schools. If so, nothing can prevent the rising of legions of new Puvises and Cazins.

The loose-jointedness of the author's argument appears nowhere more clearly than in the essay on impressionism. Impressionism, he says in effect, is to set down honestly and fearlessly your own vision of nature. Of course such a definition would exclude only fakers and conventional decorators. Impressionism means, not as is often maintained, a procedure, but a peculiar kind of seeing. The artist endeavors to transcribe a scene grasped in the twinkling of an eye. He deliberately excludes memories of similar scenes and all data contributed by other senses than that of sight. He draws as fully as he may upon pure sensation (or, more accurately, perception) untempered by reflection. Psychologically, such impressionistic vision is a sheer impossibility. Associations inevitably attach themselves to every retinal stimulus. Practically, however, one may keep the latent associations relatively in abeyance. Such a man is said to have regained "the innocence of the eye," and is, whatever his technic, an impressionist. The whole issue is not of veracity but of immediacy.

Mr. Harrison's vein is so amiable that we regret these necessary strictures. Yet how can one welcome a book that is calculated to confirm students and art lovers in an unreflecting contemporaneousness? Of that there surely is enough already. The real task is to enlarge the culture of these classes—to set our art in its just relations with ourselves and with that of the past. The book is handsomely printed and con-

tains twenty-four cuts after landscapes by recent or contemporary European and American painters.

Bernard Berenson's new book, "A Sienese Painter of the Franciscan Legend," is to be published this month by John Lane Co., and has for its hero Stefano di Giovanni, called Sassetta.

Among the exhibitions are a retrospective one of the works of William M. Chase, at the National Arts Club, which opened on the evening of January 5, with a talk on art by Mr. Chase; pictures by Willard L. Metcalf, until January 13, at the Montross Gallery; pictures by George Inness, jr., and portraits by J. Carroll Beckwith, at the Brandus Gallery, and portraits by Zeima Baylos, at the Ralston Galleries, until the 24th.

The winter exhibition at the Academy of Arts at Berlin, which opens January 27, is to consist of British and French pictures of the eighteenth century. A considerable portion of the exhibits will come from the Emperor's private collection. An exhibition of paintings by living American artists will follow at the Academy.

To the well-known series Les Villes d'art célèbres (Paris: H. Laurens) have been added "Caen et Bayeux" by Henri Prentout, and "Oxford et Cambridge" by Joseph Aynard. These pamphlets have something like a hundred good cuts apiece, with sufficient historical indications. Their usefulness for the student of architecture —since these towns are centres of mediæval style—is obvious. They will also appeal to the leisurely tourist. It seems to us that M. Aynard, whose heart is plainly on the Isis, is a little insensitive to the general spaciousness of Cambridge, and especially to the fascination of the Fenland. It is not wholly fanciful to think that because of their respective scenery Oxford could more readily produce a Samuel Johnson and a Newman, Cambridge a Milton and a Newton.

Jacques Androuet du Cerceau is at least a name to the student of French art. One meets him as a pioneer of etching. As the introducer of the fully developed "Roman style" in building and decoration, he is even more famous. Architects of antiquarian bent are likely to know his greatest work, which has been reprinted, "Les plus excellents Bastiments de France." It is this class of readers which will especially welcome "French Châteaux and Gardens in the XVIth Century"; a series of reproductions of contemporary drawings hitherto unpublished, by Jacques Androuet du Cerceau, edited by W. H. Ward (London: B. T. Batsford), and imported by Charles Scribner's Sons. Here are twenty-three collotype plates, in folio, selected from Du Cerceau's original drawings, preserved in the British Museum. These are the originals for "Les plus excellents Bastiments," but are naturally far finer in execution than the engravings, and sometimes richer in details. Many are bird's-eye projections of châteaux, with their entire surroundings, and here the landscape gardener will, sometimes only with the lens, be able to glean geometrical designs for mazes or simpler plats. Amboise, Ancy-le-Franc Blois, Bury, Chambord, Ecouen, Fontainebleau, Gaillon, The Louvre, Madrid (or Boulogne), Montargis, La Muette, St. Germain-en-Laye, St. Maur-les-Fosses, the Tuileries, and Vallery are the châteaux merely delineated by Du Cerceau's exquisite pen. Among the designs fairly attributable to him are those of Verneuil, Charleval, both existing in various trial versions, and the pavilion at Gaillon, called the Maison Blanche. Besides, there are remarkable ideal designs for a château in the form of a Greek cross, and another in the form of a square. Du Cerceau's activity as a writer and antiquarian has led many persons to suspect that he was not a practical designer. They are appalled by the 1,930 engraved plates that issued from his studio. But in a man of the Renaissance it does not follow that the active and academic functions are incompatible. Leon Battista Alberti, an active builder, also produced an enormous amount of antiquarian, critical, and miscellaneous writing. Even Baldassare Peruzzi, surely a productive genius, seemed gladly to squander his inventiveness in vast ideal designs similar to those of Du Cerceau. In any case, Du Cerceau had an important place as a propagandist of neo-Roman forms, and of severe geometrical design. His teaching, if not his building, marks the transition from the disorderly picturesqueness of the later Valois to the regularity of Louis XIV and Mansart. Beyond 1585 we cannot trace him. The collapse of the Protestant cause apparently engulfed him. But his ideal châteaux are the earnest of Versailles to come, so idiomatically French, after all, was this advocate of the Roman manner. Mr. Ward has limited his editorial contributions to indispensable notes of a biographical and bibliographical sort, and to concise explanations of the plates. This often involves much labor of an original kind, such as only his colleagues are likely to appreciate. It is emphatically a working album for the architect's cabinet, but even the layman will enjoy the delicate precision of Du Cerceau's drawings, and such simplified graphic representation of complicated chapters in building as one finds notably in the plates devoted to Fontainebleau and the Louvre.

Walter Shirlaw died in Madrid December 26, and was buried, December 29, in the English Cemetery. Born in Paisley, Scotland, in 1838, he was brought to this country in 1840. Originally a bank-note engraver by profession, he exhibited his first painting in the National Academy in 1861. Seven years later, he entered the Chicago Academy of Design, and from 1870 to 1877 he studied in Munich. He made a specialty of *genre* painting, but he also did much noteworthy work in decoration and in illustration. He was the first president of the Society of American Artists.

Finance.

STOCK EXCHANGE AND "MANIPULATION."

Perhaps the most impressive fact about last week's so-called "Rock Island corner," in the course of which the stock went up 31 points in the first ten minutes of business on the Stock Exchange, and down 31 points within the next hour or so, was the fact that the public at large appeared to accept the occurrence as a natural incident of present-day Stock Exchange trading. The attitude of people around the Stock Exchange, who knew what the machinery of the movement must have been, was even more singular. While Rock Island was being pushed up from 49¾ to 81, selling of other stocks became so urgent that Reading broke 2½ points within half an hour, Union Pacific 2⅝, Pennsylvania 3⅛, Amalgamated Copper 3¾, New York Central 4, and Southern Pacific 5⅛. A period of indignation and denunciation followed in Wall Street; this, however, grew somewhat fainter as Rock Island stock descended again and the other stocks in question recovered. Next day, the general market having in the meantime returned to equilibrium, professional Wall Street lost all interest in the episode. All that was left of the hot indignation of the day before was the committee of investigation, promptly named by the governors of the Stock Exchange.

The incident, nevertheless, leaves several interesting questions in its train. How was the extraordinary pushing-up of Rock Island's market price accomplished? What did it signify, in its relation to the Stock Exchange and investment situation generally? Why did Wall Street sell all other stocks, while this one was rising, and then change its mind so suddenly? Why did the governing committee take action which reflected its belief that something requiring discipline had occurred? And what, if anything, was to be expected as a result of the curious "Rock Island affair"?

Each of these questions admits of a definite and interesting answer. It was not known, on Monday, at any rate, whether a "short interest" had or had not been really driven into a corner, but no illusion existed as to the main source of the buying orders. They were accepted without dispute as emanating from "inside interests" who had for some time been busily engaged in creating artificial movements in the stock, by way of persuading the public that it was really active, and really of the value indicated by the quoted prices. The favorite Wall Street theory was that gentlemen engaged in this worthy occupation had been accustomed to allot to brokers selling orders in quantity sufficient to match the buying orders, thus keeping the price in their own control; but that on this occasion, for reasons variously surmised, they had put in the buying orders and forgotten to have the sellers there.

What this explanation, whether right or wrong, signified as to the Wall Street conception of the stock market of the season, is not difficult to discover. No Stock Exchange house referred to such

manipulation of values as either improbable or unusual. On the contrary, the only curiosity expressed was, how the machinery, which had been so continuously and smoothly in operation, should suddenly have got out of gear. This appeared to concede the whole question of manipulation, and of creation of artificial values by something like sharp practice.

Wall Street sold all the other stocks, while Rock Island was rushing up, because it knew by experience the extremely dangerous situation created by an actual corner. When it was discovered, on the morning of May 9, 1901, that more shares of Northern Pacific stock had been sold for delivery on that day than existed outside the safe deposit vaults of two great banking houses which were buying furiously for control, the price of the "cash stock" rose from 160 to 1,000. Some of the outstanding contracts for delivery had been made by professional "short sellers"; some by international bankers under cabled orders from European holders, the actual shares being shipped by steamer from London. Both sorts of sellers had relied on borrowing the stock for delivery, but they now knew that the stock could not be borrowed. At delivery hour, the penalty for defaulting on a contract, or the exaction of any price the buyer chose to impose, would confront them. It was not strange that financial houses thus caught in the machinery should have started to realize on their other speculative holdings, or that, as a consequence, such declines should have occurred, on May 9, 1901, as 37 points in Union Pacific, 60 in Delaware and Hudson, 31 in St. Paul, 35 in Atchison, 32 in Rock Island, and so on through the list.

When it was announced that a "settlement price" had been agreed on by the two banking houses, and that bloodmoney would not be exacted, Union Pacific went up at once 36 points from its low price of the corner day, Delaware and Hudson 55, St. Paul 22, and the others similarly. That recovery, too, was followed by assurances on the Stock Exchange that nothing had happened, and that the thing was only an accident. The governing committee did not investigate the corner, but the facts were very soon known to everybody. In the present case, the facts are not yet known, but the most unpleasant inferences are being drawn from the occurrence, barely six months after the formal investigation of such practices by a committee named by the Governor of the State.

Possibly this condition of affairs answers also the last of the above inquiries, as to what should be the sequel of the episode. The most that can be said at present is, that this public exposure of disreputable methods, employed by wealthy capitalists on a great market for investment securities, is not a happy incident of the period. It is certainly the less welcome, in that the report of the White committee on these very practices is to be submitted by the Governor to the New York State Legislature this week. Possibly this is why the Stock Exchange governors have the matter seriously in hand, and it may also explain why Wall Street rumor persistently asserts that they will take some positive action when the Rock Island affair, and their own sub-committee's report upon it, come up for final consideration

BROWN BROTHERS & CO.
No. 59 Wall Street, New York

An Exceptional Issue of 6% Bonds

Secured by a Thousand Farms

Here are brief facts about one current issue of Irrigation Bonds. They will illustrate what ideal security lies back of such bonds when the issues are rightly selected.

The Bitter Root Valley Irrigation Co. owns one of the largest irrigated fruit land projects in the world. The Company is composed of well known men who are wealthy, experienced and capable. The land to be watered consists of about 40,000 acres in the heart of our greatest fruit belt—in the famous apple region of the Pacific Northwest.

A large part of the valley has been under irrigation for many years, so the possibilities of the land have been demonstrated. Fruit land in the valley has lately sold as high as $1,000 per acre.

The water rights are unassailable, and the total water supply is more than sufficient for all needs. For the irrigable land is distinctly limited by the mountainous bounds of the valley.

$2,500,000 Invested

The Irrigation Company has invested in the project about $2,500,000, or about twice the total bond issue. And the bonds are secured by a first mortgage on all the property which the Irrigation Company owns.

The bonds are additionally secured by first liens on the lands and the orchards watered. These liens are given by individual land owners in payment for the land and the water rights. Forty per cent. of the price is paid down, and the balance, secured by the liens, is payable in annual installments.

To secure each $1,000 bond there are deposited with a Trust Company as trustee $1,400 of these first liens on farm land.

The average price at which this land has been sold is about $200 per acre. The minimum price at present is $250 per acre. Yet the bond issue is limited to $30 per acre, or to less than one-sixth the average selling price of the land.

Double Security

Thus the bonds have double security. The first is a mortgage on all the property which the Irrigation Company owns, and the Company's investment is nearly twice the whole bond issue. The second security is these first liens on farm land—on land which is worth more than six times the amount of the bonds which it secures.

One can hardly conceive of more ample security. Yet these bonds pay six per cent interest, because the demand for irrigated land is so great that the projects are very profitable.

Part of these bonds mature each year from 1914 to 1919. One may have his choice of maturities.

Ask for the Facts

In the past 15 years we have purchased 75 separate issues of Reclamation Bonds—Drainage and Irrigation. All have been secured by first liens on good farm land, and not a dollar of loss has resulted to any investor.

Irrigation bonds have now become the most popular bonds that we handle. No other large class of bonds offering equal security now pays six per cent.

We have issued a book on Irrigation Bonds, based on all this experience. Every investor, small or large, owes to himself its perusal. Please write for the book to-day. Cut out this coupon so you won't forget.

Second Edition Before Publication.
Indisputably the Book of the Year

Retrospections of an Active Life

By JOHN BIGELOW

Three vols. Imperial 8vo. 48 illustrations $12 net; carriage extra

A memoir of the classic type: copious in letters, documents, opinions, anecdotes. A record of great events, great scenes, famous men and women. Time—1817-1867. Historic characters—Lincoln, Gladstone, Queen Victoria, Seward, Thackeray, Lord Lytton, Dumas, Guizot, Maximilian, Stanton, Lord Palmerston—appear in the ample pages.

"He tells a story that is of exceptional interest, even in these days of a surfeit of personal reminiscence."—*Boston Transcript.*

"Mr. Bigelow's work is remarkable throughout for its clarity, orderliness, and definiteness of treatment."—*Review of Reviews.*

The Nation

VOL. XC.—NO. 2324. THURSDAY, JANUARY 13, 1910. PRICE TEN CENTS.

Messrs. DUFFIELD & COMPANY announce

Pierre Loti

"EGYPT" (La Mort de Philae)

Translated by W. P. BAINES, and with eight plates in color from paintings by A. O. Lamplough. $2.50 net; postage, 14c.

A wonderfully fascinating book, conveying vivid pictures of the charm of Egypt and the marvels of its antiquity. Loti gets at the heart of what he sees,—moonlit temples erected by the most ancient of civilizations, the sun getting behind the illimitable wastes of the desert, the half-submerged island of Philae, "Pearl of Egypt." Gradually a comprehension grows upon him and on the reader of the reasons that made Egypt the first country to awaken from the torpor of barbarism and build monuments that are the wonder and admiration of the modern world.

Franz Blei

"THE POWDER-PUFF: A Ladies' Breviary"

Translated by LILLIAN COURSOLLES JONES. $1.25 net; postage, 8c.

"Attentive observers have noted for some time the development of a school (so to call it) of German essayists, whose work ranks with the best that has been done of that kind in any country. Of these essayists the prince, one might also say the prophet, is Franz Blei. . . . The essays contain an extraordinary amount of delicate criticism, expressed in a style the perfect ease of which betrays to the knowing in such matters the labor that has gone to its composition. Blei's judgments are original and independent, and give much food for thought. He owes something to Mr. Meredith, something to Wilde and Aubrey Beardsley, very much to French models of all periods, and very little to Ibsen."—*The London Times.*

Fiona Macleod

COLLECTED EDITION

Volume I. "PHARAIS" and "THE MOUNTAIN LOVERS"

With frontispiece in photogravure; $1.50 net; postage, 10c.

The works which William Sharp wrote under his pseudonym between the years 1894 and 1905 are here first presented in a complete edition by Mrs. Sharp, as editor, according to the wishes and instructions left with her.

Each For All and All For Each

By JOHN PARSONS, D.D.

This volume is designed to meet the need for a convenient reference book, for the general reader especially, on the social questions of the day—a volume with indexes to every phase of the subject embraced in its limited space, and making systematic application of its principles.

It is not a scientific treatise on sociology, but it applies the results reached by science to a mass of questions in education, industry, philanthropy, government, and religion.

(Crown 8vo, Cloth, $1.50 net)

Sturgis & Walton Company, 31-33 East 27th St., New York

Important New Macmillan Books

Prof. William Lyon Phelps's *new book*
Essays on Modern Novelists
Ready this week.
By WILLIAM LYON PHELPS, *Yale University.* There is nothing more difficult to obtain than sound opinions on the work of contemporary writers—and nothing more interesting than a discussion of them with a discriminating competent critic. Among the novelists whose work is analyzed are De Morgan, Mrs. Humphry Ward, Kipling, Oilivant, etc.

Prof. C. T. Winchester's *new book*
A Group of English Essayists of the Early Nineteenth Century
Ready next week.
By C. T. WINCHESTER, *Wesleyan University.* Just now, when the essay seems to have returned to its literary own, this review of the pleasant, intimate charm of the early forms of the elusive art of essayist is exceptionally interesting.

Prof. Henry van Dyke's *long-promised book*
The Spirit of America
Ready very shortly.
By HENRY VAN DYKE, *of Princeton University.* The author states clearly in the beginning his belief that "the ideals, moral convictions and principles of a people are the most important factors in their history," and his book is an analysis of such factors in the history, past and present, of America.

The Religion of the Chinese
Ready next week.
By J. J. M. DEGROOT, Ph.D., Professor of Ethnography in the University of Leyden, Holland. These lectures were delivered at Hartford Theological Seminary, primarily to give students preparing for foreign missionary work the essential knowledge of the religious history, beliefs and customs of a people among whom they may labor.

The Religions of Eastern Asia
Ready very shortly.
By HORACE G. UNDERWOOD. Increasingly evident with the growth of American interests in the Far East has been the difficulty of a genuine comprehension of its people, without a fuller understanding of the religious ideals fundamental to their lives.

Religion in the Making:
A Study in Biblical Sociology.
Ready next week.
By SAMUEL G. SMITH, D.D., Ph.D., LL.D., Head Professor of the Department of Sociology and Anthropology in the University of Minnesota, and also for many years a teacher of the Bible to classes in the People's Church in St. Paul.

The Development of Religion
Ready shortly.
By IRVING KING. An important study from the psychological point of view dealing with, among other topics, the question *why* the mind assumes the attitude described as religious, and why that attitude finds expression through certain acts.

Studies in Religion and Theology: The Church in Idea and History
Ready shortly.
By ANDREW M. FAIRBAIRN, author of "The Philosophy of the Christian Religion," Principal-Emeritus of Mansfield College, Oxford. Studies of the Church of the First Century and of the Nineteenth Century; of the Teaching of Jesus Christ, and of St. Paul and St. John as material of which the Church was made.

The Last American Frontier
Ready shortly.
By FREDERIC L. PAXSON. Illustrated. This work narrates vividly the struggle to gain the frontier west of the Mississippi. A new volume of "Stories from American History."

Dr. Sven Hedin's *fascinating book*
Trans-Himalaya
Discoveries and Adventures in Tibet
In two handsomely illustrated 8vo volumes, $7.50 net.
"The world owes a large debt to Dr. Sven Hedin for the story he has given it about that wild mysterious country Tibet. It is a story that responds to the yearnings of the geographer, the ethnologist, the student of religions and the ordinary man of intelligence. . . . Moreover, it is a well-told story of startling experiences, exciting adventures and wonderful achievements, which, though it comes to us in a very modest form, impresses upon us that Dr. Hedin could not have made the journey he describes if he had not been a courageous, persistent, clever man, an accomplished diplomat and a born explorer."—*New York Times.*

Mr. Herbert Croly's *incisive work*
The Promise of America
Cloth, 8vo, $2.00 net; by mail, $2.14.
One of the truly notable books of the season" of which President Jacob G. Schurman of Cornell University writes: "I have found the book exceedingly stimulating. It is also instructive, for the author seems to be thoroughly versed in the modern political and economic history not only of America but of Europe as well. Finally, the volume has the immense attraction of dealing with a subject which of all political subjects is now most prominent in the minds, not only of thoughtful citizens, but one might almost say of the American people."

Dr. Robert F. Horton's *new book*
Great Issues
Cloth, $1.50 net; by mail, $1.61.
Vigorous and suggestive essays on modern phases of the great problems of Religion, Morality, the relations to life of Science, Philosophy and Literature. The book is stimulating from its power of bringing light to bear on familiar topics from new and unexpected quarters.

Miss Mary Conyngton's
How to Help *Enlarged edition.*
A Manual of Practical Charity
Cloth, $1.50 net; by mail, $1.63.
A new and revised edition of a most practical handbook, a book which is full of interest for the busy person who wishes to help the want which he sees, but does not know how best to reach, for the volunteer "friendly visitor" who wishes to make sympathy effective, and for the professional director of organized charity who feels the usefulness of an office manual convenient for the guidance of inexperienced assistants.

Who's Who, 1910
$2.50 net; postpaid, $2.73.
Sixty-second issue of the Authoritative Annual Biographical Dictionary.

The Principles of Soil Management
Cloth, Illus., $1.75 net.
By T. LYTTLETON LYON and ELMER O. FIPPIN, Professors of Soil Technology in the New York State College of Agriculture at Cornell University.
An abundantly illustrated discussion of soil conservation, so lucid and attractively presented that it will at once appeal to the practical farmer.

A Book of Operas
By Henry E. Krehbiel
Cloth, illus., $1.75 net.
The musical editor of *The New York Tribune* has with his practised skill made these studies of famous operas as interesting to the veteran opera-goer as to those less familiar with the work of international singers in this country.

Miss Jessie H. Bancroft's
Games for the Playground, Home, School and Gymnasium
Cloth, illus., $1.50 net; postpaid, $1.67.
An invaluable book wherever the importance of healthy play is recognized.

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave. N. Y.

The Nation.

NEW YORK, THURSDAY, JANUARY 13, 1910.

The Week.

Washington dispatches of all colors represent the divisions in the Republican party as acute and threatening. Acrimony is daily increasing. So grave is the situation rapidly becoming that even Republicans are admitting the high probability of party disaster in this year's elections. Unless the breach is healed, the loss of the next House is set down as certain. Representative Crumpacker, an old Congressional hand, deliberately stated the opinion Monday that, if the party were to stand by Cannon, and make the fight on that issue, not a single Republican Representative could be elected in Indiana. Thus far, it must be confessed, the efforts to avert or remove the trouble have been neither well-judged nor successful. President Taft long sought to be neutral. He smiled impartially at insurgent and at regular. Of late, he has seemed to be drawn into the controversy against his will, and came very near threatening to take from the rebellious Congressmen their patronage. But he speedily saw that this would be to identify his Administration with the Cannon-Aldrich machine, and to involve himself in the ruin plainly hanging over it; so that he made haste to withdraw from an untenable position, and to make it clear that the support he wanted was for Republican policies, not for the party organization in Congress. But as the President has eased up, the party managers have stiffened. They are now proposing to read the insurgents out of the party; or else to call a caucus on every legislative matter of any importance and compel every one to swear to vote for what the majority decides is best.

By no such rude repression can the Republican crisis be met. The rebellious Congressmen have behind them in their States a vast body of dissatisfaction and complaint. It is in the attitude of these Republican voters that the real crisis exists. Their discontent has many causes. In the tariff revision they felt that they were cheated. The continued high and rising cost of living, whether to be directly connected with the tariff or not, they charge up against the party in power. But the main point of their restlessness and their protests is their fear, in some cases amounting to a belief, that their party has ceased to be truly representative; that it is delivered over to an oligarchy, bound hand and foot; that intrigue and bargaining have taken the place of free discussion, and that the plain people of the farms and shops are left out in the cold. Now, it is plain to a tyro that such a revolt against what are believed to be tyrannical methods cannot be stopped by the use of methods still more tyrannical. The repressers and floggers at Washington will have to try again.

At the front of President Taft's recommendations in regard to amending the Interstate Commerce act we should put the creation of a "United States Court of Commerce." It is most likely to pass. Reforms that carry new offices with them always get a considerate hearing from politicians. They will think twice before frowning upon a plan to appoint five additional Circuit judges, with their appurtenant clerks, marshals, etc. This fact will give an initial impetus to a project which has, besides, something to say for itself. President Taft dwells upon the delay of railway cases in the Federal courts. He does not say that the congestion is greater than that from which other litigants have to suffer. We understand that it is not, and that the Federal courts are much better up with their business than, for example, the Supreme Court of New York. Still, there are some good arguments for setting up a court especially competent to hear and determine cases growing out of the commerce law. And the scheme of assigning circuit judges to this work, with the power to return them to other judicial labors as the occasion may warrant, is much wiser than establishing a fixed and separate Court of Commerce, like the Court of Claims or the Customs Court. A right of review would lie, in any event, in the Supreme Court.

Another important recommendation is the proposal to forbid one railway to buy the stock of a competing line, and to regulate the issue of railway securities. Mr. Taft's message last week was awaited to throw some light on the question. The message, however, advises merely that after the passage of such law,

> No railroad company subject to the Interstate Commerce act shall, directly or indirectly, acquire any interests of any kind in capital stock, or purchase or lease any railroad of any other corporation which competes with it respecting business to which the Interstate Commerce act applies.

But this outlining of a legislative plan is followed by the suggestion that, "for the protection of the minority shareholders in securing them the best market for their stock,"

> It shall not operate to prevent any corporation which, at the date of the passage of such act, shall own not less than one-half of the entire issued and outstanding capital stock of any other railroad company, from acquiring all or the remainder of such stock; nor to prohibit any railroad company which at the date of the enactment of the law is operating a railroad of any other corporation under lease, executed for a term of not less than twenty-five years, from acquiring the reversionary ownership of the demised railroad; but that such provisions shall not operate to authorize or validate the acquisition, through stock ownership or otherwise, of a competing line or interest therein in violation of the Anti-Trust or any other law.

It is evident that this would leave the case of a given railway contemplating a given purchase both intricate and hazardous. It might be impelled to go into the market hurriedly to buy 50 per cent. of another road's stock, in order to qualify itself to acquire the remainder after the law had passed; but, then, on reflection, it would see the plain intimation in the concluding sentence of what we have quoted from the President, and would perceive that it would make the purchase at its own peril, under the anti-Trust act.

President Taft's statement of his reasons for removing Mr. Pinchot is unanswerable. It is couched, too, in language of fine restraint and just feeling. The step which he has taken must have cost him dear, as his admiration and even personal affection for Mr. Pinchot have often been freely expressed. But there was nothing else to be done. The dignity of the Presidency and discipline

in the public service must be upheld at all hazards. Mr. Taft well knows that, by the course he has been forced to adopt, he exposes himself and his Administration to bitter attack. From now on the thing for all right-minded men to insist upon steadily is the duty of sticking to the real point. That does not concern itself with personal consequences or political effects, but with the great governmental policy which lies behind the whole controversy. Chief Foresters and Secretaries and even Presidents may come and go; parties may be split and beaten; but what the people will demand is that the public resources be kept for public uses, and not permitted to be filched away by designing and tricky men. To this end, the Congressional inquiry must be searching and fearless.

"The demonstration fails, but the principle remains the same." This utterance of the professor of chemistry is very much what municipal reformers will have to say about the result of Boston's Mayoralty election Tuesday. It was felt all over the country to be big with consequences reaching far beyond that city itself. Good citizens were everywhere watching eagerly for the outcome, to discover whether a method had been found of eliminating party politics from municipal elections, and a system devised by which character and intelligence might easily rise to the control of public affairs. But the high hopes have been apparently blasted. Mr. Fitzgerald has been chosen Mayor in spite of the united opposition of the Boston press, and in the teeth of extraordinary efforts put forth by the best civic forces. Yet, while deploring the event, we may find it intelligible. For one thing, the lesson is writ large that political salvation will not come automatically through any electoral device. Boston had seemingly worked out a plan by which partisan motives and appeals would be got rid of. Party designations were excluded from the ballot. No political convention, not even a party primary, stood behind the candidates. Yet the result appears to show that even if you cast out politics with a fork, back it comes. It was substantially the Democratic vote which elected Fitzgerald; it was practically the Republican and independent vote that was cast for Storrow. This is the sardonic comment of the fact upon the theory of the framers of the "Boston plan," that it would "divorce municipal elections from party politics, State or national."

Four of the Sugar Trust weighers have been sentenced to jail for a year —an ominous indication of the possible outcome of the whole prosecution. Whether the very mild character of the sentence was justified by the facts is a question on which opinions may reasonably differ; but that there was a great crime behind that committed by these petty agents, a crime calling for very heavy punishment, is a thing on which all honest men are agreed. Indeed, the leniency of the judge in passing sentence is justifiable only on that ground; and the judge himself stated that he would have gone still further in the direction of clemency if the men had acknowledged the truth as to the masters in whose service they were acting. In other words, the whole community, including the judge in the case of these weighers, is morally certain that responsible chiefs in the Sugar Trust were guilty of systematized stealing, and corruption of the Government service. But are any of them going to be punished? And is the truth going to be brought out concerning the prostitution of the public service to the desires of the Sugar Trust? Unless signs shall soon be forthcoming that real results will be got out of the criminal prosecutions, the country will insist on a Congressional investigation.

One of the speakers at a public dinner in Kentucky broke down several times in the course of his remarks. His chagrin was more than he could bear, and, leaving the table, he shot himself. The tragic incident is a reversal of ordinary conditions. Every year thousands of after-dinner speakers go on emitting words long after they have forgotten what they wanted to say, and frequently without being aware of the fact. The thought of pistol or poison as a way out usually suggests itself to the listeners, but not to the speaker. After-dinner oratory as a whole will appear to the future historian of our civilization as a survival of barbarism which prescribed that a hundred men should sit around a table and be bored to death by a half-dozen of their own number, who were nearly frightened to death. The ordinary citizen of good education and sound moral training can say more foolish things and break more rules of grammar during a ten-minute speech at a banquet than he will be guilty of the rest of the year in his private capacity. There has been a marked tendency of late to bolster up public dinners with one or two professional after-dinner humorists. To such men, and to the few men who have something to say and can be counted upon to say it, post-prandial oratory might be restricted with great benefit to the national temper and digestion.

The list of estimable persons dubbed "The American Academy of Arts and Letters" has been criticised because its membership—of which two-thirds is made up of New Yorkers—reveals once more "the proverbial inability of New York to see beyond the Hudson River." But London some time since stole a march on New York in the affair of academies. It seems, however, that the "British Academy" is composed of mere critics and the like; and, according to the London correspondent of the Chicago *Dial*, its activities in organizing the recent Milton celebration, the Tennyson centenary, and a funeral service to George Meredith in Westminster Abbey, "have awakened a spirit of revolt among our men of letters—that is to say, among imaginative writers." Apparently, the novelists and poets who are refused entry to the Elysian Fields of Britain, cannot forget that in France, where the Academy is an older and not less respectable institution, even such frivolous writers as Alfred Capus and Marcel Prévost receive seats. Here in America the Academy-makers are more eclectic still, and admit to membership the painter and sculptor. This lends fresh point to the description of Americans as a nation of "joiners."

The object proposed in the circular note addressed by Secretary Knox to the governments signatory to the last Hague Convention is of inestimable importance. It is nothing less than the establishment of a permanent court of arbitral justice, to which any matters in a controversy between any two governments may be submitted without either the delays or the perplexities attendant upon the creation of a special tribunal to deal with the particular case. Besides these advantages, a permanent

court would have other advantages scarcely less important. As the note points out, its decisions would be judicial in fact as well as in theory, whereas the constitution of a special arbitral tribunal is almost inevitably such as to point to a decision in the nature of a compromise; and owing to this circumstance, as well as to the permanency of the tribunal, its decisions would gradually build up a substantial and effective body of precedents. It may be doubted, however, whether the particular proposition advocated in the note is desirable—namely, the making of a general arbitral tribunal out of the international prize court established in 1907 by the Hague Peace Conference. A court that is to be invested with powers so comprehensive and far-reaching should be constituted with express reference to the functions it will exercise. To enjoy a jurisdiction truly effective in a domain full of unexplored difficulties it will need all the weight and authority that can be furnished to it.

Among all the arguments of British protectionists against the free-trade policy, the silliest is that which insists on the decline in the percentage which British goods imported into various countries bear to the total volume of their imports; and yet this argument appears to be seriously and prominently put forward in the present Parliamentary contest. When Chamberlain began his crusade, it happened to be possible to assert that the absolute amount of exports of British goods had shown a rather slow growth recently, and had indeed been stationary for a few years; and this lent some show of merit to the otherwise worthless argument as to relative amounts. It would be obviously absurd for the little pair of islands that constitute the United Kingdom to expect under any system to maintain its ratio of exports in face of the rapidly-growing population and the natural development of countries that not only have far greater area, but are almost newcomers in the field of modern industrial activity; an absurdity the nature of which may best be seen if, instead of comparing with the whole world, we compare with the single country of the United States. If, with our vast natural possibilities and rapidly increasing population, our exports have doubled, say, in fifteen years, is that any reason why England should expect to do the same? The marvel is that her exports should have grown in absolute volume as they have; for, after a brief period of standstill, as above mentioned, the figures began to soar up again.

Special interest attaches to the opening of the Prussian Diet last Tuesday. The belief is that the Chancellor, as Prussian Minister-President, will offer a bill at this session to cure some of the evils of the three-class franchise system which Bismarck himself denounced as incurably vicious. It is not expected that the Government measure will be so far-reaching as the public desires, but any reform will be welcome. The truth is that much as the reactionary Prussian Junkers and their friends among the bureaucrats would like to see the present system continue, the dangerous suffrage riots of last year have made it plain that at least half a loaf must be given to those eager for wider democracy. Just how intolerable the situation is appears from the existence of 2,214 electoral districts in each of which there is only one voter in the first class, and ninety-five in which the second class consists of only one voter. The Social-Democrats, who poll 23.8 per cent. of the total vote, have only 1.5 per cent. of the Deputies, while the Conservatives, who number only 16.6 out of every 100 voters, chose more than 47 per cent. of them. All the other parties, except the Poles, have a larger percentage of representation of delegates than of votes. Obviously, this furnishes government, but nothing that can be termed a representative government, and it must be altered even if the Social-Democrats should benefit thereby.

Battleship-mania, *Febris Dreadnoughtensis*, where it exists at all, is a disease that affects the masses. There is more calculation than mania, and more politics than fever, in the Dreadnought craze that attacks parliamentary leaders and jingo newspaper editors. Where the noise about battleships is not due to self-interest, it is most often due to downright silliness. Such is the statement that Austria-Hungary is to have sixteen Dreadnoughts by 1913. Germany, incomparable, irresistible, inflexible Germany, which has been striving might and main, so we have been told, to build Dreadnoughts, has none at present, and will have at most thirteen by four years from now. This after years of effort. Austria in the next three years is to turn out a little matter of sixteen Dreadnoughts just as easily as saying it. Presumably, the sixteen Dreadnoughts are to be equipped with four batteries each of Austrian members of Parliament, firing 2,000 inkwells and 4,000 picturesque epithets every minute. Austria's sixteen battleships would be merely ridiculous if not for the fact that a statement like that is immediately caught up by the war-mongers across the Adriatic, who, of course, point out that Italy must have twenty-four Dreadnoughts, which in turn necessitates an increase in Austria's output to thirty-two Dreadnoughts.

Secretary Knox attacks diplomatic problems of the first rank as easily as he would discharge a refractory window-cleaner in the State Department. His note on Nicaragua was the first example. The note concerning the neutralization of the Manchurian railway is a second example. When Secretary Knox begs to suggest to Russia and Japan that it might be a good thing if they handed over their respective sections of the Manchurian railway to be managed as an international enterprise, he seems to imply that both nations are anxious to get a white elephant off their hands. Yet asking Japan to give up her portion of the Manchurian railway is asking her to give up one of the few substantial results she has gathered from a war that cost her so much blood and treasure. Even if it were proved true that Japan uses her Manchurian lines for the purpose of getting her goods duty-free into Chinese territory, the obvious procedure would be to protest against such a practice. To call upon Japan to neutralize her railway, is to call upon her to confess that she has been violating the principle of the open door and China's custom laws. That in itself would be enough to shipwreck the plan, if in addition the Manchurian railway did not figure prominently in Japan's plans for the future. So long as rumors of Russo-Japanese friction in Manchuria persist, it will be idle to expect either Japan or Russia to weaken her strategic position in accordance with the proposals of our State Department.

BURLINGAME PUBLIC LIBRARY

THE PRESIDENT ON THE ANTI-TRUST LAW.

The thing to do with the anti-Trust act, according to the President's message to Congress, is to let it alone. He frankly states that he had thought of recommending certain changes in the law, but has come to the conclusion that none is necessary. Two complaints have been made of the anti-Trust act. One is that it is too sweeping; that in the broad cast of its net it catches harmless and even useful combinations of capital as well as those that are monopolistic and oppressive. The other is that the meshes of the net are so large that scoundrelly corporations escape. Thus there has been a demand, on the one hand that the rigors of the law be relaxed, on the other that they be intensified. But the President shows that the long but sure process of judicial interpretation has relieved us from the need of doing either. Under the decisions of the Federal courts, increasingly clear principles have been and are being established which make it possible to strike down monopolies and hurtful combinations, while holding that innocent agreements, made in the orderly development of business for the purpose of obtaining economies of production and management, are not obnoxious to the law. A close examination of the cases which, under the anti-Trust act, have been brought before the Supreme Court convinces the President that there is "strong reason for leaving the act as it is, to accomplish its useful purpose, even though if it were being newly enacted useful suggestions as to change of phrase might be made."

We regard this as an entirely sound position. Some people are terribly afraid of "judge-made law," but almost all important laws are, in the end, judge-made. That is to say, we cannot be sure of the scope and force of any given statute until it has been passed upon by the courts. And law-makers sometimes see their creations undergo surprising changes in the course of judicial interpretation. The Fourteenth Amendment of the Constitution is the classic example. Its main intent has been partly nullified by the courts, while some of its incidental phrases have been erected into great bulwarks of property. This is not, perhaps, a happy instance of judge-made law, but still it shows what the process necessarily is. The Sherman Anti-Trust act is now nineteen years old, and only to-day are we working out, through decisions of the courts, into a precise understanding of what are its limitations and what its essential vigor. If the statute were to be hastily changed, the changes themselves would then have to be submitted to this same process of judicial determination, and it might be years before business men could know where they really stood. It is much better to stop with the clarifying and enforcement of the original act to which we have now nearly attained, and which we may confidently hope fully to reach when the Supreme Court decides the Tobacco case and the Standard Oil case, now before it.

If any one would know how strong is the evidence for the President's view that the courts are making the anti-Trust act a powerful weapon against monopolistic oppression, while preventing it from interfering with the legitimate march of great business, he should read the brief of the Attorney-General in the case of the American Tobacco Company, in which the argument closed. We are passing no judgment on the charges made against that corporation, though if one-half the averments made are true, it has been guilty of practices which are as shocking morally as they are criminal legally. The value of Attorney-General Wickersham's brief goes beyond his arraignment of the defendant, for it gives a complete review of all the cases decided under the anti-Trust act, and traces the way in which the courts have beaten out its meaning and effect.

It has been said, for example, that the decision of the Circuit Court in the Tobacco case would logically shut every large corporation out of business. This has been used as an argument against the law from absurd consequences. But the Attorney-General puts all this at rest. He declares that the Government "will not attempt to support the extreme construction" of the anti-Trust act; and he goes on to show how the courts have been careful to discriminate between combinations which are merely "an incident to orderly growth" and those which directly obstruct the free flow of commerce, stifle competition, make secret covenants in restraint of trade, and practise "unfair, wicked, or oppressive methods." We cannot, of course, go into the details of Mr. Wickersham's review of the judicial decisions; we merely say that it fully justifies the President's conclusion that all this matter may safely and most wisely be left to the courts. Mr. Taft, with a seeming glance towards Africa, declares that it is impossible to write into a statute a legal distinction between a "good" and a "bad" Trust. All that the law can do is to provide the penalties for monopoly and oppression; the courts must decide whether a given corporation has made itself liable to them.

When President Taft passes on from the generally satisfactory nature of the anti-Trust act as construed by the courts, to a recommendation of a Federal incorporation law, it is hard to follow him. This part of his message seems very like a *non sequitur*. Some will be swift to say that the President, after showing how the courts are successfully restraining and breaking up illegal combinations, is proposing a refuge for them under a Federal charter. Nothing of the sort is in his mind, we may be sure; and we admit that some of the arguments for a voluntary Federal incorporation have force. First, however, the people will insist upon seeing the exact terms of the national incorporation law; and, secondly, the States will certainly be jealous of anything which would seem to impair their right to regulate and tax their own corporate creations. Indeed, so formidable are the political obstacles to the enactment of any such law as the President proposes, as to make it virtually certain that the project will not even be brought to a vote in this session of Congress.

GOV. HUGHES'S MESSAGE

The special message which Gov. Hughes sent to the Legislature will attract more widespread notice than his regular annual message of the same day. In the former, he takes up a matter which is of deep interest to other States, as well as to New York, and discusses it in a way which is certain to command attention throughout the nation. There has been much curiosity as to what Gov. Hughes would do or say respecting the proposed amendment to the Federal Constitution authorizing the levying of an income tax. Would he approve it? Would he oppose it? Would he dodge it? Well, what he has

really done is to study it, and to present the fruits of his study in a form which has given a leading to the discussion in other States, and which will result, as Washington already confesses, in the failure of the amendment.

Gov. Hughes starts out by agreeing that the national government ought to be clothed with the power to lay an income tax in times of emergency. To the principle and chief aim of the pending amendment, he gives his entire assent. But he urges the Legislature not to ratify it, on the ground that the actual text of the amendment is so loosely drawn as to admit of a serious Federal encroachment upon the borrowing powers of States and cities, and ought, therefore, to be resisted by them. This point has been made before, but by no one else with the clearness and cogency of Gov. Hughes. By citation of Supreme Court decisions and by reasoning from the nature of the case, he makes it evident that to confer upon Congress the power to tax incomes "from whatever source derived," would break down the Constitutional implication that the general government should not tax the securities of States and municipalities. Their bonds are offered and sold tax-exempt; but if the income from them could be taxed by the Federal authorities, the borrowing capacity of States and cities would be obviously cut into, with an increase of the interest rate and of the burdens of the taxpayers.

It will doubtless be said, and indeed Gov. Harmon has already said, that this is only an indirect way of attacking the amendment; that we ought to "chance" it, and trust Congress to exempt from tax the securities of States and municipalities, or to the courts to avert the danger by "construction." But Gov. Hughes does not take that view either of the law or of his duty. In stepping forward as a jealous guardian of the privileges of the States, he is but doing what he has many times before done—namely, exalting the powers and responsibilities of local government. His attitude in this matter of the amendment is in line with his general disposition to call upon citizens everywhere to work out their own salvation where they stand. The line he has taken is almost sure to be followed in many States. If the amendment is defeated, in consequence, it will not be his fault, but the fault of those who drew it carelessly and hurried it through Congress without duly considering what would follow.

It would be a pity if the Governor's special message on the income tax should overshadow his other recommendations to the Legislature, for many of these are of great importance. In his account of the finances and the needs of the State, Gov. Hughes shows again that patient attention to detail and that grasp of broad policy which his other state papers have led us to expect from him. While the Governor sees the big things, he does not allow the smaller ones which are significant to escape him. In his recommendations concerning the regulation of the use of automobiles, he accepts the view which has been urged in the *Nation*, that a severe penalty should be imposed upon the very act of running away after an accident. We note, too, that Gov. Hughes has had his eye upon the judicial decisions affecting race-track gambling, and asks the Legislature to carry out the intent of the law by making the public laying of odds a crime, even if no paraphernalia for recording the bets are used. He also recommends again that the telephone and telegraph companies be brought under the jurisdiction of the Public Service Commission.

The part of the Governor's message which will be read with the deepest interest, however, is that relating to election and primary reform. This is the matter still nearest his heart. Upon it he reaffirms the position in which he has been so strikingly sustained by the people of the State, and renews his former recommendations. Gov. Hughes is of the mind of many reformers who think that elective offices are needlessly multiplied, and would favor "the short ballot." He points out, however, that in order to obtain it many changes would have to be made in the laws and Constitution. More pressing and more feasible is the adoption of a form of ballot which would do away with the absurdities and abuses of the existing "party-column" ballot, and put the party man and the independent upon an exactly equal footing. This improved ballot the Governor strongly recommends, and the Legislature ought certainly to establish it. The only new point in what Gov. Hughes says about primary reform is that the law should compel money spent in primary contests to be publicly accounted for, and that the amount should be limited which any candidate for a nomination may lay out. Throughout the discussion of this whole subject the Governor's tone is dispassionate while dead in earnest; and it is safe to say, considering the light which the Legislature has seen, that the session will not pass without some kind of constructive action.

THE SCHOOL QUESTION IN FRANCE

The din of battle between Church and State in France will undoubtedly sound for many years to come. Just now the conflict rages about the person of the humble schoolmaster; except that "humble" does not apply to the French schoolmaster as it does to every other schoolmaster on earth. Some one has said that a Frenchman with an idea is one of the most terrific forces in Nature. And inevitably the school-teacher in France is as much exposed to the ravages of the idea as any class of citizens. The dominant ideas in France at the present day are clericalism and anti-clericalism, militarism and anti-militarism, trade-unionism among government employees and the denial of the right to strike. All of them have found concrete expression in the schoolroom. A somewhat parallel situation would be in New York if our public-school teachers, instead of filling the newspaper columns with demands for equal or higher pay, were to be accused of spreading the doctrines of tariff-revision or woman-suffrage among their pupils.

The situation in France is complicated. First stands the question of the public schools versus the clerical schools. Since Jules Ferry began the campaign for the *école laïque* in the early eighties of the last century, the movement has been steadily towards the public school and away from the church schools. The movement was hastened by the campaign against the congregational schools waged after 1902 by Premier Combes. It has been forwarded by the events that have followed the separation of Church and State. At the present day the public elementary schools have about five and a half million pupils, the congregational schools have a little less than a million and a quarter, and the public schools are the faster growing. This is the ideal of the

école laïque, and it is supported by the vast majority of Frenchmen. There is a strong party which is in favor of wiping out congregational teaching and conferring on the state the "monopoly" of education. But the bulk of moderate opinion, with the present French Government, is in favor of letting events take their course.

But the public school (*école laïque*) is one thing, and the principle of neutral teaching (*neutralité scolaire*) is another. Neutral teaching decides that if religious instruction has no place in the schools, anti-religious instruction is equally out of place. And it is of the violation of the principle of neutrality that the Church accuses the schoolmasters of France acting under dominant "Freemasonic" influences. Many Frenchmen who are against the Church on the question of the lay school are with the Church in protesting against the dissemination of anti-religious views in the elementary schools. And, further still, many Frenchmen who are not with the Church on either question, nevertheless find that the principle of neutral instruction is violated by schoolmasters who teach anti-patriotism, class-hatred, and revolutionary trade-unionism. In short, the French schoolmaster seems to have laid himself open to the same charge on which Socrates was sentenced to drink hemlock.

Jean Louis Forain's mordant cartoons on the subject picture the extreme pro-Catholic view. A schoolmaster is giving a lesson in European history. He recites: "In those days, the Church having grown very corrupt, a German monk named Luther . . ." The implication is that a French schoolmaster in teaching French Catholic school children is never so happy as when he can take a kick at the Church and exalt Germany! A cartoon by Abel Faivre shows one of a large number of boys, out for a walk with their teacher, taking his hat off to the *curé*. "You are a very nice boy," says the *curé*. The teacher grunts: "He is my youngest pupil. I have had him only for a couple of days." In another picture by Forain somebody asks a little boy: "Does your teacher ever mention the name of God?" "Yes, sir, when he swears." Now, it must be said at once that Forain and Faivre and other Catholic polemics grossly exaggerate. The revolutionary and anti-religious virus has entered, of course, into the schoolmaster as it has into very many Frenchmen of all occupations. But the Government maintains that the schoolmasters who abuse their position in such ways are few in number. And most moderate people in France side with the Government.

The Catholic newspapers go on to show, and here a good section of the moderate press is with them, that many of the text-books used in the public schools are as bad as the teachers that use them. It will be recalled that the French bishops a few months ago pronounced the ban on a large number of such text-books. The *Temps* admits that the majority of school manuals are unobjectionable, but finds a good many others that are not. It quotes definitions of God, for the use of children:

> Imagine a being who is always good and to whom we owe everything; such a being would be God. And such a being, *if he exists*, we ought to love and honor.
>
> *If God exists*, then all great thoughts and noble deeds must be agreeable to him, no matter in what soul they arise. And, *if he does not exist*, man's duty still remains the same.
>
> Is it because they love God that those who believe in Him go to church? Yes; but they might omit going to church, and still be acceptable to God.

Patriotism fares no better:

> Is military glory true glory?
>
> We admire the great conquerors, and look upon them as great men. Yet they are often only great criminals, the shame of history and the scourge of humanity.
>
> Do not measure the intellectual stature of a man by the glint of his gold lace or the height of the feathers on his hat.
>
> Remember, above all things, that we are citizens of the world.

And there are protests against the inclusion of episodes of the Prussian war from Zola's "Débâcle" in reading books for French boys. But the French proselyting spirit is nothing if not thorough.

ONCE MORE THE FALLIBLE EXPERT.

At Vienna, a few days ago, a political trial of high dramatic interest was suddenly brought to a dramatic conclusion. Its outcome is admitted on all sides to be of the highest importance for the internal politics of the Austro-Hungarian monarchy. To the outsider there is just as much interest, perhaps, in the fact that another German savant has been caught napping. Dr. Bode of Berlin may now exchange condolences with Dr. Friedjung, the eminent historian and publicist of Vienna. If Dr. Bode is a little better off, it is because he has behind him the august authority of the most infallible of the Hohenzollerns. Dr. Friedjung had behind him only an heir-apparent, and his confutation is beyond dispute.

The trial in question was upon charges of slander and defamation brought by the Serbo-Croatian members of the Croatian-Slavonian Diet at Agram against the Vienna *Reichspost*, in whose columns the slanders were first disseminated, and against Dr. Friedjung, who repeated the false accusations, with additional charges of his own, in the *Neue Freie Presse*. The Serbo-Croatian Deputies were accused of complicity in a conspiracy against the Austro-Hungarian monarchy, having for its ultimate object the unification of all the Southern Slavs in an independent kingdom. The Deputies were charged with being in the pay of the Servian Government, which had spent over a quarter-million dollars in subsidizing secret agents and Slav politicians in Austria-Hungary. Dr. Friedjung's conclusion was that the tyrannical measures adopted by Baron Rauch, the Governor of Croatia-Slavonia, were justified by the necessity of breaking up the dreadful conspiracy.

The learned doctor's charges finally put into plain words what the anti-Slav newspapers had been darkly hinting at for some two or three years. Up to 1906 the Archduke Francis Ferdinand, heir to the throne, had been regarded as Slavophil in his sympathies. For one thing, there was his wife, the former Countess Chotek. For another, there was the growing arrogance of the Pan-Germanists within and without Austria, who were busy parcelling out the Hapsburg domains with little regard for the feelings of the man who must soon be called to reign over them. In the reorganization of the monarchy which people believed inevitable after the death of Francis Joseph, it was taken for granted that Francis Ferdinand would lean heavily on the Slavs, investing them with the balance of power as between his German and his Hungarian subjects. But from a journey which Francis Ferdinand made through Dalmatia and Herzegovina in 1906, he seems to have brought back grave suspicions of the loyalty of the southern Slavs. His attitude changed and the tone of the Government press with it. There was much insistence on the need

of guarding the integrity of the monarchy against danger from the south. And that argument was not the least among the reasons brought forward to justify the incorporation of Bosnia and Herzegovina in the autumn of 1908.

Thus the Croatian-Slavonian Deputies came into court under a cloud of treason. They came out of court not only exculpated, but hailed on all sides as enlightened patriots whose well-considered plans for promoting the welfare of the monarchy and their own welfare within the monarchy had been totally misunderstood by a stupid and badly victimized Government. Dr. Friedjung's case collapsed when the documents upon which he had based his accusations, and which he had received from "the most eminent quarters," turned out to be clumsy forgeries. The learned doctor accused M. Markovitch, president of the Slav League, a Serb association for the furtherance of popular education, of having presided on November 2-3, 1908, at secret meetings in Belgrade. Detailed reports of the supposed proceedings were contained in two documents that constituted the backbone of Dr. Friedjung's charges. But M. Markovitch had no difficulty in showing that on the two days in question he was in Berlin, which is some distance from Belgrade. Another document purported to be a report from a high official in the Servian Ministry of Foreign Affairs to the Servian Premier. This paper, dated June 4, 1907, spoke of a loan about to be concluded, which loan was concluded in May, 1906. It was numbered 3,027, whereas in June, 1907, the latest document in the bureau concerned was numbered 1,040. It was dated in the new style, whereas Servia uses the unreformed calendar, like Russia. There were other ridiculous blunders. Dr. Friedjung offered what was a practical retraction in court.

And here is where the reputation of the expert suffers again. Dr. Friedjung is probably the most eminent of living historians in Austria. He is *the* authority on Austro-German affairs in the critical period from 1859 to 1870. He is emphatically an historian of the document. But what shall be said of the learned historian who accepts forged Croatian documents as easily as the French General Staff accepted documentary evidence against Dreyfus? If Dr. Friedjung could be led so badly astray on an event six months old and capable of verification in the newspapers, is there not room for doubting the infallibility of his mental processes when applied to "Der Kampf um die Vorherrschaft in Deutschland, 1859-1866," or "Der Ausgleich mit Ungarn"? Human liability to error becomes little short of astounding when error is so obvious and inexcusable.

Since all is well that ends well, the Dual Monarchy is even inclined to congratulate itself on the outcome. The suspicions which have grown up between the Slav peoples of the south and their future Emperor are now expected to disappear. As a consequence, the harsh policy pursued by Hungary in Croatia-Slavonia, which is under its direct jurisdiction, will apparently have to be modified. Baron Aehrenthal, who is believed to have been the instigator of the Friedjung charges, has received something of a setback. But the cause of enlightened administration will profit by having it shown once more that "the government which depends on 'secret documents' is nine times out of ten the victim of its own agents." The classic instance is Abdul Hamid II, for whose daily consumption conspiracies were continually manufactured by his diplomatic representatives all over Europe.

PRECOCITY AND GENIUS.

The phenomenon presented at Harvard University the other day, when young Sidis, a boy of eleven, gave a paper on Four-Dimensional Bodies before the Mathematical Society, is something quite different from that of the arithmetical prodigy, or lightning calculator. By some peculiar endowment, these prodigies are enabled to perform almost instantaneously arithmetical operations which, by the usual processes, involve a great amount of labor. Some of them have even been able to answer, in a few seconds or minutes, questions relating to the decomposition of large numbers into prime factors, which do not admit of being answered by any known mathematical process other than that of repeated and tedious trial. What special faculty makes these feats possible is a mystery upon which, we believe, very little light has been thrown; but it may be set down as certain that the faculty is something very different from intellectual power in the ordinary sense —not only different from general intellectual power, but also different from that special form of intellectual power which is the equipment of the great mathematician. These prodigies are unable to say how they arrive at their results; nor do they build up a system which carries them beyond the achievement of particular feats and leads to the establishment of new truths or of fruitful generalizations.

Though the reports of what was actually contained in young Sidis's communication to the Harvard Mathematical Society are too meagre to permit of any appraisal of its value, enough is indicated, both in that report and in the boy's previous history, to show that he possesses extraordinary intellectual power in general and that in particular he has the makings of a great mathematician. If, as it appears, he has discovered—or rediscovered—and demonstrated fundamental theorems concerning figures in four-dimensional space, one cannot help feeling that he gives promise of adding one to the short and splendid list of those whose names are landmarks in the history of mathematics. That list, brief as it is, includes several the early flowering of whose genius is not less remarkable than the greatness of their powers. Pascal, without access to any books or instruction in geometry, constructed for himself, before the age of eleven, a geometrical system substantially equivalent to the first book of Euclid, and before he was sixteen completed a wonderful treatise on conic sections, based chiefly on his own researches; Galois was killed in a duel at the age of twenty, but left behind him work the development of which has given occupation to two generations of mathematicians; William Rowan Hamilton, a prodigy in languages in his early boyhood, acquired, without other teaching than that of the books he seized upon and devoured, such mastery of the most profound parts of mathematics that the astronomer royal for Ireland is said to have declared. "This young man, I do not say will be, but is, the greatest mathematician of the age." Young Sidis's attainments in languages, chemistry, and other subjects, and his later intense devotion to mathematics, suggest the story of Hamilton; and his choice of vector analysis —an outgrowth of Hamilton's quater-

nions—as his first subject of study at Harvard, is at least an interesting coincidence.

The idea that precocity—or at any rate precocity of any such character as this—generally dies down into mediocrity has very little foundation. Some actually go so far as to think that the very fact of unusual brilliancy in a child at so early an age is a prophecy of little ability when he grows up; a notion that rests upon the same fallacy as that which regards the children of highly gifted parents as less likely to be highly endowed than other children. They are vastly more likely to be thus endowed—as Galton conclusively demonstrated in his "Hereditary Genius"; but great genius is so extremely rare that, in spite of the chances being enormously in their favor, as compared with other persons, the children of highly gifted parents have still only a moderate chance of attaining similar distinction. And it is the same way with children who early show great talent. But, of course, there is precocity and precocity; in some cases, we see merely flashes of an early maturity; in others we see early maturity; in others we see early indications of great and unusual powers.

Another question raised in connection with young Sidis is that of training versus native endowment. Dr. Boris Sidis, the eminent psychologist who is the boy's father, is said to regard his son's achievements as indicating that by proper methods of instruction several years could be cut off from the time actually employed in bringing boys up to the college or university stage. With the proposition itself we have no particular fault to find; but that young Sidis's exploits serve in any degree to establish it we deny without hesitation. The part played by native genius is so manifestly predominant in this case as to nullify any general application. This is evident on the face of the matter; but confirmation of the strongest kind is given, if any were needed, in such precedents as those of Pascal and Hamilton, both of whom made the amazing mathématical conquests of their youth without any outside help whatsoever. And it is equally unnecessary to consider another view that has been ascribed—though, like the one just mentioned, probably erroneously ascribed—to Dr. Sidis. This is the theory that, with a proper personal hold on a boy, you can turn him out a mathematician or anything else. There is no doubt a wide range in which most young men of intellectual power can freely choose their field of distinction; but it is equally certain that the range is strictly limited in most cases. The faculty for mathematics is as distinctive as that for poetry or music; if you take enough pains, you can train almost anybody of ordinary endowment to turn out verses or to compose some kind of music; but you can't make him a poet or a musician. To be a mathematician you must have mathematical insight, the mathematical vision; and if young Sidis, like young Hamilton, has that along with remarkable gifts for language and other things, this does nothing whatever to disprove the existence of the thousands of boys who, while gifted in other directions, are blind to the beauties and deaf to the harmonies of mathematics. In fact, we are loath to believe that from the performances of one extraordinary child a man of science would feel disposed to draw any conclusion at all that runs counter to the results of the age-long experience of mankind.

SWISS NOTES.

NEUCHÂTEL, December 27.

Professor Hilty of Berne, who died not long ago, had just completed and published the twenty-third volume of his "Politisches Jahrbuch." Besides being a very useful encyclopædia of general public affairs, this work was especially remarkable for Hilty's original contributions to it. As an historian he could take a dispassionate view even of contemporary events. In this last volume of the year-book he assumes an almost prophetic manner. After an optimistic review of the progress and present condition of the Swiss federation, he writes with caution concerning the future. The preparations being made for war, in all European countries, threaten not only public law, but the neutrality of Switzerland, including its posts, railways, and customs. He warns his countrymen of the danger which may be incurred in case they seek the protection of any of the great Powers. Under such circumstances, he observes, Switzerland is in danger of sacrificing its federal system, with the equilibrium between the central and cantonal governments, to a "military idea" which indeed is convenient but not in keeping with Swiss traditions. Hilty makes a part of his programme the admission of women to the suffrage, especially in order to improve public morals, and to suppress alcoholism, gambling, and lotteries which threaten the "demoralization of our republic." He closes this species of valedictory by saying that the power of Switzerland is and always must be moral, not physical.

Two notable members have been added to the faculty of the University of Geneva. Eugène Choisy, a *pasteur* at Plainpalais, a frequent contributor to English and German reviews, and a prolific author, succeeds Professor Chantre, in the chair of historical theology. His published works deal chiefly with Geneva during the Reformation period, and he founded a museum where memorabilia of early Protestantism are preserved. It shows how greatly Genevan theological opinion has changed, that a teacher in the institution founded by Calvin should have been chairman of the committee which had in charge the erection of the expiatory monument to Michael Servetus. Dr. Charles Werner of the same university has been made professor of philosophy and the history of philosophy. Although a young man, he attracted some attention on a recent memorable occasion by sustaining his doctoral thesis on "Aristotle and the Platonic Idealism," which was "attacked" by authors of international celebrity, such as Windelband of Heidelberg, Boutroux of the French Institute, Bridel of Lausanne, and Flournoy of Geneva. Notwithstanding this formidable opposition, the degree was conferred *maximâ cum laude*.

The people of Berne are proud that the Nobel prize should this year have been awarded to Emil Theodor Kocher, the leading professor of surgery in their university. Professor Kocher is sixty-eight years of age and a native of the Swiss capital, where he began his medical studies. He continued these in Berlin, Paris, and London. Among his teachers were Billroth and Langenbeck, who in their day were held to be the leading surgeons on the Continent. Professor Kocher is especially famous for the work which he did in army surgery, and for devising and carrying almost to perfection the operation for extirpation of the thyroid gland. He conducted a series of experiments, to learn the effect on the body of wounds inflicted by the modern small calibre bullets. But during the last twenty years he has made a specialty of the thyroid operation. The results of his epoch-making work were given to the Berlin Congress of Surgeons in 1883. Previous to that time no one had been successful in removing the gland. At first it was found that those who underwent this operation suffered later from cretinism. Professor Kocher, by his researches into the function of the thyroid, avoided this unhappy effect. He has up to this time performed two thousand operations of the sort, and holds the record for a minimum percentage of deaths.

The beauty of the Alps and the an-

tique remains of certain Swiss towns have not restrained those who seek to exploit their native land for the sake of "tourist facilities" and other modern but tasteless "improvements." Adolphe Tièche, an excellent painter in water-colors, attempts to counteract this unfortunate tendency, and to make the people of Berne appreciate the beauty of the old town by publishing in a portfolio (Berne: A. Francke) about two dozen sketches of the place as it was in the eighteenth century. These are admirably executed *à la sanguine*, and are accompanied by a short preface in which the artist says:

> I have made these sketches especially for the Bernese, who know so little of the real riches of their city, and who coldly delivered the most charming and graceful building in all Switzerland (the old Musée Historique) to the pickaxe of the destroyer.

He adds that large modern structures have disfigured the *cachet* of the ancient city, and that only in the last few years have people begun to open their eyes to this. Modern Berne has indeed been lavish in putting up imposing and even splendid buildings, of which the native is justly proud, but which have rivals elsewhere. To those, however, who have love of the past, artistic taste, or even ordinary curiosity, the charm of the Swiss capital lies not so much in the ambitious architecture and decoration of the Federal Palace and of the Art Museum, as in the old towers, arcades, and fountains grouped against the snowy background of the Bernese Oberland.

A correspondent of the *Journal de Genève* refers to Jean-Jacques Rousseau as one of the precursors of aviation. While secretary to the Venetian ambassador at Paris (1762), Rousseau wrote to Grimm concerning his own efforts to construct a flying machine. These seem to have been as unsuccessful as his endeavors to change the method of musical notation. The letter will be found in his "Correspondance littéraire."

A. Alexander.

NEWS FOR BIBLIOPHILES.

The fourth volume of Dr. Thomas Lindsley Bradford's "Bibliographers' Manual of American History" (Philadelphia: Stan. V. Henkels & Co.) is in the hands of the subscribers. This covers R to Z, Nos. 4528 to 6056. Our notices of preceding volumes have not been very complimentary, and about all that can be said of the present volume is that it is no better and no worse than the others.

Neither the Williamsburg edition nor the London edition (both 1754) of George Washington's "Journal" is given, only the reprint by Toner (1893). Under Underhill's "News from America" (1638) no mention is made of the fact that the Deane copy which sold for $180 in 1898 lacked the plan or that Lord Sheffield's copy, which brought $1,250 in 1908, possessed it. The Beckford record of £605 on Smith's "Historie of Virginia" (1624) is given, but without the statement that it was a large paper copy. At the end of the record of John Smith's books are reprinted James Lenox's notes on the plates and maps in Smith's books published in *Norton's Literary Gazette* for March 15, 1854. Some additions and corrections have been discovered since. These are incorporated in the E. D. Church Catalogue, a work which Dr. Bradford might have consulted with profit in the case of a great many titles.

The eighth edition, for 1910, of James Clegg's "International Directory of Booksellers, and Bibliophile's Manual" (London: Eliot Stock; New York: Dodd, Mead & Co.) is just received. The numerical summary of addresses gives the total number of booksellers recorded as 12,163, of whom 4,060 are in England and Wales and 2,354 in the United States. Generally the entry is a single line only, but in some cases specialties are mentioned. The number of public libraries recorded is 4,774, of which 1,443 are in the United Kingdom and 1,274 in the United States. Other information, such as lists of auctioneers, record and literary searchers, bookbinders, etc., sizes of books, postage rates, lists of periodicals, etc., is included.

The Grolier Club published in December a bronze medallion portrait of Emerson, designed and modelled by Victor David Brenner and cast by John Williams. The medallion is seven and one-fourth inches across and is, in general, uniform with the Hawthorne, Lowell, and Poe medallions already issued by the club.

Members of the Bibliographical Society of America have just received Volume III of the "Proceedings and Papers." The most important single contribution in the volume is the "Bibliography of the Official Publications of the Confederate States of America," by Hugh A. Morrison of the Library of Congress. Other papers of interest are "Lincoln Collections and Lincoln Bibliography," by Daniel Fish; "Manuscript Hunting," by Dr. E. C. Richardson, and "The Coöperatively Printed Catalogue," by H. W. Wilson.

The Society of Dofobs of Chicago has issued the "Second Book of Dofobs." It is a quarto, limited to fifty copies, and contains, among other contributions, "Deliberations of a Dofob," by Adrian H. Joline of New York, a pleasant rambling essay on the pleasures of old bookishness, or, as he calls it, "Dofobery"; "Adventures of a Manuscript," by William K. Bixby of St. Louis, being the story of the manuscript of Scott's "Harold the Dauntless"; two letters of Hawthorne and a letter of Dickens, here first printed, and other pieces.

The Merwin-Clayton Sales Company of this city will sell on January 20 a portion of the library of Charles Burr Todd, including a long series of books on the Quakers, a copy of Rumsey's "Short Treatise on the Application of Steam" (1788), and other books of interest.

January 18, the Anderson Auction Company will hold a sale of autographs, including the collection of James J. Casey. Among important names included are Washington (an A. L. S., dated 1798, and an L. S. dated 1778), Lincoln, Grant, Jefferson, Hamilton, Lafayette, Wordsworth, Dickens, Swinburne, and others.

January 19 and 20, they sell the library of the late George M. Diven of Elmira, N. Y. Smith's "History of the Province of New York," first edition (1757), a piece cut from the title, but with the rare folding view; an extra-illustrated copy of Irving's "Life of Washington," the large paper edition of 1855-59; about one hundred titles on the Alps, mountain climbing, and allied subjects; a complete set, twenty-three volumes, of the publications of the Selden Society, and a collection of Shakespeareana are worthy of mention.

Correspondence.

DATES OF "THE RING AND THE BOOK."

To the Editor of The Nation:

Sir: One may fairly expect accuracy in important dates—to say nothing of minor ones—in a biography of a famous poet. Yet, in recently perusing several discussions of Browning's "Ring and the Book," I was surprised to discover that no fewer than three distinguished critics had made a (seemingly) inexcusable blunder in referring to the genesis of that poem. Arthur Symons, who is apparently the original sinner, and who perpetuates his mistake in his 1906 revision, asserts ("Introduction to Browning," revised and enlarged edition, p. 152) that the poet picked up the square yellow book upon which he founded his masterpiece, at Florence, "one day in June, 1865." Sharp ("Life of Browning," p. 116) repeats the error, probably following Symons. He adds (p. 119) that Browning, on the afternoon on which he made his purchase, read the book from end to end. "The midsummer heats had caused thunder-clouds to congregate above Vallombrosa and the whole valley of Arno: and the air in Florence was painfully sultry. The poet stood by himself [Mrs. Browning died in 1861] on his terrace at Casa Guidi, and . . . his mind was busy in refashioning the old tale of loveless marriage and crime." Birrell (Globe one-volume edition of Browning, introductory note to "The Ring and the Book," p. 649) varies the comedy a trifle by reference to a "'memorable day' in June, 1862, when he [Browning] picked up, at a stall in the Piazza San Lorenzo in Florence, the 'square old yellow book.'"

On the other hand, Herford ("Life of Browning," p. 169) declares: "The story of Pompilia took shape in the gloom and glare of a stormy Italian night of June, 1860, as he watched from the balcony of Casa Guidi." He does not vouchsafe the date at which Browning bought the Yellow Book. Hodell ("The Old Yellow Book," p. 237) says: "He had discovered it amidst the rubbish of a market harrow in San Lorenzo Square. This was in June of 1860." Mrs. Sutherland Orr ("Life and Letters of Browning," Vol. 2, p. 378) irritates one's curiosity by remarking that "it has often been told, though with curious confusion as regards the date, how Mr. Browning picked up the original parchment-bound record." She offers no suggestion as to the solution of the "curious confusion." Dowden, however ("Life of Browning," p. 252), is absolutely explicit. He gives the date of purchase as June, 1859, and adds:

> As he leaned by the fountain and walked through street and street, he read, and had mastered the contents before his foot was on the threshold of Casa Guidi. That night

his brain was a-work; pacing the terrace of Casa Guidi, . . . be gave himself up to the excitement of re-creating the actors and reënacting their deeds in his imagination. . . . When in the autumn he journeyed with his wife to Rome, the vellum-bound quarto was with him.

The most important point, of course, is that Browning had roughly sketched at least parts of his treatment of the theme during the lifetime of his wife, the "Lyric Love" to whom, in an ever-memorable passage, he dedicated the finished work; and that his plans were rudely and pathetically disturbed by the shock of her death. Sharp might have avoided his ridiculous mistake if he had remembered the fact which Herford states (p. 169): that shortly after Mrs. Browning died the poet left Florence forever. He could hardly have been standing, therefore, on the terrace of Casa Guidi in 1865! Whether Herford and Hodell or Dowden is correct with reference to this memorable night on the terrace, I have been unable to ascertain. The circumstantial nature of Dowden's account would seem to throw the balance in his favor, but for the fact that he obtained all his details from Browning's own lines in the first book of the poem (Globe edition, pp. 650 and 655):

That memorable day,
(June was the month, Lorenzo named the square)
I leaned a little and overlooked my prize
By the low railing round the fountain-source.
. . . . . .
Still read I on, from written title-page
To written index, on, through street and street.
. . . . . .
I fused my live soul and that inert stuff
Before attempting smithcraft, on the night
After the day when,—truth thus grasped and gained,—
The book was shut and done with and laid by.
. . . . . .
The while I read and read,
I turned, to free myself and find the world,
And stepped out on the narrow terrace, built
Over the street and opposite the church,
And paced its lozenge-brickwork sprinkled cool.

Mrs. Orr (p. 378) quotes the following from a letter of Browning to Miss Isa Blagden, dated September 19, 1862: "My new poem that is about to be; and of which the whole is pretty well in my head —the Roman murder story you know." But in none of his published letters of 1859-60 does he refer to the discovery of the Yellow Book. HARRY T. BAKER.

Beloit College, Beloit, Wis., January 3.

PETRARCH AND GERBERT.

TO THE EDITOR OF THE NATION:

SIR: In a review of a recent work on Petrarch, the following sentence is quoted from one of his letters as giving the "keynote" of his eager activities as a scholar and humanist:

If you love me, commission faithful and learned men to search through Tuscany, ransacking the bookshelves of the religious houses and of the men who are most addicted to study, and find means to discover something that will appease or stimulate my appetite. For the rest, you must know that I have made the same request of friends in England, France, and Spain.

For those who may be too prone to find novelty in the labors of this great humanist in promoting the revival of learning in the fourteenth century, I would offer the following parallel from the darkest depths of the "dark ages." It is from a letter of Gerbert, who was born in Aquitaine about the year 950, and died as Pope Sylvester II, in 1002. The letter was written some time before he became Pope, and therefore at a period when it has been supposed that men in fear and trembling were awaiting the dreadful year 1000, which was to bring the world to an end. My extract reads:

I am eagerly collecting a library; and as formerly at Rome and elsewhere in Italy, so likewise in Germany and Belgium, I have obtained copyists and manuscripts with a mass of money and the help of friends in those parts. Permit me likewise to beg of you also to promote this end. We will append at the end of this letter a list of those writers we wish copied. We have sent for your disposal parchment for the scribes and money to defray the cost; not unmindful of your goodness.

This passage could easily be duplicated from other letters of Gerbert, and from the writings of other men of the next generation. HENRY OSBORN TAYLOR.

No. 135 East Sixty-sixth Street, New York, January 3.

ANARCHICAL vs. PETRIFIED SPELLING.

TO THE EDITOR OF THE NATION:

SIR: I note Dr. Cooper's letter in your issue of December 9, in which he refers to my address "On Some Life Ideals," and deplores the spelling used there, calling it a "caricature of English." I heartily agree with Dr. Cooper that, in spelling, as in any other human activity, all tendencies "on the part of the careless, inaccurate, and anarchical" should be vigorously combated by "all persons of good taste." However, I disagree with Dr. Cooper in his condemnation of the spellings used in my address. Far from being arbitrary, I endeavored to follow closely the amended spellings recommended by the American Philological Association (Transactions, 1886, Vol. XVII, 127). These spellings were also endorsed by the Philological Society of England, the Modern Language Association, and the Spelling Reform Association. They are also approved by the Standard Dictionary (page xvii). As a matter of fact, out of the twelve words cited by Dr. Cooper, nine are found in the list printed in the above-mentioned volume of Transactions (liv, hav, abstaind, litl, dremt, curage, dubld, tripld, atmosfere). V. KARAPETOFF.

Cornell University, January 3.

JEAN DORNIS.

TO THE EDITOR OF THE NATION:

SIR: In reference to the review in the *Nation*, January 6, of the "Essai sur Leconte de Lisle," by Jean Dornis, it may be worth noting that the catalogue of the Boston Public Library gives "Jean Dornis," author of "Leconte de Lisle intime," 1895, as the pseudonym of Mme. Guillaume Beer, at whose country house, I believe, Leconte de Lisle died.

Apropos of this poet, I should be glad if some reader of the *Nation* would explain the reference to "le Gardien pensif du mystique oranger," in "Epiphanie" ("Poèmes tragiques"). GEO. N. HENNING.

Washington, D. C., January 8.

Literature.

RECENT VERSE.

The Poems of William Winter: Author's Edition. New York: Moffat, Yard & Co.

The Collected Poems of Arthur Upson. Edited, with an Introduction, by Richard Burton. Minneapolis: Edmund D. Brooks.

Drake: An English Epic. By Alfred Noyes. New York: Frederick A. Stokes Co.

Last Poems. By George Meredith. New York: Chas. Scribner's Sons.

The Poems of Oscar Wilde: Authorized Edition. Boston: John W. Luce & Co.

New Poems. By William Watson. New York: John Lane Co.

New Poems. By Richard LeGallienne. New York: John Lane Co.

As a poetical season this has been in some sort one of recollection, illustrated chiefly by familiar names. In some cases it is the poet's last appearance. Even where this is not so, it is given us to renew old acquaintance; the stranger can wait—he is sure of the morrow. In such a mood, the very limitation of Mr. Winter's poetry—which may be first considered—its decidedly personal and occasional character, seems an added attraction. Any one who will take pains to recall the part he has played in life and will read this final edition of his collected verse in connection with his recently published reminiscences, will have little reason to regret that his inspiration has been so largely centred in his own experience. Indeed, it is to this susceptibility to his immediate circumstances, to the promptings of friendship and affection, that his most memorable work is due—his poems to Edwin Booth, Lawrence Barrett, Augustin Daly, and Henry Irving.

To be sure, there is much about the *facture* of his verse which seems a little old-fashioned nowadays. There are few vivid figures; few hard, compact, and diamantine phrases. The rhymes are frequently far from "rich"; from the modern "artistic" point of view there is something slightly archaic about the diction and the poetic convention. If anything, the moral is overobvious; it is, in a word, all very "facile." But such matters are of small importance. As Mr. Winter's own lines, "At Arlington," illustrate, even a taste for moral commonplace has not always proved incompatible with good poetry. It is more on disposition than on workmanship or even thought that the charm of a minor poet depends. And Mr. Winter's, as revealed in his verse, is admirably quiet, reflective, reminiscent—rather preoccupied with partings and death, but of a calm and reassuring

temper, unvexed by the suicidal doubts and perplexities of the century.

Through the red glare, the scorching light,
The din, the havoc, and the blight
Of clamorous wrath and hideous haste,
That make this life one dreary waste—

such lines, so common in contemporary poetry, are characteristically exceptional with him. Now and then he seems on the point of being troubled by such matters, as in "Orgia" and "After Long Years"; but poems of this kind usually turn out unreal or experimental. It is only in the "Monody for Augustin Daly"—which contains some of his best writing, whatever its debt to "Locksley Hall"—that he appears to suffer a genuine revulsion of feeling:

Ah, what pictures rise in mem'ry, and
what strains of music flow,
When we think of all the magic times and
scenes of Long Ago!
. . . . . .
Worn and weary with the struggle, broken
with the weight of care,
Low he lies, and all his pageants vanish
in the empty air.

But the mood passes finally. And in "The Rubicon," where, like so many other poets before him, he speaks his own farewell, his habitual serenity reasserts itself—a serenity neither blind nor fatuous, but the result of a happy and amiable mixture of the elements:

One other bitter drop to drink,
And then—no more!
One little pause upon the brink,
And then—go o'er!
One sigh—and then the lib'rant morn
Of perfect day,
When my free spirit, newly born,
Will soar away!

If it must be said that there is little unequivocal evidence of distinct poetic genius in the two handsome volumes of Arthur Upson's "Collected Poems," there is at least every indication of literary taste and refined sentiment. Like Mr. Winter's, though naturally without the same richness of experience or maturity of character—Arthur Upson was drowned at thirty-one—much of his work is personal and occasional, and represents in some measure that desire to "literatize" life to which a person of reading and cultivated mental habit is prone. But with this lack of fulness and detachment it has many qualities to deepen regret at the untoward accident which put so untimely an end to the writer's life. Particularly attractive are the glimpses which the reader catches, through Dr. Burton's introduction and through the poems themselves, of the young poet, both as college student and as graduate, in the midst of his friends and his literary occupations, with his taste for *chinoiserie*, for pewter, and the like—a little of a dilettante, perhaps, but frank and unspoiled, and an agreeable exception to the usual run of educated young Americans.

But while delicacy and fancy, a kind of irradiated actuality, are the reigning characteristics of his verse, there are a few poems haunted by another spirit—as it were a kind of presence lurking behind the visible mask of things, as in the "Fantaisie et Réveil," which has a singularly Wordsworthian touch; or even a sort of indefinable *Erd-Geist* under the physical semblances of earth, as in the address to the ghost of "The Dead Geyser":

I sat in the forest at sundown,
On the trunk of a fallen tree;
There were calm, low lights to westward,
But shadows over me,
And the gold beneath the branches
Was wonderful to see.

Before me lay a circle
In the glow of the fading sky,
The rim of an outworn geyser
That brothered an age gone by,
With roots grown down in its fissures
As thick as a good man's thigh.
. . . . . .
Then up in the evening silence,
And up in the westward light,
And over the widening shadow,
He seemed to take his flight,
Alone in the awesome stillness,
So solemn and weird and white.

A chipmunk peeped from his burrow
Where the white dead pine-stem lay;
A night-hawk rose from his tree-tip
To spiral the muffling gray;
And the wandering breath of Summer
Seemed all at once taken away.
. . . . . .
The molten brass in the tree-boles
Had dwindled to a span;
So I rose with great thoughts crowding
In solemn caravan,
And crept through the shade, a shadow,
Who had set me down a man.

Whether Mr. Noyes's "Drake" properly deserves the name of epic, to which it formally lays claim, is largely a question of literary definition, and a matter of comparatively small importance. The attempt to write a national poem in twelve books and dear knows how many thousand lines, is, on the contrary, an extremely interesting experiment, and at this juncture a very significant symptom. The marvel is that such a poem as Mr. Noyes's should exist at all; much more, that it should have been published originally in a periodical. Unfortunately for criticism, the explanation is probably to be found in politics rather than in literature.

However that may be, the "Drake" as a whole is conspicuously a *tour de force*. When read consecutively it soon grows to seem tedious and dilatory. The style is exceedingly diffuse—the style of romance rather than of epic, a kind of modernized *romancero*. The interest is too exclusively picaresque to be very lasting. In spite of all the poet's efforts to diversify the action, it remains monotonous: there is only one figure, that of Drake himself, and that figure has but one face and expression, the set Nelsonian countenance of the British naval hero, which is too contracted to supply the entire human interest of a long poem. In the first four books we have the Doughty episode, involving some sort of moral pathos; but the other characters are virtually all abstractions—Spanish despotism, Romish cruelty and superstition, and the like. Meanwhile, the "English Bess" of the love-making, if such it can be called, is a personage as tenuous and evanescent as any of Tennyson's early idyllic heroines. Finally, there is about the entire effort a disconcerting indefiniteness of aim and motive.

On the other hand, when read piecemeal, the poem produces a much more favorable impression. For this reason, the original mode of serial publication had a decided advantage. For there is some circulation of life, some movement, in the parts and members of the poem, though it fails to animate the whole body with a single spirit. The mixture of naïveté and self-consciousness, natural to such a performance in such a generation, is rather winning; though the attempt to subtilize and mysticize the plain old freebooting narrative is false and unhappy:

Drake only knew that as the four ships plunged
Southward, the world mysteriously grew
More like a prophet's vision, hour by hour,
Fraught with dark omens and significances,
A world of hieroglyphs and sacred signs
Wherein he seemed to read the truth that lay
Hid from the Roman augurs when of old
They told the future from the flight of birds.
How vivid with disaster seemed the flight
Of those blood-red flamingoes o'er the dim
Blue streaming forest, like two terrible thoughts
Flashing, unapprehended, through his brain.

This is very characteristic. In spite of over-elaboration and preciosity, Mr. Noyes's descriptions are, all in all, the best things he does. In a kind of grandiose impressiveness his sea pieces are fairly comparable with Calderon's, in whose vein they are:

For through a mighty zone of golden haze
Blotting the purple of the gathering night
A galleon like a floating mountain moved
To meet them, clad with sunset and with dreams.
Her mast and spars immense in jewelled mist
Shimmered: her rigging, like an emerald web
Of golden spiders, tangled half the stars!
Embodied sunset, dragging the soft sky
O'er dazzled ocean, through the night she drew
Out of the unknown lands; and round a prow
That jutted like a moving promontory
Over a cloven wilderness of foam,
Upon a lofty blazoned scroll her name
San Salvador challenged obsequious isles
Where'er she rode; who kneeling like dark slaves

Before some great Sultan must lavish forth
From golden cornucopias, East and West,
Red streams of rubies, cataracts of pearls.

In short, it is the evidences of ingenuity and resourcefulness on the part of the author which form the most satisfactory part of "Drake," because the poem itself is mainly interesting as a problem, a set task in which the overcoming of difficulties is the measure of success.

There is not much in George Meredith's "Last Poems" to affect his reputation one way or another; not much that is likely to be of moment—save as a poet's last message is always momentous—to any but a thoroughgoing and indiscriminate Meredithian. Perhaps, at this instant, the most interesting pieces of the collection, which is a small one, are those which betray a certain anxiety for the character and the future of his country:

What figures will be shown the century hence?
What lands intact? we do but know that Power
From piety divorced, though seen immense,
Shall sink on envy of the humblest flower.

Our cry for cradled Peace, while men are still
The three-parts brute which smothers the divine,
Heaven answers: Guard it with forethoughtful will,
Or buy it; all your gains from War resign.

A land, not indefensibly alarmed,
May see, unwarned by hint of friendly gods,
Between a hermit crab at all points armed,
And one without a shell, decisive odds.

Significantly enough, fully half the poems in the volume, if not more, give evidence of the same preoccupation. Obviously, it is but the same symptom as Mr. Noyes's apotheosis of the British hero and his rapturous celebration of the martial spirit, which prolong in fuller tones and larger compass Meredith's own eulogy of Nelson and Trafalgar:

He leads: we hear our Seaman's call
In the roll of battles won;
For he is Britain's Admiral
Till setting of her sun.

It is something to have a definitive and authorized edition of Oscar Wilde's poetry at last. But even with all the material at hand and in trustworthy shape, it is still difficult, if not impossible, to pronounce anything like a satisfactory verdict upon the work. The memory of Wilde's histrionic personality is still too strong and immediate. It will intrude upon his verse, until admiration of the play is lost in suspicion of the actor. That it is all very clever, very brilliant, no one will deny. But, then, it seems all very professional too—an excellent demonstration of the lengths to which poetry can be carried as an acquired accomplishment. What most rouses admiration is so largely a matter of skill! If the merits of his workmanship are conspicuous, as indeed they are, conspicuous also is the fact that he is always at his best when he is most artificial. And the imputation to his sincerity is fatal. Even "The Ballad of Reading Gaol," the most effective and feeling poem that he ever wrote, is a *tour de force* in its *genre*. "The Sphinx" is as original in one sense as any he ever made, and yet consider the amount of rigmarole it contains:

When through the purple corridors the screaming scarlet Ibis flew
In terror, and a horrid dew dripped from the moaning Mandragores,

And the great torpid crocodile within the tank shed slimy tears,
And tare the jewels from his ears and staggered back into the Nile.

In fact, "The Sphinx" is a kind of decadent "Raven." For us who are so near at hand there is always the horrid doubt inseparable from his malicious delight in the *bourgeois épaté*, in the dumfounded philistine. It is impossible to do more than cultivate the disinterested mood and wait for the personal impression to fade away.

Mr. Watson's "New Poems" seems to have obtained a rather unenviable *succès de scandale* at the start. Poetically, there is little in the volume to recall the author of "Wordsworth's Grave." Among the exceptions, however, are the lines "To the Invincible Republic" of America, which are inspired by something of the same piety for the past and impatience of present degeneracy:

In peace to-day
Thou sit'st between thy oceans; but when Fate
Was at thy making, and endowed thy soul
With many gifts and costly, she forgot
To mix with these a genius for repose;
Wherefore a sting is ever in thy blood,
And in thy marrow a sublime unrest.
And thus thou keepest hot the forge of life,
Where man is still re-shapen and re-made
With fire and clangour. . . .
. . . Let it not be said
That if the peerless and the stainless one,
The man of Yorktown and of Valley Forge,—
Or he of tragic doom, thy later born,
He of the short plain word that thrilled the world
And freed the bondman,—let it not be said
That if to-day these radiant ones returned,
They would behold thee changed beyond all thought
From that austerity wherein thy youth
Was nurtured, those large habitudes of soul.

Of Mr. LeGallienne's "New Poems," "October Moonlight" is, perhaps, as characteristic as any. It has the kind of fancy, just passing into vagary, which is peculiarly his own:

The moon is up at half-past five,
She frightens me among the pines;
The moon, and only half-past five!
With half the ruddy day alive—
So soon, so high, so cold, she shines,
This daylight moon among the pines.

The moon is walking in the wood,
Her face is very white and strange;
The moon is coming through the wood,
Her face half-hidden in her hood,
Cold silver face whose hourly change
Blanches her cheek more white, more strange.

There is something about this—at once deliberately artless and premeditatedly nonsensical, a kind of artificial *naïveté*—which makes it somehow more satisfactory than its author's more serious efforts.

CURRENT FICTION.

The Winning Lady and Others. By Mary E. Wilkins Freeman. New York: Harper & Bros.

This is altogether the best collection of short stories that Mrs. Freeman has published. It marks a definite return to her original theme and manner, with such development of both as time should naturally have brought. Her experiments in other fields, if they have seemed in themselves of comparatively little value, have no doubt served their disciplinary purpose. At all events, in these studies of rural New England character, her hand seems firmer than ever.

If it were not for her comparative indifference to the out-of-door setting, she would strike us as very closely comparable to Mr. Phillpotts. The grimly humorous aspects of rustic life have a similar attraction for her; and when she gives herself up to the pursuit of humor, she is equally likely to fall into the commonplace. "Billy and Susy," the story of a pair of cats who are quarrelled over by two New England sisters on the ground of their supposed difference of sex, and who prove to be "both Susys," is the one story in the present volume which we could have done just as well without. The plot is not new, and the handling is rather clumsily farcical. In "The Selfishness of Amelia Lamkin" and "Old Woman Magoun," on the other hand, the writer is on her own ground. Amelia Lamkin is another case of over-developed "New England conscience"—a self-effacing type to be found on any Yankee countryside; while Old Woman Magoun is of a type hardly less common and not less difficult to portray—the Roman mother who stands ready to slay that which she loves for its soul's welfare. These are the pathetic or sombre aspects which Miss Wilkins was from the first most successful in presenting. The new thing in her—or the newer thing—is a vein of tender and unstrained sentiment which here yields a really beautiful study of what we rudely call "calf-love." "The Joy of Youth" represents the achievement of the writer who, because he is so faithful to the soil and the human beings he knows, succeeds now and then in creating something that the whole world

must recognize as its own. So what in a narrow sense seems most provincial—a sketch of La Mancha, of Simla, or of Thrums—will turn out to be of more general appeal than all the vague and pretentious fictions that spring up year by year—whose scene is Everywhere, and whose theme is Everything.

Friendship Village Love Stories. By Zona Gale. New York: The Macmillan Co.

Miss Gale's Friendship Village, an idealized New England in little, has captivated many readers somewhat surfeited with rural farce on the one hand and rural tragedy on the other. The author of "Pelleas and Etarre" deals frankly in sentiment, and is not at all afraid of lapsing into sentimentality. The present love stories, which have to do with the younger element in the community with whose elders we have already made some acquaintance, will appeal to the reader according as he has or has not tears to shed. Perhaps we ought not to flatter ourselves upon the fact that the soft flutter of sensibility is now out of fashion. At all events, there are plenty of people who do not care whether it is or not, whose classics are "Little Nell" and "The Cricket on the Hearth," and who welcome such a writer as Miss Gale as a cooling spring in a land of arid fact. Whether such a village as hers ever was on land or sea (and it seems about as likely in one case as in the other) does not matter. Truth, it has been asserted, is not the same as fact; she is a goddess nevertheless who somewhat stubbornly retains her angles, and may most comfortably be seen through rose-colored glasses. In that particular optical "line" the writer of the present volume of tales has much to offer.

The Pool of Flame. By Louis Joseph Vance. New York: Dodd, Mead & Co.

Louis Joseph Vance is one of the most commercially successful of our junior yarn-mongers. The trick of fiction has, he admits, no mysteries for him. He just "loafs around" until an idea for a story occurs to him, and then dashes it off. Of course, he has to get up his local color; and his publishers express their gratification at his modern method of doing it. No arduous travel and first-hand observation are necessary for this adept. He merely lets his persons and events take him in fancy where they will, and thereafter reads up on the itinerary. The advantages of the method are evident. Mr. Vance is as untrammelled in his motions as Puck. The action of "The Pool of Flame," for example, ranges from Monte Carlo to Burmah, by way of Algiers and Alexandria; and nowhere is there a stint of color, fair if false.

The adventures of Capt. O'Rourke—The O'Rourke—are capably fashioned after their kind. That the theme is not of the utmost originality matters nothing in said kind. The Pool of Flame, in fact, is nothing more or less than a great ruby of fabulous price which has been stolen from the eye of a Burmese idol. It has left everywhere a trail of blood. The O'Rourke is offered a huge reward for its recovery. Being that chimera of the romancer, a "gentleman of fortune," and short of funds, he is pleased to accept the chance. But a French villain gets on the scent, and dogs him with a strange company of mercenaries. Indeed, the wretched Gaul actually gets possession of the jewel, and if he were not fatuous enough (after the habit of villains) to engage in a duel for it with the hero, there would be no story. Like "The Black Bag" and its fellows, this tale has merits of vivacity and youthful self-confidence which should strongly commend it to the sophomoric mood.

The Uttermost Farthing. By Mrs. Belloc Lowndes. New York: Mitchell Kennerley.

This invention concerns itself with the endeavor of a "selfless" American man to save the reputation of a pure English woman, who, having invited him to elope with her from Paris into the country, has been thoughtless enough to die, en route, of heart disease. To escape from the train and to make her husband believe that she had been travelling alone is this hero's task. A very bad week ensues, and he must needs league himself with shady agencies before he has compassed his end. The cleverness of the book, such as it is, lies in the details of a certain sort of Paris clubs and cafés, the prefecture of police, the abode of the fortune-teller. The various characters are minutely photographed in their figures, habits, and speech; but though the main features of the plot are novel, the predicaments impress one as having been forced into the story as by a compelling hand. There is no luridness of vice, and there is abundant finish of diction, but even the best that the book has to offer is depressingly shabby in tone.

THE NEW TESTAMENT.

Introduction to the New Testament. By Theodor Zahn. 3 vols. New York: Imported by Charles Scribner's Sons. $12 net.

The first German edition of this monumental work was published in 1897-99, the second in 1900, and the third, of which the volumes before us are an English translation, in 1906-07. As was to be expected, this work is characterized by exhaustive and accurate erudition, by logical acuteness, and by pronounced deference to tradition.

The thoroughness of scholarship is everywhere manifest, not only in the text proper, but also in the notes—lexical, exegetical, and historical—which are appended in fine print to each of the seventy-five sections of the work. This novel addition compensates for the omission of the customary treatment of canon and text.

The logical acuteness, suggestive of the scholastic theologian, is revealed not only in details, but in the arrangement as a whole. Here is, plainly, a constructive argument, each new point depending upon a previously established position. Opposing views of which the author is fully aware are regularly met, not directly by a rebuttal in detail, but by the reasoned presentation of a positive position. For example, Zahn points out at the start the probability that Galileans knew not only Aramaic, but Greek, thus preparing the way for the later statement that James, Peter, Jude, and John wrote in Greek the works which bear their names. So also at the outset we are reminded that Josephus, in preparing his "Jewish War" for Greek readers sought assistance from Greek scholars. This fact clears the ground for the hypothesis that Silvanus had a controlling hand in the Greek of First Peter, and explains the difference of style between this epistle and Second Peter, which was written without the aid of Silvanus. So, too, the Apocalypse of John, whose style bothered Dionysius overmuch, was written by the Son of Zebedee without assistance; while the Gospel and Epistles of John were, not impossibly, revised by friends who were better skilled in Greek than he. In this connection, the treatment of Second Peter may be instanced as an excellent example of argumentative skill. It is somewhat of a surprise at first to learn from Zahn that First Peter is addressed to Gentiles and that it betrays acquaintance with Paul's epistles to the Romans and Ephesians. When, however, we turn to Second Peter, the surprise vanishes, for it appears not only that this epistle is prior to Jude, but that it is addressed to Jewish Christians. It follows logically that the previous letter (2 Pet. iii, 1), written by Peter to the readers of Second Peter, must refer to a lost letter.

The most striking feature of this "Introduction" is, however, its pronounced deference to tradition. With the exception of the Epistle to the Hebrews, the Pauline authorship of which is denied, Zahn agrees with Athanasius in his famous letter of A. D. 367, and with modern orthodoxy, in holding that the writings in the New Testament come from the authors whose names appear in the codex titles. It is, of course, unfair to assert that Zahn is intending to present the case for tradition, as it is unfair to assert that Schmiedel or some other similarly-minded scholar is a lawyer speaking to his brief for the prosecu-

tion of tradition. *Unbefangen* is a difficult word to render into English. It is likewise unfair to say that Zahn does not cross-question tradition. The only point at issue is whether or not Zahn has stated, not the tradition, for the traditions are many and conflicting, but the most probable tradition; and whether or not the most probable tradition is supported by the internal evidence of the New Testament writings. It is admitted that, to estimate Zahn's conclusions, a knowledge of patristics is as essential as a knowledge of the New Testament. It is likewise admitted that in the field of early Christian literature Zahn's learning is probably unsurpassed. But it is a question not so much of the facts adduced as of the inferences which Zahn draws from the facts. Instead of venturing the opinion that in some cases Zahn has not indicated the most probable tradition, and that in other cases the tradition assumed as probable is incompatible with the internal evidence of the New Testament, the reviewer prefers to report some of Zahn's conclusions in reference to the gospels. Irenæus held that the Second Gospel was written after the death of Peter, while still later writers are agreed that it was written before the death of Peter. Zahn explains away the conflicting testimony by assuming that Mark was at work at his gospel in the summer of 64—exactness of date is a feature of this work of Zahn—or before the death of Peter; but did not publish it until 67, or after Peter's death. John xxi, to take another instance, was written with the consent of the son of Zebedee, but not by him. This fact might suggest that at least two persons had to do with the Fourth Gospel. But such a conclusion is forestalled by Zahn, who interprets the famous passage in Papias, which in the present form of the text naturally suggests two Johns, as meaning one John, charging at the same time that the so-called "presbyter John" owes his existence to the critical needs and devices of Eusebius, and, we may add, of Harnack. And John xix, 35, which does not at first blush suggest that it is written by the eye-witness, but which nevertheless is by the eye-witness, is so interpreted that the ἐκεῖνος is not "he that hath seen" but the Christ: a fancy as old as Erasmus.

Perhaps the most unsatisfactory part of the introduction is the treatment of the synoptic problem. Scant justice is done to the massive labors of Holtzmann and Weiss, and the astounding sentence appears:

> Up to the present time, no one of the investigations of the synoptic problem can be said to have produced results which have been generally accepted, or that can lay well-grounded claims to acceptance (II, 418).

The oldest gospel is not Mark, but Matthew, not the Greek Matthew, but the Aramaic Matthew of which Papias is assumed to speak. This original gospel was written in Palestine in 62, and was used by Mark. Luke, writing in 75, is independent of Matthew, but uses Mark. Finally, about 85, the original Matthew appears in Greek dress, a translation revealing a knowledge of Mark, but not of Luke. Why Mark omitted Matthew's story of the infancy or why there is such a linguistic affinity between Matthew and Luke at the points where they agree together against Mark, are difficulties which Zahn has not solved.

As for the translation, the fact that it was made under the supervision of Prof. M. W. Jacobus is a sufficient guarantee of its accuracy. The style of the original, as Zahn himself wittily admits in his preface to the translation, is not free from obscurity. The translators, however, students of Hartford Theological Seminary, have succeeded in giving a readable reproduction, though at times a tangled sentence needs recasting. The presswork is, in general, excellent. A special word of commendation is due to Professor Thayer for the admirable index.

Something of Men I Have Known. By Adlai E. Stevenson. Chicago: A. C. McClurg & Co.

Disappointing books, like disappointing people, rouse our resentment in proportion to the high hopes they have defeated. The first fifty pages of the former Vice-President's reminiscences hold out the promise of an exceedingly successful experiment in the art of the light memoir. These first chapters deal with the author's early career in Congress. The fact that there is a laugh or two on every page does not at first arouse suspicion, since with the fun goes a plentiful supply of intimate comment on men whose names fall sufficiently short of fame to profit by what Mr. Stevenson has to say about them. There are anecdotes about William R. Morrison of Illinois and Proctor Knott and Senator Blackburn of Kentucky, of which any volume of personal recollections would be proud.

But after the brilliant initial spurt comes a sudden stop, and every page makes it only too sadly apparent that what the author has set out to do is to compile a volume of funny stories of the kind that fills the exchange columns in the newspapers. The jests take on a suspiciously familiar air, and all pretence at writing from personal knowledge is cast aside. The habit of printing the point of the joke in italics, after the good old British fashion, grows irritating when the reasons for retelling the joke are not very apparent. Hence we are finally compelled to admit that for all the long list of well-known names Mr. Stevenson calls in review in his later pages, there is barely one to which he adds an illuminating touch, or even a fresh bit of information.

An instance in case is the chapter on Stephen A. Douglas, of whom our author writes with a pleasantly effective warmth of feeling. But though Mr. Stevenson was twenty-three years old when Douglas and Lincoln fought out their historic series of debates, there is nothing in the present account to indicate that Stevenson ever met Douglas or ever heard him speak. His story is largely a compilation from other authors, a method he employs in his chapter on the Mormons and elsewhere. Without a cheering "I" or "I remember" in it, the chapter on Douglas might as well have been written by a man born twenty years after the civil war.

The pity is all the greater because at intervals the book flashes up into a semblance of its earlier promise. The sketch of old John Reynolds, Indian fighter and Governor of Illinois, is done in a tone of delightfully sustained satire. Better yet is the old-time country doctor whom the writer once asked: "What, in your judgment as a medical man, is to be the final destination of the human soul?" "Brother Stevenson," replied Doctor John, "the solar system are one of which I have given very little reflection." Doctor John belonged to the "epleptic" school of medicine, objected to giving "written proscriptions," asserted in regard to a rival practitioner that "my books will show a greater degree of mortality than what his'n will," and once, with Mr. Stevenson acting as umpire, won a bet of five dollars by spelling "sugar" s-h-o-o-g-o-r-r.

A Journey in Southern Siberia: The Mongols, Their Religion, and Their Myths. By Jeremiah Curtin. With a map and numerous illustrations from photographs. Boston: Little, Brown, & Co. $3 net.

This is the third and final volume of the posthumous series upon the Mongols by the late distinguished ethnologist and linguist, Jeremiah Curtin; the first and second being, respectively, "The Mongols: A History"—dealing with the career of Jinghis Khan and his immediate successors in Asia—and "The Mongols in Russia," the story of the Tatar conquest of Russia. It was the author's intention to make it a series of five volumes, the others to treat respectively of the career of Batu, in southeastern Europe, and of Tamerlane and the Mogul emperors in Persia and India; the present volume, descriptive of the home life, religion, and mythology of the existing primitive remnant, closing the series. He had collected much of the material when the end came, and the duty of arranging for publication what was already written devolved upon Mrs. Curtin, his companion in labors and wanderings.

The material for the present volume was gathered chiefly in the summer of 1900, among the Buriat: a fairly primitive Tatar tribe of Lake Baikal, in southern Siberia. This is the region in which Jinghis Khan began his terrible career seven centuries ago. The Buriat, constituting about 60 per cent. of a tribe numbering a quarter of a million individuals, are a pastoral people. Where not Russianized, they dwell in octagonal houses of a single room, with a fire hole in the centre of the earthen floor. In habit, thought, and physical appearance they much resemble our own Indians of the plains. In one form or another, milk of cows or mares, with the flesh of the same animals, is their almost exclusive diet. The open milk barrel is the household commissary, and its replenishing the daily duty of the housewife. As this barrel is never covered, it has always a thick scum of the filthy dust that fills the air from the constant tramping of the herds. The single daily meal consists of boiled meat, some dirty rye bread, and then milk: sweet, or sour, or curds, or skimmings, or *tarasun*, a colorless intoxicant distilled from the same milk when it is become too sour for any other use. Even the bread is made up in part from the solid residuum of the distilling.

While other Mongol tribes have accepted Buddhism, Mohammedanism, or Russian Christianity, the majority of the Buriat have retained their primitive shamanism, the very name of which is of Mongol origin. Every house, field, and pasture has its *ongons*, or protecting fetishes, hung up near the roof or fastened to upright poles. Mr. Curtin gives us here a good account of wedding, christening, and funeral (*i. e.*, cremation) rites, and of the great propitiatory ceremony of the horse sacrifice, which he himself witnessed. This last ceremony involves the slaughter of nine white mares, whose bones are burned upon stone altars, but whose flesh is eaten with accompanying litany and libation. We find here, however, but meagre detail of general ritual and belief, and must still consult for these matters Mikhailovskii as embodied in Wardrop's translation, "Shamanism in Siberia and European Russia," while for the economic condition and home life of this people, our best authority remains Melnikov. What we get from Curtin is a general picture of a half-savage, pastoral, and equestrian race, of few manly traits, inconstant, dishonest, mercenary, repulsively dirty in habit and surrounding, given over to drunkenness, immorality and cruelty, degenerate descendants of the merciless hordes that once carried massacre and desolation from the China seas to the German frontier. Melnikov's view is much more favorable, for he, while freely admitting their vices, considers them as ranking fairly high in industry, mechanical skill, and intellectual ability.

The myths, with which about half of the book is occupied, have their own distinct character. In virile strength they suggest the Mongol of world-domination, while in picturesque detail and abounding exaggeration we may trace the influence of the more cultured Oriental races which have given us the Arabian Nights. Their closest European counterparts are the hero tales of ancient Ireland.

Among them we find the Buriat parallel of the Bible tree of knowledge. There are numerous fine illustrations of the imaginative faculty of the Mongol, with here and there a touch of Mongol philosophy, such as:

> Soft meat needs no knife, and a true word needs no road.
>
> Once I have undertaken, I shall finish.
>
> With women, hair is long, but thought is short,—

to which last saying the women retort: "Short hair, short sense."

It is much to be regretted that so few etymologies are given, as these furnish the key to the real meaning of the myths themselves. The map shows deficient proofreading. There are several pages of notes and index, including an index of myth incidents, and President Eliot, the author's former instructor at Harvard, contributes a sympathetic preface.

A Literary History of the English People. Vol. III. From the Renaissance to the Civil War, Part ii. By J. J. Jusserand. New York: G. P. Putnam's Sons. $3.50 net.

The present instalment of M. Jusserand's history shows the same quality as the preceding volumes—erudition enlivened by humor and illuminated by brilliancy and charm of style—but it has the advantage over its predecessors of dealing with a group of writers of the first importance, and so affording a worthier test of the author's critical powers. Shakespeare, Ben Jonson, and the other Elizabethan dramatists, Raleigh, Bacon, Herrick, Burton, and Browne here constitute the material of discussion, and, whether we agree with the author or not, the method of approach is throughout so new, the criticism so fresh and unhackneyed, the observations so manifestly the fruit of an extremely alert and wholly independent mind, that there is not a tedious page in the book. As we remarked in our notice of the First Part of this volume, M. Jusserand's method enables him to lighten his task to a degree that is not possible in histories of the usual type. Leaving aside the great body of less significant and intractable material to the handbooks of literature, of which there is never likely to be any lack, he aims at a general appreciation of the period or the *genre* through its most eminent representatives; and even in the case of these he does not attempt a systematic appreciation of their individual works. At the same time the volume conforms to the title of the work and is by no means a mere collection of essays on the great writers of the period. Indeed, M. Jusserand's skill in recalling before our eyes a past civilization—here the bustling London which furnished the Elizabethan dramatists with their audiences and imposed on them its tastes—was never displayed to better advantage. The artist comes to the aid of the critic, and it is the combination of these qualities that gives M. Jusserand his particular distinction.

The chapters devoted to Shakespeare, which constitute considerably more than one-third of the volume, are those, of course, which will at once attract the reader's attention. That the author's point of view is not the same as the English reader's will not be likely to diminish their power of interest. The difference is manifest in the space given to the defects of Shakespeare's work, of which we have here and there scattered through these chapters, a more searching examination than could be pointed to in any other book of Shakespearean criticism. Naturally, however, the English reader will not accept all of M. Jusserand's strictures (which, it may be remarked, take no account of the different periods of production), especially those which spring from a manifest want of sympathy with the romantic spirit. This want of sympathy, doubtless, is responsible for our author's incredible insensibility to the charm of Shakespeare's great comedies. To describe "Twelfth Night" as "chiefly filled—with filling," is surely a singular way of dismissing a comedy which, by its charm of humor, sentiment, and poetry, still delights audiences (to say nothing of readers) three hundred years after its first performance. We cannot be surprised, after this, that Benedict and Beatrice simply bore M. Jusserand, and that even Rosalind, who captivated Taine, seems to have failed to win the heart of his countryman. The same want of sympathy mars his criticism of "King Lear," and leads him to regard the wild scenes of the third and fourth acts of that play—the most stupendous expression of the Germanic genius—as mere "theatrical devices." It would be an injustice to M. Jusserand, however, if we should leave the impression that these limitations of sympathy overbalanced his admiration for the poet's work, as a whole. On the contrary, no one has expressed better the life-giving power of the great dramatist, his splendid lyrical capacity, and his magical gifts of language.

The excellent chapters on the prose-writers furnish less material for de-

bate; but the classical leanings of the author's criticism show themselves again in his treatment of the later Elizabethan dramatists. We are accordingly astonished to find Chapman singled out for especial praise—partly, no doubt, because he depicts Frenchmen with seriousness and dignity instead of with the crude and outrageous chauvinism of Shakespeare's history-plays. But the very wildness and improbability of the plots of Beaumont and Fletcher, Massinger, and the rest, which are a stumbling-block to M. Jusserand, will always obtain more readers for these dramatists than for their more regularly disposed contemporary. Altogether in his reaction from the excessive laudation which it has long been the habit to bestow upon the minor dramatists of this age—a habit which has increased especially since the establishment of dissertation-factories in our modern universities—M. Jusserand, it seems to us, has gone too far to the other extreme. Their characterization may be crude, their plots may frequently represent a threadbare romanticism or even confuse by imperfect construction, the touch of blood and lust may be too often on their work; some of the most important of them, *e. g.*, Webster and Middleton, may be destitute of any real rhythmical charm, yet they are practically all of them endowed with no inconsiderable share of vital energy, and they are nearly all able, even in otherwise unsatisfactory plays, to throw off with varying profusion beautiful fancies and images.

The present volume is better translated than the last, being free, especially, from the irritating inversions which gave that part of the English translation a strongly Teutonic flavor. A few Gallicisms, however, have crept in, such as "politics" for "politicians," "ignore" for "to be ignorant of," "expose" for "expound." *Anglia*, moreover, is a review, not a learned society, and it is singular in a book printed in this country to find the institution at New Haven called the "University of Yale."

The True History of the Conquest of New Spain. By Bernal Díaz del Castillo; edited by Genaro García. Translated into English by Alfred Percival Maudslay. London: Printed for the Hakluyt Society.

The Hakluyt Society continues to perform its chosen task of publishing English editions of rare works on early geography, conquest, and exploration, in such a manner as to command our warmest admiration. Its latest product is an accurate and carefully annotated translation of the first part of one of the four accounts by eye-witnesses of the discovery and conquest of Mexico by Hernando Cortés; and the remainder of this interesting narrative will doubtless soon be put forth in a subsequent volume. The original manuscript has always been kept at Guatemala, where it remains to-day; and the only exact copy ever made from it, which was edited and published in Mexico a few years since, by Genaro García, forms the basis for the present translation. A garbled version, compiled in 1632 by Friar Alonzo Remón of the Order of Mercy from a sixteenth-century copy of the original document, was, in the course of the nineteenth century, translated into English, French, German, and Hungarian; so that Bernal's story has not been by any means unknown hitherto. The untrustworthiness of Father Remón's work was, however, such as to make the appearance of the present accurate edition almost as valuable as an entirely new discovery.

Bernal Díaz del Castillo was born in 1492, in the famous town of Medina del Campo, in Old Castile, and emigrated to America in 1514 in search of adventures and riches. Most of his first three years there were spent in Cuba; in 1517 and 1518, however, he accompanied Capt. Francisco Hernández de Córdova and Juan de Grijalva in their preliminary explorations on the mainland; and in 1519 he joined the memorable expedition of Hernando Cortés. With Cortés he remained through the defeat of the army of Narvaez and the capture of Mexico in 1521; and though he found, like many others, that his share of the rich booty fell far short of what he had a right to expect, he did not desert his leader, but commanded various minor expeditions for the subjection of remote parts of the country. The superseding of Cortés, by the Audiencia of 1528 and subsequently by the first Mexican viceroy, Mendoza, in 1535, failed to better Bernal's fortunes, and finally, in 1540, he departed for Spain to seek justice at the hands of the Council of Castile. After the usual delays, he returned to America in 1541, armed with a couple of decrees which resulted in gaining for him "three towns of little worth" in Guatemala, where, save for one brief journey to Spain in 1550, he remained, poor but respected and beloved, till the day of his death in 1581.

Bernal was above seventy years of age when he began the writing of his "True History," and the story tells of the conquest of the mainland from 1514 to 1568. It consists of 214 chapters, the first 81—which take the account down through Cortés's dealings with the Tlascalans in the autumn of 1519—being translated in the present volume. Bernal did not pretend to be a man of letters; he confesses his slight knowledge of literature, and humbly begs his readers' indulgence. But his account is valuable as the simple, unaffected, straightforward narrative of a vain but honest, splendidly courageous, and thoroughly lovable old soldier. It only remains to add that editor and translator have done their work uniformly well, and that an excellent introduction and appendix, maps, illustrations, a glossary of Mexican, Spanish, and other foreign words, and a very complete bibliography, enhance greatly the value of the "History."

Marcus Whitman, Pathfinder and Patriot. By the Rev. Myron Eells, D.D. Seattle: Alice Harriman Co.

A zealous disciple and follower of the sturdy pioneer and martyr-missionary of Oregon recounts in this book the story of Marcus Whitman. The hero was a man of the John Brown and Stonewall Jackson type, of the sternest evangelical piety, great force of character, pursuing his aim with a singleness of purpose so narrow that he became quite blind to considerations which would have been obvious had his mind been broader. This is the latest deliverance in the long and acrimonious controversy as to whether or not Marcus Whitman saved Oregon to the United States. We think that no one man saved Oregon. The Northwest came to the United States because the American people poured into it overwhelmingly, England meanwhile being powerless to offer any counteracting tide. In the influx Whitman was no doubt a notable figure; but so, too, were the merchant-adventurers like Astor, the Methodist missionaries of the Willamette Valley, the captains of the emigrant trains, like Wyeth; chief of all, perhaps, Robert Gray, who carried his ship, in 1792, into the Columbia River, and thus established the first hold.

We think Dr. Eells makes clear by much testimony what has been denied—namely, that Whitman, in undertaking his famous winter journey across the continent in 1842-3, had prominently in mind the prevention of England, which at that time, through the Hudson's Bay Company, was seeking to secure herself in that region, and that his work to this end was effective. A main argument of the opposers of this view has been that for full twenty years after the journey no such claim was advanced as to Whitman's purpose. This objection Dr. Eells meets as follows: Whitman's mission-station was in close contact with the Hudson's Bay Company's posts, from which it obtained supplies and received protection. It was necessary, therefore, to be reticent about a plan to subvert their jurisdiction and turn the country over to the United States. Again, Whitman had been sent to the Columbia by the American Board of Foreign Missions to save souls for Christ. Critics said it was a departure from his proper work for him to give time and strength to a political scheme (much to his material advantage if it succeeded) however patriotic. It was wise therefore

to keep the facts in the background. Good worldly reasons for reticence, perhaps, but are such transactions fair and above board? In England the Oregon missionaries were accused of being tricky and treacherous, of abusing the hospitality and kindness of the Hudson's Bay factors (shown notably by John McLoughlin at Vancouver). Dr. Eells's pages give evidence that the officials of the American Board, and others, felt that Whitman was doing other work than that to which he had been assigned. Dr. Eells states his case naïvely, not appearing to see that the situation he describes suggests serious questions. Whitman possessed manly virtues, and had a hand in the saving of Oregon, and it is ardently to be wished that his course in the matter, and that of his friends, should be cleared of all suspicion of duplicity and unfaithfulness to their proper engagements.

Notes.

Through the Columbia University Press will be published a complete edition of the English and Latin works of John Milton, in verse and in prose. The editorship of this work is to be held by Prof. W. P. Trent, who has previously published a study of Milton, and whose biography and bibliography of Defoe, in three volumes, is promised for early issue. The Columbia University edition of Milton will run to at least eight large octavo volumes. It will be adequately illustrated and furnished with facsimiles of manuscripts and title-pages. Besides the standard library edition of the new Milton, there will be a limited large-paper edition.

Brentano's offer an edition of Oscar Wilde's poems in a volume uniform with their issue of his other works. It contains a biographical introduction by Temple Scott.

"Modernity and the Churches," a contribution by Dr. Percy Gardner to the Putnams' Crown Theological Library, is announced for early issue. The essay which gives its title to the volume was delivered before the Hibbert Summer School of Liberal Theology in Oxford, England, last autumn.

The Putnams are the publishers, also, of a fortheoming book for boys by Frederick Stanhope Hill (author of "Twenty-six Historic Ships") entitled, "The Romance of the American Navy." An historical work for grown-ups, to be issued by the same publishers, is "Britain at Bay," by Spencer Wilkinson, Chichele professor of military history at Oxford University.

During January and February, the Cochrane Publishing Company will issue, among other books, "Ideals and Conduct," by Uriel Buchanan, the exponent of the "new thought," and author of "The Mind's Attainment," and various books on Yogi philosophy.

The authorship of the story, "Margarita's Soul," has just been disclosed. The book is by Josephine Dodge Daskam Bacon.

On the occasion of the fiftieth anniversary of the proclamation of the kingdom of Italy, Leo S. Olschki, the Florentine publisher and bookseller, will issue a monumental edition of the "Divina Commedia," which it is aimed to make worthy, in scholarship and beauty, of the anniversary it memorializes. A new life of the poet by Gabriele D'Annunzio will precede the text. Count Passerini, editor of Olschki's *Giornale Dantesco*, will supply the commentary, which aims at comprehensiveness, and is printed on each page, parallel with the text; and the editorial revision of the text itself promises to be thorough. The book will be printed on hand-made paper especially manufactured by Miliani of Fabriano, with the watermark of Dante's head. It will be a royal folio, of about 600 pages, with broad margins. The leather binding, with bronze hinges, etc., is described as of the finest Italian craftsmanship. The edition is limited to 300 copies, and the subscriber's name will be printed on the flylcaf. The subscription price (prior to January 31, 1910) is 500 lire. Six additional copies, printed on parchment, with illuminations by Prof. Amedeo Nesi, and other embellishments, will be 3,000 lire each. Lemcke & Buechner of New York are the American agents, and it is announced that the work will be ready for delivery next autumn.

A plan was announced some time since for the erection of a statue of Ralph Waldo Emerson in the town of Concord. A committee was appointed to procure and erect such a statue, the members being George A. King, John S. Keyes, Moorfield Storey, Henry L. Higginson, Charles Francis Adams, 2d, Woodward Hudson, Edward J. Bartlett, George S. Keyes. The sculptor, Daniel C. French, who was, in youth, Emerson's neighbor and friend, undertook the work, and about $7,000 had been raised, out of the required $20,000, when the San Francisco earthquake diverted subscriptions to a more pressing cause The committee is now earnestly desirous of completing the work, and asks every friend of Emerson to send what he or she can, no matter how little, to Lee, Higginson & Co., No. 50 State Street, Boston, who will acknowledge all contributions.

The award of two Parisian literary prizes is announced. That of the *Annales* (3,000 francs) goes to Pierre Grasset, an earlier prize-winner with his "Conte Bleu." That of the Association des Critiques Littéraires (1,000 francs) is divided between Georges Grappe, author of "Dans le Jardin de Sainte-Beuve" and of the very recently translated study of Degas, and Alphonse Séché, the biographer, who has published an anthology, in two volumes, under the title, "Muses Françaises."

For their standard sets of novelists, Charles Scribner's Sons are now preparing a Memorial Edition of George Meredith, to be completed, according to the present estimate, in twenty-seven volumes. Two of these volumes, "The Shaving of Shagpat" and "The Ordeal of Richard Feverel," are now before us. They are well printed, and the binding is in silk, uniform with the Outward Bound Kipling, the Thistle Stevenson, and the New York James. The illustrations include photographs taken for the edition by Frederick Evans, showing scenes identified by Meredith with his stories; they are to include also reproductions of the drawings made by Millais, Du Maurier, and others for the original publications. A considerable amount of new material is promised, of which we shall have occasion to speak when it appears. We have, in sooth, grown rather to dread this resuscitation of an author's ephemeral work, but in the case of Meredith the process may justify itself. One volume of this new material, containing the unfinished novel "Celt and Saxon," will certainly be welcome. Students of Meredith will also be glad to know that the concluding volume is to collect the various changes and deletions made by the author in the different editions of his works, together with a complete bibliography. Altogether the publishers are no doubt right in calling this the definitive edition of Meredith.

Helen Archibald Clarke is one of the writers who follow the trail of the poet. Having written of Browning's Italy and England, she turns now with a will to "Longfellow's Country" (Baker & Taylor Co.). Here she joins to æsthetic fervor something of our modern nature cult and love of out-of-doors. These fine traits, blended with enthusiasm for the life and character of her poet, readily suggest writing of a superlative sort; and yet enthusiasm is always worth the contemplating. On occasion, the author of "Longfellow's Country" makes much of little, it seems to us; perhaps the pains she takes to quote some passages from the poet's journal are unnecessary—as in the case of a commonplace note like this, of the view from Milton Hill, near Boston:

> Commands a grand prospect over villages, fields, forests, and the city, to the great sea itself, stretching blue and vapory beyond.

The comment is not felicitous: "We know that Longfellow loved the sea, not only because of his frequent references to it in his poetry, but because he speaks of this love more than once, *when clothed and in his right mind*, in his journal."

Not that this book lacks interest. For those who are curious as to the making of a poem there are reproduced, for example, newspaper accounts of the wreck of the Hesperus (not at Norman's Woe, but off Rowe's wharf, Boston), and a passage from Longfellow's diary (December 17, 1839):

> News of shipwreck horrible on the coast. Twenty bodies washed ashore near Gloucester, one lashed to a piece of the wreck.

Readable chapters about Gloucester—both the poet's and ours—about Newport and "The Skeleton in Armor," and about "Hiawatha" and the material for that poem—all these matters are here. And there are photographic illustrations of such places as figure in the various poems.

Rabbi Edward N. Calisch has attempted in a volume of 277 pages, including index and bibliographical appendices, to write the history of "The Jew in English Literature," as author and as subject from the earliest times to the present day (Richmond: The Bell Book and Stationery Co.). It is to be regretted that the scholarship he has brought to this ambitious task is quite unequal to the zeal displayed. In dealing with some of the famous repre-

sentations of the Jew, malignant or otherwise—Marlowe's Barabas, Shylock, Fagin, Daniel Deronda—Rabbi Calisch speaks with feeling and with an understanding of the ideals of his race which should make his criticisms suggestive to the Gentile reader. But in the main his treatise smacks of secondary sources, of second and third hand critical opinion, of bungling, futile compilation. He expresses pleasant disdain for those who quote without quotation marks; but he himself quotes—almost as great a sin in a work of this sort—with quotation marks, but without indicating the author. He also quotes by paraphrase, one must suspect, from bad and antiquated authorities—and this is a worse sin, if possible, than the one which he condemns. In the section devoted to the nineteenth century he presents without order or proportion a jumble of books, authors, and biographical sketches, some important, some not, some with dates, some without, dead with the living, helter-skelter in inexplicable confusion. A few specimens of the sheer blunders sprinkled through the pages will best illustrate the inadequacy of his account. He credits the dramatist Greene (p. 61) with a passage which he says very positively refers to an event that happened in 1594, oblivious of the fact that Greene died in 1592. He remarks (p. 93) that "the dominance of the religious element made itself apparent in the atmosphere of the theatre" in the later seventeenth century, the plays reverting in the Restoration period "to Biblical or Palestinean conditions"! He lists Rymer's "Fœdera," which belong to the early eighteenth century with the work of Matthew Paris and Roger of Wendover in the "Pre-Elizabethan Period" (p. 199). He refers to Gil Blas (p. 115) as if it were the name of an author. On the same page he spells Edmund Spenser with a "c." Choicest of all, he makes Oliver Goldsmith (p. 135) a nineteenth century novelist, and confirms the error in the appendix (p. 214) —the novel in question is "The Haunch of Venison," a fine piece of prose fiction with which all readers of Goldsmith are familiar.

The sixth volume of Dr. Elroy M. Avery's "History of the United States and its People" (Cleveland: The Burrows Brothers Co.), covering the period from the New York campaign of 1776 to the adoption of the Federal Constitution, has in general the same qualities of accuracy and proportion and the same profusion of pertinent and consummately executed illustrations as those to which the readers of this monumental piece of bookmaking are by this time accustomed. Special praise should be given to the maps and battle plans, which excel, both in historical value and in mechanical beauty, anything ever attempted in an American historical work. In certain other important respects, however, we cannot but feel that the present instalment of Dr. Avery's great undertaking is a disappointment. For one thing, the social and economic life of the period is almost wholly neglected, save for brief chapters on finance and on the treatment of the loyalists. When it is remembered that New England, for example, saw comparatively little of the Revolutionary War after the evacuation of Boston, and that large parts of the South were, for considerable periods, free from active military operations, the internal life of those sections obviously becomes of importance; but of that life, as of the period of recovery after the war and before the adoption of the Constitution, these pages afford but meagre details. Equally disappointing is the literary form. With a period possessing in a high degree the advantages of unity and incident, Dr. Avery gives us, at best, only careful narrative. Of the numerous dramatic situations with which his story deals, not one receives a really effective literary setting; while in more than one instance the style approaches dangerously near flippancy. The successes and tragedies of the making of a nation are serious, whatever a writer may think of them; and it is matter of regret that Dr. Avery, with the most favorable opportunity for good writing that the course of his narrative has yet afforded, should not only fail to rise above the accurate and the commonplace, but should also at times sacrifice dignity to what, with him, doubtless, passes in good faith as lightness of touch. Of positive slips in the text, whether of statement or of proof-reading, there are, happily, few. "Haynau," on page 3, becomes "Hanau" on page 102; while the soldiers who, down to page 314, take or hold "redoubts," thereafter fight over "redouts." The use throughout of "cannons" as a plural form, and of "privateers" (page 63) in the sense of privateersmen, is at least doubtful usage. Sir *Henry* Carleton (page 357) is obviously a slip for Sir Guy Carleton.

"Travels in Spain," by Philip Sanford Marden (Houghton Mifflin Co.), is a book for which the author engagingly admits that there is no excuse except as a record of his own pleasurable experiences. For a traveller on his first venture into Spain, who was without any special knowledge of Spanish history or characteristics, and whose acquaintance with the language was obviously only of the phrase-book sort, Mr. Marden contrives to avoid many of the ordinary pitfalls and to write with unfailing zest. He plainly enjoyed his itinerary so much that readers will almost regret that they cannot find more in it to repay them for their trouble in following him. Some amends are made in the shape of a number of excellent illustrations, after photographs.

A frank imitation of the Baedeker model, in both contents and style of printing, "Terry's Mexico" (Houghton Mifflin Co.) may be commended as a trustworthy handbook for travellers. Its information is full and up to date, and is given with a high degree of accuracy, so far as we have been able to test it. Not only a long and minute acquaintance with the country, but general sagacity and a good insight into Mexican character guide the author in his advice to tourists. His fair-mindedness is well instanced in his page on the famous but disputed Titian of Tzintzuntzan, where he gives the arguments for and against the attribution without deciding. Mr. Terry usefully gives the Spanish equivalent for many English words, but this part of his work is not without slips.

Prof. Emory R. Johnson's "Elements of Transportation" is a recent and valuable addition to Appleton's Business series. The author has undertaken to cover the whole field of transportation in a single elementary volume, and he has divided his study into four parts, dealing respectively with steam and electric railways, ocean transportation, and inland waterways. The general plan of treatment has been to discuss, in turn, each of the various agencies of transportation with reference to its origin and growth, the services which it performs, the relations of the carriers to each other and to the public, and the regulation of the services of the carriers by the government. The writer has covered in this single volume the salient points which he had already so well treated with more detail in his two books entitled "American Railway Transportation" and "Ocean and Inland Water Transportation." Although the work is adapted primarily to the needs of classes in commercial high schools and in private commercial and technical institutions, it is not without considerable value for normal schools and colleges as well.

Of the many volumes lately published about Bismarck, the most interesting and valuable is "Bismarck: ein Biographie," von Erich Marcks, of which the first volume, covering the period from 1815 to 1848, has just been issued by the Cotta'sche Buchhandlung of Stuttgart and Berlin. It contains the fullest account hitherto published of Bismarck's early youth and education, his wild and turbulent career as a student of the university, and his moral and mental development during the first thirty-three years of his life. Even as a country squire he was known as the "tolle Bismarck," and his landed estate, *Kniephof*, was called by the peasants *Kneiphof* (tippling grange). The author of the volume before us, a professor in the recently founded Hamburg Scientific Institute, was aided in his researches by Herbert Bismarck and other members of the family, who allowed him access to private papers in Friedrichsruh and Schönhausen. This first volume deals chiefly with personal characteristics and psychology: its data place us in a better position than heretofore for judging Bismarck's subsequent political career. Extremely interesting is the section entitled *Weltanschauungskämpfe*, or cosmological conflicts, which led him to renounce his belief in Christianity and to become a pantheist. This change, which began in his sixteenth year with the study of philosophical works, ancient and modern, especially Hegel and Spinoza, was rendered still more radical by the writings of David Strauss, Ludwig Feuerbach, and Bruno Bauer, so that, to use his own expression, he was "conducted still deeper into the *cul-de-sac* of doubt." This skepticism often takes a sardonic tone, as for example in a letter to his sister describing a stormy voyage to Norderney in August, 1844: "Some ladies fainted, others wept, and the stillness of the gentlemen's cabin was broken only by the loud praying of a Bremen merchant, who, before the tempest, seemed to think more of his vest than of his God. . . Still, his prayer saved us this time." His restless and quite melancholy state of mind continued for some years, and it was not until his marriage in 1847 that his so-called "conversion" took place—this as the result of outward circumstances and social considerations, rather than intellectual conviction. Portraits of Bismarck at eleven and twenty years of age are given in this first volume of Marcks's work, whose earlier pages are well written, though they are, perhaps, somewhat too numerous.

Several volumes have recently been add-

ed to the series of technical economic monographs edited by Prof. Ludwig Sinzheimer, lecturer in political economy at the University of Munich. The series appeals most forcibly to students and investigators within the fields of industrial history and commercial geography. This is due to the fact that the various volumes are prepared in conformity with the general plan of showing the economic significance of the progress of technical knowledge as applied to certain representative industries. The ninth volume, which is the latest yet published, was prepared by Dr. Franz Schaefer and is entitled "Die volkswirtschaftliche Bedeutung der technischen Entwicklung in der Papierfabrikation" (Leipzig: Werner Klinkhardt). Other studies which already have appeared in the same series deal with the sugar, shipbuilding, glass, sulphuric acid, celluloid, brick, wool, and shoe industries.

The Rev. Theodore Thornton Munger died at New Haven, Conn., January 11, in the eightieth year of his age. He was a graduate of Yale College and Yale Theological Seminary, and was active as a clergyman in the Congregational Church until his retirement in 1901. He was the author of fiction, essays, and a biography of Horace Bushnell.

James Barr Ames, dean of the Harvard Law School, died at Cambridge, Mass., January 8. He was born in Boston, June 22, 1846. He was a graduate of Harvard College (1868), and of the Harvard Law School (1872). From 1873 he had been a professor in the latter institution, and since 1895, dean. He compiled numerous volumes of cases, and was a frequent contributor to the *Harvard Law Review* and other publications.

Mrs. Flora Adams Darling, founder of two national patriotic societies and the author of several novels, died in New York city January 6, in the seventieth year of her age.

George Edward Graham, a newspaper writer and the author of two volumes of war correspondence, died January 6 at Los Angeles, Cal., aged forty-three years.

Peter Hay Hunter, D.D., of Edinburgh has recently died, aged fifty-five years. Among his religious books are "The Story of Daniel" and "After the Exile," and he was the author of several novels.

John Sibree, the last of the literary group of Coventry associated with George Eliot, died last month at an advanced age. Born in Coventry in 1823, he was educated at Mill Hill, and later in Germany. Besides being an educator, he translated Hegel's "Philosophy of History" (1857). He was described as knowing his Horace by heart, and as an ardent evolutionist; and with his figure readers of Cross's Life of George Eliot are not unfamiliar.

Francesco di Paolo Satolli, bishop of Frascati, archpriest of the Lateran Arch-Basilica, and prefect of the Congregation of Studies, died at Rome, January 8. He was born at Marsciano in 1839. He was created a cardinal in 1895. Three years earlier he had acted as first apostolic delegate from the Vatican to the United States. He made in all three visits to this country. He was an exponent of the Thomistic philosophy, and the author of a "Commentary on the 'Summa' of St. Thomas," in several volumes, of a "Course in Philosophy," and of essays on various topics, including "The Beautiful and True in Relation to the Study of Nature," "The Powers of the Soul," and "Variety of Systems and Essential Defects of Modern Philosophy."

From France comes news of the death of two men of letters: Ernest Quentin-Bauchart, a bibliographer of high standing—the author of "Les Femmes Bibliophiles de France," two volumes, "Mes Livres," etc.—at an advanced age, and Charles Louis Philippe, a novelist, at the age of thirty-five years.

From Strasburg is reported the death, at eighty-five years, of Ludwig Friedländer, professor of classical philology and archæology at the University of Königsberg from 1859 to 1892. The editor of Juvenal and Martial, and a contributor to Homeric literature, he was perhaps best known for his "Darstellungen aus der Sittengeschichte Roms."

Science.

Preventable Diseases. By Woods Hutchinson, A.M., M.D. Boston: Houghton Mifflin Co. $1.50 net.

Of all writers on popular medicine, Dr. Woods Hutchinson deserves commendation for his accurate, forceful, and interesting presentation of matters which lie very close to health and happiness. His present book is an excellent example of his lucid manner of exposition. He has learned, that to be explicit, one must go to the very bottom of a subject, and hence every chapter of this volume explains to the reader the embryological significance and the pathology of diseases preventable through knowledge and caution.

The first chapter shows the defences of the body against the invasion of death-dealing diseases. There is, the author says, a true legacy of health, and lack of health represents to a great extent our wilful and perverse ways of living. The diseases which he considers preventable are adenoid growths, tuberculosis, pneumonia, typhoid fever, diphtheria, scarlet fever, measles, whooping cough, appendicitis, malaria, rheumatism, cancer, and the various odds and ends classified as psychoses.

The chapter on cancer is especially illuminating, and shows the origin, the prevalence, the characteristics, and the early diagnosis of this dread scourge. The only cure for cancer is early diagnosis and immediate operation. To quote:

Warts and birthmarks that are in any way subject to pressure or friction from clothing or movements should be promptly removed, as both show a distinctly greater tendency than normal tissue to develop into cancer. Cracks, fissures, chafes, and lumps of all sorts, especially about the lips, tongue, mammary gland, uterus, and rectum, should be early and aseptically dealt with; jagged remnants of teeth should be removed, all suppurative processes of the gums antiseptically treated, and the whole mouth parts kept in a thoroughly aseptic condition.

Headache he considers the most useful pain in the world, inasmuch as it is often the first danger signal that some wheel in the great body mechanism has slipped its cog. The final chapter deals with mental influences in disease, and touches lightly the much discussed psychotherapy.

A new "School Economic Atlas," by J. G. Bartholomew, F.R.G.S., with an introduction by L. W. Lyde, M.A., professor of economic geography in University College, London, is promised for early publication by Henry Frowde. Sixty-four colored maps are a feature of the announced publication.

Prof. Carl Runge's lectures on "Graphical Methods in Mathematics and Physics," delivered by him at Columbia University as the Kaiser Wilhelm professor, are to be published in book form by the Columbia University Press.

In "Makers of Electricity" (Fordham University Press), by Brother Potamian and Dr. Walsh, we have biographical sketches of some of the great discoverers in this branch of science. It is, in our opinion, a matter of importance that the works and lives of men like Gilbert, Franklin, Galvani, Volta, Ampère, and others should be made known to the students of electricity, and this office has been well fulfilled by the present authors. The book is no mere compilation, but brings out many interesting and obscure facts, especially about the earlier men. Thus, in connection with the experiments proving the identity of lightning and artificial electricity, the significant work of the forgotten Procopius Diviseh is related in a lively manner. The claims of the various rivals for the honor of the discovery are fairly discussed, the credit being finally given to Franklin. Besides the main purpose of the book, the authors, following the plan of their previous histories, attempt to show that adherence to the Catholic Church has not prevented, but rather promoted, scientific advance. It is certainly true that the lives of these investigators display piety and nobility of character, and the writings of most of them indicate a belief in immortality. But the real question is hardly proved. A majority of the men were not Catholics, and, in one case, that of the priest, Diviseh, his scientific work was stopped by order of his superiors. Yet whatever opposition there was in the past, at the present time this Church has undoubtedly accepted the right of scientific research. The book is attractively made up and the proofreading has been careful.

In France, the authorities have signalized the need of an institute of aeronautics, "analagous to the Institut Océanographique." No sooner said than done, for a gift of Henry Deutsch of $100,000, with an annual income of about $3,000, announced last summer, has been accepted, and the grounds for the new institution purchased. These are at Saint-Cyr-l'Ecole, near Paris, and the institute will be ready to open its doors by May, 1910. The institute is under the direction of the minister of public works.

Dr. A. A. Michelson, professor of physics in the University of Chicago, has been chosen president of the American Association for the Advancement of Science for the meeting to be held at Minneapolis next year. Dr. D. T. MacDougal, director of the department of botanical research of the Carnegie Institution, was elected president of the American Society of Naturalists at the recent meeting in Boston, and Prof. W. D. Bancroft of Cornell University has been elected to the presidency of the American Chemical Society. At the session of the American Physiological Association, Prof. W. B. Pillsbury was elected to the presidency of that organization.

Lardner Gibbon, said to be the oldest ex-officer of the United States navy, died suddenly at his home in Holmesburg, Pa., January 9. He was born in Philadelphia in 1829, and was appointed a midshipman in the navy eight years later. In 1851 he became a lieutenant. He conducted an expedition in the early fifties from the coast of Peru across the Andes and down the Madeira and Amazon Rivers. On this trip he travelled about 2,000 miles in a canoe. The government published a book written and illustrated by him describing this expedition. He was the first to suggest the building of a railway around the falls of the Madeira River, for the purpose of opening a highway from Bolivia to the Atlantic coast. The railway is now being built by the governments of Brazil and Bolivia. He resigned his commission in the navy on May 15, 1857, and during the civil war was in the service of the Confederacy.

Stephen Warner Baldwin died at Brookline, Mass., January 5, in his seventy-seventh year. He was one of this country's most prominent mechanical engineers, and an ardent advocate of improved industrial education. To the Artisan School at Syracuse and the Half Time Trade School at Worcester he gave generously of time and thought.

George Earl Church died in London January 5. He was born in New Bedford, Mass., in 1835, and served in the civil war as colonel and brigadier commander of United States volunteers. Earlier, he was resident engineer of the great Hoosac tunnel, and a member of the expedition which, in 1858, explored the southwestern frontier of Argentina. After the close of the civil war he served in Mexico as a champion of President Juarez, and as a war correspondent. Again, he opened up the tributaries of the Amazon to navigation. Of late years his activities had been principally concerned with London enterprises, and he devoted much time to historical researches and to writing. It is said that he was the only person, not an English citizen, honored with the membership of the Royal Geographical Society.

An official of the Natural History Museum of South Kensington, London, Dr. Richard Bowdler Sharpe, has died, in his sixty-second year. He was an expert on ornithology, and had published a study of kingfishers, a history of the birds of Europe, a "Hand List of Birds," etc.

Bouquet de la Grye, author of books on navigation and allied topics, has died, at the age of eighty-two years. Among his projects were a canal which should make Paris a sea-port, and an *horloge universelle*, or system by which, through the agency of wireless telegraphy, uniform time should be maintained throughout the world.

The professor of geodesy in the Technical School at Darmstadt, Germany, Dr. P. Fenner, has died in his fifty-seventh year.

Drama.

The Man Shakespeare and His Tragic Life Story. By Frank Harris. New York: Mitchell Kennerley. $2.50 net.

"As biography this book must rank with Boswell's 'Life of Johnson'; as art, it must rank above it"—this is the statement sent out by the publisher. Who would not read such a book! From the title, we should have inferred another specimen of that species which passes rapidly into modest retirement among the Shakespeareana in the second-hand dealer's catalogue. Forewarned, we opened the volume, and soon perceived that "modest" was not quite the word to apply either to the biography or its author. From cover to cover, Mr. Harris is fairly gasping with astonishment and contempt at the stupidity of all his predecessors. He finds only three exceptions—"one authentic witness, Jonson, and two interesting though not trustworthy witnesses, Goethe and Coleridge—and nothing more in three centuries." "A man must be judged by his peers," he continues with splendid candor, and a little later he adds, "It looks as if the time for judging him [Shakespeare] had come." He believes that the "time for random assertion about Shakespeare . . . has passed away for ever," and that he himself has "heaped up" his proofs so as "to stifle doubt and reach absolute conviction." No wonder Mr. Harris finds it difficult to conceal his self-satisfaction.

We are not of that strict sect of Shakespearean critics which holds that the plays and poems throw no light upon the character of their author. Neither is Mr. Harris. On the other hand, we do make some distinction between drama and autobiography. Mr. Harris does not. He declares that Shakespeare's purpose was self-revelation as clearly as was Montaigne's. There is just one flash of sanity in Mr. Harris's method. Assuming that Hamlet was the poet's most intimate and complete piece of self-portraiture, he goes through the plays examining all the principal characters in search of Hamlet-traits where they do not belong. This portion of the study is not without suggestiveness, though Mr. Harris is not unique in discovering a certain family likeness in Jaques, Hamlet, Lear, and Macbeth. It is in the mad extreme to which he pushes his theory that he is unique. He would have it that Shakespeare, like an elder Rousseau, was deliberately laying bare his soul in one confession after another from the beginning to the end of his career. "A little earlier, and occupied chiefly with his own complex growth, he would only paint sides of himself; a little later, and the personal interest absorbed all others, so that his dramas became lyrics of anguish and despair." Accepting without question the identification of the "dark lady" with Mary Fitton, and the rival poet with Chapman, and "Mr. W. H." with William Herbert, he proves what is entirely uncertain by what is entirely unknown. If a twentieth part of Mr. Harris's "proofs" were sound, then Shakespeare with maniacal indecency spent his life in revealing to the public his amour with a dissolute woman of the court. Hamlet hesitating to kill Claudius is just Shakespeare hesitating to kill Pembroke; Othello jealous of Desdemona is Shakespeare jealous of Mary Fitton; "it is Shakespeare and not Antony who groans: 'O this false soul of Egypt' ": Lear railing at lechery is, etc.; Timon is "a scream of suffering" at the loss of Mary Fitton and the perfidy of Pembroke. As a result of this remarkable piece of synthetic criticism—Mr. Harris points out that Carlyle's "Cromwell" is the "only memorable attempt" at creative criticism before his—Shakespeare emerges at length as he really was: "gentle," "kindly," "winning," yet "inordinately vain and self-centred," a "parasite by nature," a "snob," a man of "overpowering sensuality," "weak," "irresolute," a poor sleeper, afflicted by "erotic mania," endowed with the "gift of gab." The processes by which Mr. Harris reaches this conclusion are as funny as the conclusion itself. Though we have not read all the absurd books in the world, we are almost tempted to declare that this is the absurdest.

The future work of Rudolf Besier, the young English dramatist, will be awaited with interest. He has a good deal to learn yet in the way of artistic restraint and proportion, but both of his plays recently produced in this city, "Don" and "Olive Latimer's Husband," widely different as they are in character, are distinguished from the great mass of contemporaneous pieces by the same striking and exceedingly uncommon qualities. These are definiteness of purpose, a logical dependence of the dramatic action upon the prescribed premises and the personalities involved, and a reasonable conclusion. In "Don," in the main a light comedy, truth triumphs over uncharitable misconstruction and all ends happily. In "Olive Latimer's Husband," a domestic tragedy, the degradation and misery arising out of loveless marriages for money are depicted with veracious power, and the action proceeds steadily to a catastrophe as complete as it is, under the circumstances, inevitable. In technical construction the piece is occasionally awkward. The sequence and location of the various scenes are often felt to be arbitrary rather than natural. But the scenes themselves spring from natural causes, and are emotionally powerful and substantially true.

Such weaknesses as exist lie not in the original design, but in the inexpertness of execution. It may be granted that the emotion is somewhat overwrought—with too much elaboration of accumulated detail—but these are only the errors of an anxious young writer, whose fertile imagination has not yet been brought under the control of artistic discipline. A really fine actress in the leading part could, doubtless, carry the play to success, but unless well acted it is too sombre to have much chance of popularity. The performance accorded to it here at the Hackett Theatre was fatally incapable. It is not the first time that a meritorious play has been discredited in this way.

Charles Frohman plans to erect a theatre in the East Side of New York city where will be presented good modern dramas acted by a succession of stars, at prices not to exceed fifty cents. The plays to be presented will be contributed without royalties, it is stated, by such playwrights as Mr. Barrie, Mr. Shaw, and Henry Bernstein. The new theatre, which it is proposed to place in Rivington Street, is planned for the coming season.

The next play at His Majesty's Theatre, in London, will be by Justin Huntly McCarthy. It is an historical Irish piece, in four acts, called "O'Flynn's Own." Sir Herbert's part will be that of an Irish soldier of fortune, and he will be supported by Miss Evelyn d'Alroy. The piece, which is of a gay, joyous character, will have music in it, and the period will be somewhere between Charles II and the Georges. It is a story of love and war.

"Madame Margot," the new historical play by Emile Moreau and Charles Clairville, produced at the Théâtre Réjane, in Paris, is less an historical *drame* than a refreshing piece of comedy. The heroine is the charming and risky daughter of the fourth Henry, and is interpreted by Mme. Réjane.

Arthur Bourchier is preparing his production of "Dame Nature," Fred Fenn's adaptation of Henri Bataille's "Femme Nue." This delectable piece treats of a Bohemian artist and his wife—formerly his model. The artist wins the *grand prix*, attains social eminence, and becomes a popular portrait-painter. One of his distinguished sitters is a princess, who falls in love with him and vows that a model is no wife for such a talented man as he. Then comes the big scene between the two women, in which each struggles for possession of the man. Finally, the wife realizes the hopelessness of the situation, and goes off with a former lover.

At the Berlin Schauspielhaus has been produced "Strandkinder," a new play by Hermann Sudermann. Emphasis may well be placed on the fact that the royal theatre was the place of production, for few really "modern" German plays have had their first performance on that stage. The "Versunkene Glocke," for example, was not given at the Schauspielhaus until last year, and not for some three years has Sudermann been acted there. There is, however, nothing dramatically heterodox about the new production. "Strandkinder" is based upon mediæval Prussian history, representing the feuds and tyrannies of the Baltic coast under the brutal reign of the knights who dominated it in ante-Hohenzollern times. The construction of the piece does not commend it to the critics, and it was received rather coldly at its first performance.

Klara Ziegler, whose death is announced at Munich, was born in 1844, and was for many years distinguished as a tragédienne. Her initial triumph was in the name-part of the "Medea" of Grillparzer. Six years ago she retired from the stage, but only after many years of earnest effort to revive the interest in German classical drama.

Music.

OPERATIC COMPETITION.

When Oscar Hammerstein gave New York a second opera house, all the experts felt sure that it would not stand, as such, more than a year; but it has survived three seasons, prospering at times astonishingly. Had it not been for this experience, there would have been more preliminary misgivings regarding the advisability of having a third opera—for that is what the two additional evenings of opéra comique at the Manhattan, and the two weekly performances at the New Theatre, virtually amounted to. It is now clear that it would have been wiser to let well enough alone. The opéra comique company had to be sent to Canada, where French is more widely understood, and the New Theatre performances, with few exceptions, have not been pecuniary successes. In neither case are the managers to blame; Mr. Hammerstein brought over the best musical comedians from Paris, and at the New Theatre also the operas have been presented for the most part with admirable casts and scenic backgrounds sufficiently attractive to interest the most blasé opera-goers. The explanation of the situation lies in the three words: "Too much opera." Even at the Metropolitan, it is the rule rather than the exception that speculators offer after eight o'clock excellent $5 seats for one-half to one-fifth of their value. No doubt there is a surprisingly great demand for opera in this city; but at present the supply exceeds it.

For some days personal and semi-official negotiations were even under way with a view to mitigating or eliminating the financially injurious competition between the Manhattan and the Metropolitan. It is certain that the Manhattan Opera House is not looked on with affection by the directors of the Metropolitan, but they have met the assertion that they are ready to buy out its owner at his own figure with the statement that no negotiations have been pending or are now pending. On the other hand, it seems certain that Mr. Hammerstein is a little staggered for the moment at his temerity in "fighting Wall Street"; that is, the millionaires who own the Metropolitan. It is to be hoped that this is merely a mood of temporary discouragement, for the closing of his opera house at the end of this season would prove a great loss to the musical world. He has put the professionals as well as the public under great obligations in many ways, notably by bringing over the best Parisian singers, and thus providing an opportunity to become acquainted with the operas of the modern French school. Since the first performances of Wagner's works in New York in the days of Seidl nothing has been offered to local opera-goers so unique and enjoyable as the Massenet and other Parisian operas, with Mary Garden, Dalmores, Renaud, Gilibert, and other great artists, and in an auditorium ideally suited to their style.

Nor has Mr. Hammerstein simply given first-class performances at his own house; he has also done a great deal to improve those given at the Metropolitan. It is undeniable that the older house had fallen into negligent ways from which it needed competition to redeem it. The Manhattan set a new standard in chorus singing, and it showed that new operas—tabooed at the rival house—can be made profitable provided they are produced with the right artists and amid the proper surroundings. If the manager of this house should now retire on his laurels it is feared that the Metropolitan would return to its old ways. Already there is talk of doing away with the double orchestra and the double chorus, which have made it possible to rehearse the operas properly, while increasing the number of performances. This would be a fatal step backwards, for it is the extra rehearsing, chiefly, that has made the performances given under Giulio Gatti-Casazza and Andreas Dippel so superior to most of those managed by Heinrich Conried.

It cannot be denied that the operatic situation is peculiarly difficult to deal with. The expense list of the Metropolitan is some $80,000 a week, and while the directors declare that they are interested in the cause of art alone, it is obvious that efforts must be made to keep within reasonable limits of expenditure. New York has practically a "corner" in great singers (all Europe bewails this fact), and these artists can be had only on high terms, and on promise of a given number of performances each season. The necessity of providing this number of performances for each and all has led to the invasion of neighboring cities. But those cities want only the best singers, and these do not like to be sent hither and thither because of the fatigue, the overheated cars, the damage to delicate vocal organs.

The latest plan is to have local opera companies in cities sufficiently interested, and to lend them some of our great

singers for a time. That plan is being tried this year in Boston, and will be tried next season in Chicago. If it fails, it will be because of the American habit of insisting on the best or nothing. The root of the difficulty lies in the scarcity of first-class artists. Even we, who have most of them, need more; and in other cities, American and European, the supply falls lamentably short of the demand. It is a mystery why the hundreds of conservatories in the world, and the tens of thousands of private teachers fail to provide the desired number of operatic artists when fame and fortunes are eagerly awaiting them. In the meantime, and till they are forthcoming, temporary relief might be provided by adopting a suggestion previously made in this journal. Why should not the Metropolitan and the Manhattan lend one another their best artists for occasional star-cast performances like those which Maurice Grau found so profitable and the public so enjoyable?

Report on The Star-Spangled Banner, Hail Columbia, America, Yankee Doodle. By Oscar George Theodore Sonneck. Washington: Government Printing Office. 85 cents.

In December, 1907, at the suggestion of President Roosevelt, Mr. Sonneck, chief of the division of music in the Library of Congress, received instructions from Herbert Putnam to bring together the various versions both of text and music, with notes as to the historical evolution, of "The Star-Spangled Banner," "Hail Columbia," "America," and "Yankee Doodle." It was an order not easy to carry out, as Mr. Sonneck soon discovered, because most of the literature on the subject is untrustworthy. He was thus compelled to spend much time delving for original documents, sorting, and sifting; and the result, with his deductions from the evidence, makes a volume of 255 pages. It may not be the last word on the subject, but is certainly by far the most scholarly treatise yet written. The last eighty pages are devoted to facsimiles and a helpful index.

In regard to "America," the author takes the ground that, being a British air, it belonged to the British colonists just as much as it did to the Britons at home, and is, therefore, not "borrowed." The tune of "The Star-Spangled Banner" also originated in England, and from these two "Hail Columbia" differs in that both words and music were written in the United States. We regret to add, however, that this is not something to be proud of, since it is in musical value far inferior to the other two. Nevertheless, it seems like an inspiration of genius compared with the vulgar "Yankee Doodle," the continued use of which as a national tune is a national disgrace. Mr. Sonneck devotes no fewer than 77 pages to "Yankee Doodle," because he found its history a maze of conflicting stories. He admits that the origin of the tune, after the most careful examination of the many different stories, still remains a matter of doubt. He does not sympathize with those who treat this tune with contempt, holding that there must be some redeeming features in a song which has appealed to our people for a century and a half. But this appeal has been, one takes comfort in retorting, on patriotic much more than on musical grounds. Mr. Sonneck tries to come to the reseue by declaring that "Yankee Doodle" "frankly appeals to our sense of humor. Critics, pedantic or flippant, have overlooked the fact that every nation has its humorous, even burlesque, patriotic airs, and that these are just as natural and useful as solemn airs—indeed, more so, occasionally. As a specimen of burlesque, even 'slangy' musical humor, 'Yankee Doodle' may safely hold its own against any other patriotic air." Now, this may be true so far as the words are concerned; but, as the author himself points out, the text or texts are now "practically obsolete." As for the tune itself, we have never known any one in an acclaiming multitude to take it humorously. It is applauded because of its patriotic and political associations. Used as it always is, "Yankee Doodle" is not comic, but painfully ludicrous. It has been pointed out that it resembles in its melodic intervals the "Hymn to Joy" in Beethoven's ninth symphony. Undoubtedly it does; but the difference between the two is the step between the ridiculous and the sublime. It is to be greatly regretted that Mr. Sonneck should have thus apologized for this vulgar tune. His book would have been the place to present weighty arguments against the further sanction of its use as a national air.

Max Kalbeck's biography of Brahms (Deutsche Brahms Gesellschaft) threatens to become as interminable as Glasenapp's (or even Ellis's) life of Wagner; and, like Glasenapp, Kalbeck issues complete volumes as part i or part ii of volume so-and-so. The latest volume, for instance, is called "first half-volume of part iii." It covers the years 1874-1881, beginning with the C minor symphony and concluding with the violin concerto and two overtures.

Among other important recent German publications are Kapp's "Franz Liszt" (Schuster & Loeffler); "Richard Wagner an Freunde und Zeitgenossen" (Schuster & Loeffler), and the seventh edition of Riemann's "Musiklexicon" (Hesse). In Kapp's book Liszt is treated both enthusiastically and critically, and his life is told more fully than elsewhere. The Wagner letters are 336 in number, most of them not before printed. They are addressed to King Ludwig, Nietzsche, and many others, the first being dated 1834, the last 1883.

No musician has been more talked and written about in the last two years than Ferruccio Benvenuto Busoni. He was born in Florence in 1862, and is the first Italian pianist since Scarlatti to win international fame. To-day he is celebrated as a pedagogue (he was Sauer's successor as director of the piano-master class in the Vienna Conservatory), as pianist, critic, and composer, even conservative England having recently acclaimed him as such. Like Liszt, he is much addicted to making transcriptions and arrangements of the works of other composers, and some of these have aroused the ire of pedants and conservatives to whom the letter is more sacred than the spirit. In 1891 Mr. Busoni made Boston his home, but soon went back to the more congenial atmosphere of Germany. Last week he returned for a concert tour in this country, playing at his first appearance Beethoven's Emperor concerto with the Philharmonic Orchestra. He provoked much enthusiasm, which was all the more eloquent as it was not aroused by eccentricities or sensational means, but by qualities of tone production, coloring, phrasing, and shading that place him in the front rank of pianists.

The remarkable pecuniary success won in this country last year by France's most prominent female composer, Cécile Chaminade, is doubtless responsible for the invasion of our realms by the English Chaminade, Liza Lehmann, who gave a concert in Carnegie Hall last Saturday, with the aid of a vocal quartet and a boy soprano. Mme. Lehmann is entitled to the distinction of having made song cycles popular in her native country. Her "In a Persian Garden" has, since its first production, some fourteen years ago, been sung innumerable times in England and America. It owes its popularity in part to the lines it is set to, selected from the Rubáiyát of Omar Khayyám; but as music, too, though it lacks individuality, it is far superior to most of the countless songs composed today by women. Mme. Lehmann will doubtless get a cordial welcome, especially from the women's clubs, throughout the country.

Scores of American sopranos, altos, tenors, baritones, and basses are singing today in European opera houses, especially those of Germany, and every year a few of them are honored by being brought back to be heard in our own opera houses. None of those who have come back in recent years has more deserved this honor than Clarence Whitehill. His success at the Metropolitan is the more noteworthy as it has been won particularly as Wotan in two of Wagner's Ring operas—a part often decried as tedious, but which, when well sung, is really most impressive. Mr. Whitehill is a true successor of Scaria and Edouard de Reszke in that he has learned the rare art of delivering the music with dramatic expression without sacrificing beauty of tone. That is not the present Bayreuth ideal; but it was Wagner's.

Samuel Simons Sanford, professor of applied music at Yale University, died January 6 in New York city. Born in 1849, he was a pupil of Klingman, Mason, and Mills, in this country, and of Rubinstein, Battiste, and Ritter, abroad. No American of our times has enjoyed closer relations with the great pianists of the Old World. His style of play was marked by power, accuracy, high expression, exquisite feeling, and every musical trait of a great artist whose admirers lamented that, by his own

choice, his listeners were so few. In 1894, he accepted the Yale professorship, being urged by friends to make some deeper and wider impress on the musical world than he had previously done. Returning habitually the checks mailed him for his salary, he undertook successfully the humdrum work of the teacher, with the task of developing, in coöperation with Prof. Horatio Parker, the musical department of the university.

Art.

SOME TENDENCIES IN MODERN ENGLISH ART.

LONDON, December 21.

Several interesting exhibitions of modern work are, or have lately been, open in London, their interest possibly being not so much in the work itself as in their general characteristics. A curious condition of affairs now prevails. Whatever their differences, almost all are agreed in shrinking from the knock at the door, not of the younger generation, but of the old masters. Some say that if only there were no old masters selling at fabulous prices, the millennium would dawn. Academicians have tried to bring on this millennium of the modern painter by devoting their winter exhibition wholly to modern work: a measure they have had already to abandon. Men who have not received even the official recognition they do not deserve cry out for a bounty from the state. Many see salvation in the creation of a Ministry of the Fine Arts or an English Luxembourg. And yet, for all the discontent and disappointment of genuinely hard times, a certain proportion of the younger men already have all the success they could ask for, are hailed Young Genius, and hear their work recommended as a safe financial investment for the collector.

These few are recruited chiefly from the International Society and from the new English Art Club, which has the advantage of including among its members influential critics, directors of national collections, and professors of art. The New English happens to be one of the exhibitions now open. For years the club was content to exhibit in a small gallery where the limited space necessitated careful selection. One result was a small but, especially in the beginning, suggestive and stimulating exhibition. Now the club has moved to larger quarters—to the historic galleries of the British Artists in Suffolk Street made famous by Whistler when he showed there—where there are one large and four small rooms to fill. With the consequently less rigorous selection, the standard is lowered. Effort is, in any case, slackened with success. Yet the older members who form a kind of inner group are still to the fore. Sargent is again represented, though only by a portrait not to be ranked with his most remarkable. It is a three-quarter length of an elderly lady, Mrs. Wedgwood, whose bonnet and cloak seem to mark the passing of a fashion rather than to make the fashion for all time as the great portraits of the world always do, and whose pose is as haphazard as if she had been caught in it by a snapshot. For all that, no other portrait in the collection rivals it in the expression of character or in technical skill. Sargent is said by the critics who make a business of discovering new geniuses to be a back number, still shining at the Academy, it may be, but vanishing when subjected to comparison with the younger generation. I note that even Mr. Caffin, writing of Harold Speed in *Harper's*, casts his doubts upon Sargent's continued supremacy. But the fact remains that there is not a painter in England—it is another matter on the Continent—who has the wonderful command of his medium that in Sargent approaches genius, though he may lack the finer qualities of the great masters.

On the same wall with Sargent's Mrs. Wedgwood hangs a large nude which, for Mancini, is an indifferent work, starred with his eccentricities of technique, yet seen, certainly, through artists' eyes and drawn with a master's knowledge. Farther on hangs a portrait of a Man from New York, by Augustus E. John, the most highly praised of the younger men, before whom, his admirers declare, Rembrandt and Ingres must bow diminished heads. Sargent and Mancini, at least, do manage, at the New English, to hold up theirs with no too serious strain. John's portrait is an able, sound piece of student's work, solidly painted, well modelled, but with no distinction in the arrangement and with more apparent attention concentrated upon the blue shirt and tie than upon the face. Whatever the future may disclose, the present work shows neither Sargent's vitality nor Mancini's subtlety. I did not find in the other portraits any invitation at all to comparison. I have seen better things by Gerald Kelly than his studies of Eastern women. Orpen, technically the most proficient of the younger New English men, shows, not portraits, but pictures with figures—a group of Travellers; a Child by the Sea; a Girl on a Hilltop—not one of which will add materially to his reputation. Nicholson sends nothing but one of his small, admirable studies of still-life. Of the landscape painters. Wilson Steer is the most prominent, as from the beginning of these exhibitions: all the more so because he understands the value of reserve in the art of exhibiting as well as in that of painting. His large Horseshoe Bend of the Severn is a spacious landscape of the kind Steer knows so well how to paint: a wide countryside stretching away under a vast expanse of sky. The feeling of space is here the chief merit, as it customarily is in his canvases. But this landscape has, too, his principal defect, which is an implicit reliance upon nature at the expense of composition, arrangement. He seldom shows the sense of line that is Claude's or Turner's, though, according to the modern critic, he eclipses Turner even as John overshadows Rembrandt.

The Goupil Gallery Salon is another of the principal early-winter exhibitions. The managers deserve credit for devoting their galleries for two or three months annually to contemporary work, while most of the other dealers prefer work by men whom death has "placed." Not more than one Academician contributes here, the New English men being so strong in numbers that the show seems little more than an echo of Suffolk Street. Orpen and Nicholson, Steer, Russell and Mark Fisher, Blanche and Gerald Kelly, are all here. Some, however, have been more generous to Goupil's in reserving for it their best work; and had Sargent also sent, there would be a better chance for a comparison between him and Orpen and Nicholson, who both have characteristic portraits. Orpen's two large canvases show each a single figure standing, bent as if swaying in the wind, with a suggestion of the movement he has lately sought to render in more than one of his portraits. It may be a chance that the wind apparently has caught them from opposite directions, but if designed for the purpose, the pictures could not balance each other better on the walls where they hang; and as a result the movement seems less natural than a deliberate convention. Nicholson's Girl with the Tattered Gloves is as conventional, but in quite another way. It is a half-length, sombre in color scheme; the girl is clothed in black even to the gloves on her folded hands. The repose and the decorative charm which make it a pleasure to come upon Nicholson's work in any collection of modern English pictures are not wanting here, though gained by an harmonious arrangement of flat spaces of color rather than by an intimate study of character or by a serious interpretation of life. A good Sargent would produce the effect of a real person framed on the wall if hung between the Nicholson and the Orpen. But this collection is not confined to the New English group: Le Sidaner has always a place at Goupil's. His new pictures are impressions of Lago Maggiore under snow and in the evening, the effect disturbed by that mannerism which grows upon him. Lavery and William Rothenstein also are contributors—as are many of that youngest group of all, whose names have as yet scarcely been heard outside of London.

The Portrait Painters' is the third large exhibition held at this season, though rumor says this year's is the last. Certainly it is the last year of the New Gallery: a fact to be regretted, for the gallery has played an important part in the art history of London during twenty years and more, and is one of the best lighted and best arranged in London. It is to be turned into a café, eating and drinking in public, to the sound of music, having become much more popular a pastime than looking at pictures. Every member of the Portrait Painters' has the right to exhibit, and some members have not enough merit to justify their exhibiting anywhere; so that the show is a curious medley. An attempt to increase the interest this year was made by showing, as a section apart, portraits of musicians and actors; but as these are mostly by members and of comparatively recent date, there is little to distinguish it from the rest of the collection. Nicholson and Orpen again reappear, as if no exhibition could be complete without them. The former's Lady Denman is certainly one of the most distinguished of the portraits—a full length on a larger scale than the Girl with the Tattered Gloves, but presenting, by much the same means, much the same effect. In his three small portraits here, Orpen is at his best: he has placed his sitters in elaborately furnished settings full of such detail as delights him. Not only he, but several of the younger portraitists are now accepted as prophets of a new school, which has returned to the subjects and treatment popular at the Academy when the Pre-Raphaelites made their famous revolt more than half a century ago. Nor can I say that I think they have surpassed the early Victorian Academicians in the old Academic game. Orpen first attracted attention by a little anecdote in paint in the manner of Frith; but Frith, even though he never could be mistaken for a master, could do this sort of thing far better, and his Derby Day or Railway Station, in the New English show, or at Goupil's, might shake the critic's confidence in the superiority of the modern school. Orpen's Prime Minister, in official robes, hung by Orchardson's masterly, well-known Sir Walter Gibbey, is weak and tentative. Neither is Alma-Tadema (who sends portraits, which have been seen before, of Paderewski and the etcher Lowenstam) put out of countenance by the younger generation. But there is nothing more vivid and brilliant in either section than Sargent's small head of Joe Jefferson. Blanche and Gerald Kelly are others who are seen at Goupil's, too. Charles H. Shannon belongs to much the same group; but because he has either more reticence or less facility, he does not figure in the other two galleries, showing here one new portrait, a Child, and contributing to the theatrical series his Mrs. Patrick Campbell. Like Nicholson, Shannon always seems more engrossed in his decorative formula than in his sitter, and both these portraits are overweighted with pattern. Other exhibitors among the more conspicuous are Strang, Ricketts, Pryde, and Cameron: whose work appears and reappears in one exhibition after another, outside of the Academy, until one might fancy the public was clamoring for them in art as it clamors for Hall Caine and Marie Corelli in literature.

I wonder that they do not shrink from such praise as more than half suggests that Rembrandt and Velasquez, Titian and Turner, only paved the way for them. Many of these artists are accomplished, but they suffer as much from one extreme of criticism as the Pre-Raphaelites in London, the Impressionists in Paris, suffered from the other. The truth is that the criticism of art has rarely fallen so low in this country. Some ten or fifteen years ago, art criticism was in the hands of men who knew, who could write, who were honest. To-day, your art critic is often enough a dealer in disguise, who uses his paper to advertise yesterday's purchases. Others are so identified with this or that group of artists that they could not criticise without prejudice even if they so desired. It is from these critics that the rank and file, who fear above all to be caught tripping, take their cue. They are not blind to see that Academic reputations have of late been perishing in the auction room; therefore Academicians have gone out of critical fashion. On the other hand, they find that artists, Whistler for example, who were not recognized in the Academicians' golden age, now increase in pecuniary value with every sale; therefore, it is sufficient for a young man to be scorned by the public for them to exalt him into a genius. In self-defence, they accept everything that appears to them serious as proof of inspiration from on high. When one remembers that Whistler had to wait a life-time before he won acknowledgment, and before his pictures, originally bought for a trifle, sold again for a fortune, it is almost comic to read the hysterical praise of those who have yet to win their spurs, and to follow the frantic effort to send up their prices. But the situation has its element of tragedy, and there is artistic disaster in store for more than one turned head.

I might add, as a word of warning to the American artist who is eager for "free art," that, overpraised as some of these English artists are, and inseparable from the financial aspect of art as the English criticism of it is becoming, their prices are still low compared to those that prevail in America. When an American collector, in an outburst of enthusiasm, gave five hundred pounds to Liverpool the other day for the purchase of pictures in the current exhibition there, three landscapes by men of considerable reputation were bought, though a painter of the same standing at home would probably not sell one of his landscapes for less than the whole sum. It will be at least interesting to watch the result if the collection now at Knoedler's here should be transferred to New York.

N. N.

"Schools of Painting," by Mary Innes, with supplementary material on American painting by Charles De Kay, is to he published in the spring hy the Putnams, and should prove an interesting and comprehensive sketch of its subject for the casual reader.

Edwards J. Gale, in "Pewter and the Amateur Collector" (Scribner) has in mind the beginner and shows a real sense of his needs. In the English and American field—other pewters are treated only in passing—he indicates patiently the points of fineness and simplicity of form, thoroughness of workmanship, stiffness and ring of metal, charm of color, and good preservation that must combine to make a piece worthy of the amateur's shelves. What is written is sufficient to put the heginner on his guard against the numerous reproductions. There is a special warning against Britannia metal masking as the choicer product, though the author admits grudgingly the older and hetter pieces of the more silvery composition. There is a reasonably full list of early American pewterers with description of their marks, a skeleton history of the manufacture in England, and forty-three excellent plates. Collectors of metal work invariably split on the issue of cleaning radically or slightly. Mr. Gale is of the radical persuasion. He goes down to the metal fearlessly, and even advises, under certain conditions, what seems the appalling process of grinding off enough metal to create a new surface. Here we cannot pretend to play the umpire. The hints on the proper display of a pewter collection—a really difficult matter—reveal the man of taste. But it is not true that hrass is always the "foe" of the gray metal. On the contrary, certain very pale Colonial or early Republican hrasses make charming accents among the colder pieces.

The twenty-fifth annual exhibition of the Architectural League of New York will open on January 30 in the Fine Arts building. An effort is heing made to render it of particular interest, since it marks the first quarter of a century of the league's exhibition work. An exhibit that will attract attention is the working drawings of Sir Edward Burne-Jones for mosaic decorations in the American Church of St. Paul, at Rome. On the margins are the written instructions of the artist to the mosaic workers. The drawings were discovered in a storeroom of the church by George W. Breck, formerly director of the American Academy at Rome, who will contribute to the league exhibition his cartoons for mosaics recently placed on the façade of the church, representing St. Paul expounding the faith. Among the architectural drawings Carrere & Hastings will

show those for the replanning of Baltimore, and C. G. La Farge those of the Cathedral of St. John the Divine. F. D. Millet, E. H. Blashfield, G. W. Maynard, Joseph Lauber, and W. B. Van Ingen will send decorative paintings, and among the sculptors to be represented are Daniel Chester French, Augustus Lukeman, J. Scott Hartley, and Chester Beach. The exhibition will close February 19.

Frederick Moynihan, a sculptor, died in New York city January 9, aged sixty-seven years. He was born in the island of Guernsey, and was a student at the Royal Academy, in which he held a life scholarship. Among his works are bronzes of Gen. J. E. B. Stuart and of Capt. Stephen F. Brown, the latter a part of the Vermont State statue on Gettysburg battlefield.

Finance.

FOURTEEN PER CENT. MONEY.

The sudden rise of call money to 12 per cent. on the Stock Exchange on Monday of last week, and to 14 per cent. after official hours, with the reaching of 9 per cent. on Tuesday, of 8 on Wednesday, and of 7 on Thursday, excited the profoundest interest. It did not excite this interest because the rates were abnormal for the opening week of the year. On the contrary, 20 per cent. was reached at the opening of January, 1908, 20 per cent. in 1907, 60 in 1906, 14 in 1903, and 10 in 1902. Compared with those years, the high rate of this January was nothing out of the ordinary. The feeling of something like consternation over rates with which the new year opened, arose from the fact that December's money market, despite a manifest strain on bank resources, had been so consistently held down that the Stock Exchange had begun to talk of rates above 6 per cent. as something which it would not witness again.

Exhaustion of surplus reserves at the New York Associated Banks, and increase of the loan account to a figure exceeding the total deposit fund available for lending purposes, have always, heretofore, been accepted as a sign of genuine stringency, to which the call money market responded by more or less spectacular rates. Last October, the surplus bank reserve had fallen to $1,600,000. Half a dozen years ago, so weak a position, with the Western drain of currency continuing, commonly foreshadowed something like 25 per cent. call money. It resulted, the ensuing week, in only one day at 6 per cent. Built up by shifting of loans, the surplus got down again to $4,400,000 in November, but call money rose no higher than 5 per cent. In December, the excess of loans over deposits had mounted to $25,000,000, showing that capital and surplus of certain Wall Street banks were being drawn upon to an unusual degree for use in ordinary loans. But of this really urgent stringency, the worst result was a momentary 7 per cent. call money rate in the last days of December. Since January has never, during the dozen years past, produced a money rate as high as the maximum of December, the inference seemed obvious. The new year ought to be introduced with a maximum rate of 5 or 6 per cent. This is why last week's 14 per cent. rate came with something of a shock to Wall Street; it undoubtedly had some part in the sharp break in prices on the Stock Exchange, which began on the first business day of the year, and ran, in many important stocks, to 4 or 5 points before the week was over.

Several explanations have been offered for this January money rate, twice as high as the highest of the four preceding months. One is, that artificial expedients, such as assumption of bank loans by individual or corporate depositors, had been utilized on an unprece-

An Exceptional Issue of 6% Bonds

Secured by a Thousand Farms

Here are brief facts about one current issue of Irrigation Bonds. They will illustrate what ideal security lies back of such bonds when the issues are rightly selected.

The Bitter Root Valley Irrigation Co. owns one of the largest irrigated fruit land projects in the world. The Company is composed of well known men who are wealthy, experienced and capable. The land to be watered consists of about 40,000 acres in the heart of our greatest fruit belt—in the famous apple region of the Pacific Northwest.

A large part of the valley has been under irrigation for many years, so the possibilities of the land have been demonstrated. Fruit land in the valley has lately sold as high as $1,000 per acre.

The water rights are unassailable, and the total water supply is more than sufficient for all needs. For the irrigable land is distinctly limited by the mountainous bounds of the valley.

$2,500,000 Invested

The Irrigation Company has invested in the project about $2,500,000, or about twiee the total bond issuc. And the bonds are secured by a first mortgage on all the property which the Irrigation Company owns.

The bonds are additionally secured by first liens on the lands and the orchards watered. These liens are given by individual land owners in payment for the land and the water rights. Forty per cent. of the price is paid down, and the balance, secured by the liens, is payable in annual installments.

To secure each $1,000 bond there are deposited with a Trust Company as trustee $1,400 of these first liens on farm land.

The average price at which this land has been sold is about $200 per acre. The minimum price at present is $250 per acre. Yet the bond issue is limited to $30 per acre, or to less than one-sixth the average selling price of the land.

Double Security

Thus the bonds have double security. The first is a mortgage on all the property which the Irrigation Company owns, and the Company's investment is nearly twice the whole bond issue. The second security is these first liens on farm land—on land which is worth more than six times the amount of the bonds which it secures.

One can hardly conceive of moro ample security. Yet these bonds pay six per cent interest, because the demand for irrigated land is so great that the projects are very profitable.

Part of these bonds mature each year from 1914 to 1919. One may have his choice of maturities.

Ask for the Facts

In tho past 15 years we have purchased 75 separate issues of Reclamation Bonds—Drainage and Irrigation. All have been secured by first liens on good farm land, and not a dollar of loss has resulted to any investor.

Irrigation bonds have now become the most popular bonds that we handle. No other large class of bonds offering equal security now pays six per cent.

We havo issued a book on Irrigation Bonds, based on all this experience. Every investor, small or large, owes to himself its perusal. Please write for the book to-day. Cut out this coupon so you won't forget.

dented scale to protect the surplus; that there were other demands on these accounts after January 1, and that the sudden throwing back of this mass of loans upon the banks caused an awkward situation. Another was that interior lenders, with a high bid for their funds at home, were no longer ready to accept a 6 per cent. New York bid. In general, it was frankly admitted that the real bank position, having been disguised in November and December, was bound to reveal itself when the all-around settlement week arrived. The New York bank statement, at the end of the week, gave little clue to the actual causes of the high money rates; that statement was, indeed, more perplexing than enlightening. So far from indicating on its face that loans of the Associated Banks had been largely increased by the reshifting to those institutions of credit obligations, it reported decrease of $14,000,000 in the loan account—a decrease, which, along with the gain in cash, usually looked for in this week, added $11,000,000 to the surplus reserves, leaving that surplus at $14,500,000, a higher figure than has been reached at the end of the first week of January in any of the past half-dozen years, except for a year ago. Taken by itself, such a seemingly strong showing would appear inconsistent with the money market of the week. But a somewhat sensational fall in foreign exchange, during the same week, was unanimously ascribed, on the sterling market, to renewed shifting of loans from New York to Europe; and it was also generally known that, at the higher money rates, some of our own interior banks rushed into Wall Street again as lenders. In other words, although the New York bank position was greatly strengthened, this was done by increasing considerably the market's outside indebtedness, at a time when such increase is not usually looked for, and as a result of abnormally high bids for money.

The story of the week leaves one question open—to what extent, if at all, the high money rates at the opening of the year foreshadow stringency later on. Perhaps it is safest to say that, since these high rates are the logical outcome of the millionaire speculation of the autumn, they are a sign that similar money market disturbances must logically be looked for, if the recent practices of wholesale manipulation on the Stock Exchange are to be resumed. It is a highly interesting fact that, in the published forecasts of the coming year, by financiers and financial critics on the numerous markets, home and foreign, there has been a distinct trend of opinion towards the probability of a "high-money year" in 1910.

Four New Books of Exceptional Importance

POLITICAL SCIENCE

The Promise of American Life

By Herbert Croly

Beginning with the acknowledgment that American democracy is disappointing expectations, the author discusses its original promise, the difficulties which have retarded its fulfilment, and the measures needed to protect true liberty, and produce economic justice.

Cloth, 8vo, $2.00 net; postpaid, $2.14

Pres. J. G. SCHURMAN of Cornell University writes: "I have found the book exceedingly stimulating. It is also instructive, for the author seems to be thoroughly versed in the modern political and economic history not only of America, but of Europe as well. Finally the volume has the immense attraction of dealing with a subject which of all political subjects is now most prominent in the mind not only of thoughtful citizens, but, one might almost say, of the American people."

"Its main thread is remarkably strong and sound. The book cannot be neglected by thinking men."—*Chicago Record-Herald.*

PLANETARY HISTORY

The Evolution of Worlds

By Percival Lowell, LL.D.

Author of "Mars and its Canals," "Mars as the Abode of Life," etc.; Director of the Observatory at Flagstaff, Arizona; non-resident Professor of Astronomy, at the Mass. Institute of Technology.

Cloth, 8vo, $2.50 net; postpaid, $2.72.

"A book of the broadest interest . . . the boldest survey of the fate of worlds from the latest findings of science that has been stated in print. All steps in the progress of the worlds, their rise and their decay, are fully illustrated with plates, maps, diagrams, etc. Prof. Lowell writes for the general reader as well as the scientist, as these extracts from his volume indicate, and the 'Evolution of Worlds' is one of the most complete and entertaining works on astronomy in the light of modern investigation that has been issued," says one critic. "To any one whose mind is open to the reception of knowledge concerning our solar system and the mode of its evolution, we venture to say that this book will be as interesting, and even as exciting, as a problem novel," says another.

The photographs of phenomena of the heavens are the finest reproduced in any book.

TRAVEL AND ADVENTURE

Dr. Sven Hedin's Trans-Himalaya

DISCOVERIES AND ADVENTURES IN TIBET.

"Dr. Hedin was, by nature and special studies, ideally equipped for exploration. To a fine physique he adds a constitution wonderfully adaptable—to the sweltering desert as to the rarified air of the roof of the world; a linguist and a diplomat, as he had need to be in the forbidden land of Tibet; a man of affairs and a born leader knowing how and when to defy if he cannot persuade; an artist skilful with both pencil and brush, and above all a writer, he can pause from a purely geographical record to set down a scene or situation glowing with descriptive or dramatic eloquence. Add to all these qualities the experience of a quarter of a century devoted to Asian exploration and we begin to understand the secret of these two fascinating volumes."—*San Francisco Chronicle.*

"More fascinating than any novel."

In two octavo volumes, with 388 illustrations, including eight colored plates. Cloth, gilt tops, $7.50 net (carriage extra).

SOCIAL EFFORT

Mrs. Mary Conyngton's How to Help

A MANUAL OF PRACTICAL CHARITY.

It has been very widely used wherever interest is felt in understanding the methods of modern, intelligent philanthropy which recognizes both the need of truer social justice, and the necessity of avoiding the spread of dependence as if it were a contagious disease. The author, now with the Department of Commerce and Labor, writes from long personal experience. Her book has none of the coldness sometimes attributed to scientific charity. Good sense and practicality fill the book with interest for those busy people who wish to deal wisely as well as generously with those who appeal for aid. After a discussion of general principles and specific cases, the book gives some account of various forms of social preventive work for children and adults, and closes with practical suggestions concerning giving and possible forms of indirect service.

A new, revised edition with considerable additions. Appendix of suggestions for extended reading. Cloth, $1.50 net; by mail, $1.63.

Send for a descriptive pamphlet.

Small, Maynard & Co., 21 Beacon St., Boston

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps.
$5.00 *net*. Postage, 35 cents.

An autoblographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle.*

PRINCIPLES OF POLITICAL ECONOMY, WITH SOME OF THEIR APPLICATIONS TO SOCIAL PHILOSOPHY.

By JOHN STUART MILL. Edited with an Introduction by W. J. ASHLEY, M.A., M.Com., Professor of Commerce in the University of Birmingham, sometime Fellow of Lincoln College, Oxford. Crown 8vo. pp. liv+1014. $1.50 *net.*

It is a main purpose of Professor Ashley's edition to indicate, with their dates, all those changes in the text which show any variation or development in Mill's opinions.

LONGMANS, GREEN, & CO., Publishers - New York

LETTERS AND MEMORIALS OF

Wendell Phillips Garrison

Late Editor of the Nation (1865-1906)

In one volume, crown 8vo, 300 pages, with photogravure portrait. Price $1.50 net, postpaid.

During the forty-one years in which he edited the *Nation,* with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews and essays, besides a fine photogravure portrait. It likewise preserves the notable letter of appreciation addressed to Mr. Garrison by more than two hundred contributors to the *Nation* on the completion of his fortieth year of service, and his acknowledgment thereof.

The book has been privately printed at the Riverside Press, but as it is believed that it will be prized by many who long had literary or friendly relations with Mr. Garrison, or who have been readers of the *Nation* for many years, the opportunity is given to such to secure it. It would also find fitting place in public and private libraries which possess and treasure the bound files of the *Nation.*

HOUGHTON MIFFLIN COMPANY. Boston and New York

The Nation.

NEW YORK, THURSDAY, JANUARY 20, 1910.

The Week.

The insurgent cause in Washington is distinctly looking up. It has now achieved the clear and general recognition of the fact that Speaker Cannon has become an intolerable burden to the Republican party. Even his warmest friends concede that he can never be Speaker again. If he were to announce that he would not seek that office in the next Congress, it would only be making a virtue of necessity. And if he refuses thus to take himself out of this year's Congressional elections as an issue, the loss of the next House stares the Republicans in the face. More and more of the members of the "organization" are admitting this. They declare bitterly that the attacks on Cannon are most unjust, yet the effects they cannot blink. Even the faithful Dalzell is now said to be shaken, and to think that the Speaker will have to make the great sacrifice. It is rather strange to find such hardened politicians hesitating at all. They are the great political realists. They have always preached the gospel of acting on facts, not on theories or sentiment. To urge a course upon them as right has been in vain unless you could show them that right made votes. Well, here they are with the votes obviously slipping away from them, yet they stop to talk about the cruel wrong of the assaults on the Speaker. Are Dalzell and Payne and Dwight suddenly to become idealists?

He would be a bold and rash man who should undertake to characterize any particular act of the Democratic party as the most inexcusable piece of folly and stupidity that it has committed for years; we shall not therefore undertake to make this assertion in regard to the selection of Congressman Rainey of Illinois by the Democratic caucus as one of the two members of the party to serve on the Ballinger-Pinchot investigating committee. The only thing, so far as we are aware, for which Rainey is known in the country at large is his having made a blatherskite speech in Congress, putting forward absolutely baseless charges of corruption in connection with the Panama purchase. That those charges affected the brother of President Taft—and, if we are not mistaken, even the President himself, more or less—happens to aggravate the case, but it is by no means the main point. The main point is that this man, who is now singled out by his sapient fellow-Democrats to represent them in an investigation imperatively requiring judicial impartiality, is notorious for having made utterly irresponsible and wanton charges in a set speech on the floor of the House, and then having done nothing whatever to back them up when they were denied and proved baseless. The union of the insurgent Republicans with the Democrats gave the minority party such an opportunity as has rarely come to it. But it insists on using this opportunity for performing the utterly superfluous operation of once more writing itself down an ass.

In appointing Henry S. Graves, director of the Yale Forestry School, as Chief Forester in succession to Mr. Pinchot, President Taft has shown a strong desire to keep that branch of the public service up to its previous level of intelligence and efficiency. Of course, no new man can have the ear of the country as Mr. Pinchot had. And people will be entirely right in keeping a watchful eye upon the Forestry Bureau to see if there is to be any letting down in its methods.

It is a rare day, these times, that does not bring to notice some aspect of the problem of advancing prices and cost of living; and it is a rare instance that does not present some complexity peculiar to itself, and thus illustrate the difficulty of the problem as a whole. Two such statements have just appeared, each interesting in its own way. One is an elaborate exhibit coming from the railway interests, and designed to show that, while the cost of supplies and the cost of labor have both increased about 30 per cent. in ten years, freight receipts per ton-mile and passenger rates per mile have remained about stationary; and that therefore no further increase of wages can be made without raising railway rates. The argument is clearly not conclusive. The question whether a railway is operated profitably, or how profitably, turns not only on the level of rates, but also on how fully its plant is kept in use; and as a matter of fact everybody knows that, in spite of higher prices and higher wages, the railways have been doing vastly better in recent years than they did ten years ago. The other statement to which we refer is that announcing the change of the architect's commission from 5 per cent. to 6 per cent. In this case, one is curious to know why the automatic increase in the commission due to the increase in the cost of building was not sufficient to offset the increase in the architect's expenses. A reason is assigned in the greater complexity of the architect's duties, and probably this is quite sufficient; but it is very interesting—and very human—that the fact of the automatic increase is entirely overlooked.

Gov. Hughes has confirmed the report of his decision not to accept another nomination for the Governorship. He puts the matter in a way that has to be taken as final. The reason he assigns for determining to return to the practice of the law is that he is in duty bound to make provision for those dependent upon him. Against this nothing can be said—especially by those who have refused to make the salary of the Governor of New York large enough to admit of the office being held by a man without private means to draw upon. There is, however, a sense in which it will not be possible for Mr. Hughes to retire to private life. He may refuse to hold office, but he will remain a public character. It is inconceivable that his fellow-citizens will not call upon him from time to time for advice and moral impulse in great questions. He could not if he would refrain from using his high prestige to serve the public.

The board of directors of the American Sugar Refining Company, in its report for the year 1909, takes occasion to say, in regard to the weighing frauds, that it "has no reason to believe, and does not believe, that any executive offi-

cer or director of this company had any knowledge of or participation in this fraudulent underweighing." Possibly this may suffice to make the stockholders comfortable in their minds. But the directors expressly assign as one of their motives in making the report "the legitimate interest which the public has" in the affairs of the company, and the desire to "correct the widespread misrepresentation and unjust criticism to which it has been subjected"; and it is therefore pertinent to remark that what the directors do *not* believe can go but an extremely small way toward affecting public opinion in the case. What is it that the directors *do* believe? What is their theory of the way in which those corset-steels got into those seventeen holes in the seventeen weighing-machines? If no executive officer or director of the company knew about the frauds, who was it that caused them to be committed? Why has not the company been doing the one obviously necessary thing to throw the guilt from its own shoulders? Why has it not exposed the true authors of the crime? Mere non-resistance to the Government's inquiry, to which they point with pride, is but a small part of what the situation called for.

Meanwhile the swift indictment of the secretary of the Sugar Trust is a startling reply to the assertions of its board. Indictment, of course, does not mean conviction. Innocent men are frequently indicted. But the success of the Government's prosecution heretofore makes it likely that it is on this occasion also well fortified with facts. In either case, the Trust's management is gravely indicted in the public eye; for only incompetent or corrupt managers can have rascally subordinates—to the profit of their company—for a long term of years. We have no desire to see Mr. Heike convicted merely as a victim to popular clamor. But if he is guilty, his conviction will do a world of good. The doctrine, so widely held, that rich rascals are immune while poor ones go to jail is less warmly cherished now that Charles W. Morse resides in the Atlanta penitentiary. It will still further be weakened if one of the men higher up in the Sugar Trust should don a prison suit. At any rate, the Trust which complains that it must advertise in order to get its side before the public is now to have its day in court—to prove its innocence if it can.

The bill against the "white-slave" traffic, which was passed by the House last week, is particularly to be commended in respect of the severity of the penalty that it prescribes. There are some crimes in regard to which the all-important matter is that the punishment that they invite shall be so terrible as clearly to offset any inducement to their commission; and this is eminently a case of that kind. The vile creatures who practise it do so in cold-blooded calculation and not under the stress of sudden temptation or necessity. Let it once become generally known that to be caught really means ten years' imprisonment at hard labor, and there will soon be nothing left of this infamy. That is what the Federal bill provides for any participation in the traffic so far as it is connected with interstate transportation. But so far from relieving State and city authorities from the need of vigorous prosecution of the matter, the enactment of the Federal law should serve only to intensify their determination. This is not a thing which must be tolerated in view of the weaknesses of human nature, but, on the contrary, a thing which it is disgraceful not to stamp out utterly. State laws should provide penalties of the utmost severity for it, and police, prosecuting, and judicial officers should apply the laws in their fullest rigor. A sentence of six months in the workhouse is absurdly mild for a crime second to none in loathsomeness and iniquity.

The science of flight moves on towards perfection in accordance with the same law of vicissitude that guides every kind of progress. Last year's triumphs of the aeroplane in France were followed by a succession of disasters which must have chilled the bright anticipations of many an aviation enthusiast. But within a few days after the death of Delagrange, one of the pioneers of heavier-than-air flight, hope rises high once more with Paulhan and Curtiss at Los Angeles. In their performances the two men have shown themselves true to type. Curtiss, like the good American he is, concentrates his efforts on speed. He has risen from the ground faster than any of his rivals, and has made the fastest lap around a measured course. He has left it to Paulhan, the Frenchman, to soar above the clouds, cover great distances, and risk his neck in a dozen feats of bravura. Yet taken together, the work of these two men has shown that the aeroplane is being steadily broken to safer use. The ancient difficulties with false starts, halting motors, and bad propellers seem almost to have disappeared for the experienced man-bird. On the navigator's skill much still depends. But nerve and pluck are not rare qualities, and if aeroplanes are to be for a long time amenable only to the expert, no one, except the ambitious rich amateur, will complain. We live in an age of guidance by experts.

In the Chicago *Evening Post* there is a eulogy of the late Dean Ames of the Harvard Law School, by Merritt Starr. The writer lays stress upon the qualities which made Professor Ames no less the successful head of a great school than a great legal scholar. In our big, hulking universities the emotional element that binds the student to his alma mater during college days and after, centres largely about the figure of the dean. "Prexy" goes about the country making learned addresses, but the dean stays at home and winks a more or less indulgent eye over cuts and deficiencies, and intrenches himself in undergraduate hearts. "Prexy's" familiar diminutive and the fact that the dean has none by no means represent the ratio of true affection in which the two men are held by their students. Just what "Van Am" has been to Columbia men, what Shaler and Briggs have been at Harvard, few university presidents have ever succeeded in being. They may command five hundred professors and six thousand students with two-million-dollar budgets, and thirty-million-dollar endowments, and speak at a hundred banquets a year, but they have given up for it much of that human relationship which our colleges should hold in store for the student.

Canada's navy is at last launched—on paper. Sir Wilfrid Laurier has explained the Government's proposal to the Parliament at Ottawa. The Canadian navy is to consist of eleven ships to be built at a cost of $16,000,000—obviously not Dreadnoughts! Even the five cruisers and six destroyers will, the Premier

admitted, cost 35 per cent. more than the above figure, if the vessels are built at home. Yet if we know the stuff of which Canadian protectionists are made, they will insist upon having all their warships labelled, "Made in Canada." Like some of our own naval patriots, they would consider it more important to build ships than to have them. Behind the navy, however, lies the question of its control and use. Sir Wilfrid represented the naval policy as a part of the great plan of rendering Canada a self-sufficient and autonomous nation. But it was admitted that the Canadian navy would be at the disposal of Great Britain in any war. So the pretence of self-defence is thin: what could the little fleet of Canada do unaided against any naval power from which an attack might possibly come? It is too plain for denial that this step on the part of Canada means only a disguised contribution to the British navy. Yet it may well be maintained, as it has been by Sir Charles Tupper, that Canada is not a burden to the mother country, speaking in naval terms, "since without her harbors and coal mines on the Atlantic and Pacific coasts, England would require a larger navy."

The *Frankfurter Zeitung* throws an interesting sidelight on the German aspect of the tariff difficulty with the United States. In order to retain the advantages of the minimum rates of our tariff, Germany must—aside from any special matters of controversy—continue to give us, after the expiration of the present reciprocity arrangement, her "conventional" or most-favored-nation rates on the articles in which we are interested. This can be arranged for by diplomatic exchanges, but in order to become effective it must have the approval of the Reichstag. This circumstance, says the Frankfort paper, has been seized upon by the high-protection people and the Agrarians as furnishing an opportunity to raise a great cry by which they hope to offset the discredit into which they have fallen through their opposition to the measures for reforming the finances of the Empire. They have been carrying on a bitter agitation against making any concession whatever to America, not so much, according to this paper, because of their opposition to the concessions in themselves as for the sake of making political capital. One feature of this campaign, as shown by extracts given by the *Frankfurter Zeitung*, is the spreading of the view that the United States is determined to have her own way in everything; a most approved plan for bringing on a war—tariff or other—being, of course, for each side to represent the other as absolutely determined to fight.

When the Russian constitutional movement began, about five years ago, it was still the fashion to speak of Nicholas II as the well-meaning but helpless tool of a vicious system. The habit held out for a year or two, until Nicholas II began to make it quite apparent that he was the conscious and ill-meaning tool of a system which he showed no desire at all to render less vicious. The Czar's congratulatory telegrams to the organizers of massacre, his august favors to the reactionary and landlord faction in the Duma, his easy compliance in the new crusade against the liberties of Finland, all testify to his unspoken attachment to the principles of autocracy and reaction. Now we have another instance of Nicholas II's benevolent attitude towards the principles of justice and progress. Imperial clemency has just been extended to two members of the reactionary Union of the Russian People, recently sentenced to seven years imprisonment in the Finnish courts for complicity in the murder of Professor Herzenstein about three years ago. Herzenstein was a leading member of the first Russian Duma. His cold-blooded murder, known as a political crime from the first, shocked the civilized world. The men really responsible have escaped and it has taken years to bring the humbler criminals to justice. The Czar's pardon, like the pardons and commutations bestowed on the perpetrators of the dreadful Bialystok massacres, leaves no doubt as to where the Imperial heart inclines.

The magnitude of the problem involved in the State Department's scheme for neutralizing the Manchurian railways will be realized when we recall the circumstances attendant upon our epic struggle for a share in the now famous international railway loan to China. For more than a year we have been at it, fighting for the privilege of lending China some of our money, and every other nation's hand has been against us from the start. First it was England that raised difficulties, then it was the French bankers, then it was the German bankers, and so on. And at the present writing the great international muddle is still on. Behind the affair is simply our own desire to get a share of expected Chinese railway profits, and the other nations' desire to keep the profit for themselves. Now consider the situation in Manchuria. There Russia and Japan are solely and separately the owners of many miles of railway, paid for by both with hundreds of millions of dollars and hundreds of thousands of lives. Bound up with the Russian and Japanese railways are Russian and Japanese schemes of future profit-taking, of economic and industrial development in their respective zones, and, more than all, their far-reaching plans, hopes, and follies of territorial expansion and empire. Such considerations make it plain why Russia should have refused its consent to the plan and why Japan is sure to do it in the immediate future.

The final condemnation of the Japanese as unfit to associate with Americans has been a little slow in arriving, but it was bound to come, and now we have it from Honolulu. The former Governor of the Hawaiian Islands used to have a sneaking fondness for the Japanese, but at last he has found them out. Ex-Gov. Carter now declares that he has carefully observed their recent conduct, and discovered it to be outrageously un-American. They have had a great strike, attended by "a reign of terror," and by "violence and brutal force." Any child would know that such things cannot breathe in the air of America. The Japanese, moreover, have been "swayed by certain leaders beyond all reason." Will Americans tamely submit to having such an obnoxious Oriental habit—absolutely unknown here—brought among them? Mr. Carter concludes by affirming that "Roosevelt was right," about the Japanese. Certainly, as about everything else; but which time was he right—when he praised the Japanese to the skies, and said that they ought to be allowed to become naturalized in the United States, or when he asserted that they should be kept away from our shores?

THE PRESIDENT AND CONGRESS.

When Mr. Taft's nomination for the Presidency was virtually assured early in 1908, one of the judges of the Supreme Court privately expressed a fear of what might follow. His apprehension was lest the new President might try to import into his office something of the autocratic methods he had been able to employ as Governor-General of the Philippines. This feeling was not at all personal to Mr. Taft. No one could accuse him of being a conscious usurper of power. His respect for the law and the courts was not called in question, any more than his native and simple democracy. But it was feared that his having had a free hand in unchecked administration in the Philippines might insensibly affect his attitude as an American executive. There might be upon him a subtle tendency to make himself also a judge and legislator. So far this justice of the Supreme Court—who could hardly be blamed to-day if he were to point to current events as at least a partial justification of his former disquiet.

The Washington dispatches are full of explanations of President Taft's attitude towards the factions in his party, and of his desires and decisions respecting legislation. He has made it clear that he will not allow his Administration to be tied up with the fortunes of Speaker Cannon. The "insurgents" may go on fighting in the House as they find opening and inclination, and the President will not say them nay. Of that affair he washes his hands. But he is represented as very determined in his demand that Congress shall accept his recommendations in the matter of lawmaking. Only there will he draw the line of loyalty to the Administration. If Congressmen wish to enjoy what a newspaper correspondent has elegantly called "the fruits of regularity"—it would not do to speak of them as the rewards of subservience—they must go into caucus and agree to abide by the Administration's legislative policies. Of course, the President does not set himself up as the fount of all wisdom and the originator of the measures which he is desirous of seeing enacted into law. He describes himself merely as the agent of his party. It is to carry out the party platform that he proposes to enforce discipline. But right there comes in the frank implication that he shall finally judge what were the real pledges of the platform which are to be redeemed by all the power of party organization and by the use of patronage.

Now, if this be really the position taken by the President, we can only say that it is based upon mistaken theory and misconceived facts. There is no such function of a President in determining with authority what are and what are not the vital points of his party's platform. Everybody knows how those convention promises are put together. They are often the result of a struggle in committee; sometimes of intrigue; occasionally of inadvertence. Take the case of the plank in the last Republican platform favoring postal savings banks. No one can pretend that this represented the mature and final judgment of the party. It was put in, along with other sops to various urgent gentlemen, with no clear intention to bind the party to a scheme which had not been thoroughly discussed, and in which the people had neither arrived at a strong conviction nor even shown much interest. Who shall say that it does not deserve to be ranked, as a platform obligation, with the demand for one-cent postage which appeared in at least one Republican "declaration of principles," but which no President has felt it a duty to urge his party to grant? It is, indeed, impossible for Mr. Taft to make himself the judge of what the platform compels Congress to do. The platform was the resultant of divergent views and more or less free conference among a large body of men, and so must be whatever legislation shall result. The President is entitled to his own opinions about the matter. He may express them as openly and as forcibly as he pleases. He may urge them upon Congress with all the argument and persuasion at his command. But he cannot set himself up as the only infallible interpreter of a platform which really admits of various interpretations. And if he goes further and proposes to discipline those members of his party who conscientiously differ with him, he sets up a rule which was certainly never contemplated by the Constitution, which has not the sanction of party practice, and which will surely cause many more heart-burnings and quarrels than it can cure.

No President is under obligation to bestow favors upon those who discredit his Administration and try to make his work appear a failure. That is understood. But from that, it is a long jump to saying that everybody who differs with the President about legislation becomes, *ipso facto*, an enemy of the Administration. Such a dissident may be, in fact, its best friend by helping to save it from a blunder. Those who oppose and delay the Federal incorporation law, for example, may well be doing Taft a greater kindness than those who ask him to push it on and to make it a test of party regularity.

But even granting that President Taft had a sound theory of his relations to Congress, it would still have to be said that he was ignoring an essential fact. This is that a great change has been wrought within the past three years. Congress is in no mood to submit to Executive dictation. Even in Roosevelt's last year, it plucked up courage to defy him. His special messages went disregarded, when they were not unread, and his power to dragoon Congress into doing what he wanted completely disappeared. Now, can President Taft for a moment imagine that Congress will give back to him what it wrested from Roosevelt? Having despised the swords of the lion-hunter, will it now tremble before the putter of the golfer?

CONSERVATION TO THE FORE.

The matters relating to the conservation of natural resources which are brought to the attention of Congress by the President in his special message are of fundamental importance to the country's future. It is, therefore, most earnestly to be hoped that public opinion will be clearly directed toward the attainment of the ends in view, and not be diverted toward any personal or controversial aspects of the situation. From Congress the President desires legislation properly recognizing the interest of the nation in such resources as mineral supplies, forests, waterpower, which can still be safeguarded as part of the national domain. These objects were not in view when the existing statutes were enacted. He asks, therefore, in the first place that fuller authorization be in the future given to the Secretary of the Interior for the temporary withdrawal of lands from the operation of the general statutes, and that such withdrawals as have recently been made be validated by Congress. His next rec-

ommendation urges the systematic classification of lands according to their use, and the reservation to the government of control over the mineral resources to be found even on such lands as may have been disposed of as agricultural. There can be no question either of the rightfulness or of the importance of these recommendations, and their immediate adoption should be imperatively demanded by public opinion. The President's recommendation in regard to waterpower sites is not so simple, but the object in view is no less clearly pointed out by the public interest, and it should be effectively provided for by the present Congress.

The real purpose of Mr. Pinchot's counter manifesto is not quite clear. In view of the very great service that Mr. Pinchot has rendered, it is greatly to be regretted that he is so fond of methods which smack of the spectacular. Instead of a moral broadside whose publication seems to have been timed with the intention either of breaking the force or of diminishing the credit of the President's message, it would have been more to the purpose if he had stated his views of what the message actually recommends. On its face, the message seems to cover very fairly the ground that Mr. Pinchot refers to in his manifesto. It is not a sermon or a muck-raking magazine article; but its chance of gaining attention in Congress will not be lessened by that circumstance. Mr. Pinchot is in a position to speak with authority on almost every aspect of the conservation question, and it will be a pity if he wears out his welcome with the great body of the people by constant indulgence in spectacular appeals to sentiment. It is unnecessary for him to reiterate the loftiness of his motives; he has had credit for that, even by those who have most clearly recognized the necessity under which he placed President Taft to remove him. The less he says about these generalities henceforth, the more weight will be carried by any definite pronouncement from him as to specific matters of legislation or administration.

In addition to the question of conservation, the President discusses in his message the subject of the improvement of inland waterways. But he does not dispose of this question by laying down any sweeping dogma, or declaring that great waterways projects must be adopted out-of-hand, because there is a popular demand for them in the region affected. There must be an authoritative ascertainment of the cost, and a reasonable assurance that the resulting benefit wi'l be such as to justify the undertaking. These conditions the President regards as having been fulfilled in the project for introducing dams into the Ohio River from Pittsburgh to Cairo, so as to maintain at all seasons a depth of nine feet; while his approval of the like project in the case of the Mississippi is more tentative. This is a much better way of treating such a question than that of Mr. Pinchot, who not only comes out flat for "the construction of the deep waterway from the Great Lakes to the Gulf," but who talks of the urgency of this scheme in language that could be justified only if the possibility of carrying it out would end with the slightest delay. We want all of Mr. Pinchot's ardor, but we want it kept effective; and it cannot be kept so if it is made cheap by misapplication or over-exploitation.

MUNICIPALITIES AND WASTE.

Let a kind word be spoken for that old offender, the misgoverned American city. Unkind words have been used in plenty. They are the commonplaces, and largely the true commonplaces, of all writing about American institutions. Twenty years ago Mr. Bryce found that our municipal system was our one conspicuous failure. Smaller men than Mr. Bryce have gone further than Mr. Bryce in declaring that our municipalities typify the bankruptcy of democracy. With the Boston election only a matter of last week, with New York's narrow escape from Tammany still fresh in mind, with the shame of the cities mounting high once more in Philadelphia and San Francisco, it would take something more than courage to deny the old charge. But if not denial, there may be palliation. A plea in extenuation may be especially directed towards the ancient complaint that all would be well with us if our cities were conducted as a merchant or a manufacturer conducts his business. It is well to remember here that if business is what the Sugar Trust understands it to be, Mr. Dooley was right in congratulating us upon our unbusinesslike methods of city government.

It is not quite fair to show how unbusinesslike our municipal governments are in comparison with municipal governments in England and Germany, if at the same time we refrain from comparing methods prevalent in American business with those of England and Germany. Is it in government alone that we are lavish, wasteful, criminally obtuse to the possible needs of to-morrow? Or is municipal extravagance only the accentuated expression of our general shiftlessness? We are at the present moment in the throes of a great conservation movement. Like a wild rich young man the morning after, this wild rich young country wraps a towel about its head and sadly contemplates—waste. We ponder upon land-waste and sigh to think that we have been getting ten bushels out of an acre that should have yielded twenty. We ponder upon water-waste and confess that we have done little to build up river and canal transportation. We plead guilty to fire-waste and admit that there is nothing to be proud of in letting millions of dollars of wealth go up in smoke every year where the other nations lose hundreds of dollars, or thousands at most. We plead guilty to timber-waste and coal-waste. We go further still and admit our blood guiltiness of life-waste, yearly killing and maiming men by the tens of thousands on our railways and in our mines and mills.

Therefore, when the critic of American institutions asserts that municipal extravagance proves American democracy a failure, he quite overstates things. It is not our democracy that is so much at fault, as our Americanism. If our business men—farmer, manufacturer, railway man, merchant—cannot go about their work without enormous waste, as judged by European standards, what reason is there to expect that our municipalities should be run as thriftily as Hamburg or Manchester? The fair test would be to compare municipal economy with individual economy in Europe, and municipal economy with individual economy in this country. Graft is not peculiar to democracies. Russian government contractors can hold their own against all comers. And in Germany and England, too, there is little doubt that it is more costly to govern cities than to run factories. That our own municipal standard of efficiency falls short of our business standard, it

would be idle to deny. Wasteful as our business men are, our city rulers are still more wasteful. Corrupt as some of our corporations are, many of our municipalities are equally corrupt. But always it should be remembered that, in fairness to ourselves, civic misrule must be judged not by foreign standards, but by our own general standard of carefulness and economy.

This is not a plea in favor of Mr. Charles F. Murphy of New York and Senator McNichol of Philadelphia. It is merely an attempt to show cause why America's urban citizens should not despair of the cities they live in. The forces for civic betterment that have done so much good work among us and seen so much of it undone, must be assured that their fight is not fruitless. And one way of keeping up heart is to be aware that we are not as black as in our discouragement we are tempted to paint ourselves. When we are not so preposterously rich as we have been up to the present, we may come to bear down more sharply on waste and graft. When we stop hewing down our forests in a fury of immediate profit-taking, when we stop burning up our factories and warehouses, when we give up cultivating our fields with a lick and a promise, we may learn, too, how to rule our cities moderately well. Enormous waste is not indigenous to democracy.

THE ENGLISH ELECTIONS.

The results of pollings so far in England make certain the return of the Liberal party to power. The Liberals and Labor members will probably have a fair working majority, even over the combined vote of Conservatives and Nationalists. On the other hand, the Conservatives have made enough gain over their phenomenal showing of weakness four years ago to give warning that the victorious party must make sober use of its opportunity. With this result most well-wishers of England will, we believe, feel that they have good reason to be satisfied. What gave this Parliamentary contest its exceptional interest, in the outside world as well as in Britain, was the feeling that the situation had in it the seeds of something like revolution; but nothing like revolution, it may now safely be said, is to come.

Although the great new issue was precipitated by the challenge of the Lords and the aggressive acceptance of that challenge by the Liberal Government, there is no reason to believe that any extreme form of treatment will be applied either to the composition of the House of Lords or to the extent of its prerogatives. Its pretension to the right to reject a finance bill has already been effectively disposed of by the popular verdict: effectively, because it had against it from the beginning every serious authority, past and present, without distinction of party. In appealing to the people to support that pretension, the Lords not only challenged the House of Commons, but sought to overthrow a thoroughly established part of what, for want of a better term, is called the British Constitution. A negative answer to such an appeal is final. When so great a legal authority —and a Conservative, too—as Sir Frederick Pollock treats with absolute contempt the contention of his own party that the Lords had a "legal" right to their action; when he cites the unanswerable precedent of Lord Salisbury under circumstances offering far more justification for the assertion of the Lords' right of veto, and winds up his statement by expressing the hope that the average voter, while he understands little about legal arguments, will show the Lords that he "does understand what is meant by people minding their own business"—when this kind of talk represents the view of men of weight and authority, it is plain that no thought will be entertained of appeal from the people's verdict. Nor is it too much to expect from the instinctive good sense of Englishmen that the victors will refrain from pushing to extremes the advantage of such a victory, and thus endangering its substantial results.

If the Opposition had won, there would have been much more ground for the apprehension of something like a revolutionary change in the British political system. In the first place, the defeat of the Budget through the action of the House of Lords would, under the circumstances, have been calculated to give a most powerful impetus to the agitation for radical change, both Constitutional and economic. For, after all, the central motive in the rejection of the Budget was to be found in its bearing on the personal pecuniary interests of the peers themselves. It was the taxes on land and wealth—their own land and wealth, particularly—that they regarded as an innovation so dangerous as to justify their attempt to revive a dead prerogative. Had their appeal been successful at the moment, is it to be supposed that the agitation for more equitable taxation would have ceased? On the contrary, it would have gained new momentum from the association of that issue with the claim of the House of Lords to block any measure of taxation that trenched upon their own pecuniary immunities; and something far more radical than what is now to be expected would have been the almost certain outcome.

But while the issue was made ostensibly on the Budget and on the Lords' right of veto, the campaign of the Conservatives was fought chiefly on the issue of protection; and their victory on this issue would have portended a change in English politics which may well be regarded as even more serious in its political consequences—not to speak of the economic results—than that which we have been considering. A protectionist England we have had in the past; but a protectionist democratic England the world has not yet seen. To combine democratic government with the maintenance of a vast Empire is a task of tremendous difficulty, with which England has been accustomed to grapple; but she has thus far been exempt from the influence which the struggle for protectionist favors exercises over the politics of every country in which it has place. In her internal government, it would bring into Parliament those malign forces which it has brought into the legislature of every protectionist country; and while Mr. Chamberlain's most plausible argument in its favor has always been that it would make possible a closer union between the mother country and the colonies, there is at least as much reason for fearing that it would operate as an agency of discord and dissension. Thus far, the ties of sentiment and consanguinity have proved adequate for the maintenance of union and loyalty; but once begin to measure the mother country's claims to her children's affection by the amount of tax she is willing to put on foreign imports, and who shall guarantee that the bargaining and

bickering will not produce discontent and perilous estrangement?

Taken in itself, the free-trade victory is matter for hearty rejoicing. In the face of the most doleful stories of widespread unemployment, and with every possible use of the standard protectionist arguments, the attempt to overthrow the system under which England has grown and flourished for more than half a century has once again broken down. The result is all the more notable because the underlying idea of the protectionist propaganda—that what is a gain to the foreigner must be a loss to yourself—might have been expected to derive a great accession of force from the present condition of British feeling toward Germany. It was hoped by the protectionists to make a serious inroad into the free-trade ranks even in Manchester, but their efforts have met with no success. It is not the last time the battle will have to be fought; but the hands of the free-traders have been so strengthened that, unless times should be much worse than is now expected in the next few years, a long respite from serious attack upon the right of Englishmen to buy where they please may be expected. To preserve that right inviolate is felt by many Englishmen to be a duty that has almost the force of a religious obligation; and it is to the able, fearless, and uncompromising assertion of this principle in the face of every form of attack, that its maintenance through all these years must in a very great measure be ascribed.

A MAGAZINE'S JUBILEE.

With its last issue for 1909, the *Cornhill Magazine* completed a half-century of existence. To most Americans, the *Cornhill* means Thackeray; and to come upon its jubilee number in the flesh is apt to give a thrill not unlike what one may have in London on suddenly being confronted with a living Russell Square, after having thought of it all one's life as peopled only by the creatures of Thackeray's mind. It seems strange to find that, in addition to the reality of the Sedleys and the Osbornes and Becky Sharp (surely a deeper reality than almost anything in one's actual experience of mankind), the ordinary reality of every-day also belongs to Russell Square; and so, for the true Thackeray lover, if he happen also to have a proper amount of ignorance of English periodical literature, it will seem strange to find that there is something else about the *Cornhill* than its great tradition of having had Thackeray for its first editor.

What these other things are, it is pleasant to read in the jubilee number of the present month. As in the case of our own *Atlantic*, whose half-century was completed in 1907, the editor and the publisher take a justified satisfaction in the thought that they have maintained the standard set in the beginning, and are serving as nearly as possible the same ends. "There is still," says the editor, "the Thackeray touch; still the *Cornhill* note"—by which, of course, is not meant the touch of Thackeray the master of fiction, but of Thackeray the editor; and in glancing over the past, he can point not only to Thackeray's latest books, but also to "the last pages of Charlotte Bronte, the first appearances of many a poem by Tennyson, Robert Browning, Mrs. Browning, Meredith, and Swinburne, and of many a collected volume by Matthew Arnold, by John Addington Symonds, by Leslie Stephen, by Robert Louis Stevenson," which first saw the light in the *Cornhill*. For a dozen years, Leslie Stephen was the editor. Thackeray himself retained the editorship only a little more than two years; the pangs which his sensitive nature endured, especially in connection with the rejection of manuscripts, were too much to permit a further continuance of editorial duties. Nor were these rejections always due to lack of merit in the contributions; it is almost startling to be told that the publication of Ruskin's "Unto This Last" was discontinued in deference to a storm of indignant protest called out by this attack upon economic "orthodoxy." And more is suggested of the past in this retrospect of the magazine's history than is conveyed by mention of the notable productions that appeared in it. Thus we are reminded that when Macaulay died in his library, the first number of the *Cornhill* was on the table beside him, open at the first page of Thackeray's "Lovel the Widower"; and an anecdote of Leigh Hunt is told, which reads exactly like a Skimpole page out of "Bleak House."

But after all is said and done, it is the fact that Thackeray was its first editor which gives to the appearance of this jubilee number its great interest for others than habitual readers of the magazine. The opening article by Thackeray's daughter, Lady Ritchie, brings home to us his genial and kindly and manly figure; and we enjoy the story of George Smith, the publisher's, happy thought of establishing a magazine whose mainstay should be a serial novel by Thackeray, and of the delightfully complete success that followed. Elsewhere the present editor argues successfully that—methodical Trollope to the contrary notwithstanding—a man of Thackeray's quality might be a most effective editor, from the strictly practical standpoint, even if he did sometimes mislay a manuscript or put off till to-morrow what he certainly ought to have done to-day. And in still another place we have a facsimile of proofs corrected by Thackeray which may give to a mere editorial worker the comfort of a fellow-feeling. There he will find, in Thackeray's characteristic handwriting, not only many a little change—and he will note that, without exception, it is a change for the better—but a totting up of figures which shows that Thackeray was looking closely to the number of lines he had saved, to see that they amounted to a clear page in the aggregate. A little thing like this gives a touch of reality that extended narrative might fail to convey.

When our children and grandchildren, half a century hence, shall be looking back to the present time, will they have anything to match the recollections that gather round the days of Thackeray and Dickens? It may be thought that such a question springs from the fond illusion of the *laudator temporis acti*. But it is not so. There are many things as wonderful in our times, perhaps there are some things far more memorable or more important; but there is nothing to match the delights or the enthusiasms created by the literature of those days. And the proof of it is in the actual experience of men who are not only still living, but still in the full vigor of life. They remember what it meant when a new novel came from the pen of Thackeray or Dickens or George Eliot; does anybody feel a thrill of excitement at the announcement of a novel by Mrs. Humphry Ward or H. G. Wells? And there

is still another test. What character in any novel written since the "mid-Victorian" days has become a household word? Who is the Becky Sharp, or the Sam Weller, or the Pecksniff, or the Colonel Newcome, of the last three decades? Whatever the reason, nobody has struck the chord that vibrates in men's hearts and minds as did the great ones of those days. And perhaps one reason for the change lies in a characteristic of our times that certainly is dominant in other fields and that may have its reflection in literature. Different as possible in all other respects, the great masters of English fiction in the flowering-time of the Victorian age had in common a broad and deep humanity. Their thoughts were not centred on particular problems, either of psychical analysis or of moral or social reform. Particular abuses were, indeed, made the subject-matter of many of Dickens's novels, and Thackeray has been charged with insularity by critics who have not had the faculty to see that the microcosm of English society was for him but a representation of all human nature; but, whatever the medium they employed, the thing with which they really worked was the fundamental passions and longings and weaknesses and affections of mankind.

WHAT TO EAT.

It is exasperating to the normally healthy man to be informed by some self-constituted authority what diet he must adopt. Yet such authorities and such diets confront one at every turn. This form of gastronomic introspection is peculiarly American; while the Frenchman eats his half-chicken with much the same sauce as did Montaigne and the Englishman untiringly orders beef and puddings, the American must experiment with predigested wheat or raw celery and nuts. Then the novice gives up everything, in order to devote himself to spreading the new-found gospel of longevity.

The arguments advanced by enthusiasts in favor of their diets are often interesting, even when absurd. Predigestion is advocated on a pre-supposition, to wit, that the human stomach is no longer capable of performing its proper function—so degenerates the body where the spirit grows. Propagandists of raw food rest their case on man's descent: our simian ancestors could procure only raw foods, hence it must be the best form of nourishment for the human anthropoid. But why draw the line short of snakes and lizards, the true delicacies of the simian age? All these food conceits spring from two causes: first, a disordered digestion, without which no one ever experiments with foods—on himself; secondly, a little knowledge, worse than ignorance, of human physiology and anthropology.

In the homo-simian period evolving man lived on raw vegetables; as his increasing intelligence made the capture of animals less difficult, his diet became more and more carnivorous, and he gradually discarded acrid roots and seeds from his bill of fare. It was not, however, until he learned the art of hunting and fishing and setting traps that meat assumed more importance than vegetables. During the ages that mark the transformation in human nourishment, the digestive functions also underwent adaptive changes. With the decrease in the use of raw vegetable matter, for example, the power to digest uncooked starch was lost, because it was no longer essential; and doubtless many other functions were modified to meet food environment.

The use of fire marked the final period in the evolution of the human dietary. Cooking not only rendered meats savory, but unlocked vast supplies of heretofore unavailable materials. Roots and seeds too hard even for strong teeth were rendered soft and palatable; and so, in time, it dawned upon the lord of creation that it was less laborious to make his women cultivate the soil and grow these edible roots than it was to hunt and trap. After the discovery of cookery, vegetables slowly superseded meat again, just as previous to that time the painful ascent through the anthropoid and homo-simian period is notable for a gradually increasing animal diet, which reached its height in the hunting stage when man was chiefly carnivorous.

It appears, then, that we cannot arrive at a rational conception of perfect aliments by reasoning from what our forebears ate. Through the ages there has been a wonderful accommodation by man to his food supply, and this is perhaps not the smallest factor in his successful competition with other animals. This adaptability of the human digestion is not sufficiently taken into account. A common error is to regard the human diet as definite with an ideal suitable for every one, any deviation from which is either morbid or sinful. On the contrary, it is an individual affair; as there are various types of intellect, so there are different types of digestive function. One may thrive on uncooked food. Another feels himself best when he eats no meat. If the chosen food suits the demands of his individual being, it is for him the ideal. And notwithstanding a stupendous amount of scientific research on the subject, we have no completely satisfactory way of estimating what an individual's nutritive demands really are.

There is no food that is particularly adapted to repair worn-out brain cells or increase brawn. Sausage and black bread have furnished the nutriment for thinkers as stalwart as any that ever broke their fast on cereals and fruit. This suffices to disprove Savarin's "Dis-moi ce que tu manges, je te dis ce que tu es." There are, aside from salts and water, only three nutrient elements—proteins, fats, and carbohydrates—and these in different proportions occur in all foodstuffs, whether they be of animal or vegetable origin. So far as science knows to-day, there is not a special food for the man who exercises his wits and another for him who uses his muscles; at most it is a question of quantity—the brain-worker needs less. The whole sum and substance of diet for the healthy man is "know thyself" and be temperate. Every man over thirty not a fool understands what foods agree with him; this is individual and obeys no law but idiosyncrasy. The common sin is to refuse to cease eating when one has had enough.

The worst thing about fads when they encroach upon the festive board is that they kill all festivity and change what should be a pleasant occasion into something of almost funereal solemnity. The habit of introspection so engendered is at the base of many a deranged digestion. The normal man does not ponder the advisability of partaking of some toothsome dish unless it recalls unpleasant memories of a past experience. And who has not suffered at table, tormented with hunger and eager for the tardy roast which is delayed that his neighbor may have leisure to masticate and thoroughly insalivate his soup? Beneath our napkin our thumbs deride while

we endeavor to see the funny side of life, and we say with wise Montaigne, "I hate those remedies that importune more than sickness."

NEW FRENCH FICTION.

PARIS, January 6.

"La Croisée des chemins" (Plon), the new novel by Henry Bordeaux (who is not yet forty), sets him still further on in the straight way to the Academy. It is well written and composed; the story is dignified and attractive, and the descriptions, while frequent and pleasant, take no undue place; and the moral of the book transpires from the events without any preaching pages. It is the exact contrary of the French novel in the foreign sense. Aside from its literary *tenue*, it is as Christian as are the stories of René Bazin; it is redolent of the old French worship of the family as the essential unit of society, far more truly than the works of converted Paul Bourget; and in the one fatherland of France, it excites to the love of the home province most, as does Maurice Barrès.

All this is to note the illuminating growth of yet another conservative power in the newer French literature. It is a phenomenon worth noting, this revival in a people's head and heart of all that Revolution and Romanticism, Naturalism, and the uprootings of Paris centralization, of fashion and politics and irreligion, were supposed to have quenched finally in French life. Naturally, critics complain that Henry Bordeaux is a Puritan in his reverences and a bourgeois in his attitude toward respectable people with homestead and property. Even critics admire the human movement in his stories and their thrill of feeling, which is most often a pathos for men rather than a stirring of women to tears.

Fifteen years ago, his hero, Pascal Rouvray, was a rapidly rising young doctor of the Latin Quarter, where the unending advantages of Paris (faculty and schools and hospitals and—publicity) work together for medical celebrity. The death of his father, a Lyons doctor, discloses to the young man one of those family secrets that touch to the quick that traditional French life in which all the members of a family stand together in defending the honor of each. To Englishmen and Americans who think Frenchmen have no homes (while Frenchmen think we have no families) this tragic obligation of the grandfather's debts, which the father's labor of a lifetime had not sufficed to clear away, comes strangely to break the young man's career and his love. For the ambitious modern girl, Laurence Avenière, who willingly betrothed herself to a coming man of Paris, will never bury herself with him in the provincial city. Yet there alone he can do his duty to his family name; to his mother who, French-fashion, has offered the sacrifice of her *dot*—her own and only fortune—for the payment of the debts of the family into which she married; and to younger children who would be left straitened and without their own opportunity in life, if he should selfishly pursue his Paris career. He suffers, but he gives up science and love for family and takes up his father's practice in Lyons.

Thirteen years pass and the work which duty imposed is done. Pascal is free to return to Paris and take the place in the central Faculty which his talent and attainments warrant. He finds Laurence married to an *arriviste*, who, from the start, broke with family and provincial ties to enter politics, and has become a Minister of the Republic. With all her ambitions filled, she has no peace until she has brought to her feet again, from his own wife and children, her old lover. She has never forgiven him for preferring the honor of his family to worldly honor with her. She has no longer a heart. The scene is striking where she derides him and tastes her revenge. Contrite from this final, belated lesson (which should have been needless), Pascal returns homeward, never more to waver in that family faith to which he has sacrificed so much and which is so high above all fleeting passion. Note that in each of the three really great novels which Henry Bordeaux has given to the world, a woman who has been unwilling to sacrifice to duty is sacrificed in the end to family, which holds or conquers the man. This is another upset to English prejudices of French life.

"Aimer quand même" (Plon) is a harmless love story—also of a doctor, who *quand même* is faithful and clears his betrothed of a charge of murder! It is from the lady who signs herself Jean de la Brète, a signature which scarcely enters into literature, but which secures a heavy sale for her books. They are well and pleasantly written and reflect faithfully the literary ideals of middle-class people like the greater number of us; and they can be read in families. "Les Naufrages du 'Jonathan'" (Hetzel—two volumes), is a posthumous *voyage extraordinaire* by Jules Verne. During his whole lifetime, this most popular of authors worked in virtue of a contract made with his publisher at the beginning of his career, binding him to so many volumes a year. He was in advance of his work, which explains this continued output after death.

"La Mère Patrie" (Lemerre), by Maurice Montégut, is a more than usually interesting sample of this author's work, which is very well known in France. Here he crosses not only the frontiers, but the Atlantic Ocean. In Canada, members of the hostile races, French and German, meet and make "un tumulte de peuples." Such books, in which the story is more important than the literature, are beginning to find an English-reading public. As the publisher sagely observes, "they reject the sub-romantic which makes our contemporary literature so anæmic." "Totia" (Messagerie des Journaux), by Jean Box, is a "colonial romance" of unusual background—a French colonizer's romantic adventures along the Black River far back in Tonkin.

"L'Amie lointaine" (Plon), by Raymond Casal, is another novel likely to upset the average English idea of French high life. The hero is as great a sportsman as he is distinguished in all the walks of life. On Scotch moors, in Albania and the Pamir, he shows his prowess—and this is not improbable, for all mighty hunters know such deeds of Empress Eugénie's nephew in more varied and distant regions. The book is full of the charm of healthy nerve and muscle, in spite of its dazzling people of quality.

"Roman pour ma fiancée" (Calmann-Lévy), by Henri de Noussanne, is a thrilling Nationalist plea that Frenchmen should marry French and not foreign women, but with cosmopolitan chapter-headings from Sterne and Theocritus, Goethe and Montaigne. English Josy does not marry the handsome French officer, when she finds she would be but an apple of discord in the closed circle of his military family. There is emotion, and, strange for such a book, real and plentiful humor scattered through the pages.

With Camille Lemonnier's "La Maison qui dort" (Fasquelle), we have Belgian robustness and much idyllic grace, careless of worldly distinction. Of the other two stories of the volume—"Au beau pays de Flandre" and "Un Mari"—the last leaves a certain Flemish Rabelaisian taste in the mouth, rather than that odor of the human beast which has infected, off and on, this writer's work, since, at the age of fifty, he was seduced by Zola's worst methods. He is now past seventy; and his literary production of forty years is, in many ways, the strongest in Belgian fiction, and very high in French.

"Afrancesada" (Fasquelle), by Tancrède Martel, a younger writer of historical romances, leads off like the best stories with which G. P. R. James held breathless some of us when we too were young. Only the Frenchman's story is swifter, more explosive, among Napoleon's dragoons in Spain; never was a heroine of war more hawk-like in danger, more dove-like in fast faith and sheer self-sacrifice of love; and all the heroes are much more than six feet tall. The historical part of the book has been worked enough to allow the author to dedicate it to Frédéric Masson, who knows all about Napoleon and his men.

This writer is already worthy of note, and, doubtless, to be heard of later.

"It was in the year 1107 or 1106. A young provincial was entering Paris by one of the two bridges which led into the city. He was called Pierre Abélard or Abeilard, as they spelled it then. Those of his time bear witness that he was tall of stature and handsome of feature beyond the common." Thus opens "La Passion d'Héloïse et d'Abélard" (Ollendorff), by Madame Jean Bertheroy, which is printed with Gothic tracery round each page. Since her "Cléopâtre," in 1892, this learned and eloquent lady has roamed far and wide through the ages in her historical romances. She has had the honors of the *Revue des Deux Mondes;* thrice she has been crowned by the Academy; and it is evident that her books are much read in France. For other than French readers, she has been happy in the choice of her new subject. It was not all humor that made Mark Twain hunt for the "tomb" in Père Lachaise; cool Emerson knew that "all mankind love a lover." And here there are two of them (which is not always the case): frenzied in passion, sublime in resignation, with the faith and philosophy of the twelfth century and its local stained-glass color. Perhaps the book will be chiefly welcome because it makes a praiseworthy effort at accuracy in narration and description, something which the literary remains of the romantic pair and all that has become known about them and their age in recent research have made possible. The book will not attenuate the stream of pilgrimage to the Paris cemetery.

S. D.

NEWS FOR BIBLIOPHILES.

Some notes about the various contemporary editions of Pope's "Essay on Man," compiled from Marshall C. Lefferts's books, were printed in the *Nation* for September 14, 1909. Mr. Lefferts's collection of editions of "The Dunciad" is equally notable. He has been able to acquire several editions not described by either of the two writers on the bibliography of "The Dunciad," W. J. Thoms and Col. Francis Grant. The following is a list, with points of identification, of the earlier editions:

(1.) The first edition was published on May 28, 1728, with imprint "Dublin, Printed, London, Reprinted for A. Dodd, 1728." Notwithstanding the statement by Pope in his Preface of 1736, regarding "the first five imperfect editions of the Dunciad, printed at Dublin and London in octavo and duod. in 1727," and the statement in the imprint that it was "Dublin, printed, London, reprinted," this is certainly the first edition. It may be distinguished by the misprint in the first line of the text, "Book and the man I sing," instead of "Books and the man I sing." Evidently, a few copies only were printed and privately circulated. It is one of the rarest of eighteenth century books. There are at least three copies in America: the Lefferts, the Grant copy, which brought £75 in May, 1900, and is now in the Hoe library, and the Locker-Lampson copy, which belongs to Dr. James B. Clemens.

(2.) The second edition, or, perhaps more accurately, the second issue, as it was printed from the same types, was issued almost immediately. It is distinguished by the correction of the misprint in line 1, which now reads, "Books and the man I sing." In the note respecting John Heywood on page 5, "Interludes" is altered to "Enterludes." Whereas the first edition is printed in fours on half-sheets (being thus an octavo), this edition is printed in sixes on half-sheets (making it a 12mo). On the verso of the last leaf an advertisement of "The Progress of Dulness" has been added. Mr. Hoe obtained the Grant copy, which brought £50 in 1900, and Mr. Chew owns a copy. Mr. Lefferts has never been able to acquire one.

(3.) The next edition is a very curious book, unknown to either Thoms or Grant. Mr. Lefferts is of the opinion that it was an unauthorized edition, printed, probably, by the pirate, Edward Curll. As it has been asserted by some that this is actually the first edition, we may describe it more fully and point out the variations between it and the earlier issues. The imprint is the same, but the title vignette is a small square type-metal ornament, made up of two pieces, instead of a basket of flowers, as in the two earlier issues. The text of the poem throughout is page for page with the earlier issues, but the preface is differently spaced, page viii containing twenty-two lines instead of fifteen. While the type used is similar, the ornaments are different, and from the very profuse and often incorrect use of capital letters it seems probable that it was set up at a different printing office. The frontispiece of an owl on a pile of books is a different engraving, but copied from the one used in the original edition. The last page contains an advertisement of "The Progress of Dulness." As this advertisement appears elsewhere only in the second edition, this was probably printed from a copy of our No. 2. In the first edition of the "Key to the Dunciad," advertised on May 29, 1728, as published by Curll, there is a correction, referring to line 76 of the poem. "For Glad chains—read—Gold chains." Now "Glad chains" is correct, although "Gold chains" appears in this edition and this edition only. In the quarto edition of 1729 Pope referred to this error, as follows:

> The ignorance of these moderns! This was altered in one edition to gold chains, showing more regard to the metal of which the chain of Alderman are made than to the beauty of the Latinism and Greecism, nay, of figurative speech itself.—*Lactas segetes*, glad, for making glad, etc.

(4.) The fourth edition of "The Dunciad" is distinguished by having on the title-page the words "The Second Edition." The printer probably considered Nos. 1 and 2 as identical, and, if he knew of No. 3, ignored it as unauthorized. In line 159 (p. 23) "Spirits" has been corrected to "Spirts."

(5.) The fifth edition, the earlier form of two bearing the words "The Third Edition" on the title, has also been unknown to previous bibliographers. Except for different tailpieces, Books i and ii agree with No. 4, being without the changes and corrections found in the next. Book iii agrees exactly, apparently, with No. 6.

(6.) The second of the two forms with "The Third Edition" on the title-page. In this variety some names are given in full which had previously been indicated by initials or by asterisks or dashes. For example, Book ii, line 310, "Sh—" becomes "Shadwell"; line 353, "T—d" becomes "Toland"; line 364, "C—re" becomes "Centlivre," etc.

(7.) All the preceding editions have the same imprint: "Dublin, Printed; London, Reprinted by A. Dodd. 1728." This edition seems to be the first actually printed in Dublin. The imprint reads, "London: Printed, and Dublin Reprinted by and for G. Faulkner, J. Hoey, J. Leathley, E. Hamilton, P. Crampton, and T. Benson, MDCCXXVIII." As the word "Spirts" is correctly printed, it almost certainly followed No. 4, and was probably printed from a copy of that edition, neither No. 5 nor No. 6 having reached Dublin at the time.

(8.) This edition is a quarto, and has a new title, "The Dunciad, Variorum. With the Prolegomena of Scriblerus. London. Printed for A. Dod. 1729." It was the first in which Pope publicly acknowledged the authorship of the poem, and, as it contains much new matter, it is called the first complete edition. It is one of the commonest of all the old editions.

(9.) The first octavo variorum edition. The bookseller's name in the imprint is "Dob" instead of "Dod," but the title otherwise is word for word with No. 8. The vignette on the title, an ass with a backload of books, has been reëngraved and the edition may be considered unauthorized.

(10.) The second Dublin edition "From the New Quarto Edition done at London," with imprint: "London: Printed, and Dublin Reprinted by and for James Hoey, and George Faulkner, MDCCXXIX."

(11.) Another Dublin edition, with imprint: "London: Printed and Reprinted, for the Booksellers in Dublin, MDCCXXIX."

(12.) The earliest edition with Gilliver's name in the imprint, which reads: "London: Printed for Lawton Gilliver at Homer's Head, against St. Dunstan's Church, Fleetstreet, 1729."

(13.) With the same imprint as the preceding, but with the words "The Second Edition, with some Additional Notes." Mr. Lefferts has two copies, one with the genuine, the other with the reprinted leaf P3. All copies which he has examined contain reprinted leaves, inserted on stubs, for D3 and E2.

The above thirteen editions were all printed in 1728 and 1729.

The next edition seems to be the one included in Pope's "Works," Vol. II, a folio, with imprint: "London: Printed by J. Wright for Lawton Gilliver . . . 1735." Mr. Lefferts has identified no less than nineteen other editions and variations printed before the appearance of Warburton's edition of Pope's works in 1751. Space permits only a note of the first edition of the Fourth Book: "The New Dunciad: As it was Found In the Year 1741," London, printed for T. Cooper, 1742; and the first complete edition "The Works of Alexander Pope," Vol. III, part i and Part ii, 1742. In this and later editions Colley Cibber was enthroned as king in the place of Theobald. A comparison of the text of several editions shows various changes, substitution of names, etc., made by Pope

to further his various literary quarrels, or for other reasons.

The auction sales of the coming week are none of them important. In Philadelphia, Stan. V. Henkels sells, January 28 and 29, American history and bibliography of Dr. Thomas L. Bradford, including several rare loyalist tracts printed in New York by Rivington in 1774, Confederate imprints, a large number of sale catalogues of libraries, etc.

In New York, the Anderson Auction Company, on the afternoon and evening of January 24, sells a collection which includes, among other rarities, a copy of the "Trial of Daniel Disney," Quebec, 1767, of which only one other copy can be traced.

On January 25 and 26 the Merwin-Clayton Sales Company offers the library of Frederic B. Savage of Newburgh, N. Y., and on January 27 a large collection of natural history and sporting books.

Correspondence.

THE FUNDAMENTAL FALLACY IN MR. BOOTH'S BACONIAN ACROSTICS.

To the Editor of The Nation:

Sir: Last spring Mr. W. S. Booth attempted to shatter forever the delusion of three centuries that Shakespeare wrote his own works. In a learned and ponderous volume he maintains that Bacon's name appears repeatedly in acrostic signatures in the First Folio edition of Shakespeare's plays: *ergo*, Bacon wrote the plays. Those acrostic signatures represent what their discoverer calls a "string cipher." In reading them you start from an initial F standing in a prominent position, and read along the lines to the first initial R. This you mark. Then, still reading along the lines to the right and left alternately, you mark the first initial A you meet, then the first initial N, etc., until the initials marked by you spell FRANCIS BACON. If the final N comes out in an inconspicuous place, the cipher is worthless; but if the final N, like the first F, falls in some specially significant position the acrostic is said to be "keyed" by this fact, and is accepted by Mr. Booth as an intentional signature of Bacon.

Now, unquestionably the arrangements of letters which Mr. Booth calls acrostics do exist; but the whole question is, Are these intentional signatures or merely accidental combinations? This is a problem, not of literary taste, but of mathematical demonstration; and as such I propose to consider it.

If you start from any initial F, in Shakespeare or any other author, you will, by going far enough, be able to find in succession all the initials for Francis Bacon's name. They will stand out among the other initials (which you skipped) something like this: FiuRcAtNConmISwyaBAnmrCsOtN. In other words we can lay this down as a fundamental fact, that every initial F in Shakespeare begins a spelling of Bacon's name which differs from Mr. Booth's acrostic signatures in nothing except that it is "unkeyed"; that is, that it begins and ends anywhere in the middle of the text instead of in salient positions. Such a combination of words as that represented by the above row of initials we will call an "unkeyed cipher"; and by studying these unkeyed ciphers we can determine their relation to the keyed ones of Mr. Booth.

I found by examining hundreds of these unkeyed ciphers that they occur, not only with great frequency, but also with great regularity. I found in the second place that the average length of these unkeyed ciphers was just about the same as the average length of the corresponding keyed ones in Booth. This looks suspicious, for we should naturally expect intentional acrostics to be much shorter than accidental ones.

Now, keeping this in mind, let us see how far chance might be depended on to produce such a number of keyed acrostics as Mr. Booth found. Ignoring for the sake of convenience such signatures as BACON and BACONO, let us consider all signatures which begin with an F. The first thing needed to make a keyed acrostic possible is a solid block of verse or prose with an F in a prominent position; for example, as initial of a word at one corner of the block. I found that according to Mr. Booth's own methods there were about 600 such blocks in the First Folio.

Now, let us look at any one of these blocks. It already has a prominent F from which to start; and this F must be the beginning of either a keyed or an unkeyed cipher. But a moment's reflection shows us that it is the beginning, not of one unkeyed cipher, but of a multitude of them. In the first place, it begins eight different unkeyed ciphers, according to the eight different spellings of Bacon's name used by Mr. Booth: F. BACON; FRA. BACON; FRAN. BACON; FRANCIS BACON; FRAUNCIS BACON; FFRAUNCIS BACON; FRANCISCO BACONO; FRANCISC-O-NOCAB. Then, also, we have the compound signatures, two forms of the name meeting in the middle of a block or following each other to reach across it. Each of these must be regarded as a distinct form; for the parts, if taken separately, would cease to be keyed. There are at least six of these compound acrostics: FRAUNCIS BACO-N-OCAB; FRANCISC-O-CSICNARF; FRANCISCO BACON-O-NOCAB OCSICNARF; FRANCISCO BACON-O-NOCAB; FRANCIS BACO-N-OCAB SICNARF; FRANCISC-O-NOCA-B-ACONO. Hence our first F has already become the starting point of fourteen unkeyed ciphers.

But further, each one of these fourteen can be read in six different ways: on initials; on terminals (*i. e.*, both the first and last letters of words); on all letters of words; on outside letters around the margin; on initials of outside words around the margin; on capitals. (See Booth, page 36.) Hence we now have six times fourteen, or eighty-four, ciphers. And, lastly, each of these can be read in two directions, starting toward the right or starting toward the left. Consequently, there are no fewer than 168 unkeyed ciphers dangling like the arms of a cuttlefish from our one F in the corner. Moreover, we can make all of these end somewhere in the block; for Mr. Booth will read to the end of the passage and then backward, and hence we also can.

The next question, and a very important one, to which the preceding paragraph is simply preliminary—is this: How many words in this block represent the end of ciphers read from the F in the corner and terminating on one of the letters of the word? There would not be 168 of these, for frequently two or more ciphers will end on the same word. Nevertheless, the number will be large; for most of the ciphers are of different lengths, reaching all over the page; and they do not all end on the same letters. Turning to modern authors, I picked out a large number of pages or paragraphs which had an F in one corner, and laboriously worked out the different unkeyed acrostics. I found that for blocks of less than 350 words the total number of "end words" (words on which ciphers actually did end) ranged from one-eighth to one-sixth of the total number in the block. Hence we must be safe in assuming that at least one-tenth of the words in any representative block will be words on which unkeyed ciphers (if started from the corner F) will end.

Now, all that is necessary to produce a keyed acrostic is to have one of these "end words" occur in a significant position, thereby keying the cipher of which it represents the terminal. The possible significant places are five in number, one at each of the three remaining corners of the block, one on the word next to the F-word in the same line, and one directly under it on the line below. What are the chances that one of these "end words" will be found in one of these five positions and give us a keyed acrostic?

Suppose that we have an F-block containing some 200 words. We have not examined it; but since in every block the number of "end words" appears to be at least one-tenth of the whole number, we feel sure that somewhere in that block there are twenty words or more terminating unkeyed ciphers. Each of these has 200 possible positions, for there are 200 words in the block. Five of these 200 positions are significant. Hence each "end word" has five chances in 200 of appearing in a significant position and keying the cipher which stretches between it and the starting point. But since there are twenty "end words" and each has five chances in 200 of being keyed, there are twenty times five chances in 200, that is, 100 in 200, or one in two, that we shall have one keyed cipher in the block. In the same way there would be one chance in two in any block of reasonable size.

Of course the above method is not absolutely accurate. For the sake of simplicity I have disregarded certain factors; and consequently there will be a margin of error in my results. But this margin of error should not be large; for the practical question under discussion the above results are accurate enough.

Now apply this reasoning to Shakespeare's First Folio. That contains about 600 F-blocks; consequently, with one chance in two for each block, it should produce some 300 keyed ciphers; or, making all possible allowance for errors and uncertainties, we should expect to find in practice somewhere between 200 and 400 of them, in accordance with the natural laws of language. Mr. Booth found a little over 100; consequently there must still be a large number awaiting discovery.

The same reasoning may be carried further to explain away double acrostics and all the other phenomena which Mr. Booth found. His acrostics are not the signature of anybody, but simply such natural combinations of letters as occur in any author.

A most convincing thing about the above mathematical proceduro is that it has worked out with me in practice. The number of keyed ciphers which I have found has been about half of the number of blocks examined. A reader who doubts my conclusions may work out a dozen blocks or so for himself and decide. By the keyed acrostics acquired in this way, I have already proved that Bacon wrote "Heretics," a book previously attributed to G. K. Chesterton; that under the *nom de plume* of Ethel Allen Murphy he published a poem last year in *Appleton's Magazine;* that he worked with my fellow instructors and myself on our new book, "Theory and Practice in English Composition," and that he collaborated with the authorities of Yale University in producing their last annual catalogue. By this method, no doubt, with a little industry, one could prove that the amatory songs of Burns were written by Ira D. Sankey; that Robert Ingersoll composed "Paradise Lost," and that "Baron Munchausen" was the scientific masterpiece of Huxley. Verily, some are born great authors; some achieve great authorship, and some have great authorship thrust upon them.

FREDERICK E. PIERCE.

MILITARY TRAINING.

TO THE EDITOR OF THE NATION:

SIR: Allow me to suggest that, in your article on "Professional Military Training" in the *Nation* of December 23, you do not give sufficient importance to the fact that the absence of such training in youth is not necessarily a bar to the acquisition of military distinction in middle life. Cromwell's military service did not begin till he was more than forty-two years old. Yet he takes a very respectable place among the generals of the world.

Thomas Graham, after he was raised to the peerage as Lord Lynedoch for his services in war, led a purely civil life till, when still a civilian, and nearly forty-five years of age, he joined the staff of Lord Mulgrave, on his way to Toulon in 1793, as a volunteer aide-de-camp. (He was born in 1748.) His first commission as lieutenant-colonel commandant was dated February 10, 1794. In his regiment, the Ninetieth Foot, he had as his lieutenant-colonel the officer who afterwards became celebrated as Lord Hill. Lord Lynedoch won the glorious victory of Barrosa over the French.

In the civil war I have heard it was the case that no general who had not been trained at West Point ever earned great distinction in command. This could not have applied to the Confederate cavalry leaders, for I believe neither Mosby nor Forrest had been at that celebrated training establishment. It is not every general or every admiral, however trained, who becomes eminent as a war commander.

The case of navies, to which you refer, is, I submit, peculiar. To be a fairly efficient naval officer every man must have a fair mastery of two quite distinct professions, viz., that of the sea and that of war. This essential condition is very commonly forgotten. The necessity of combining the two callings makes early training indispensable. The indispensability is less apparent in other services. The great Robert Blake, if he had no naval, had had, at any rate, a good deal of nautical experience before he held a command in a war fleet.

CYPRIAN A. G. BRIDGE,
Admiral H. B. M.'s Navy.

London, January 3.

POE'S "SILENCE."

TO THE EDITOR OF THE NATION:

SIR: In your issue of December 30, Professor Killis Campbell of the University of Texas attributes a sonnet, entitled "Silence," beginning:

> There is a silence where hath been no sound:
> There is a silence where no sound may be:

to Edgar Allan Poe on the ground that it appeared in *Burton's Magazine,* September, 1839, signed "P.," and because of its resemblance to Poe's sonnet of the same title, of which he thinks it may be an earlier variant. The sonnet in question is from the pen of Thomas Hood and appeared in the *London Magazine,* February, 1823. It may be found on page 36 of the first volume of Hood's "Poems," edited by Alfred Ainger, Macmillan, 1897. It is also to be found as No. cliii of the "Sonnets of This Century," edited by William Sharp. In the notes on page 297, a comparison is made between it and Poe's sonnet, which is there printed in full. The two questions of interest are, first, how Hood's sonnet came to be printed in *Burton's Magazine* with the signature "P."; and secondly, how far Poe was influenced by it in writing his own sonnet. HENRY WILDER FOOTE.

Ann Arbor, Mich., January 4.

TO THE EDITOR OF THE NATION:

SIR: I am glad to be set right with regard to my "early draft" of Poe's "Silence." My reasons for attributing the sonnet to Poe were, first, that, as published in *Burton's,* in September, 1839, it was subscribed with the initial "P.," a signature which Poe had used in republishing two of his juvenile poems in *Burton's* for the month immediately preceding, and which he later used several times with his publications in the *Broadway Journal;* secondly, that, inasmuch as Poe was one of the editors of *Burton's* and had used this signature with his poems in the August issue, the readers of *Burton's* would naturally assume that this poem was his also, and that he would accordingly have put in a disclaimer to it, if it were not his, as he did with several other things erroneously ascribed to him; thirdly, that Poe was fond of the theme with which the poem deals, using it not only in his sonnet on the subject, but also in his "Spirits of the Dead," "Al Aaraaf" (part i), and "The Valley of Unrest," and in his essay "Silence: A Fable." Just why Poe affixed his initial to Hood's poem, I am unable to say. Perhaps, he thought this an easy way of turning a dollar. Perhaps —and this is the more plausible theory, I think—he merely wished to hoax his public, a thing he delighted to do.

KILLIS CAMPBELL.

University of Texas, January 8.

COLLEGE-ENTRANCE REQUIREMENTS IN LATIN.

TO THE EDITOR OF THE NATION:

SIR: In your issue of October 24, 1907, you printed a letter in which I urged, with special reference to Latin, two vital objections to the prevailing college-entrance requirements: the lack of uniformity in the definitions of a given subject, which makes it necessary to teach students preparing for different colleges in different classes, though their work is the same in kind and aims at the same result; and the viciousness of quantitative standards. Prof. William T. Foster emphasized the first of these objections in your issue of December 10, 1908, and he also took the Latin requirements as the example which best showed our evil state.

At about the time that Professor Foster's letter appeared the American Philological Association, acting upon petitions from the classical associations of New England, the Atlantic States, and the Middle West and South, established a commission on college-entrance requirements in Latin, in which the schools should be represented as well as the colleges. The commission has recently made a unanimous report, containing definitions of the Latin requirements which it is hoped the colleges generally will accept. Furthermore, the commission lays the stress in the entrance examinations upon sight-translation, a qualitative test, reducing materially the amount of prescribed reading and allowing a wide range for the other reading of the schools. Copies of this report can be obtained from the secretary of the commission, Prof. Walter Dennison, the University of Michigan, Ann Arbor, Mich., or from the undersigned. JOHN C. KIRTLAND.

Exeter, N. H., January 11.

Literature.

REMINISCENCES OF JOHN W. FOSTER.

Diplomatic Memoirs. By John W. Foster. Two volumes, with illustrations. Boston: Houghton Mifflin Co. $6 net.

During the heated campaign of 1872, John W. Foster, Republican chairman in Indiana, secured the return of a Republican Legislature. Barometrically interpreted, this indicated the election of Grant, and nearer home it insured the reëlection to the Senate of that patriotic statesman, Oliver P. Morton. In return for his political life Senator Morton, after dinner one night, asked General Foster to look over the list of Federal offices and choose the one that most pleased him. The General, though attracted by the glamour of the diplomatic service, took a modest view of his own capacity, selecting the least important of the ministries, the Swiss. Instead, he was sent to Mexico, where he witnessed the turbulent aftermath of the French adventure and the founding of the permanent dictatorship of Diaz.

Technically, this Indiana lawyer in his middle thirties had the slenderest qualifications, for his new career. On examination, he could not have secured a secretaryship. On the other hand, a man who had commanded a cavalry division before his thirtieth year, who had succeeded in the law, and made a name for

himself in the politics of the most political of States was not, as the sequel proved, unfitted to stand before kings. This instance lends weight to Mr. Foster's present opinion that while there should be more promotions from the lower grades of the diplomatic service and a greater permanency of office, the way should remain open for appointment from civil life. During the eight years in Mexico, the new diplomat had every chance to show his quality. As he did in subsequent and far more important missions, he set himself seriously to learning the language, to cultivating friendly relations, official and unofficial, with the Mexicans, to uniting the resident American colony, and to extensive travelling. Friction between American and Mexican forces on the Rio Grande, vexatious and sometimes fraudulent claims, made his position an uneasy one. Something like an annexation plot at Washington delayed our recognition of Diaz for months after the other Powers. From this invidious position Mr. Foster came away without sacrifice of dignity, though he was obliged once to withdraw from an anti-American demonstration at the theatre. Through two revolutions he had maintained the good will of all parties, and years later, when the Republic of Mexico needed a counsellor in the very delicate cases connected with the fraudulent La Abra and Weil claims, she naturally turned to Mr. Foster. On the matter of provocation to Mexico Mr. Foster is guarded, but he evidently believes that certain partisans of Hayes were willing to accept war as a counter-irritant to the sting of the disputed election. He thinks that Diaz, being in a position to name his successor and insure order, should have retired after his second term. The dictatorship has retarded the normal growth of Mexican politics.

Promotion to the Russian Ministry was the reward of faithful service in Mexico, and in June, 1880, Mr. Foster presented his credentials to Alexander II. At Petersburg began a notable acquaintance among diplomats. Lord Dufferin, Marquis Tseng, Count Nigra, M. de Giers, Prince Gortchakoff are still great names. Here Mr. Foster had the satisfaction of hearing the prince who was so soon to be Alexander III declare that the Russian fleet sent to American ports during the civil war went with deliberate friendly intent as a makeweight against French and English tenderness for the Confederacy. But this retrospective assurance did not fully convince the hearer that other motives might not have been involved. We may record, in view of the present multiplication of embassies, Mr. Foster's opinion that he was under no practical disadvantage in bearing only ministerial rank. At the Foreign Office and elsewhere he readily got by courtesy the consideration that ambassadors have of right. His mission was terminated by resignation within a year and a half, but sixteen years later, at the time of the fur seal controversy he was accredited to St. Petersburg as special commissioner with the rank of ambassador.

It was his intention to devote himself to the practice of international law. And in 1882, at Washington, he laid the foundations of a notable practice, only to be sent by President Arthur to Madrid as Minister in order to negotiate a reciprocity treaty with Cuba. After vexatious delays, due to changes of ministries and the general dilatoriness prevailing at Madrid the treaty was agreed on and signed. Owing, however, to the success of the Democratic party and Mr. Cleveland's disinclination to tariff reduction by indirection, it stifled —the common lot of reciprocity treaties —in the Senate pigeon holes. Mr. Foster returned the richer by the experience and by the acquaintance of such statesmen as Sagasta, Cánovas, Castelar, and Rampolla.

After the Republican victory of 1888, Secretary Blaine, already allured by the Pan-American idea, and desirous, too, of contenting the public by some show of tariff reduction, gave himself heartily to the principle of tariff reciprocity. Mr. Foster arranged treaties with Cuba, San Domingo, the British West Indies, Brazil, Germany, and Austria. Others were signed, but not ratified. The reciprocity conventions worked well, but were upset in a matter of five years when the McKinley bill restored sugar to the protected list.

Hardly freed from the reciprocity negotiations, Mr. Foster was wanted as counsel to the Bering Sea Commission at the Paris tribunal. The whole American side of the controversy was beset with difficulties. The arbitrary seizure of foreign sealers had made our case unpopular; our best argument, that from humanity and expediency, was never properly presented until the public hearings; finally our best diplomatic trump, that of the *mare clausum*, had to be precipitately withdrawn for repairs, having been based in large part upon the fraudulent mistranslations of a too-obliging Russian interpreter. During the hearings England and Russia most unhandsomely concluded a special agreement prejudicial to our case. Under the circumstances, we were lucky in securing even an imperfect protection for the seals of the Pribilov Islands. In fact, the whole cause was infected from the violent and illegal procedure of the concessionaries of these islands. The original seizures were made at the instance of this company without the knowledge or consent of any high executive official, the suits at Sitka were brought without the knowledge of the Attorney-General, and the briefs were prepared by the attorney of the sealing company. A government order for the dismissal of the suits and release of the vessels was treated as spurious and ignored. Mr. Foster's comment on this lawless proceeding is worth quoting. "It revealed the fact," he writes, "that a great government might be betrayed into a line of policy through the machinations of a private corporation, influenced by pecuniary motives, which put in peril its relations with a powerful neighbor and subjected it to the condemnation of an international tribunal for conduct taken unadvisedly and unwisely." The Pribilov concessionaries were the worthy predecessors of the Panama Company, concerning whose political activities it would be interesting to have, if not the opinion of an international tribunal, at least of the accomplished jurist Mr. Foster.

Before his brief tenure of the office of Secretary of State in 1892, Mr. Foster had withdrawn from his law practice. Accordingly, the close of the Bering Sea arbitration left him free to indulge an old project of travelling around the world. On this tour of recreation he made acquaintances which were later to be useful. Returned to Washington and his clients, he had something more than a year of respite from public service before receiving the most important assignment of his career—that of counsel to the Chinese Peace Commission after the disastrous war with Japan. It was a desperate cause to undertake. Urged by the unbounded ambitions of the war party, Japan had refused even an armistice. Through ambiguous credentials and dilatory tactics the Chinese delegates had discredited themselves in advance. At this point Mr. Foster came to claim for China the usual rights of a sovereign state. And fortune favored him. The murderous assault of a fanatic upon the plenipotentiary, Li Hung Chang, turned Japanese scorn into sympathy. The armistice was granted, and gradually the excessive demands abated. Trouble arose at times through Oriental circumlocution—habitually, when time was an object, the discussions were held in English. Moreover, the attack on the great Chinese Viceroy for a space sapped his spirit. His court added to his perplexities by insisting that he should personally undergo the humiliations of the peace he was arranging. For example, his son was appointed to the odious duty of ceding Formosa to the Japanese. In something like a funk young Li begged Mr. Foster to see him through, and finally the principality was transferred on shipboard by a brief exchange of papers, much as if a corner lot had been in question.

His share in the treaty of Shimoneski is probably the brightest chapter in Mr. Foster's career. He had restored *morale* to the representatives of a demoralized nation, and he had successfully appealed in a prophetic spirit to the comity of

Far Eastern nations; finally he had personally convinced a proud and apathetic court to make a necessary sacrifice. That the battleships of Europe promptly made waste-paper of the treaty in no wise detracts from the merits of its negotiators. The moral precedent had been attained. Japan, having shown her power, had bound herself to magnanimity. The accusation has been made that China accepted the conditions knowing that the Western Powers would annul the treaty. Mr. Foster denies emphatically that there was such foreknowledge or collusion, and he is in a position to know.

Within something more than a year of his return from Japan Mr. Foster was visiting Hawaii on a private errand, but with his eyes open. As Secretary of State he had already signed the first annexation treaty; as adviser to Assistant Secretary Day, Secretary Sherman being incapacitated, he drew up the definitive treaty which was signed on June 16, 1897.

We can note only in passing that Mr. Foster sat with the Joint High Commission at Quebec in the winter of 1898-9, was associated with the drafting of the ill-destined Kasson reciprocity treaties, and in 1903 was special counsel before the Alaska boundary tribunal. Nor can we dwell upon his service as Chinese delegate to The Hague Conference in the summer of 1907, though the chapter dealing with this congress is one of the most entertaining and valuable in the book. His law practice, too, affords numerous points of interest which must be merely mentioned. In 1902 he did his clients, a steamship company, and Secretary Hay a good turn in advising him that the preposterous "pacific blockade" maintained by us against Venezuela had no standing in international law. Only a practitioner can properly value the exploit of recovering for the heirs of that heroic soldier of fortune, Gen. F. T. Ward, the money due him from the Chinese Empire. Naturally, payment was made, not from the Chinese treasury, but by a rather peculiar gentlemen's agreement from the surplus of the Boxer indemnity.

A welcome feature of the book is the character sketches of the many Presidents and secretaries of state whom Mr. Foster has known or served, with a few appreciations of foreign diplomats. These judgments are as shrewd as cautious, and sometimes they recall sturdy figures unduly forgotten, like Secretary Hamilton Fish. The sidelights on Blaine are valuable, and the appreciation of President Harrison quite masterly. One may regret that obvious considerations prevented the inclusion of President Roosevelt in this gallery. Such a sketch would grace those literary remains that we trust Mr. Foster will leave, but not soon.

This full and modest record of an extraordinary and most exemplary career is naturally of unequal interest. It would have borne condensation, and a stricter limitation to the matters suggested in the title. Parts of it are thrilling. One can hardly imagine a time when a politically inclined man will not delight in reading the chapters on the peace between China and Japan. And the charmingly mellow account of the second Hague Conference is of hardly less value. Everywhere the book abounds in incidental wisdom. We have said, and believe, that it would have gained through a moderate condensation, but were it a question between too much or too little, we would gladly choose the fuller measure.

CURRENT FICTION.

The Master. By Irving Bacheller. New York: Doubleday, Page & Co.

Mr. Bacheller, who holds, perhaps, a more agile and eloquent pen than any American novelist now writing, seems never quite able to grasp a serious motive and hang to it. "The Master" is a jumble of literary Bohemianism, social idealism, and sensational adventure. The Christlike figure is becoming almost a commonplace of the current tale and the current play. Mr. Bacheller's Ben Lovel is a good example of his kind, hardly more. He is a man of inherited wealth, and of genius in more than one field—a master of the violin and of the pen. For love of his fellowman he has given up his position of ease and honor, and become a poor shoemaker. He has also become member of a great international brotherhood called "The Chain," the leader of which is an American, one Condon. This man and Lovel become intimates: Lovel saves him from turning into a demagogue and tyrant, and is the good angel of all the persons involved in the narrative. So much for the serious element in the story; it might be impressive, if it were not for its setting—though the great man Condon is in truth a flabby figure. But the compound contains as much of "Treasure Island" as of "The Servant in the House"—plus a somewhat smaller portion of "Paul Kelver," or any modern literary-Bohemian tale you like.

The story-teller is a young Englishman who is suddenly called to America by a message from a mysterious uncle. He has only a vague clue as to the uncle's whereabouts, and, having presently spent all his money in New York, would, no doubt, have become a tramp, if he had not been inspired to turn author. As he had been bred a plumber, he had no difficulty with this allied trade, and we are to regard him hereafter (so far as the exciting events into which the story plunges him will permit) as turning an easy penny with his pen. He becomes a member of a club of young and ambitious journalists, and it is in their company that we breathe the favored airs of a somewhat antiquated and vinous Bohemia. But the main thing, after all, is the series of adventures and perils of which the central figure is old Rog Rone, a sea-dog of the most approved proportions—who swigs his gin, shivers his timbers, and hunts his treasure, with all the remorseless and humorous ferocity of his countless prototypes in fiction. There are wild scenes of stage bloodshed on shipboard in store for the youthful reader. In fact, one thinks of no type of reader to whom some portion of this hodge-podge may not be palatable—unless it be the reader who does not care for the game of little Jack Horner.

Trespass. By Mrs. Henry Dudeney. Boston: Small, Maynard & Co.

Reiteration is the thief of effectiveness. If Mrs. Dudeney were to cut down by one-half the repetition and re-repetition of her thoughts on the heart of man and the destiny of woman, her jeremiads, auguries, and incessant invocations of "Julia! Julia!" there would still remain volumes in sufficiency of acute observation, minutely faithful portraits, and a story whose outcome piques the interest. It is a story of English middle-class respectability, in the person of a village innkeeper, pitted against genius, in the shape of Oliver Heron, the "artist right through," the man who "robbed emotional orchards"—for the possession, naturally, of Julia! Julia! Stephen, the innkeeper in whom "poesy and commerce were most bewilderingly interwoven," saves both a perilous situation, and Julia—for the time being; this by a chivalry which stirs even his rival's admiration. But Mrs. Dudeney's are a dreary set of folk; their very aspirations, when they have them, are depressing. The triumph of the little man whose life-aim was to "prove to Julia," leaves him with but dubious reward. For with Julia, both merits and faults are unlovable.

Beechy. By Bettina von Hutten. New York: Frederick A. Stokes Co.

"Beechy" is the phonetic spelling of "Bice," or "Biei," the diminutive of Beatrice, the name of Baroness von Hutten's heroine. The half-Italian, half-English Beechy has a rather forlorn but assuredly picturesque childhood in Rome. The story of these early days is full of such vivid adventure as may befall a clever little waif with unquenchable spirit, with a singer's gift, and the happy faculty of making friends. Whether she is selling papers in boys' clothes or smuggling herself into the opera chorus or living demurely with the Convent Sisters, she is a little figure that catches the light and keeps the scene a-twinkle. Her plunge into cockney England and her emergence on the

stage of grand opera carry the interest along on a conventional level. The lovers who come and go make little ripple until Lord Charles Cressage appears above the horizon. The subsequent proceedings are so absurd as to quench the none too vivid sense of sharing in a real prima donna's real experiences. Beechy is plausible enough in her struggles, her successes, her shrewdness, her generosity, her well-awareness, her innocence. But the affair with Lord Charles, the Lothario who loves her only, but cannot be true to her for six months; her Italian jealousy and English scruple, and her no-man's-land arrangement of mutual eternal devotion combined with "being good"; and, chiefly, the excellent Lady Charles's chaperonage, her tender safeguarding of both lovers till her death shall them join together, unite to make assuredly the most preposterous situation that fiction has lately revealed.

"It is quite true that she is dying," says Lord Charles. "And she wishes us, you and me, to marry as soon as—as it is over." "Oh! isn't she wonderful, wonderful?" "Yes, she is. And—until then—we, you and I, are to be engaged, though, of course, no one shall know." Comment would be anti-climax.

Three Lives. By Gertrude Stein. New York: The Grafton Press.

These stories of the Good Anna, Melanctha, and the Gentle Lena have a quite extraordinary vitality conveyed in a most eccentric and difficult form. The half-articulated phrases follow unrelentingly the blind mental and temperamental gropings of three humble souls wittingly or unwittingly at odds with life. Whoever can adjust himself to the repetitions, false starts, and general circularity of the manner will find himself very near real people. Too near, possibly. The present writer had an uncomfortable sense of being immured with a girl wife, a spinster, and a woman who is neither, between imprisoning walls which echoed exactly all thoughts and feelings. These stories utterly lack construction and focus, but give that sense of urgent life which one gets more commonly in Russian literature than elsewhere. How the Good Anna spent herself barrenly for everybody in reach, the Gentle Lena for the notion of motherhood, while the mulattress Melanctha perished partly of her own excess of temperament, but more from contact with a life-diminishing prig and emotionally inert surroundings, readers who are willing to pay a stiff entrance fee in patient attention may learn for themselves. From Miss Stein, if she can consent to clarify her method, much may be expected. As it is, she writes quite as a Browning escaped from the bonds of verse might wallow in fiction, only without his antiseptic whimsicality.

MOGUL INDIA.

Storio Do Mogor, or Mogul India, 1653-1708. By Niccolao Manucci, Venetian. Translated, with introduction and notes, by William Irvine, Bengal Civil Service (Retired), Member of the Royal Asiatic Society. Vol. IV. New York: E. P. Dutton & Co. $3.75 net.

This book, published for the government of India, as one of the Indian text series, affords a kaleidoscopic view of Hindustan during the reign of Aurangzeb—the last of the great Mogul rulers. Manucci was conversant with both Urdu and Persian—the camp and court languages of the later period of Mohammedan rule. This fact he mentions with evident pride in the course of his journal. Besides knowing the current *lingua franca,* he spent the major portion of his life in Hindustan in intimate association with the people of the land. All this gives a high status to the Venetian's writings. Nevertheless, no one can read his book without feeling that only an alien could write of India as he has done. This is pointed out with no view to disparage, much less discredit, the author. Indeed, the chief asset of "Storio Do Mogor" is the fact of its foreign authorship, since it supplements, in an important manner, histories of the same period composed by native scribes, whose besetting sin is to present highly colored statements, and to show little regard for chronological order. And in a day when foreigners "do" India in a month or two and then write learned, ponderous volumes bearing on the complicated political, social, and economic affairs of Hindustan, Niccolao Manucci's careful study comes as a pleasant surprise and a great relief.

Born at Venice in 1638, Niccolao Manucci ran away to sea in November, 1653. After travelling with Viscount Bellomont, whose service he entered, through Smyrna, Persia, and other lands, he touched Sindh, a port on Indus, and finally found himself at Surat. After casually touring in various parts of India, he went to Delhi, then the capital of the country, and was presented to Shah Jahan, the ill-fated father of Aurangzeb. Some time later he was introduced to Prince Dara Shukoh and entered his service as artilleryman. In that year, when Aurangzeb confined his father in Agra, and vanquished his brothers, Manucci fought for Dara Shukoh in many engagements, at one time nearly being killed. The Venetian refused Aurangzeb's service, travelled through northern India, and, in 1663, entered, as artillery captain, the service of Jai Singh, who sent him as envoy to meet Shiva Ji—the Marhatta leader, who fearfully harassed Aurangzeb and succeeded in establishing the Marhatta rule over a considerable portion of India. *Wanderlust* seized him once again, and he sojourned in various parts of southern and northern India for a number of years. In 1672 he became a physician, and in his new profession gained free access to the courts of many a native prince. Toward 1686 he married and settled for some time in Madras, then the chief centre of English influence. His appointment, at various times, as English and French envoy gave him the opportunity to study at close range the ambitions of the European nations interested in extending their trade and empire in India. He remained in Hindustan until his death in 1717, travelling and doctoring and gaining an intimate knowledge of many phases of Indian life. Such a career inevitably yielded rich material for this chronicle, begun in 1699 and finished ten years later.

As an historic document, "Storio Do Mogor" is not invariably accurate. The names of persons and places are often incorrect, and some of the dates are inaccurate. Moreover, at times, the author degenerates into a scandal-monger, coloring his statements, and occasionally showing bitter animosity. This last defect is usually inseparable from contemporary memoirs, and yet it mars, in some measure, the reliability of this work as an historical record. Fortunately, the work of the editor goes a great way in remedying this defect. Whenever Mr. Irvine has found inaccurate dates, or names of places or persons, he has indicated the correct ones in parentheses. Other notes supplement the obscure portions of the book, bring out the allusions, and in a considerable way illumine the text.

Many beautiful illustrations judiciously distributed through the book excellently supplement and elucidate the text.

Dalmatinische Reise. By Hermann Bahr. Berlin: S. Fischer.

We are freshly reminded of the awakening of the national conscience, expressed, of late, in Austrian fiction, in reading Hermann Bahr's "Dalmatinische Reise." Here we have a fit companion-volume for the sketches of scenes and types collected by Felix Salten under the title, "Das österreichische Antiitz," and issued through the same publisher. Both writers are masters of the *feuilleton* and have a fascinating manner of conveying their impressions and convictions without burdening their readers with facts or assailing them with arguments. Salten's account of wanderings through the streets of Vienna, of country walks, charity entertainments, dance-halls and cafés, army manœuvres and pilgrimages, his portraits of Altenberg, Girardi, Kainz, Radetzky, the late Empress, and even the famous Mayor Lueger, reflect the artist's delight in his interesting material and a light-hearted

acceptance of his people just as they are.

Bahr, on the contrary, has attained the critical attitude. The Austrian lack of enterprise in exploiting the possibilities of their beautiful country, their want of modern push and grit, is to him a matter of constant regret. He is irritated by the bad roads, the poor hotel accommodations, the inadequate carriage, railway, and steamboat service. He bewails the want of concerted effort in problems of municipal improvement and the partiality of the government towards the German provinces of the Empire. His descriptive passages alternate with critical excursions into political and social problems which are by no means irrelevant. Among the fruits of misrule and abuse which he points out is the abject poverty of the agricultural population, and sociologists will be particularly interested to learn that the "Kolonat" existing in the vicinity of Spalato differs little from old-time serfdom. His eyes are open to every popular wrong inflicted in the name of patriotism and tradition. Bahr feels, too, that the court at Vienna knows all too little about some of the provinces under its dominion. Why should not one of the younger archdukes be Governor of Dalmatia? Certainly this "Adriatic Switzerland" is capable of a very remarkable development, as yet half-suspected. To-day, however, the province is sending shipload upon shipload of her sons to America: sturdy, skilful laborers that till a foreign soil, while the native needs their strong hands and modern tools to coax from its rich harvests.

The book is full of historical reminiscences, and of glimpses of a literature and an art as yet undiscovered by the arbiters of our culture. Illuminated by exquisite humor, interwoven with personal reflections, these apparently random notes make thoroughly interesting reading. The paragraphs on Diocletian, on Maximilian of Mexico, on the archæologist Bulic, are singularly enlivening. It is Bahr's wish to secure the investment of foreign capital and labor in Dalmatia. He hopes to interest the Berlinian: for with one such, a "Company Limited" is sure to follow. Nothing can be hoped for from the Austrian government, which seems to be positively hostile to improvements in this province, suspected as it is of rebellious and treacherous sentiments. Already the people of Dalmatia, and the Austrian progressives, hail in Bahr their champion. This book has, however, performed a mission in a larger world than that ruled by the Hapsburgs. It has called the attention of the travelling public to a country unsurpassed for natural beauties, historical associations, romance and poetry, for picturesque scenery and picturesque population, and, what is exceedingly rare in these days of Cook's and other tours, one as yet unconventionalized and uncommercialized.

Essays on Greek Literature. By Robert Yelverton Tyrrell. New York: The Macmillan Co. $1.25 net.

The notion that what has once been well said about the Greek and Latin masterpieces can ever be discarded as out of date is German, not English or French. For the Germans, fashions in scholarship come in and go out like the cut of a sleeve. For instance, Jebb's "Introduction to Homer," which Professor Tyrrell praises so warmly in one of the Essays before us, will be worth reading as long as the text of Homer endures; but it says nothing to a German because it antedates the Homeric armor controversy and the theories, more in number than the leaves of Ida, which have gone far since the eighties to bury Homer under the Homeric Question.

Professor Tyrrell's Essays were written, for the most part, several years ago: that on Sophocles, a review of Jebb, is twenty years old; the "Pindar," though it has a good discussion of Mezger's theory of the Terpandrian nome structure of the Odes, knows nothing of Schroeder and the New Metric and is none the worse for that. Pindar is a poet about whom too many of his readers are content to say, with Tennyson, that "he has long tracts of gravel with immensely large nuggets embedded," a remark which merely showed that one who had ignored virtually all the sources of modern poetic emotion did not appeal to Tennyson. Tyrrell's Essay will rank with Jebb's on Pindar as an admirable introduction to the splendors of the austere style. That entitled The New Papyri, dealing with the Petrie Papyri and the "Constitution of the Athenians" is eighteen years old, and, since Grenfell and Hunt's publications and the new Menander now fill the foreground, the title is misleading. Tyrrell agrees with Cauer, Van Leeuwen, and others in rejecting Aristotelian authorship for the tract, and supports his view with a list of non-Aristotelian words and phrases. To put these down to scribes is, as he points out, a dangerous doctrine, and would shake all criticism of classical remains based on style. Yet in England the tract, backed by the powerful authority of Sandys and Kenyon, is still called the "New Aristotle." Tyrrell's attitude to German text criticism is elsewhere hostile, and some of his judgments might well rekindle that *odium grammaticum* which is passing out of fashion in Germany.

The essays as a whole represent the best English tradition of sound conservative scholarship and the correct literary instinct of the school of Jebb. There are a good many misprints, the worst being "Philostratus" for "Philoctetes" (p. 83), and "Marietti" for "Mariette" (p. 86).

Notes.

Lamb's "Tales" and "Gulliver's Travels," with the illustrations by Arthur Rackham, have just been reissued by E. P. Dutton & Co., this time in a large-paper edition, quarto.

From the Yale University Press will be issued next month "The Beginnings of Gospel Story: A Historico-Critical Inquiry into the Sources and Structure of the Gospel According to St. Mark," by Dr. Benjamin W. Bacon, Buckingham professor of New Testament criticism and exegesis.

"The Seminoles of Florida" are the subject of a history by Minnie Moore-Wilson, to be published this month by Moffat, Yard & Co. There are illustrations, and an introduction by E. S. Martin.

In the year 1909 there were published in England 10,725 books, compared with 9,821 in 1908. The chief increase was in religion and philosophy. Poetry and the drama, on the other hand, show an actual decrease.

On January 10 ground was broken for the library building of Chicago University to be erected in honor of the late President William Rainey Harper, at a cost of $600,000. The structure is to be 276 by 80 feet, fronting on the Midway Plaisance. The main building will be six stories, 113 feet in height; with two towers 138 feet high containing eight stories. Provision will be made at first for 400,000 volumes, with an ultimate capacity of 800,000 volumes. This, with the departmental libraries surrounding it, will mean a provision for 3,000,000 volumes.

We have to record the receipt of two volumes, XXX and XXXI, of the Wiener Beiträge zur englischen Philologie (Vienna: Wilhelm Braumüller). In the former Prof. Leopold Brandl gives a minute study of "Erasmus Darwin's Botanic Garden" as a complement to his study of "The Temple of Nature"; in the latter Ferdinand Putschi writes on "Charles Churchill: Sein Leben und Seine Werke." These are but desiccated literature, and, in so far as they merely translate the poems considered into heavy prose, are an incumbrance. Some learning and discussion of a more useful sort are, however, buried in the pages. Professor Brandl is amusingly kind to a poet whose name has become a synonym for unreadable dulness. He finds in Darwin: "Höchster poetischer Schwung, warme Gefühlsdurchdringung auch von Dingen, die sonst ganz ausserhalb des Bereiches dichterischer Gestaltung liegen, lebendige Auffassung schöner Naturanschauungen. . . ." All of which, we may say respectfully, is sheer nonsense.

Edward Bliss Reed has published in a pamphlet (from the "Transactions of the Connecticut Academy of Arts and Sciences") a selection of "The Poems of Thomas, Third Lord Fairfax." The complete manuscript of the poems, extending to 656 pages, is now in the Bodleian. Professor Reed makes no attempt to bestow undue literary merit on these halting verses

of the great Parliamentary general, but he is right in thinking that they have some interest of another kind. And nothing in the selection is more interesting than the two brief poems, which express the feelings of one who was both enemy and friend of the King. They are short enough to quote here:

On the Fatal day
Jan: 30 1648 [N. S. 1649]

Oh lett that Day from time be blotted quitt
And lett beleefe of't in next Age be waued
In deepest silence th' Act Concealed might
Soe that the King-doms Credit might be saued
But if the Power deuine permited this
His Will's the Law & ours must acquiesse

Of Inpartial Fate

Here we all the Same Danger run
By the like Destin's we are ledd
Same Misfortune to the Shepeard Come
May attack as well the Crowned head
Our dayes are Spun vpon that wheele
The meanest Subiect & greatest Kinge
To like end th' Fatal Sisters bringe
The thread when Cutt both same Sisers feele

John Davis, author of "Travels of Four Years and a Half in the United States of America, During 1798, 1799, 1800, 1801, and 1802," is well worth knowing, even at this late date. And, for all the prolixity of his title-page, his "Travels" (published in London, in 1803, and a rare book to come by), contains many passages of extreme interest. One is, then, well-content to have the fine reprint issued through Henry Holt & Co. Good paper and clear type repose the eye of the reader, and wide margins invite annotation and the enrichment of the text with parallel passages from Crèvecœur and Chateaubriand—notwithstanding the remark of A. J. Morrison, who edits the volume, to the effect that these two were "sentimentalists"; that the former is "very disquisitional," while "Chateaubriand might have written *his* book in his tower." The personality of John Davis is one of the most interesting things about his book; for John Davis was not as other Englishmen. In the first place, he travelled through these States by horse and sloop and *on foot:* and we are always prejudiced in favor of a traveller who proceeds under his own power. Then, too, there is a refreshing fatuity about this perambulatory Briton; and fatuity nowadays is so case-hardened and sophisticated! He was born, the traveller, in the year 1776, at Salisbury, Wiltshire; and was "reared," he tells us, "in the lap of opulence." He was, however, a born vagabond, and ran away from home and school to become a sailor. "When the boatswain's mate piped Starbowlines, I walked up the main rigging into the top. I always put Le Sage in my pocket; and in the maintop of an East Indiaman, under a cloudless tropical sky, when the breeze was so steady that for days we had no occasion to start either tack or sheet, I began to cultivate the language of the Court of Lewis the Fourteenth."

"In 1798, I embarked in a small brig, at Bristol, for the United States," writes Davis: in other words, his visit to the new world was paid when he was twenty-two, and still impressionable. "I had before made some progress in Greek, and began the study of the language of harmony, with the Father of Poetry, and the Bible of the Ancients. In Latin, I had looked into every writer of the Julian and Augustan ages; the study of French had always been to me like the cracking of nuts; and in my vernacular idiom, I had neglected no writer from Bunyan to Bolingbroke." He was, by his own account, a finished linguist. In fact, one reads, all in one sentence, that he "translated at New York Buonaparte's 'Campaign in Italy,' a considerable octavo, and proceeded to the South." In the South, he was to have experiences none too delightful as a tutor: but that fact need not detain us long. For this complacent critic of American institutions at the turning of the century was, by his avowed scholarship, well qualified to be, at Philadelphia, the associate of Brockden Brown, "Father of the American Novel," and Joseph Dennie, of the *Portfolio,* who took such pride in the appellation of "The American Addison." But it is as a "social document," rather than as a contribution to literary history, that Davis's book is to be prized to-day. And that it entertains as well as instructs, is, perhaps, suggested in our citations.

Antonio Scarfoglio, the author of "Round the World in a Motor Car," (Mitchell Kennerley), is a younger son of that remarkable family which controls and largely writes the most popular newspaper of southern Italy, the *Mattino.* Young Scarfoglio was chosen to enter the round-the-world motor race arranged by the *Matin* of Paris, as his father later explained, not in the hope of copy, but of breaking him in. As a matter of fact, his correspondence is a brilliant example of snapshot impressionism. It gives a vivid and unforgettable account of the contest with the snow and mud of America, with the glare of the alkali desert, and of the perilous escarpments of Japanese mountain trails, and the alluvial slime of Manchuria. In many cases this youthful correspondent, with his two chauffeurs, reduced to one after Vladivostok, pushed their car inch by inch, from boggy roads up railway embankments, dragged it out of torrent beds, improvised roads and pontoons, in general did the impossible to carry the Italian car—a Züst—around the circle. It limped into Paris at last after eight months, a bad second to the American competitor, but morally the victor. In fact, the American car may be said to have won before it started. Its way was paved with gold. Everywhere supplies and aid were prearranged; finally, it took certain short cuts through railway tunnels that were denied to the foreign cars. The Italian machine, on the contrary, depended almost wholly on the resourcefulness of its crew, followed the stipulated routes faithfully, and as we have said made a far more remarkable record than the winner. Antonio Scarfoglio's story is usually one of dire struggle with unfriendly nature. It is significant that the worst difficulties beset him in thickly peopled parts of our East and Middle West. Occasionally, there are poetic interludes—the strange story of a French hermit prospector, a glimpse of pathetic derelict Italians and French folk in Siberia. The author is a shade too free with unamiable generalizations of scant worth, and is at his best when he sticks to the road. Certain of his staccato passages are extraordinarily vivid. A picture of the vermin of Siberia might be set beside G. W. Steevens's classic page on the Sudan thirst. The letters are well translated by J. Parker Heyes, and there are many good photographic cuts showing the Züst and its crew in all manner of peril and plain sailing. Signor Scarfoglio has unfortunately left untouched one or two suggestive passages, which make his story unadvisable for boys, for whom otherwise it would be ideal reading.

"The London Life of Yesterday," by Arthur Compton-Rickett (E. P. Dutton & Co.), consists of thirteen essays, treating as many periods of London history. As an uncritical compilation, presenting a considerable amount of well-chosen material, the book is not devoid of merit. It is badly articulated at times, as if from haste or sheer misunderstanding of the original notes. On page 237, for example, describing the vicissitudes of Whitehall palace, we defy a reader not already acquainted with the facts to tell just what happened as to burning and rebuilding, and when. A writer who, according to his own bibliography, quotes his Chaucer from the Publications of the Chaucer Society, should know better than to write:

> With the exception of that quaint mixture of history, epic, and romance—entitled Beowolf, fashioned in the eighth century from the sagas of the Northmen, there is practically no English poetry until we come to the fourteenth century.

Our author's first-hand acquaintance, either with the quaint mixture or subsequent pre-Chaucerian poetry, is clearly the slightest. Very ugly misprints are Van Dycks for Van Eycks, page 122, and on page 82 the conversion of a Chaucer date, 1389, into an impossible 1339. Again, 'Wren's orginal design for St. Paul's is said to have been in the form of a Great (read Greek) cross. Without undue emphasis of these infelicities, they are of a symptomatic sort. To scholarly readers this book makes no appeal, and, given the abundant literature about London, it can hardly be said to fill a long-felt want.

An agreeable book of travel, with interesting illustrations in color and in black and white, is published under the title "From Sketch-Book and Diary" (Macmillan), by Lady Butler, the well-known painter of war pictures. Sir William Francis Butler commanded the Gordon relief expedition and saw service in many parts of the empire. Lady Butler's light-hearted notes barely suggest the grisly errands which carried her hither and thither in her husband's wake. In the midst of the picnics and sunsets of Luxor, she recalls that "W. was pressing the enemy harder every day"; but she very properly limits her narrative to her own experiences, and draws with a practised hand the pictures that impressed her most in Ireland, in Egypt, in South Africa, and in Italy. The book is dedicated to her sister, Alice Meynell.

Two recent issues of the Historical Manuscript Commission of England are an Index to the first series of the Ormonde papers, and the fourth volume of the Report on the American manuscripts in the Royal Institution. The first series of Ormonde papers in two volumes, though published in 1895 and 1899, was left unindexed owing to the death of the editor, Sir John T. Gilbert. The second series, the publication of which is now in progress, has been duly indexed as each volume has appeared. The fourth volume of the report on American manuscripts is the last and covers the period from April to November, 1783. It is largely concerned with the winding up of British business in America preparatory to evacuation. Financial matters and accounts bulk large in the volume. The

most important material deals with the loyalist refugees, a pathetic body, whose enforced emigration to various parts of the British world represents perhaps an inevitable though not very creditable outcome of the war, and the tales of loyalist suffering, to be found here and elsewhere, are sufficient to arouse considerable indignation. Distinctly the most interesting entry is the first, a letter printed in full of the British Deputy Quartermaster-General, Capt. William Armstrong, in which he gives at considerable length his observations on conditions in America and what he conceives to be prevailing opinions and sentiments of the Americans on their present and future affairs. Few of them, he says,

> expect that the thirteen States will long remain under the same government, the ideas of the Eastern and Western States being so very different in every particular. Some people think they will be divided into two Governments or Kingdoms, divided by the Hudson River, others think into three Governments divided by the Hudson and Susquehannah Rivers. In a very short time they will take the Floridas from Spain, and tis more than probable they will not stop there.

"The Last Days of the Directoire," by Alfred Allinson (John Lane Co.), is a pleasant volume aiming "to present a vivid picture of the extraordinary years from 1795 to 1799." The author's motto is: *Aut Scissors aut Nullus*. Carlyle and Mignet jostle Lanfrey and Anatole France with long extracts. Whole pages from the Cambridge Modern History are diluted with passages from letters to a Lady of Fashion by a Lady, and the Souvenirs of My Last Voyage to Paris, by a Swiss gentleman. But this extraordinary mixture, totally in defiance of the canons of historical criticism and of orderly arrangement, is nevertheless entertaining reading. The descriptions of streets and buildings suggest a kind of historical Hare. The fifty illustrations are chosen chiefly to illustrate the costumes of the period.

In "The Royal Family in the Temple Prison" (Sturgis & Walton Co.), English readers may enjoy in translation the vivid journals of Cléry and the Abbé Edgeworth. Cléry, as valet, attended Louis XVI faithfully during the five months of imprisonment from his suspension from office on August 10, until his execution the following January. There is a certain fascination in his simple honest narrative describing the most trivial details of the king's last days. Abbé Edgeworth (cousin of Maria Edgeworth), who was with the King in his last hours and accompanied him to the guillotine, wrote one of the most authentic accounts of his heartrending separation from Marie Antoinette.

The "Transactions of the Asiatic Society of Japan" (Vol. XXXVI, parts ii and iii) contain two interesting papers, well fortified with scholarly references, by Dr. M. W. de Visser on the *tengu* (mountain sprites) and on the fox and badger in Japanese folk lore. Most valuable to the student of feudalism is Consul-General J. C. Hall's translation and interpretation, with critical commentary and comparison with the same epoch in Europe, of the Ashikaga code of feudal laws of 1336. The gem in this collection of papers is Walter Dening's review of three volumes on the Confucian philosophy in Japan by Professor Inouye Tetsujiro of the Imperial University. In these volumes, the result of eight years of labor, we have an exhaustive and trustworthy history of Japan's three great schools. No one can understand the Japan of to-day without some knowledge of the philosophy, which for above twelve centuries has moulded the mind of Japan, producing, besides other fruits, that high moral standard of everyday life with which foreigners accustomed to associate with Japanese gentlemen are so familiar. More immediately potent in furnishing the finest specimens of Japanese humanity, and particularly in equipping those minds which shaped the interior potency of the empire before Commodore Perry and which since have directed Japan's modern career, is the Oyomei philosophy. This was founded by the last of the great Chinese philosophers (1472-1529), who broke loose from the authority of the ancients and claimed the right to interpret nature and its laws in his own fashion. By the Oyomei system, the lack of idealism in the Japanese mind is corrected, as also its tendency to a narrow practicality. No other such lucid exposition of Japanese philosophic thought exists.

The most recent volume of the Wilhelm Ernst edition of Goethe's works, "Dramatische Dichtungen I," published also separately with the title "Goethes Faust, Gesamtausgabe," is a neat and handsome pocket edition of the drama printed in Latin type. As the second title indicates, it contains the "Urfaust," "Faust, ein Fragment," and "Faust, Erster Teil," and "Zweiter Teil," besides the "Paralipomena" and "Parerga." This chronological arrangement suggests the best way to read "Faust," if one would understand it and the literature that has grown up about it. First the text, so far as we know it, of the original manuscript which Goethe carried with him to Weimar in 1775, then the revised form in which he published a portion of it in 1790, finally the finished product which he left to the world, the First Part in 1808, the Second Part in 1832. Some readers will doubtless regret that such "Lesarten" as do not appear in any of these texts were not included, in order to make the critical apparatus complete. Especially is this true of the manuscript fragments now deposited in the Goethe Archives in Weimar. They are exceedingly difficult to decipher, and Schmidt's reading of them for the Weimar edition shows rare knowledge and skill, but he made a few mistakes that need to be corrected. The small number of variant readings of the important old editions would add to the usefulness of the book from the point of view of the scholar. However, the edition is evidently intended for the general reader. It is edited by the well-known Goethe scholar, Hans Gerhard Gräf, and published by the Insel-Verlag of Leipzig.

The number of women attending German universities as matriculated students during the present semester of 1909-1910 is 1,856; the number last year was 1,108, and only 254 three years ago, when women were excluded from all universities in Germany except Leipzig and Tübingen and those of Baden and Bavaria. The 1,856 female students are distributed among the different universities as follows, the numbers in parentheses indicating the attendance last semester: Berlin 633 (412), Munich 183 (148), Göttingen 160 (118), Heidelberg 142 (138), Bonn 135 (144), Freiburg 86 (90), Breslau 84 (64), Leipzig 59 (56), Königsberg 46 (30), Marburg 38 (33), Giessen 33 (30), Strassburg 28 (21), Halle 27 (26), Jena 24 (15), Tübingen 23 (9), Erlangen 19 (16), Kiel 18 (13), Würzburg 10 (9), and Rostock 3 (0). As to the studies pursued by these matriculates, more than half of them devote themselves to philosophy, philology, and kindred branches, namely, 975 (699); medicine 476 (371), mostly Russians; mathematics and natural science 287 (245); dentistry 46 (44); law 32 (23); cameralistics, political economy and agriculture 27 (42); evangelical theology 5 (4), and pharmacy 2 (4).

The whole number of matriculated students, male and female, in the twenty-one universities of the German empire is 52,407; last year there were 48,780, ten years ago 32,800, twenty years ago 28,000, and thirty years ago 20,000. In addition to these matriculates there are 3,314 men and 1,923 women hearers or so-called guest-auditors. Thus the full number of persons now in attendance is 57,644 (last year 53,728), of whom 27,244 are in Prussia, 9,082 in Bavaria, 4,101 in Baden, and 11,900 in the six universities of the other German states. Of the several universities Berlin has the largest number, 9,242 (8,041); then follow Munich, 6,537 (6,304); Leipzig, 4,761 (4,461); Bonn, 3,652 (3,282); Breslau, 2,405 (2,248); Halle, 2,393 (2,158); Göttingen, 2,230 (2,059); Freiburg, 2,167 (1,966); Strassburg, 1,995 (1,356); Heidelberg, 1,934 (1,841); Münster, 1,906 (1,737); Marburg, 1,878 (1,750); Tübingen, 1,760 (1,643); Jena, 1,496 (1,419); Würzburg, 1,424 (1,346); Königsberg, 1,367 (1,191); Kiel, 1,290 (1,103); Giessen, 1,261 (1,196); Erlangen 1,121 (1,090); Greifswald, 881 (786), and Rostock, 707 (685). Thus all the universities show a greater or less increase of students during the last year.

John Prentiss Hopkinson, founder of a well-known Boston school, died January 14 at Cambridge, Mass., aged sixty-nine years.

John Calvin Reed died at Montgomery, Ala., January 12, aged seventy-three years. He was a graduate of Princeton College (1854), and a member of the bar. He served during the civil war in the army of the Confederacy, being twice wounded. He was the author of "Georgia Criminal Law" (1873), "Conduct of Law Suits" (1875), "American Law Students" (1882), and "The Brothers' War" (1905).

Dr. Henry F. Bishop, at one time court dentist to the King of Hanover, and for thirty years in practice in Worcester, Mass., died January 14 in New York city, in his ninety-first year. He was born in Lisbon, Conn. After returning to this country from Germany, and retiring from practice, he gave his time to writing. One of his books was a "History of Lisbon, Conn., from Early Colonial Days."

The death is announced of Hugh MacColl, in his seventy-third year. He kept a school at Boulogne, but found time to do original work in logic and mathematics. Among his books is "Man's Origin, Destiny, and Duty."

William Earl Hodgson has died at Aberfeldy, Scotland. He was at one time editor of *Rod and Gun*, and was best known for his books on angling.

James Hannay, the Canadian historian, died at St. John, N. B., January 12, aged sixty-seven years. He was formerly a newspaper editor, and was the author of a

"History of the War of 1812" and of a "History of Acadia" (1879). Other works were "Nine Years a Captive" (1875), "The Story of the One Hundred and Fourth Regiment" (1882), "The Story of the Queen's Rangers in the American Revolution" (1883), "The History of the Loyalists" (1893), and lives of L. A. Wilmot and S. L. Tilley, in the Makers of Canada series (1906). He was also a contributor of articles, fiction, and verse to magazines and newspapers, and he had edited the reports of the Supreme Court of New Brunswick in two volumes (1867-1872), and written "New Brunswick; Its Resources and Advantages" (1902); a "History of New Brunswick" (1905), and "New Brunswick Year Book" (1907). Recently he had completed a history of New Brunswick. Since 1905 he had been connected with the Archives Department of the Canadian government.

From Göttingen comes the news of the death of Dr. Johannes Merkel, professor of Roman and German civil law. Among his books are "Lehre von der Successio Graduum unter Intestaterben," "Quellen des Nürnberger Stadtrechts," and "Abhandlungen aus dem Römischen Recht."

Science.

Fertilizers and Manures. By A. D. Hall, F.R.S. New York: E. P. Dutton & Co. $1.50 net.

The paramount importance of improving methods of agriculture is recognized in all countries to-day more generally than it has ever been before. Even our sensational newspapers catch at every suggestion pointing to such improvements, and they give to the agricultural advice and warnings of our railway magnates scare headings in the type which they use for a revolution or a scandal. But it is more than likely that this modest volume which carries the wisest advice and the gravest warnings may pass without the attention it deserves.

The author is the director of one of the most interesting agricultural experiment stations in the world, Rothampsted, England. He is thoroughly familiar with the historical development of the subject of soil-fertilizers, and has, himself, made large contributions to it. He possesses a remarkable power of exposition and condensation, packing into small compass clearly stated facts. His lectures in Cornell University, which he delivered while on a visit to this country, have been freely drawn upon in the preparation of this treatise. He has also incorporated in it the substance of his Cantor lectures, so that the whole work has the attractive character which belongs to a stimulating lecture-course, and is never burdened by a useless technical terminology. But while it is thoroughly popular in its general character, it is fitted to go without change into the classroom as an authoritative text-book.

The parts of the volume which have most interest for the general reader are those concerned with the production of fertilizers by artificial means, especially by compelling the inert nitrogen of the atmosphere to unite with the oxygen or hydrogen of water. The most costly substance in the enrichment of the soil is combined nitrogen. Ordinarily, it is procured second-hand, so to speak, either from animal excreta or from other waste products, and the constant demand met by a diminishing supply has carried the price steadily upward. There is a roundabout, indirect method of using atmospheric nitrogen by means of certain plants of the pea-family, through the agency of microbes in the tubercles of the slender roots. This process is limited and special, applicable only to a comparatively few cases. Hence it has been a great desideratum to discover a general method by which the nitrogen of the air could be used on a grand, even an unlimited scale. On a small scale in numberless laboratories, both chemical and physical, this union had been brought about, but always hitherto at too great a cost to make the method practicable. Now, improved appliances for the utilization of water-power in the production of the electrical energy necessary for this chemical production have reduced the cost so much that it is no longer a question of dreaming. Practical work has begun. The new methods are here described briefly but clearly, and it is seen that we are on the eve of enormous changes in the production of certain fertilizers. In some instances, however, Mr. Hall cautions the reader not to be too sanguine in regard to the rosy outlook. Thus in speaking of the inoculation of soil by selected bacteria, he says: "So the picture of the farmer carrying the manure for a field in his waistcoat pocket and applying it with a hypodermic syringe, is still a vision of the future." When the author faces a very doubtful question he frankly states the difficulties, and postpones final decision, but he gives his own views in regard to the practical side of every matter without fear and without prejudice.

The work can be heartily recommended not only to students of agriculture, of every grade, but also to library farmers and parlor gardeners who wish to keep well informed as to recent progress in the improvement of soils.

W. H. R. Curtler's "Short History of English Agriculture" (Frowde), a book of 371 pages, suffers somewhat from compression, which gives dryness, and from occasional repetitions. It is, however, of about the length required by the American reader on the subject, while the general student will find it an instructive commentary on the modern brand of roseate historical novel. The tale of bad times and bad seasons is depressing. From the mediæval system of common lands to modern enclosures is a story of irresistible economic forces, under which the position of the agricultural laborer has been surprisingly little bettered. The author says a good word for English landlords, and seems to favor a return to the tariff. On this latter question some of our agricultural writers will take issue with him; yet we know nothing of the tremendous foreign competition which the British farmer, dairyman, and market-gardener have to face. The book gives interesting glimpses of the great figures of English agriculture, notably Jethro Tull, Arthur Young, and Coke of Holkham.

The French Academy has awarded the Lalande prize to M. Borrelly of the Marseilles Observatory; the Valz prize to M. de la Baume-Pluvinel, and the Pontécoulant prize to Prof. E. W. Brown of Yale University, for his work in the lunar theory.

Drama.

THE THEATRE OF IDEAS.

There are signs that playwrights and public are beginning to tire of what the Germans might characterize as the socio-economico-political drama. Our old friends, "questions of the day," still hold the stage, but the old zest is not there, and, by all accounts, neither are the old box-office receipts. We have had successful plays of late that have dealt neither with capital and labor, nor with dishonest bosses, nor with the iniquities of Wall Street. We have had plays of late that have attempted to deal with social questions of high importance, and have not been very successful. The trend seems to be away from the drama of what the advertisements describe as the burning question of the hour. The professional critic who would rather praise than blame may deplore the change. It was always possible to say that, while the new play had neither literary grace nor dramatic merit nor insight into character nor interest of any kind, the author evidently did have a message to deliver, and apparently did his best to deliver it. Many a halting and stupid piece owes whatever measure of success it has earned to the sole fact that it would be a very hard-hearted critic indeed who should refuse to give it a good word for tackling the question of the day, the hour, or the minute.

But there is one question of the day that has been generally overlooked. And that is, that when all is said and done, a stupid and ill-built play is a bad play, and no amount of contemporary social or political significance can make it anything but a bad play. The theatre among us has never suffered from a superfluity of ideas to an extent that would justify our sniffing at them. But there is all the difference in the world between putting ideas on the stage in adequate form, and putting on the stage in any form anything that the newspa-

pers and militant magazines may be talking about; whether it be Christian Science or dress reform, child labor or breakfast foods. It is impossible to deny that the drift has been towards making the theatre a universal forum. It is also impossible to deny that the thing cannot be done, and that we are beginning to find it out. This is not the old question of what is morally fit or unfit for presentation on the stage. It is a question of what is unskilfully and unnecessarily put upon the stage. And the greater vice is the lack of necessity rather than the lack of skill. Is it really essential that the evils of tobacco-smoking or the bad effects of dancing on the heart should be discussed upon the stage? Mr. Bernard Shaw put the claims of the theatre in their most extravagant form before the recent British commission on the dramatic censorship. "If you prevent us from discussing crime and folly upon the stage," said Mr. Shaw, in substance, "then crime and vice will thrive in secret. If you keep us from showing up hypocrisy and folly on the stage, hypocrisy and folly will spread unchecked."

Now, in all this, there is a vast deal of nonsense. Mr. Shaw would simply have us believe that the theatre has come to be the sole organ of public criticism and debate among us. He mixes up two entirely different questions. Should the theatre be allowed to treat of anything it pleases? For the sake of argument, we may say, if it so desires, yes. *Must* the theatre treat of everything conceivable on the ground that the subject will not be taken up in any other way? The answer is obvious. We still have newspapers and periodicals. We still have printed books. We still have lecture platforms and a pulpit, even if some clergymen stand ready to confess that the theatre is the church of the future. In the face of the great, patent fact that we live in an age of shrieking publicity, it is absurd to maintain that if the dramatist is not permitted to tell us things, no one will. Mr. Shaw has grounds to argue that if he wrote "Mrs. Warren's Profession" and if enough people wished to see the play, they should have been allowed to do so. But he cannot seriously maintain that if his play had never seen the light, the facts upon which it is based would have remained hidden from a public among which yellow sheets circulate by the million and children of twelve weep over the wrongs of Evelyn Thaw. A play that is a poor play cannot claim to be a great one because it points out that we have immigrants and public schools, and that the children of the immigrants attend the public schools and learn to be good Americans. The point has been made before by commencement orators and even in newspaper editorials.

The modern theatre has reached out to embrace the entire round of human interest. Let it, if it can. But in trying to get everything in heaven and earth within the scope of its philosophy, it must remain true to the one elementary law of its being—it must interest. It does not matter whether it does so by purifying the emotions through "Hamlet" or by making us laugh with the slapstick. Let it use one or all of its bag of a thousand tricks. But a play that is a bore cannot claim salvation on the ground that it is a sermon. Mr. Shaw may any day decide to present us with a play in three acts dealing with the fact that in a right-angled triangle the square of the hypothenuse is equal to the sum of the squares of the other two sides. If Mr. Shaw can make the thing go, as he undoubtedly can if he tries; if he can win our sympathies for the hypothenuse as a fine, bold, revolutionary line that does not hesitate to take the shortest course between two points as contrasted with the cowardly, shuffling, round-about, thoroughly middle-class behavior of the other two sides of the triangle; if Mr. Shaw can do all this, he has written a play. But Mr. Shaw cannot suppose that without his play the principles of Euclid would be forgotten.

Francis J. Ziegler has translated "The Awakening of Spring," a tragedy of childhood, from the German of Frank Wedekind (Philadelphia: Brown Brothers). His labor might easily have been employed to better purpose. The piece is a particularly gross specimen of the degenerate drama, impracticable in form and matter for stage use, grotesque in its shallow and vulgar treatment of an exceedingly difficult physiological and sociological subject, and wholly insignificant except as proof of a diseased imagination. The flippant and coarse assurance with which Herr Wedekind decides in the affirmative a question which has puzzled some of the wisest minds of the ages furnishes a notable example of the folly which rushes in where angels fear to tread.

The revival of H. H. Davies's "The Mollusc" in the Empire Theatre, by Sir Charles Wyndham and the original London company, commands attention as an uncommonly good specimen of artistic comedy acting. When the piece was first produced here it was spoiled by the ineptitude of performers who failed to discern its finer qualities. Sir Charles, Miss Mary Moore, and their associates interpret it with a lightness of touch and a perfect naturalness which give plausibility to the story, while they do not distract from the delicate bits of character drawing and the frequent play of wit. Few cleverer or more veracious light comedies have been written in the last decade, and the representation is worthy of the play in its admirable proportion, fine finish, and artistic restraint. Miss Mary Moore is extraordinarily felicitous as the heroine. She is, indeed, the woman herself—while the part of Tom Kemp shows Wyndham at his best. But it is the perfection of the performance as a whole that is especially noteworthy.

The promised revival of "Twelfth Night" at the New Theatre on the 26th instant will be first excursion of that company into the domain of Shakespearean comedy. The announcement of the play awakens pleasant memories of past Violas—Ellen Terry, Ada Rehan, Helena Modjeska, Adelaide Neilson, and others—of the exquisite Malvolio of Henry Irving, the richly comic Sir Andrew Aguecheek of John Baldwin Buckstone, the luscious Sir Toby of the lamented Wenman, and many others. Annie Russell is now to essay the part of Viola, while her husband, Oswald Yorke, will be the Malvolio. Mr. Calvert, who is chiefly responsible for the production, will be the Sir Toby, Ferdinand Gottschalk the Sir Andrew, Henry Stanford the Fabian, Leah Bateman Hunter the Olivia, and Jessie Busley the Maria. In many respects, this is a cast of admirable promise. The play will be presented in five acts and ten scenes. The scenery and costumes have been designed by E. Hamilton Bell, the theatre's art director.

"Nonotte et Patouillet," the three-act "fantasy," in verse, by the Belgian Albert du Bois, has just been presented at the Théâtre de l'Œuvre, at Paris, where M. Lugné-Poe assumed the rather ungrateful part of Patouillet with fire and appropriate truculence. The piece is marred, according to the critic of the *Figaro*, by certain anachronisms and by a superfluity of paradox—also, it may well be, with squinting allusions to other Belgian poets, whom M. du Bois does not admire; such as Emile Verhaeren and M. Maeterlinck. The costumes are of the eighteenth century.

Music.

Hugo Wolf. By Ernest Newman. New York: John Lane Co. $2.50 net.

Fifty Songs by Hugo Wolf. Edited by Ernest Newman. Boston: Oliver Ditson Co. $1.50.

When Hugo Wolf died, in 1907, a few of his 232 songs were sung by amateurs in Vienna and the cities of Germany, but to the world at large his name was unknown. He had been a great admirer and champion of Wagner, and it was through the instrumentality of the Wagner-Verein in Vienna that his reputation first began to spread. Further missionary work was done by the Hugo Wolf Societies, founded in that city and in Berlin; funds were collected for publishing his compositions and his letters, and four years ago Dr. Decsey completed an elaborate biography of Wolf in four volumes. The bibliography compiled by Mr. Newman for the volume of fifty songs edited by him includes twenty-six books and essays in German. In English there was nothing for him to record except his own writings, which is odd, because Wolf's songs have within the last five years won a prominent place in the programmes of our recitalgivers.

It is extremely fortunate for Wolf that his music won for him the championship of so vivid and influential a

writer as Mr. Newman. In "A Study of Wagner" this distinguished English critic showed that he could be enthusiastic without ceasing to be discriminating. In the two volumes before us there is even more enthusiasm, but much less discrimination. The author has "no hesitation in putting him [Wolf] at the head of all the song writers of the world," whom he surpasses "to the same extent and for the same reasons that Wagner surpasses all other musical dramatists." We do not believe there are six persons in all Europe and America who will endorse this opinion, and in following Mr. Newman's argument we soon find that his criterion is one which leaves out altogether the decisive factor of creative genius—the faculty of originating melodic and harmonic ideas which made Wagner great. He tries to prove, by comparing some imperfect songs of Schubert, Schumann, Brahms, and others with the best of Wolf's, that Wolf saturated himself with the poem he set as no song-writer ever did before, and that in consequence he kept his music in closer touch with the poem at every point than any of his predecessors.

It is curiously English of Mr. Newman to ignore Liszt here. Every special merit he claims for Wolf was possessed by Liszt, who, moreover, had the gift (which Wolf lacked) of originating enchanting melodies and harmonic progressions that move to tears. The only point that can be conceded is that Wolf was more critical—that, unlike most song-writers, he seldom if ever chose a poem not suitable for music, and that he never sacrificed the accent or the mood of the verse to the exigencies of the music, as Schubert sometimes did. But this by no means suffices to make Wolf the greatest of all song-writers, for critical conscientiousness is infinitely less important than the faculty of creating ideas. As the author himself says, Schubert's melodies "are often so divine in themselves that we scarcely trouble to think of the words." He could not have said that of any of Wolf's songs.

When we find Mr. Newman stating that Wolf gave the piano part a significance it never had before; that he could put himself into the moods and peculiarities of poets of various countries as no one else could; that his Mörike songs alone are superior in scope of matter and variety of manner to the "Ausgewählte Lieder" of Schubert; that there is more variety and specialization of emotional expression and more atmospheric suggestion in Wolf's songs than in others, we simply retort: "not proved"; and feel tempted to add that Mr. Newman's adulation is farther from the truth than the crushing verdict of Brahms's biographer, Max Kalbeck, that Wolf's songs are "dry, puerile stuff, extravagantly banal melodies and ridiculous harmonic convulsions, that would fain pass themselves off as emotions of the soul."

The real significance of Wolf's songs lies in this, that they illustrate the reaction in favor of poetry which set in with Wagner's operatic reforms. Wolf realized instinctively that his lieder must owe such success as they could win very largely to the poems to which they were set. It was his custom first to read and expound these poems to his auditors before he allowed the music to be heard; and when his Mörike songs were issued, it was not the composer's but the poet's portrait that appeared as the frontispiece—"a rare and exquisite stroke of self-abnegation" our author calls it. Unfortunately, the contents of the volume justify this self-abnegation; for the music in itself is seldom as beautiful as is the poem to which it is wedded.

Was Wolf really a genius? He certainly acted like one. Like Schubert, he composed in a state resembling clairvoyance. For a few weeks or months his mind would be as active as a volcano, throwing out songs or instrumental pieces in abundance, and these periods were followed by months of mental exhaustion in which he could do no work. During the ardor of composition, he scarcely slept, ate, or rested for days together. Mr. Newman's biography contains numerous other details, which show Wolf to have been a man of exceptional gifts and many interesting traits. Possibly his estimate of Wolf's ability is after all nearer the truth than ours. We hope so. The reader will find it an interesting task to decide for himself, reading first the biography and then making the acquaintance of the best fifty songs, included in the Ditson volume. For each of these, the editor has provided a helpful note, and the publishers have taken pains to secure satisfactory English translations, which in the case of this composer are naturally of exceptional importance.

Among the singers to be heard next summer at the Mozart festival in Salzburg are Lilli Lehmann, Geraldine Farrar, and Johanna Gadski.

Robert Kahn has just written a quintet, which gains special interest at the outset from the fact that it is composed for the unusual combination of piano, violin, 'cello, clarinet, and horn. Dr. Leopold Schmidt praises it highly in the Berlin *Tageblatt*, remarking among other things that Kahn "always has something to say"—a compliment that can be paid few composers, especially those of chamber music.

Of the famous Joachim Quartet only one member is now living—Emmanuel Wirth. Joachim died in August, 1907, Hausmann in January, 1909, and Halir's death took place on the 21st of last month. Wirth was born in 1859 at Hohenelbe, in Bohemia. After receiving his first musical education at the Prague Conservatorium, he went to Berlin in 1874, to become a pupil of Joachim. At seventeen, he was engaged as principal violinist in Bilse's Berlin orchestra, and subsequently held the post of Concertmeister at Königsberg, Mannheim, and Weimar, settling in the last-named for ten years. In the extensive journeys to many parts of Europe and the United States, which he undertook at that period and later, he made for himself the name of one of the foremost violinists of his time. In 1897 he went to Berlin, where, upon the death of de Ahna, he joined the Joachim Quartet as second violin, also receiving the appointments of leader of the Berlin Court Opera and professor at the Hochschule. He afterwards formed a quartet of his own, which made itself favorably known in Berlin and elsewhere.

Art.

Bushman Paintings. Copied by Helen Tongue, with explanatory text by Henry Balfour, Miss Tongue, and Miss D. Bleek. A pamphlet in folio, with fifty-four detached plates in a box. New York: Henry Frowde. $19.25 net.

A very few of the remarkable paintings and chippings, made by the bushmen of South Africa, have been transferred to European museums or reproduced in scientific publications. It has remained for Miss Helen Tongue to make a full and representative collection of this fascinating form of primitive art. The map included in this work shows her explorations mostly in Basutoland, where she has faithfully traced and copied something like a hundred subjects on half as many plates. She has been fortunate in securing as collaborators Miss D. Bleek, the daughter of a well-known student of South African tongues and customs, and Henry Balfour. Thus the basis of legend and folk lore underlying these designs is suggested, though many subjects defy elucidation. The prints are made on toned paper, representing the brown or gray rock of the caves, and there are several interesting photographic cuts of the paintings *in situ*.

These masterly and spirited designs are treasure trove, both for the ethnologist and the lover of art. With a vivid sense of truth of action, these savages have mimicked graphically the postures of antelope, or heavier beasts of deer or oxen kind, the massive advance of the elephant and rhinoceros, the antics of baboons, and, less successfully, the movements of fighting, hunting, fleeing, or dancing men. The colors are the simplest—black and white, sometimes used singly, with ochreous yellow and red make up the bushmen's palette. They deal in significant contour that, asserting action, takes the form for granted; in bold areas of local color uncomplicated by constructive light or shade. The two instances, which are reproduced as

cases of incipient chiaroscuro give no such impression in the facsimiles. One differs with misgiving from those who have seen the paintings in place, but these modulated tones give us a feeling that the aim is not light and shade, but simply a pleasing fusion of larger planes than usual. It may be noted that these paintings are on a scale uncommon in this art. In any case, the bushmen were generally near the springs of fine design, their lines and edges, being always dynamic, were also sufficiently constructive.

It would be interesting to trace the analogies between these lovely and significant drawings and allied forms of art. The nearest kinship, as one might expect, is with the sketches scratched on bone or stone by the cave men of prehistoric France. That remarkable phase of earliest Greek, perhaps semi-Oriental, realism exemplified in vase paintings and by the Vaphio cups is also cognate. Odder comparisons occur. The hunter, with an antelope's head and elongated legs in plate is very like Cruikshank's print of the seven league boots in Grimm's Tales. A similar spindly and disguised warrior in plate xxix recalls Hokusai's ghosts in the Mangwa. Again certain of the animals have a delicate suavity that we have felt elsewhere only among the Japanese. Others have the purposeful ruggedness of such men of yesterday as Cheret, Steinlen, Rouveyre, and Gauguin. If any one doubts such parallels, we confidently refer him to these magnificent designs.

How old are they? It is a wide guess. Those in Cape Colony are all of a century old, those in Basutoland later. In some caves the paintings are five layers deep. The few surviving natives say that a painting was let alone while the memory of the artist remained, for a matter of three generations. The oldest traces, then, may date from five hundred years past. The meaning of this art we can merely guess at. Those who might tell are dead without other record. Occasionally a folk-tale, or a superstition like the transformation of a bushman into a frog, is clearly the theme. The round dances of men disguised as brutes certainly suggest "medicine" rites. The serpent, a rather rare form, may well have his usual phallic and luck-bringing significance. But all this is mystery and guess work. What is certain is the beautiful and vivifying quality of these facsimiles. They ought to be permanently exhibited on the walls of every art school, being a living protest against our topographical and static way of seeing the always energized forms of nature.

Like their makers, the nameless fine artists of the African upland, these paintings are vanishing. The cattle rub them from the rock walls, casual visitors deface them wantonly, the damp and alternation of heat and cold flake them away. All thanks then to Miss Helen Tongue for providing a faithful and permanent record of a lovely and vigorous art that the world could ill afford to let die.

Twenty-six inedited drawings by Rembrandt in the Budapest Museum are to be published by Karl W. Hiersemann of Leipzig. Exact facsimilies are promised under the editorial supervision of Hofrat Gabriel von Térey, director of the print cabinet containing these drawings. The issue is limited to 150 examples. The sheets include composition sketches, portraits of Saskia and Coppenol, nudes, animals, and landscapes. The subscription price is 120 marks, subject to later increase.

A welcome book about modern German landscapes and landscapists—a kind of pictorial promenade across the map of the Fatherland—is offered in Dr. E. W. Bredt's "Deutsche Länder, Deutsche Maler" (Leipzig: Thomas). Eighty-two full-page engravings, with sixty in the text, and a dozen reproductions in color, are the illustrations, forming texts for popular discussion.

Gaston Migeon is the author of a volume devoted to the "Arts du tissu" in the collection of Manuels d'histoire de l'Art (Paris: H. Laurens). A condensed yet substantial encyclopædia, this volume is the work of a specialist who spares his readers the less useful details of his subject. Simultaneously, there is issued in the series of Maîtres de l'Art, by the Librairie Plon, an excellent volume on "Peter Vischer," by L. Réau. And from the publisher Alcide Picard, in the Bibliothèque de l'enseignement des Beaux-Arts, comes a new edition of the first volume of Georges Lafenestre's "Peinture italienne."

The subject of the beautiful Greek statue vaguely called a Temple Ministrant, or from the place where it was found, the Girl of Anzio, has so far remained obscure. Now the Florentine linguist Domenico Comparetti makes the suggestion that we have to do with a Cassandra as described by Euripides in "The Women of Troy." Foreseeing the murder of Agamemnon, whose slave she has become, and resenting the fate by which her prophecies are always disbelieved, she tears off the band and garland that mark her as priestess of Apollo and restores them to the god and vengeful lover. Æschylus, who gives the episode a more vehement tinge in the "Agamemnon," sets this renunciation at Mycenæ before the palace. Euripides makes it take place prior to the sailing from ravaged Troy. Professor Comparetti remarks chiefly upon the agitation and servile costume of the Girl of Anzio, as expressed in disordered hair and draperies. But there are also more definite marks of identification. The broken salver on the left arm bears the lion foot of an Apollonian tripod, beside which rest a trimmed laurel rod and the rolled band of a priestess. From the shattered fragments of the right hand one may yet see that it held a wreath of laurel which was to be laid on the salver. These results Professor Comparetti has communicated by the informal method of an interview in the *Marzocco*. The complete argument will soon be presented in the *Bollettino d'Arte*. Meanwhile, since the date of this masterpiece has been disputed, it may be interesting to note that its latest interpreter sees in it a work of the fourth century B. C. and possibly a creation of Lysippus.

The death is announced of Mlle. Léonide Bourges, a painter and engraver and also a writer on art topics, well known in Paris. She was a pupil of T. Salmon and Edouard Frère, and exhibited pretty regularly at the Salon. Other deaths announced from Paris are Georges Becker, Paul Salzedo, a native of Bordeaux, and M. Chauvel, honorary president of the Société des Aquafortistes.

Finance.

STOCK EXCHANGE DISCIPLINE.

On Wednesday evening of last week, after a fortnight of deliberation over their sub-committee's report on the so-called "Rock Island corner" of December 27, the New York Stock Exchange governors suspended for sixty and thirty days, respectively, two brokers, in its membership. It was through them that the orders were executed which caused the stock on that day to rise 31 points in less than five minutes. The formal report by the governors to the Stock Exchange, Thursday morning, severely and publicly reprimanded these brokers for accepting and executing the buying orders under the circumstances. It expressed the belief of the Stock Exchange authorities that the brokers could not possibly have been ignorant of the character of the orders, or of the fact that in executing them, on the lines prescribed by their author, conduct "detrimental to the interests of the Exchange" was indulged in. Over conduct adjudged to be thus detrimental, the Stock Exchange's governing board has, under its constitution and by-laws, very sweeping powers.

That the episode of December 27 was detrimental to the interests of the Exchange, no man in his senses doubts. It was so seriously harmful that its exposure not only tarnished the good name of the New York Stock Exchange in New York and Europe, but threatened the possibility of extremely unpleasant consequences in legislation on the matter. Two opinions, almost exactly opposite, will be and indeed already have been expressed, regarding this exercise of Stock Exchange discipline. One has been voiced by the New York *World*, which remarked, contemptuously:

> Yesterday the governors of the Exchange after many promises of stern discipline, suspended one broker sixty days and his partner thirty. What a tribute this is to the childlike faith of Gov. Hughes's Wall Street commission in expecting the Stock Exchange to reform itself!

Critics who take this ground apparently assume that the governing committee of the Stock Exchange ought to have expelled the brokers who acted as agents for this virtually fraudulent transaction. Whatever the Stock Ex-

change authorities may have wished to do, fair-minded men will recognize that there were certain obstacles in their way. One was the fact that Stock Exchange membership is a property right, and that to deprive a member of that right, without such proof of deliberate violation of the rules as should satisfy the courts, would probably have involved the Exchange in litigation. But proof of that nature was not easy to obtain. The original culprit—the man who was planning by a species of sharp practice to deceive the investing public into the false idea that genuine trading on a large scale, and a bona-fide advance of prices, were occurring in Rock Island stock—the governing committee could not reach. He was not a member of the Stock Exchange. If he had been a member, the board of governors, with the evidence already in their hands, would have been bound to visit upon him the most severe and humiliating penalties in their power.

Failing this possibility, they assumed on the part of the man's Stock Exchange agents knowledge of the nature of his orders, and punished them accordingly, but in such manner as to avert the probability of recourse to the courts. This is a precedent of great importance; furthermore, it is a warning to the rest of the Stock Exchange members that they will hereafter engage in operations of the sort at their own individual peril. Nor is there any guarantee, explicit or implicit, that the next offender will not be visited by severer penalties.

The other opinion referred to above is heard in some quarters of Wall Street. It objects to the action of the board of governors on two grounds —one, that the brokers had no means of knowing what was the character or purpose of the buying orders assigned to them for execution; the other, that whatever the brokers involved in the Rock Island scandal may have done, other Stock Exchange houses have time and again done the same thing with impunity. The answer to the first objection is that if these gentlemen did not know what they were doing, they were the only men in Wall Street who did not. The "Rock Island manipulation" had for weeks been flagrant, open, and impudent. There was not an office-boy within hail of the Stock Exchange who did not know that an unscrupulous "insider" was matching orders as closely as he dared; that in actual effect he was buying at fictitious prices from himself. The stock's performances had become the jest of clerks. But no one imagines that the author of the orders would have continued to pay commissions, had he not believed that he could successfully use the Stock Exchange facilities to delude the real investor into the notion that the sales were genuine and the prices bona fide. In other words, he was making the Stock Exchange, to all intents and purposes, an instrument of fraud.

There remains the objection: Other brokers did the same thing and were not punished; why, then, should this one house be disciplined, merely because something went askew with Rock Island's thimblerigging programme? There is a familiar ring to this logic; it might have been borrowed, almost verbatim, from the insistent *apologias* of Mr. Charles W. Morse. Morse had been so impressed with the spectacle of other people violating with impunity the Na-

BROWN BROTHERS & CO.
No. 59 Wall Street, New York

An Exceptional Issue of 6% Bonds

Secured by a Thousand Farms

Here are brief facts about one current issue of Irrigation Bonds. They will illustrate what ideal security lies back of such bonds when the issues are rightly selected.

The Bitter Root Valley Irrigation Co. owns one of the largest irrigated fruit land projects in the world. The Company is composed of well-known men who are wealthy, experienced, and capable. The land to be watered consists of about 40,000 acres in the heart of our greatest fruit belt—in the famous apple region of the Pacific Northwest.

A large part of the valley has been under irrigation for many years, so the possibilities of the land have been demonstrated. Fruit land in the valley has lately sold as high as $1,000 per acre.

The water rights are unassailable, and the total water supply is more than sufficient for all needs. For the irrigable land is distinctly limited by the mountainous bounds of the valley.

$2,500,000 Invested

The Irrigation Company has invested in the project about $2,500,000, or about twice the total bond issue. And the bonds are secured by a first mortgage on all the property which the Irrigation Company owns.

The bonds are additionally secured by first liens on the lands and the orchards watered. These liens are given by individual land owners in payment for the land and the water rights. Forty per cent. of the price is paid down, and the balance, secured by the liens, is payable in annual instalments.

To secure each $1,000 bond there are deposited with a Trust Company as trustee $1,400 of these first liens on farm land.

The average price at which this land has been sold is about $200 per acre. The minimum price at present is $250 per acre. Yet the bond issue is limited to $30 per acre, or to less than one-sixth the average selling price of the land.

Double Security

Thus the bonds have double security. The first is a mortgage on all the property which the Irrigation Company owns, and the Company's investment is nearly twice the whole bond issue. The second security is these first liens on farm land —on land which is worth more than six times the amount of the bonds which it secures.

One can hardly conceive of more ample security. Yet these bonds pay six per cent. interest, because the demand for irrigated land is so great that the projects are very profitable.

Part of these bonds mature each year from 1914 to 1919. One may have his choice of maturities.

Ask for the Facts

In the past 15 years we have purchased 75 separate issues of Reclamation Bonds —Drainage and Irrigation. All have been secured by first liens on good farm land, and not a dollar of loss has resulted to any investor.

Irrigation bonds have now become the most popular bonds that we handle. No other large class of bonds offering equal security now pays six per cent.

We have issued a book on Irrigation Bonds, based on all this experience. Every investor, small or large, owes to himself its perusal. Please write for the book to-day. Cut out this coupon so you won't forget.

tional Bank Law that he proceeded to violate it himself, and when caught in the act, pleaded that he was no worse than they; that only an "accident" had brought him to the bar, and that he ought not to be punished. A certain maudlin sentimentality made itself visible in response to this appeal. The courts listened patiently, considered the matter soberly, and sent Mr. Morse to prison. They were quite aware, as were all other right-thinking people, that to refuse to punish a notorious offender, on the ground that other offenders had escaped, would be to turn the law into ridicule. Members of the Stock Exchange who have at heart the welfare and prosperity of their organization, and possibly its continued existence in its present form, are likely to take a similar view of the present case.

A POLITICAL HISTORY OF THE STATE OF NEW YORK. Vol. III (1861-1882)

By D. S. ALEXANDER. 499 pp., 8vo, $2.50 net; by mail, $2.78. Vols. I and II (1774-1861). 840 pp., 8vo, $5.00 net (carriage 40c. extra).

This work presents a history of the movements of political parties in New York State from 1774 to 1882, and traces the causes of factional divisions.

It embraces a series of brilliant character studies of the leaders, most of them of national importance, who, from the days of George Clinton, have drawn the attention of the nation to New York.

"The most entertaining story of state politics in American History."—*Review of Reviews* on Vols. I and II.

"An important and readable work. . . . The rise and fall of such giants as Roscoe Conkling and Samuel J. Tilden make the years peculiarly interesting. . . . The record set forth is admirable. . . . Excellent discretion and ability in citing from the contemporary press. . . . Mr. Alexander has added much color to the pages by following the course of the personal journalism of those seething years. . . . The style is lucid and attractive. Its perusal may be recommended not only to those who are interested in politics for business reasons, but as well to all who take more than a passing interest in the welfare of the institutions under which we live."—*N. Y. Sun* on Vol. III.

The Conclusion of a Great Work.

A Literary History of The English People

From the Earliest Times to the Civil War. By J. J JUSSERAND. Three vols. 8vo., with Frontispieces. Each $3.50 net.

Vol. III. (Completing the Work) From the Renaissance to the Civil War: Part II. Now Ready. Previously Issued: Vol. I. From the Origins to the Renaissance. Vol. II. From the Renaissance to the Civil War. Part I.

"Mr. Jusserand's qualifications for the task which he has undertaken are of a high order. There are few foreigners, and certainly very few Frenchmen, who have so intimate a knowledge of English life. He has already gained great distinction as an original investigator in more than one period of English literary history, and although his point of view in the present work is unmistakably that of a Frenchman, he shows a degree of sympathetic insight which is seldom met with in foreign critics of our literature."—*London Athenæum.*

The Nation

VOL. XC.—NO. 2326. THURSDAY, JANUARY 27, 1910. PRICE TEN CENTS.

FROM DUTTON'S JANUARY LIST

VOLUME III NOW READY—COMPLETING THE WORK

A NEW HISTORY of PAINTING IN ITALY

By J. A. CROWE and G. B. CAVALCASELLE

Edited and Supplemented with Notes by EDWARD HUTTON

3 Volumes. $15.00 net per set

Volume I—Early Christian Art to Giotto and His Followers.

Volume II—The Sienese School of the XIV Century and the Florentine School of the XV Century.

Volume III—The Florentine, Umbrian and Sienese Schools of the XV Century.

"Wherever there is an art lover this comprehensive work should find a place on the library shelves."—*John Vance Cheney.*

"A veritable treasure house of artistic information, invaluable to students."—*Philadelphia Public Ledger.*

In this edition the text of Messrs. Crowe and Cavalcaselle is brought up to date—and supplemented by notes. The latest discoveries and recent critical opinions are noted; and the volumes are so generously illustrated that the student is able to get the fullest possible benefit from the text.

Mr. Hutton's name is a guarantee of the value and authority of the new matter.

NOW READY FROM THE 115TH FRENCH EDITION

PIERRE DE COULEVAIN'S

ON THE BRANCH

ENGLISH VERSION

By ALYS HALLARD

12mo. Cloth, $1.25 net

"On the Branch," now in its 115th edition in France, has the distinction of being the most popular novel ever written in France by a woman. It is the intimate story, told in the first person, of a woman of charm and cultivation, who chooses to live, homeless, a life of morbid introspection. The story of her return to a happier state of mind is told with rare sympathy and delicacy.

THE TYRANT

A NEW NOVEL

By Mrs. HENRY DE LA PASTURE

Author of "Peter's Mother," "The Lonely Lady of Grosvenor Square," "The Grey Knight," etc.

12mo. Cloth, $1.25 net

"A singularly appealing novel, which is written in a simple, enforced style, that carries conviction."—*Philadelphia Press.*

"The story is thoroughly readable. It is well told."—*N. Y. Sun.*

"The romance is fresh and sweet and wholesome as the Welsh borderland country which forms its setting; its general atmosphere being that of purity and exalted morals."—*Chicago Record-Herald.*

"Mrs. de la Pasture's books are always delightful reading, and this one is no exception to the rule."—*N. Y. Herald.*

"An exceptionally moving and plausible story."—*Boston Transcript.*

"The strongest and, on the whole, most pleasing of Mrs. Henry de la Pasture's stories. . . . Full of sympathetic studies of human nature. The author has an unusual art of actualizing her types of character and experience, and has made a story which is well worth while."—*The Congregationalist.*

The Review of Reviews
Is impartial; it neither muck-rakes nor hides facts. Dr. Shaw's editorial, "Progress of the World," opens the magazine with thirty splendidly illustrated pages that give the reader a clear, finely interpreted account of the men and events of the month. Reviews of the best articles in the other magazines of the world are so comprehensively done that they have given the Review of Reviews fame all over the world. Each month the Review produces the most graphic, clever and striking cartoons that have appeared in American and foreign papers.

CROWELL'S LATEST BOOKS

A NEW HEAVEN AND A NEW EARTH

By CHAS. BRODIE PATTERSON

Author of "The Will to Be Well," etc.

A succinct survey of New Thought forces and principles.

$1.25 net. By mail, $1.37

PUNISHMENT AND REFORMATION

A new, enlarged edition of this standard work on criminology.

By FREDERICK H. WINES
Special Agent Eleventh U. S. Census

"A book for governors, legislators and judges to ponder over."—*Detroit Free Press.*

$1.75 net. By mail, $1.90

CROWELL'S SHORTER FRENCH TEXTS

A series of school texts, edited

By J. E MANSION

New Volumes.

La Belle au Bois Dormant, par EMMA FISHER.
Deux Comedies enfantines, par MATHILDE REICHENBACH.
Waterloo, par VICTOR HUGO.
Croisilles, par ALFRED DE MUSSET.
Le Chateau de la Vie, par E. LABOULAYE.
Mon Etoile, par SCRIBE.
Les petites Ignorances de la Conversation, par CH. ROZAN.
Anecdotes sur Napoleon, par MARCO DE ST. HILAIRE.
Quatre Contes des Mille et une Nuits. Edited by R. DE BLANCHAUD.
Contes du Petit Chateau, par JEAN MACE.
La Farce de Paquin fils. By L. LAILAVOIX.

Cloth, 25c. net, each

FAITH AND HEALTH

By CHAS. REYNOLDS BROWN

Author of "The Young Man's Affairs," etc.

A discussion of the curative side of spiritual life.

$1.00 net. By mail, $1.10

THE CHRISTIAN PASTOR IN THE NEW AGE

By ALBERT JOSIAH LYMAN

Author of "Preaching in the New Age."

A technical study of the modern pulpit.

$1.00 net. By mail, $1.10

DO IT TO A FINISH

By ORISON SWETT MARDEN

Editor of "Success."

Cloth or boards, 30c. net. Paper, 10c. net

FIRST FOLIO SHAKESPEARE

"Indispensable to Students.'

Edited by CHARLOTTE PORTER and H. A. CLARKE

All Comedies and Tragedies now ready.

Just Published.

In Press **CHINA AND THE FAR EAST**

A symposium by the foremost authorities. Edited by GEO. H. BLAKESLEE of Clark University

THOMAS Y. CROWELL & CO., New York

Important New Macmillan Books

RELIGION

Studies in Religion and Theology

By ANDREW M. FAIRBAIRN, Author of "The Philosophy of the Christian Religion." Dr. Fairbairn's new book is an important study of the Church in the First Century and in the Nineteenth, of the Church in its original idea, and of John and Paul as material of which the early Church was made. *Ready next week*

The Religion of the Chinese

By J. J. M. DE GROOT, Ph.D., Professor of Ethnography in the University of Leyden, Holland. A new volume in the series of Hartford-Lamson Lectures on World-religions inaugurated by Dr. Frank B. Jevons's "Introduction to the Study of Comparative Religion." *Cloth, 12mo, $1.25 net; by mail $1.35*

Religion in the Making

By SAMUEL G. SMITH, D.D., Ph.D., LL.D., Head Professor of the Department of Sociology and Anthropology in the University of Minnesota. A Study in Biblical Sociology. The author has had long experience as a teacher of the Bible, and some years ago became impressed with its value as a source of sociological material, as well as with the usefulness of sociology as an instrument of Biblical interpretation. For four years he has given a course in the joint study to university classes, following the lines of this book.
Cloth, 12mo, $1.25 net; by mail $1.35

The Religion of Eastern Asia

By HORACE G. UNDERWOOD, D.D. The book shows clearly the fundamental principles of the faith of China, Japan and Korea, illuminating the life of those Oriental people. *Ready next week*

The Ethics of Jesus

By HENRY C. KING, D.D., LL.D., President of Oberlin College, Author of "Rational Living," etc. The Nohle Lectures delivered at Harvard University, puhlished as one of the "New Testament Handbooks" edited hy Dr. Shailer Mathews of the University of Chicago. *Ready February 9*

LITERATURE

Essays on Modern Novelists

By WILLIAM LYON PHELPS, M.A. (Harvard), Ph.D. (Yale), Professor of English Literature at Yale, formerly Instructor in English at Harvard. From the list of subjects of these essays (DeMorgan, Hardy, Howells, Bjornson, Mark Twain, Sienkiewicz, Sudermann, Ollivant, Stevenson, Mrs. Ward, Kipling, "Lorna Doone") one may see how wide a review of modern writers of fiction is offered in this uncommonly interesting book.
Cloth, 12mo, $1.50 net; by mail $1.60

A Group of English Essayists of the Early Nineteenth Century

By C. T. WINCHESTER, Professor of English Literature, Wesleyan University. An attractive informal discussion of the half-a-dozen men—Jeffrey, Hazlitt, Lamb, De Quincey, Wilson, and Leigh Hunt—who, more completely than any others, made the nineteenth century aware of the intimate, self-revealing charm of the essay as a form of literary art. *Cloth, 12mo, $1.50 net; by mail $1.60*

POLITICAL SCIENCE AND SOCIAL EFFORT

The Promise of American Life — By Herbert Croly

Beginning with the acknowledgment that American democracy is disappointing expectations, the author discusses its original promise, the difficulties which have retarded its fulfilment, and the measures needed to protect true liberty and produce economic justice. *Cloth, 8vo, $2.00 net; postpaid $2.14*

Pres. J. G. SCHURMAN, of Cornell University, writes: "I have found the book exceedingly stimulating. . . . A serious and weighty contribution to contemporary American politics."

Miss Mary Conyngton's — How to Help

A Manual of Practical Charity. Its author, now with the Department of Commerce and Labor, writes from long personal experience. Her book has none of the coldness sometimes attributed to scientific charity. Good sense and practicality fill the hook with interest for those busy people who wish to deal wisely as well as generously with those who appeal for aid. *Cloth, 8vo, $1.50 net; postpaid $1.63*

TRAVEL AND ADVENTURE

Dr. Sven Hedin's — Trans-Himalaya — DISCOVERIES AND ADVENTURES IN TIBET

"A well-told story of startling experiences, exciting adventures, and wonderful achievements . . . of a courageous persistent man and a horn explorer."—*New York Times.*

In two octavo volumes, with 388 illustrations, including eight colored plates. Cloth, gilt tops, $7.50 net (carriage extra)

PLANETARY HISTORY

The Evolution of Worlds — By Percival Lowell, LL.D.

Author of "Mars and its Canals," "Mars as the Abode of Life," etc. Director of the Observatory at Flagstaff, Arizona; non-resident Professor of Astronomy Mass. Instituto of Technology. *Cloth, 8vo, $2.50 net, postpaid $2.72*

"A book of the broadest interest . . . the boldest survey of the fate of worlds from the latest findings of science that has been stated in print."—*Boston Herald.*

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave. N. Y.

The Nation.

NEW YORK, THURSDAY, JANUARY 27, 1910.

The Week.

President Taft is reported by the Washington correspondents to be "smiling broadly" over the promises of Congressmen to be good and pass the bills which he regards as the articles of a standing or falling Administration. This is natural, but is it wise? Should the smile be anything more than partial—say, on one side of the mouth and mantling only one cheek—so long as we are still in the region of pledges and have not yet got to performance? There is such a thing as the strategic use of smiles. Distributed too easily and employed too early, they lose something of their due effect. Even a laughing philosopher is bound to display at times a certain reserve and economy in his hilarity. We do not pretend to be expert in these matters, but we should say that, in the actual situation, a judicious mixture of frowns with his smiles would well grace the President. He should not give the full rewards of victory to those who are just buckling on their armor. If the Republicans in Congress are already enjoying the full breadth of the Executive smile, what guerdon is there left for them to fight for? Besides, he smiles best who smiles last.

There is something a trifle comic in the consternation over President Taft's reported announcement of his purpose to direct the Department of Justice to proceed against all oppressive Trusts and illegal combinations. This is received in some quarters as if it were a startling new departure. Certain people are talking as if there had not been the slightest warrant for expecting that Mr. Taft would try to enforce the law against agreements in restraint of trade. In actual fact, of course, he has again and again announced his determination to do that very thing. In speeches both before and since his election, as also in messages to Congress, he has made his position plain. In his recent message on the Anti-Trust act, for example, he explicitly stated that the judicial interpretations of the law show that it "applies to many combinations in actual operation, rendering them unlawful and subject to indictment and restraint." And a little further on he added: "It is the duty and purpose of the Executive to direct an investigation of the Department of Justice . . . into all the industrial companies with respect to which there is reasonable ground for suspicion that they . . . are conducting business in violation of the Anti-Trust law." Words could hardly be more precise, or more clearly express the intent of the Administration.

It will be a popular thing for the Government to proceed with a prosecution of the Beef Trust, as it is announced that the Department of Justice proposes to do, but that, of course, is no reason for undertaking it. The question is simply one of enforcing the criminal law. It may be true, or it may not be true, that the packers are partly responsible for the high prices of meat products, about which the whole country is complaining. That, however, is only incidental. The real point to be determined is whether the packing companies have violated the Sherman Act; whether they have combined to suppress competition, restrain trade, and obstruct the free flow of interstate commerce. If they have, they are liable to prosecution and punishment. The decisions of the Supreme Court furnish ample grounds for moving against them. They may deny that they have any intent to create a monopoly, but if the natural effect of their acts is such as to admit of and produce a monopoly, that is all the law needs to know. Moreover, the judges have shown that it is possible to brush aside the devices—the holding company, for example—by which an illegal combination seeks to mask itself.

Secretary Ballinger's address at Williams College on Saturday was sound in doctrine, even if unnecessarily violent in language. It is late in the day to attack furiously the muck-rakers and the penny-a-liners. They have become a part of the whole situation with which a public man has to deal, and he must accept them with as much philosophy as he can muster. It certainly will not do to denounce as muck-rakers the very newspapers and magazines which, when they were on your side, and promoted your political fortunes and those of your party, you lauded to the skies. Mr. Ballinger dwelt none too strongly upon the need of strict legal warrant for every act of executive officers. If they assume that they have any higher commission than their oath of office, or any authority greater than that conferred upon them by law, they throw our whole system into confusion. It is well for the Secretary and the President to press upon Congress the urgent need of regulating by statute the work of caring for the national domain. None of these things, however, goes to the merits of the charges against Secretary Ballinger which Congress is about to investigate. These relate less to the written law than the unwritten intent, to the spirit in which the statutes are administered, to the possibility of private interest getting the upper hand of a public officer. Men of all parties must hope that nothing will be brought out to smirch a member of the Cabinet.

There has been hurled into the camp of the Pinchotites what is not strong enough to be called a bombshell and is somewhat too strong to be called a demurrer. The head of the Federal Weather Bureau has taken sharp issue with the prevalent ideas concerning the influence of forests upon rainfall. Professor Moore maintains that rainfall affects the forests, but that forests have nothing to do with the rainfall; that spring floods come more often from the forest than from the open; that erosion is not so bad as we imagine it to be and that in any case floods are no more frequent now than they used to be. Professor Moore's views do no great damage to the cause of conservation, since there are other potent reasons for saving our forests than the need of regulating our rainfall. It is different with the hundreds of books of travel that take particular pains in pointing out how bare hillsides go hand in hand with languishing agriculture and a degraded peasantry. The question is one that has long been in controversy, and Mr. Moore's challenge may help to bring it toward definitive settlement.

The preliminary report of the National Waterways Commission follows within less than a month upon the report of a British royal commission on internal waterways, which, after the thorough manner of British royal commissions, had been studying the subject for nearly four years. The problem in this country and in England, allowing for the great difference in area under consideration, is largely the same. In this country and in England, the rapid development of the railway, following upon an era of canal building, relegated internal water-borne traffic to a state of obsolescence. In both countries the movement is primarily a protest against what is felt to be the exactions of the railways. Yet from the year 1880 to 1906 the percentage of total traffic within New York State carried by the Erie Canal has declined from 18 per cent. to 3 per cent., and absolutely from 4,600,000 tons to 2,385,000 tons. But in spite of the task involved in restoring the canals and rivers from their fallen estate, our own commission and the British commission are agreed that the thing is more than worth trying—the British a good deal more positively than our own, it must be confessed. But both commissions agree on the all-important point that the improvement of internal navigation must be taken up as an enterprise that recommends itself, and not as a mere club for the railways. "The fundamental criterion," says our own commission, "should be whether a railway or a waterway, when constructed or improved, will be a profitable investment."

Attorney-General Wickersham's decision that the income from United States bonds, when forming a part of the income of a corporation, can be taxed under the Corporation Tax law, is of extraordinary interest. In one respect, indeed, it is not overdoing the matter to call it startling. For the exemption from taxation which attaches to the bonds is not merely a matter of understanding, nor even merely of law; but it is written upon the face of the bonds in the strongest and most inclusive language possible. "The principal *and interest*"—so runs the inscription—"are exempt from the payment of *all taxes and duties of the United States*, as well as from taxation in any form by or under State, municipal, or local authority." Accordingly, the Attorney-General cannot take refuge under a distinction between taxing the bonds and taxing the income from the bonds, for even the metaphysical refinements of our Constitutional law would hardly attempt to conjure into tangible being a difference between the interest paid on the bonds and the income derived from them. His view can only be that to tax the income from the bonds as part of the corporation's total income is a different thing from taxing the income from the bonds as such; but what the Supreme Court will do with this distinction does not seem very difficult to predict.

The Attorney-General, it is safe to say, was driven into this position by the desire to avoid the Constitutional prohibition of a Federal direct tax, other than one which is apportioned among the several States in proportion to population. Authorities in the Treasury Department are quoted as saying that if any part of the income of corporations were exempted, the tax would cease to be legally an excise tax and would take on the character of a direct tax. Whatever be the ultimate metaphysics of this view, there are two morals that the whole incident evidently carries in regard to the proposed amending of the Constitution so as to give the United States power to levy income taxes. In the first place, Gov. Hughes was entirely right in saying that, if the amendment as submitted to the Legislatures really does in law carry the right to tax income from State and municipal bonds, we cannot be sure that right would never be exercised; for here is the Attorney-General of the United States proposing to tax what at least nine men in ten would say were bond incomes explicitly declared exempt by the United States itself. The second moral is even more important: that it is the clear duty of the present Congress to pass a new Constitutional amendment, giving the Federal Government power to levy income taxes, but free from the objection raised by Gov. Hughes. Such an amendment, if quickly put through Congress—and the practical unanimity of Congress last year makes debate on the principle superfluous—would have an excellent chance of being approved by three-fourths of the State Legislatures. Not to avail of that chance is to throw the gravest doubt on the sincerity of Congress, and even of the Administration, in the whole matter.

The benefits that may accrue to the country from the establishment of the conference of Governors as a recognized institution cannot easily be overestimated. It has unquestionably been one of the elements of weakness, and sometimes of serious danger or difficulty, in our system, that an assemblage of States whose interests are so inextricably bound together, administer affairs of common importance upon lines independently chosen by each. It is by no means only owing to the inefficiency of State governments, but also to the impossibility of securing harmonious action among them, that the demand for increased centralization of power has been growing so strong in the past two decades. All good Americans, therefore, will hope that the conference of Governors may prove efficient. In his address at the conference last week, Gov. Hughes helped to crystallize sentiment on the subject by making a classification of the ways in which these conferences can be made useful. The three main subjects for their consideration, as he said, are uniform laws, State comity, and the systematic utilization by the States of one another's experience. Under each head matters are comprised of the first importance.

There is a group of subjects, however, of the first importance which cannot be classified exactly under any one of these heads, although partaking of all three. We refer to questions of taxation, incorporation, and industrial regulation. It is not to be expected, or even desired, that legislation on these subjects should be made strictly uniform in all the States, but there may well be a recognition by the separate States of the interests of the country as a whole in the admission of certain principles or limitations. In matters of taxation, one of the great difficulties with which every State has to contend is the danger that, either by the enactment of a proposed new law or by the more efficient enforcement of an existing one, capital may be driven elsewhere. The same thing is true of incorporation laws; the disgraceful history of New Jersey in this regard could

not have been written if there had been an organized interstate opinion, such as the conference of Governors may be expected to provide, to pass judgment on her conduct. In the matter of child labor, employers' liability, and the like, similar considerations apply.

While the Illinois Legislature is almost split in two on the subject of primary legislation, the Chicago *Tribune* has made a poll of State editors and finds that among sixty-odd newspapers five out of six are sharply in favor of a new primary law; this despite the State's discouraging experience with three earlier primary laws, passed and invalidated by the courts since 1905. If the direct primary is a delusion, the people of Illinois seem badly set in their aberrations. They have had five years to think the question over. They have had the opportunity to profit by the "failure" of the direct primary system in Oregon and Wisconsin. Yet, strangely enough, they have persisted, against court decisions and the politicians' wiles, in urging on their representatives to the enactment of a primary measure that shall stand the test of the courts and give the system a fair trial. If the politicians at Springfield are lukewarm in a cause which the people of the State have so much at heart, it only raises the presumption that a primary law may turn out a bad affair for the politicians but a good thing for the people.

There is much to be said in favor of the recommendation made by a special committee of the New York State Bar Association in reference to the plea of insanity in criminal cases. They recommend that instead of the present provision of the Penal Code relating to the subject there be submitted the following:

> Insanity or other mental deficiency shall no longer be a defence against a charge of crime; nor shall it prevent a trial of the accused, unless his mental condition is such as to satisfy the court upon its own inquiry that he is unable, by reason thereof, to make proper preparation for his defence.

In cases in which the accused man has a real plea of insanity, it would remain for that to be treated separately, after the jury had decided as to the commission of the crime itself. Of course, the chief purpose served by such a change would be the avoidance of the preposterous abuses to which the exploitation of the plea of insanity has given rise. Yet it may well be doubted whether this simple and sweeping remedy is not open to objections quite as serious as those which lie against our present methods, though of an altogether different nature. The mere getting of the individual criminal out of the way, whether by execution or confinement, is not the most important purpose of the penal system, any more than is his reformation; the impression made by the administration of the law upon the minds of all men is the great agent for the prevention of crime, which is the chief end to be served. And this impression cannot be made without preserving the instinctive association between law and fundamental justice. In real cases of insanity, to convict the accused of crime would be to do a fundamental injustice. But some radical cure of the abuse of the insanity plea has certainly long been called for.

The fight for control within the First Church of Christ, Scientist, New York, has resulted in the election of an anti-Stetson and pro-Eddy board of trustees. Thus Mrs. Stetson's recent excommunication is confirmed by the members of her own church and the history of Christian Science once more repeats itself. It is pointed out by the chroniclers of Mrs. Eddy's life that the founder of Christian Science has, by temperament or policy, failed to keep within the fold her earliest disciples and her most prominent followers. One after another the men and women who have helped to build up Mrs. Eddy's church and fortunes have either fallen away or been driven away. Christian Science is a marvellously centralized system, with its sole seat of authority in Mrs. Eddy acting through the directors of the First Church in Boston. Unusual prominence for a Christian Scientist is a quality apt to invite the thunderbolt. In Mrs. Stetson's case it is the fact that she introduced Christian Science in New York and that she built up the fortunes of the First Church here. She has been in Mrs. Eddy's service for nearly thirty years, but her ambitions, whether real or alleged, have been her downfall. Whether the absolutist system within Christian Science will survive its founder is quite a different matter.

Everybody must hope that the exclusion in the President's proclamation of Germany and France from the list of nations with whom we are to live in tariff peace is but temporary. Negotiations with those two countries are still under way, and an agreement may be reached. Such a contest may be as disastrous as one with ships and guns. France and Switzerland engaged in a tariff war some years ago, with the result that each combatant soon found that he was hurting himself more than the other, and the mortified statesmen of both lands had to call a truce. Nothing but similar consequences could be expected if the United States and Germany, or France, were to begin hurling maximum tariffs at each other, like so many explosive shells. A spirit of reasonable concession on either side is all that is needed to bring about a good understanding. And the authorities in Washington might well bear in mind that the Payne-Aldrich tariff has already incurred a sufficient amount of odium without dislocating our commercial relations with two great trading nations.

The appearance of a Cardinal of the Roman Catholic Church as a defendant in court is an event rare enough to attract attention outside of France, where the incident is part of the "school war" now going on between the Church and the radical elements. His Eminence the Cardinal-Archbishop of Rheims, against whom the Public School Teachers' Association is now reported to have brought suit, has been the most prominent figure in the attack on the "neutral" schools. The precise nature of the suit is not stated, but it is said to be based on the open letter issued some time ago by the French bishops, in which Catholic parents were called upon to unite for defence against the corrupting influences threatening their children in the "Godless" schools. At the same time, a number of text-books in general use in the schools were placed on the Index. Fighting the government schools through parents' associations is the plan which the Clericals mainly depend upon. The argument is that Catholic parents are entitled to have their children immune from atheistic influences. In practice, however, it is the bishops behind the parents' associations that carry on the campaign.

"COST OF LIVING."

Abundant evidence exists that the people are stirred to an unusual degree by the pressure of high prices for necessaries of life. Not to mention the curious incident of "Consumers' Leagues" to abstain from certain high-priced foods, it will be recalled that President Taft, in his recent message to Congress, referred to the general problem as the most serious drawback to the prosperity of the day. Bills have been introduced in Congress for commissions to inquire into its cause and meaning; State legislatures are moving independently in the same direction. The Department of Agriculture has intimated its purpose to have an investigation on its own account. Still more recently, high cost of living, as a practical problem with a practical bearing on the investment markets, has taken a prominent place in Wall Street controversy.

We heartily favor Congressional investigation. It is highly desirable that correct information should be officially obtained, and a government commission of inquiry provides the surest means of obtaining it. The ideal board of inquiry would be constituted like the British Royal Commissions, which have from time to time been designated by Parliament, and in which eminent experts, not members of Parliament, have participated. This, unfortunately, is not the way of Congress, whose commissions, made up wholly of Congressmen, too often have a habit of trying to bolster up by evidence some preconceived notions of their own. Nevertheless, the scope and power of Congressional inquiry is very wide, and there are cases like the Senate inquiry of 1892 into Wages, Prices, and Cost of Living, which began with a brief to free the protective tariff from responsibility, but which ended, under the masterful management of Carroll D. Wright, in producing an economic document of the highest value.

We should suppose that a commission on the cost of living, named at the present juncture, would address itself more largely to individual testimony than did the inquiry of 1892. If such testimony could be kept down (and the task should be easy) to something less than the monumental proportions of the Industrial Commission's cross-examinations, it would provide some very much needed information. People at large are ascribing the present high cost of necessaries in this country to one or all of seven separate causes: the world's increasing gold production; exhaustion or partial exhaustion of natural resources; the exactions of the Trusts; protective tariffs; forestalling operations by speculators; habitual extravagance by the community as a whole; and, finally, the demands of labor.

We shall not enter upon a discussion of the quantitative theory of money. The world-wide rise in prices, since 1897, has undoubtedly accompanied great increase in the world's gold production. The world produced $235,000,000 gold in 1896, and, by the *Engineering and Mining Journal's* estimate, $457,000,000 in 1909; the London *Economist's* "index number" of prices of 47 commodities rose from 1,850 at the end of 1897 to 2,390 at the opening of the present year, and it got up to 2,601 in the middle of 1907. This, to a good many people, establishes a conclusive *post hoc* argument. It might, no doubt, be suggested that the reasoning did not fit so conclusively to the decade preceding 1897, in which the world's annual gold output more than doubled, and in which, nevertheless, a prolonged and general decline in commodity prices occurred. Bankers, however, will be apt to make the point that the total annual gold output has of late been exceptionally large, that new gold goes into bank reserves, and that the higher bank reserves mount up, the more easy and confident are the banks in providing credit. Now, many typical events of the decade past—not only the merchant's capacity for buying large supplies on borrowed money, but the promoter's facilities for organizing Trusts, the power of those Trusts to dictate "stand-pat" prices, the courage and tenacity of speculators, and even the extravagance of individuals—are at least in part a result of abundant credit.

Exhaustion of natural resources accounts for something; it explains, for instance, much of the rise in price of lumber. But it does not explain the rise in price of iron or copper, where production has assumed unheard-of proportions in the period, or the rise in price of wheat, of which the world's crop, last year, was larger by 25 per cent. than the largest crop up to 1898. Arbitrary prices, fixed and maintained by combinations of capital, undoubtedly play their part. No one familiar with trade in the high-price era of 1907 is likely to deny that copper, tin, and lead were held at exorbitant prices by the Trusts controlling the markets for such commodities. Combinations of manufacturers have been accused of fixing abnormally high prices for meat and milk.

When, furthermore, an association of cotton planters, backed by bankers, publicly announces, as was done in 1905, fifteen cents a pound as the minimum price at which members of the association are expected to sell their product, we have at least the machinery of a Cotton-Growers' Trust. This very season has presented the spectacle of both cotton and wheat held up in price by operations of speculators, based largely on the farmer's slowness to sell.

As for protective tariffs, it is quite possible that they may not be a fundamental cause—they were quite as high in 1898, when nobody grumbled at the cost of living. But the most convinced protectionist must admit, if he is honest in his reasoning, that on some articles high duties cruelly aggravate the general pressure of cost of living, and that in virtually all articles they raise the bars against possible relief, through foreign markets, from arbitrary exactions of domestic Trusts and speculators. In the matter of wages, it is true that the Bureau of Labor figured out, even in 1907, an increase of 28⅞ per cent. in average wages of skilled laborers as compared with 1900. But the same government report also intimated that the rise in wages was as much a consequence as a cause of higher prices.

We do not propose to indicate here which of these various influences is the most important, or how any one of them can be restrained in its operation. It is altogether doubtful if a Congressional commission could devise a comprehensive remedy. But the value of determining, with some approach to authority, the precise truth in regard to all the factors going to make up the present high scale of prices, is that unintelligent and possibly dangerous public demands for legislative action may be averted.

THE LESSON OF SAN FRANCISCO.

In the autumn of 1908 Mayor Taylor of San Francisco appointed a committee of citizens to investigate the causes

of municipal corruption in that city under the Ruef-Schmitz régime. The committee submitted its report on December 31 last, and the report was shortly afterwards published. Its findings are of interest in every State and city in the country. While without a trace of violent or irresponsible denunciation, this report, signed by every one of the seven citizens appointed to serve on it, does not hesitate either to characterize the general situation or to state positive conclusions as to particular points of controversy. Among these it is especially interesting to note the matter of Mr. Spreckels's share in the promotion of the prosecutions; the committee's conclusion being unequivocally to the effect that his participation was entirely legitimate, and that the ruin or embarrassment of the United Railroads was no part of the object of the men who contributed funds to aid the prosecution. Equally unquestioning is the approval given to Mr. Heney's magnificent work in hunting down the rascals; a judgment to which all the more weight will attach because the committee frankly admit that in the campaign of last fall some of Mr. Heney's speeches "lent color to the claim that he was attempting to try the accused man at the bar of public opinion rather than in the courts of justice." They add that "the bulk of well-intentioned citizens understood the strain to which the three years of most bitter and arduous courtroom service, coupled with the shock of his shooting, has subjected him, and judged in their true light his statements made in the heat of the campaign"; and they express "the highest appreciation of Mr. Heney's splendid services and of the results accomplished, not only in unmasking the real forces behind the corruption in San Francisco, but in overthrowing the Ruef-Schmitz administration."

Into the particular forms in which the corruption at San Francisco was embodied, and which are set forth in the report, we cannot enter here. What concerns us all is the degradation which a régime of bribery brings upon the whole body of the community. How pervasive this was a few citations from the report may serve to show. One of the most startling evidences of this condition of things is furnished by the history of the third election of Schmitz, in 1905. The corruption of his rule had been so unmistakably indicated, both by Mr. Heney's charges and by the attacks made upon it in the *Evening Bulletin*, that he lost a great deal of his support in the ranks of the labor men themselves, whose candidate he was; but, incredible as it may seem, he then, for the first time, received "a very considerable plurality" in the portion of the city where the more prosperous merchants and capitalists lived. "It was for a time suspected by many," says the report, "that the sinister strength of Schmitz in the wealthy quarter of the town was due to tampering with the voting machine. It could not be believed that the financial leaders, the bank managers, the great merchants, and the more pecuniarily successful of the professional classes were in sympathy with an administration pledged to an extreme labor platform and about which the odor of corruption was already discernible." But the exposures made by the Oliver grand jury the following year placed beyond doubt the fact that Schmitz's strength lay largely in the interest of many "best citizens" in the perpetuation of the reign of corruption.

Two more instances must suffice. One relates to the bribery of Ruef and the Supervisors by a corporation desiring a privilege that was in itself utterly unjustifiable—a case in which there was no possibility of pleading defence against blackmail as an extenuation of the crime of bribery. In this case—

> The attorney who reported the necessity for bribery was a former judge of the Superior Court and the then president of the San Francisco Bar Association, a man of ability, good social and professional standing, and attractive personality. Although it was made public that he had neither disclosed the crime to the district attorney nor withdrawn from the investment, nor given up his attorneyship or his directorship in the Parkside Company, he did not resign his presidency of the association.

The other tells of the condition of the Police Department under a régime of corruption:

> The total number of crimes for which indictments were found by the Oliver grand jury was one hundred and seventy-five, participated in by nearly forty persons, representing practically every walk in life. Not one of them was unearthed by the Police Department of San Francisco, and the chief of police himself was indicted for perjury before the grand jury and for conspiring to prevent the detection of crime. It is apparent that such a department must have been rotten to the core.

It is pleasant to wind up with a more encouraging aspect of the story. Not only was the highest public spirit displayed by such men as Heney, Phelan, Spreckels, and other leaders, but also by men who could expect no reward in the way of personal fame. We refer particularly to the members of the grand jury already mentioned, of which B. P. Oliver was foreman. We cannot do better than quote what the committee says of their unflinching stand against the powers of corruption:

> The merchants of the jury knew that the institutions they attacked involved the men who controlled the transportation of their goods, the credits with which they purchased them, and who could deprive them of part of the market in which they were sold. Professional men realized that to offend the financial and social powers whose participancy in the crimes they had unearthed meant loss of prestige and serious inroads on their clientèle. Harder to face, for some at least, was the severance of long-standing friendships, business and social, with the men against whom they ultimately found their indictments, and the social ostracism from certain circles, not only for themselves, but also for their wives and children.

They knew, furthermore, that physical violence was among the dangers they invited; as a matter of fact, the dynamiting of the home of the chief witness for the prosecution, the kidnapping of Editor Older, the shooting of Heney, showed the lengths to which the desperate corruptionists were prepared to go. In facing all the consequences which the honest performance of their duty might entail, these men did a patriotic service of the highest order; and it is gratifying to see their names recorded, with fitting tribute to their devotion, in this permanent record of a memorable chapter in American civic history.

PARLIAMENT AND "MANDATE."

What is the "mandate" of the people in a given Parliamentary election in England, or Presidential election in America, is often difficult enough to decide, even when the majority is very great. The voters are not called upon to say yes or no to any one question; and it not infrequently happens that no one question is so distinctly "paramount" as to make unmistakable the popular verdict upon it. To take familiar instances out of our own history, there is the strongest possible contrast between such an event as the decisive victory of Lincoln in 1864 and the decisive victory of McKinley either in 1896 or in 1900. The defeat of Mc-

Clellan in 1864 meant a triumphant vindication of the Lincoln Administration, an unequivocal mandate for the inflexible prosecution of the war for the Union; it was a positive, not a negative, result. On the other hand, in 1896, when the silver issue was unquestionably and emphatically paramount, while every one felt that the nation had pronounced unmistakably upon that issue, it was open to the gravest sort of doubt whether the Republicans could legitimately claim that the people had also declared their assent to the positive programme of high protection, although that, too, had been contained in the Republican platform. The victory had been obtained by the aid of an extraordinary revolt within the Democratic ranks, and the men who took part in this revolt were almost solidly opposed to the high-tariff policy. In 1900, both the silver issue and the issue of imperialism were involved, and it was impossible to say that the nation had passed its judgment on the new issue of the colonial policy; it had, indeed, rejected Bryan the anti-imperialist, but had been unable to separate his anti-imperialism from his free-silver position and his other economic peculiarities.

The situation that will confront the new Parliament is one in which this kind of doubt concerning the "mandate" of the people will, of itself, present extraordinary difficulty, and in which, over and above this, there will be the difficulty arising from the extreme closeness of the vote. The impression produced by the results of the earlier pollings has been entirely wiped out by later developments. Even with the substantial majority then in prospect, it was plain that the Conservatives had made sufficient gains to warrant the confident expectation that radical measures would not be resorted to by the victors, either in regard to the treatment of the House of Lords or in the direction of economic change; but it did seem that, in addition to securing the passage of the Budget, the elections would be found to have decided two things. One was that the question of the right of the Lords to veto a supply bill would be permanently settled in the negative; the other was that free trade was secure from serious attack for a number of years, unless business conditions underwent a great change for the worse. Now, however, all the fat is in the fire again. The Liberals, with the aid of the Labor men, will still probably have a clear majority; but, with a victory like this, it will be impossible to assert with any emphasis that they have a plain mandate from the country on any one of the four great issues involved in the contest. For, in reality, the lines of policy concerning which the fight was waged were no less than four in number—reform of the House of Lords, free trade, a programme of economic legislation savoring more or less of Socialism, and Irish home rule. And not only are these sharply distinct from each other in their nature, but, as a matter of fact, there are large bodies of voters who, in deciding to support either the Government or the Opposition, were compelled to do great violence to their feelings on one or another of these issues. This has been especially the case with the important body of Unionist free traders—men who would regard the abandonment of free trade as a national calamity, but who see even greater danger in the possibilities of the radical programme on the other three issues. Indeed, it may fairly be averred that the vast loss sustained by the Liberals this year, as compared with four years ago, is due, above all, to the fact that conservative Englishmen felt at liberty to vote their sentiments on free trade four years ago, but that this time they felt compelled to swallow their objections to protection, under stress of what they regard as an imperious necessity.

In spite of all this, however, there is one result of the elections which it seems safe to say will have all the force of a "mandate." The nation has shown beyond all question that it is not desirous of any policy of rash innovation. For the support of such a policy, in a country with the political traditions of England, the emphatic approval of the nation is an essential requisite. But the country has not risen to the support of the Lords in their assertion of the right of veto in a domain where it had long been regarded as dead, and it has not risen in support of the aggressive Liberals in their flaming indignation against the Lords. Surely there can be no violent dealings with that problem. Even more impressive is the lesson of moderation in economic legislation that the elections teach; for not only does the even balance of parties tell in favor of old-fashioned Liberalism as compared with the semi-socialistic temper of Lloyd-George and Winston Churchill, but the unexpectedly crushing defeat of leading champions of avowed Socialism gives point to the moral.

But, after all, Parliamentary government is not supposed to be, fundamentally, government by popular mandate. Upon the men who will formulate the policy of the country in the new Parliament will rest a task of enormous difficulty, but also of unusual opportunity. The situation they will face is of the precise kind in which real powers of constructive statesmanship can best manifest themselves. Mr. Asquith—if he should, as in all probability he will, again take the helm—will not be sure of the support of a majority of the Commons for any programme he may decide upon; but, on the other hand, he will not be under the compulsion of an apparent demand of mere numbers to adopt a policy that he does not in his heart approve. A really great leader might well find in such a situation an opportunity for appealing to what is soundest and truest in the political instincts of his countrymen—for seeking in the strength and wisdom of his proposals that support for his policy which he cannot look for in the sheer force of a brute majority. There is much talk, just now, of a life of only a few months for the coming Parliament; but it is a question of the statesmanship of the leaders, quite as much as of the momentary state of the public mind, whether the new Government will or will not be able to maintain itself and make a substantial and noteworthy record.

NOVELTY AND THE NEW.

"When a new book comes out, I read an old one," may have been said partly in sarcasm, but it contains more than a jest, and more even than its author probably meant. With the new we are only too familiar. It is the breath of our twentieth-century nostrils. In it we live and move and have our restless being. We count that day lost whose futile sun has seen nothing unprecedented done. New forms of entertainment, new methods of eating, new ways of healing, new discoveries, new religions, prove America virgin soil. Columbus found our abode a new world, and we are bent on keeping it such. Yet we are not without a saving conservatism that has a fashion of mani-

festing itself with unexpected force and timeliness. There is little in us of the French pleasure in wiping the slate clean. We are fundamentally Northern and Saxon. But our conservatism seems a spasmodic instinct rather than a settled policy, a city of refuge rather than a chosen camping-place.

Nevertheless, nothing could be newer to most of us than something really old. For what we mean when we speak of the new is the novel, and this, it is no subtle paradox to say, is more easily found in the past than in the present. He is very unsophisticated indeed who does not have an inkling of the inside of the latest piece of fiction he buys before he has opened it. He buys it, indeed, because he does know its general character. What he wants is familiar scenes newly drawn and inhabited, or unfamiliar scenes with the old familiar actors. This gives him novelty without strangeness; he visits a new spot, but under accustomed conditions of language, institutions, laws. A new book's very date demonstrates its modernity; in manufacture, atmosphere, plot, characters, style, it reeks of its time. Even when it deals with another epoch, it does so from the standpoint of its own. The historical novel is a personally conducted tour with every obscurity explained, every offence removed. "They do but jest, poison in jest; no offence i' the world." For the genuinely new, we must turn to the obsolete.

Sober historians made discovery of this pregnant truth some time ago. Crammed with knowledge of events ancient, mediæval, and modern, looking for new worlds to bring to book, and pressed by the ever-growing necessity for unthreshed topics of research, they bent themselves to the study of origins. More superficial intellects would have found sufficient novelty in speculations concerning the present conditions on Mars or the future developments on the Earth, but the sure instinct of the born investigator led the chroniclers into the field whose freshness is its antiquity. But they have not been followed by the mass of mankind. Despite the impressive array of volumes dealing microscopically with the table manners of our remote ancestors, the unenlightened public blindly continues to prefer newspapers to epics, vaudeville to "Everyman," airships to Hammurabi. We are forced to the conclusion that the real sensation-monger is the innocent-looking, dry-as-dust representative of modern scholarship. Our position is confirmed by the remembrance of the inevitable nine-days' wonder that is aroused whenever a discovery of the study is made intelligible to the denizens of the marketplace. Whatever it be, whether the baselessness of the cherry-tree incident, the mythical character of Adam, or the splendors of Nippur, the announcement never fails to make a stir similar to that which followed the report of the circulation of the blood. Such announcements, however, are rare, and thus only the highly educated may habitually breathe the surcharged air of scientific pursuit. For them, life must be one prolonged excitement.

It is this lack of real novelty that constitutes the essential weakness of "popular" learning. A university extension course, pleasantly taken in opera chairs under brilliant chandeliers, with all the comfortable accompaniments of syllabi, stereopticon, and refreshments, by its very accentuation of contemporary conditions precludes anything like adequate appreciation of other times, other manners. We are dangerously near to finding the royal road —which may lead to entertainment, but to nothing more. Let us, however, try for the really new: born into a time of exact science, of material interest, of triumph over space and force, let us remove ourselves to another world, a world of myth, of spirits, of submission to vague but personal Force. Here is no roar of trolley, no newsboy's cry, no storied piles. Business is business, and not finance; literature is absorbing work; philosophy is thought, rather than experiment. We are terribly impressed by the limitations of such a civilization. But suppose we stay a while, and day after day live with these people, so strangely unprogressive. Could anything be more productive of novelty? Ingrained habits would prove worse than useless; long-standing assumptions would collapse for want of basis; complete readjustment of view and activity would be necessary even to understand the new life. But would there not be in such understanding, and still more in participation in such conditions, an education and a culture? Is anything more characteristic of culture than a widely mobile, sympathetic point of view? Search of the obsolete yields more than novelty. Not the least of its results is a new comprehension of the modern.

CANADIAN BOOKS OF 1909.

OTTAWA, January 15.

The Quebec Tercentenary has been responsible for a respectable body of literature, inevitably varied in quality, but, on the whole, of fair merit. Dr. Arthur Doughty's "Cradle of New France" (noted in the 1908 review) was rather in the nature of an introduction to the Quebec celebration, of which the aftermath remains to be recorded. One finds, of course, books on the famous siege of 1759, and on the generals who took part therein, as well as on some of the other notable men and events of this ancient Canadian town. Edward Salmon has given us a new and decidedly readable "Life of Wolfe" (Cassell), though he has not added materially to what was already known of the career of the conqueror of Quebec. Beckles Willson's "Life and Letters of Wolfe" (Heinemann) is more ambitious, and brings together a good deal of material hitherto scattered and more or less inaccessible. An ingenious attempt to tell the story of the siege in verse is embodied in Dr. J. M. Harper's "Battle of the Plains" (Musson); while A. Gagnon, in his "Fort et Château St. Louis," describes the romantic history of that once famous home of French and English governors, commenced by De Montmagny in 1647 and completed by his successor D'Aillebout, rebuilt by Frontenac, enlarged after the conquest, and finally destroyed by fire in 1834. Of the old building, with its memories of three sieges, and the countless succession of governors, generals and missionaries, savage chieftains and more than half-savage *coureurs de bois*, who once met in its historic halls, nothing now remains but a single inscribed stone let into the wall of the Château Frontenac Hotel. An interesting picture of life in Quebec during the early years of British occupation is furnished by J. M. Fairchild's "Journal of an American Prisoner at Fort Malden and Quebec in the War of 1812" (Carrel); Sautai's "Montcalm au combat de Carillon" (Chapelot), belongs rather to the Lake Champlain celebration than to that of Quebec; and J. Macpherson's "Scenic Sieges and Battlefields of French Canada" (Valentine) is a popular account of the more remarkable of the many conflicts in the French colonial and Indian wars, based mainly on Parkman.

There is now in preparation, under the direction of the Dominion Archivist, Dr. Doughty, an official history of the Quebec Tercentenary, which, in both text and illustrations, will form a magnifi-

cent memorial of the celebration. While only indirectly a product of the Tercentenary, William Wood's "Logs of the Conquest of Canada" (Champlain Society) is not only a notable contribution to the literature of the Siege of Quebec, but it is decidedly the most important Canadian book of the year. It forms a companion work to Dr. Doughty's "Siege of Quebec," that work containing the documents relating to the land operations by the army, and this being devoted to the actions of the fleet. In a long and scholarly introduction, Major Wood reviews his material, gives an exceedingly valuable account of the character and relative strength of the British and French navies in the middle of the eighteenth century, and brings out very clearly a fact which all previous historians had neglected—that the conquest of Quebec was due, not solely to the splendid generalship of Wolfe, nor to the bravery and capacity of the British troops, but to the perfect co-operation of the army and navy. The logs themselves are divided into three sections, those relating to the capture of Louisburg, those relating to the siege of Quebec, and those relating to the final operations at Montreal.

Of scarcely less importance, as a contribution to Canadian history, is Sir C. P. Lucas's "History of Canada, 1763-1812" (Frowde). As in his "Canadian War of 1812," the author bases his work on original documents, and has given us what must be regarded as the best available interpretation of them. His book covers one of the most important periods in Canadian history, and throws new light on the causes and consequences of the Quebec Act, the Treaty of 1783, and the coming of the United Empire Loyalists, the administrations of Lord Dorchester and Sir James Craig, and the intricate question of the international boundary.

A history of quite a different type is Agnes C. Laut's "Canada, the Empire of the North" (Briggs). Miss Laut does not concern herself with the formal history of wars and treaties, political movements, and those who stood behind them. Her object is rather to bring out the romantic side of the story of Canada; to recreate, in her own words, "the shadowy figures of the heroic past, to clothe the dead once more in flesh and blood, to set the puppets of the play in life's great dramas again upon the stage of action." As she justly says, "pictures of men and women, of moving throngs and heroic episodes, stick faster in the mind than lists of Governors and arguments on treaties." There is, it will probably be admitted, room for both kinds of history. The only vital provision is that the work should be accurate. Miss Laut, fortunately, possesses both the knowledge to write true history, and the ability to present it in exceptionally attractive form.

The widespread interest taken by Canadians in their own political problems, as well as in those that concern their status in the British Empire, is reflected in such recent works as Andrew MacPhail's "Essays in Politics" (Longmans); J. P. B. Casgrain's "Problems of Transportation in Canada" (Laflamme & Proulx); Charles Langelier's "Souvenirs politiques de 1878 à 1890" (Dussault & Proulx); and George T. Denison's "Struggle for Imperial Unity" (Macmillan). Professor MacPhail discusses, with the breadth of view and acuteness of an impartial and singularly well-informed student of public affairs, such live Canadian questions as the fiscal policy of the Dominion, British diplomacy and Canada, the naval question, preferential trade, and inter-imperial relations. Mr. Casgrain's volume of speeches is of timely interest, as it deals with such immediate problems as the national transcontinental railway, the Hudson Bay route, and the Georgian Bay Canal. Mr. Langelier's reminiscences throw an important sidelight on the history of Canadian politics throughout the constructive period from 1878 to 1890. Col. Denison's book, while written from the standpoint of a strong partisan, brings out and presents in an interesting way the inner history of the Imperial Federation movement in Canada.

The recent death of Dr. James Hannay removes one of the last members of the group of Canadian historians, to which belonged Dr. William Kingsford, John Charles Dent, and Sir John Bourinot, and, of which Dr. George Bryce, Benjamin Sulte, and Sir James Le Moine are now the only survivors. Dr. Hannay's "History of New Brunswick" (St. John: Bowes), appeared only a few weeks before his death. It fills two substantial volumes, and is practically a continuation of his "History of Acadia," published some thirty years ago. That work dealt with the story of the part of the present Maritime Provinces controlled by France, up to the Treaty of Paris, 1763. The present history traces the development of the Constitution of New Brunswick, and the growth of its laws, from the foundation of the province down to the present time. While somewhat unattractive in style and poorly arranged, the work embodies the results of deep and painstaking research, and will be invaluable to the future historian.

Two other important publications bearing on the history of the Maritime Provinces are Dr. E. M. Saunders's "Three Premiers of Nova Scotia" (Briggs), embracing the lives of Joseph Howe, James W. Johnston, and Sir Charles Tupper—the latter now ranking with Lord Strathcona and Sir Sandford Fleming as Canada's most eminent octogenarians; and J. A. Chisholm's "Speeches and Public Letters of Joseph Howe" (Halifax: Chronicle). The latter includes Howe's remarkable defence in the suit for libel in 1835, in which he held a stolid Halifax jury spellbound for six and one-quarter hours; and his speech on Reciprocity at the Detroit convention of 1865, where his eloquence brought the vast gathering of American business men to their feet in a body, cheering like schoolboys.

In imaginative literature, the year's record has been far from remarkable. It must be taken as rather indicative of the low ebb which we have reached in contemporary verse that the public has welcomed with a degree of enthusiasm such third-rate stuff as R. W. Service's "Ballads of a Chechaco." Hiram L. Spencer's "Fugitives" (Bowes), contains a number of short poems of very fair merit, and is further interesting as the work of an octogenarian, who, in his younger days, enjoyed the close friendship of Longfellow and Bryant. Thomas McInnes's "Lonesome Bar" is made up of dance-hall tragedies, and other verses suggestive of the rough-and-ready life of the Klondyke. Donald A. Fraser's "Pebbles and Shells"; E. W. Thomson's "Many-Mansioned House"; W. M. MacKeracher's "Sonnets and Other Verses," and W. T. Allison's "Amber Army," are of varying merit and interest. In fiction, the more noteworthy Canadian books of the year are Wilfred Campbell's "A Beautiful Rebel"; R. E. Knowles's "The Attic Guest"; Charles Roberts's "The Backwoodsman"; C. W. Gordon's "The Foreigner"; L. M. Montgomery's "Anne of Avonlea," and Gilbert Parker's "Northern Lights." L. J. B.

NEWS FOR BIBLIOPHILES.

A few days ago a collector pointed out to the Bibliophile that there were two varieties of Thackeray's "The English Humourists of the Eighteenth Century," London: Smith, Elder & Co., 1853. The book is common enough, worth a pound or two at the most, and it has been easy to get together several copies for comparison. The result shows that there are really three distinct editions of the book, all of which would have passed heretofore as first editions. The actual first edition has the following title: "The | English Humourists | of the | Eighteenth Century. | A Series of Lectures. | By | W. M. Thackeray, | Author of 'Esmond,' 'Pendennis,' 'Vanity Fair,' &c. | London: | Smith, Elder, & Co. 65 Cornhill. | Bombay: Smith, Taylor, & Co. | [rule] | 1853." The preliminary signature consists of four leaves made up of (1) a blank leaf; (2) half-title, "English Humourists" (verso blank); (3) title-page as above, with "The Author of this Work reserves to himself the right of | Translation." and "Bradbury and Evans, Printers, Whitefriars." on verso; (4) "Contents" (verso blank). The text consists of pp. 1-322, with three leaves of advertisement, "Mr. Thackeray's New Fiction," completing signature Y. One of the two copies seen has on the fly-leaf the name "Jos. Connell," the date "2 March 1853," and a price "£22 per 100." This copy has been sub-

mitted to Smith, Elder & Co., who state that it was an "advance copy made up for their traveller." Mr. Connell, "when the book was at press for him to go around and take orders in advance." The book, they say, was published on June 6. This copy has no catalogue bound in at end. The second copy has bound in "A Catalogue of New and Standard Books," dated "March, 1853," of sixteen pages. The third of "Works in the Press" on p. 1 is "Lectures on the English Humourists" "In one Volume, crown 8vo," but no price is given. This copy has also, inside of front cover, a label "Smith, Elder & Co. | East India | & Colonial Agents | Cornhill, London."

The second edition has a different title. Two lines "Delivered in England, Scotland, and the United States of | America." are added after the line of "A Series of Lectures." And at the bottom, below the imprint are two lines, in small type, enclosed in square brackets "The author of this work reserves to himself the right of authorising | a translation of it." The preliminary signature of four leaves consists of (1) half-title, "English Humourists | of the | Eighteenth Century." (verso blank); (2) title, as above, with imprint only on verso; (3) "Contents" (verso blank); and (4) "Errata" (verso blank). The text has the same collation, but the catalogue bound in at the end is dated "June 1853." "Lectures on the English Humourists" is still third of "Works in the Press" but "price 10s. 6d." and "(Just ready)" have been added. There are, of course, many other differences in the catalogue.

Both forms are bound in blue marbled, ribbed cloth, the back-stamp differing slightly. The side stamp of the first edition consists of a frame of lines and scroll-work, while that of the second is merely a border of two parallel lines. Although the text at first sight appears to be identical, a comparison has brought to light numerous differences, such as the following:

P. 26, line 14. First edition has "word, than"; second edition "word from Goldsmith than."

P. 30, lines 24 and 25. First edition has "evil, I don't say a lost, spirit"; second edition has "evil spirit."

P. 49, line 3. First edition, "over"; second edition, "over for poor Stella."

P. 151, lines 2-5 read in the first edition "acquaintance. Gentlemen may speak of him to their wives and daughters as they do of certain men's men and brilliant club wags, whom it is dangerous to introduce into society. Not that Steele." In the second edition this sentence was cut out and line 2 is "acquaintance. Not that Steele," etc.

P. 193, line 14. First edition, "Almanza"; second edition, "Barcelona."

In these two editions there is a long rule at the top of each page, below the headline, and a short rule below the text, between it and the note.

The third edition is most easily distinguished by the fact that there is no rule at the top of the page, and the rule between the text and the note is a long one extending entirely across the page. This third edition has half-title and title the same as the second edition, but there is no errata leaf, the errors all being corrected. A few other slight differences in the text have been discovered. The catalogue at the end is dated "June, 1853," but is quite different; the binding is the same.

The two points by which the genuine first edition can be most easily identified are, briefly, these: The half-title should be one line only, not three lines; and the title should have twelve lines only, not sixteen.

The Anderson Auction Company will hold a sale of important books on February 1 and 2. Among first editions of nineteenth-century authors are Keats's "Endymion" (1818), correct earliest issue in the original boards; Thackeray's "Flore et Zephyr" (1836), the plates cut around like those of the Mynderse copy, which brought $709 last October; and "Pickwick" (1837), "Nicholas Nickleby" (1839), and "Martin Chuzzlewit" (1844), in the original parts. Among rare Americana are Beverley's "History of Virginia" (1722); Bartram's "Observations" (1751), uncut; Burns's "Poems, first New York edition (1788); Backus's "History of New England," 4 vols., complete (1777-1804); the first edition of "A Narrative of the Captivity and Sufferings of Benjamin Gilbert" (1784), and other items. Among association books is the volume from Keats's library, with his signature and date 1820, which brought $460 at the McKee sale, and the volume from Shelley's library with his autograph, which brought $180 in the same sale. Sporting and other colored-plate books, early printed books, and bindings are other classes represented.

On February 2 and 3 the Merwin-Clayton Sales Company will sell the library of the late Col. William Lamb of Norfolk, Va. Included are books on the Revolution, the war of 1812, and the civil war, early Western travels, etc.

Correspondence.

THE BOSTON ELECTION.

To the Editor of The Nation:

Sir: In your issue of January 13 you take, not unnaturally, a somewhat gloomy view of the Boston charter amendments, the recent election seeming to have proved the amendments a failure. You note that, though party nominations were excluded from the ballot, party politics were as present as ever, the Democratic vote electing Mr. Fitzgerald, the Republican and Independent vote being cast for Mr. Storrow.

The Democratic vote of Boston outnumbers the Republican by fully two to one. It is made up principally of the most clannish race in Christendom, welded into a unit by centuries of real or fancied Anglo-Saxon oppression. No other American city has so large an Irish population or one so united in an offensive and defensive alliance against the world. In the recent election an Irishman, born, so he said, of poor but honest parents, ran against an Anglo-Saxon who seemed the best available candidate, notwithstanding that he was also a banker, an aristocrat, a resident of the one exclusive ward of the city, and the president of the Chamber of Commerce. Mr. Storrow attacked Mr. Fitzgerald's record with great vigor, and to defend it was impossible. Perhaps the attack was too strenuous, for every one knew the shortcomings of the Fitzgerald régime. Mr. Fitzgerald kept away from his record, and by almost superhuman ingenuity persuaded his race to rally round him. Pat reasoned thus:

Fitz is not what he should be, but they tried a year and a half to find the goods on him and they didn't succeed. They didn't get him behind the bars. The other chap doesn't know us except at election time, and he's not one of us, and he's been in high finance, and that's worse than Fitz. Besides, look at the money he squanders on his big ads. He can't buy me in that way. So, hooray for Fitz, bad as he is.

Enough crucial votes were cast on the issues Irish against Anglo-Saxon, poor man against rich man, petty graft against high finance, to determine the election. Those who cast such votes gave only secondary heed to the administration for four years of the city government.

The president of the Democratic City Committee, a formidable Irish political chieftain, joined the Storrow forces. Thus strict party regularity, for years a pernicious principle in Boston municipal elections, was broken up. Mr. Storrow's vote was extraordinarily large. If 700 more votes, in a total vote above 95,000, could have been swung over, all the philosophical deductions regarding the campaign would have been radically different. In such an event there would have been a superb victory over almost impossible obstacles. Not only did the independent forces have to overcome, with a rich man for their candidate, the Irish prejudice and the habit of voting the Democratic ticket, but they had also to overcome the strictly Republican vote. This stood behind the present Mayor, whose virtues in office had exceeded his defects, and who appealed with all his might to Republican loyalty. He received only 1,816 votes, or less than 2 per cent. of the total vote cast. This shows the extent to which the voters did their own thinking. And this small remnant of the Republican vote was alone sufficient to turn victory into defeat. But for the wounded vanity of the present Mayor, which led him to become a candidate, the independent and Republican vote would have elected Mr. Storrow, in spite of all the other obstacles.

Except for the return to office of Mr. Fitzgerald, the election was a signal success. The chairman of the present excellent school committee was elected by 13,000 votes over as extreme and almost as well known an Irish-Democratic candidate as Fitzgerald himself. Seven of the reform candidates for the new council, out of a possible nine, were also elected, showing that, where the prejudice of the voters was not actively aroused, they tended to choose the best, party labels being absent.

It should be added that the school committee and City Council campaigns were waged without rancor, and without personal charges of wrongdoing by the candidates against their opponents. This permitted independent voting on the part of the Irish to seem less an act of disloyalty than in the case of the hard-pressed "Fitz."

BISHOPS AND CARDINALS.

To the Editor of The Nation:

Sir: Your issue of December 23 contains an editorial whose tone, to the Catholic, is a little strange. It is all very well to speculate upon the probabilities of the next consistory when those probabilities have some chance to become realities. After expressing doubt as to the fitness of the archbishop of Paris to receive the cardinal's hat, because of Jesuit dissatisfaction with

his lack of "ultramontanism," it is hinted that the archbishop of Montpellier might be more acceptable to the powers at Rome. Passing the remark concerning the Jesuits, who have about as much to do with a consistory as I have, permit me to state that there is no archbishop of Montpellier. The see mentioned is a bishopric, suffragan to the archbishop of Avignon; and it is not generally the custom to advance bishops to the cardinal's dignity over the heads of their metropolitans. It is true that, in a recent instance, it was done. Bishop Andrieu of Marseilles, a suffragan of the archbishop of Aix, became a cardinal, while his archbishop did not; yet there were especial reasons for the move in that case. In the first place, Marseilles is one of the most ancient sees of France, besides being the second city of the country in population and importance. Secondly, the bishops of Marseilles have enjoyed certain privileges, among them investiture with the pallium, and the use thereof, like an archbishop. Thirdly, in such a large city as Marseilles, Mgr. Andrieu necessarily bore much of the injustice of the separation law, and the red hat was a reward for his uncompromising position at that time. Fourthly, as soon as possible after his reception of the dignity, he was transferred to a metropolitan see, that of Bordeaux. Montpellier, on the contrary, is a provincial town; its bishop's metropolitan is not a cardinal. Were the bishop to be promoted to the cardinal's dignity, it would be, in all likelihood, only after his transfer to a more important see.

The bishops of Autun have often been cardinals. That city is the oldest suffragan see of the archbishop of Lyons, who is primate of Gaul, and who has invariably been raised to the Roman purple. Hence the reason for such privilege in Autun.

Of late years the number of French cardinals has been kept at seven. There is no reason for calling this the normal number, however. If the Pope desire, or if it be expedient, he can name fifteen French cardinals, or he can let the number fall to one, or two, or three, as it is now.

[The statements in our editorial were quoted as coming from the *Corriere della Sera*, whose Vatican correspondent is supposed to be well informed.—ED. NATION.]

PLUNDERING TEMPLE.

TO THE EDITOR OF THE NATION:

SIR: There is a famous sentence in Sir William Temple's essay "Of Poetry" which has created an interesting series of echoes. It runs: "When all is done, human life is, at the greatest and best, but like a froward child, that must be played with and humored a little to keep it quiet till it falls asleep, and then the care is over."

Goldsmith, in Act I of "The Good-natured Man," puts almost the same words into the mouth of Croaker: "Life, at the greatest and best, is but a froward child that must be humored and coaxed a little till it falls asleep, and then all the care is over." The words are entirely inappropriate to the character. Goldsmith must have known that he was quoting, but he makes no acknowledgment.

Sainte-Beuve, speaking of Molière, says ("Portraits Littéraires" II, 9): "Il considérait cette triste humanité comme une vieille enfant et une incurable qu'il s'agit de redresser un peu, de soulager surtout en l'amusant."

Frederick Locker-Lampson, in "Confidences," p. 313, writes: "I ask you, what is human life? At best it is but a froward child, that must be played with and humored, to keep it quiet till it falls asleep, and then the care is over." I have not the volume at hand, and am relying on the long quotation from it in Professor James's "Varieties of Religious Experience." Mr. Locker-Lampson makes no acknowledgment by quotation marks or otherwise, unless Professor James's citation does him injustice.

It would thus appear that three notable men of letters have helped themselves to Temple's idea, and to more or less of his phraseology, without so much as saying "by your leave." But perhaps he has partly deserved this treatment; there is some reason for supposing that the simile was not entirely original with him. Dorothy Osborne, in one of her delightful letters to him, written before their marriage, says: "Methinks he wakes out of his long sleep like a froward child, that wrangles and fights with all that comes near it." Possibly, too, Temple took a hint from a sentence of Robert Burton's, which resembles his slightly in idea, and notably in cadence: "The world itself, which ought at least to be wise by reason of his antiquity . . . is every day worse than other; the more it is whipped the worse it is, and as a child will still be crowned with roses and flowers." And this sentence is not Burton's, but purports to be quoted from an author of whom I know nothing but the interesting name: Hugo de Prato Florido. HOMER E. WOODBRIDGE.

Colorado Springs, January 13.

MINNEAPOLIS AND ST. PAUL.

TO THE EDITOR OF THE NATION:

SIR: According to the estimates made by the United States Census Bureau in 1906, Minneapolis had a population of 273,825 and was the sixteenth largest city in this country, St. Paul having a population of 203,815 and being the twentieth largest city. Together they had a population of 477,640, which would bring them next after Baltimore, which at that time had a population of 553,669, and ranked as the sixth largest city.

It seems a great pity that two such pushing, thriving cities should not get together and adopt one name, since they are in fact one community. To be kept apart through jealousy for either one of their present names, or because of the use made of this sentiment by local politicians for selfish purposes, does not comport with the reputation their citizens have won for level-headed sagacity as business men.

A suggestion has recently been made to me which struck me as so good that I transmit it to you. It may not be new, but I have never heard of it before. It was that the Twin Cities should drop once and for all the discussion of which of their present names was preferable, or of how these two names might be combined, and agree upon St. Anthony, the name of the town on the east bank of the Mississippi River, which was consolidated with Minneapolis in 1872.

This name belongs to neither one of the two cities and therefore should not excite any feeling of jealousy. It is a name, however, that not only once connoted the locality, but still does so, for the falls in the Mississippi River at Minneapolis are today, and always have been, known as the Falls of St. Anthony. A. T. H. BROWER.

Chicago, January 18.

RICHARD WAGNER'S "FARCE OF THE ANCIENT MARINER."

TO THE EDITOR OF THE NATION:

SIR: In looking through the "Personal Recollections of Wagner," the translation of Angelo Neumann's "Erinnerungen an Richard Wagner," published in 1908, my attention was struck by the following note on P. 202:

Many journals even published extracts and translations of Richard Wagner's "Farce of the Ancient Mariner" and his amusing "Capitulation," written late in 1870.

I call your attention to this note, not so much in order to afford Wagnerites a little amusement, as to correct the impression which might be made upon readers of the book when they find reference made to a "Farce of the Ancient Mariner" as well as to a second comedy, the "Capitulation," both written by Wagner late in 1870. Neumann's note reads: "Aus Richard Wagners Lustspiel *in antiker Manier*, der köstlichen 'Kapitulation,' Ende 1870 geschrieben." It refers, of course, to Wagner's farcical "Eine Kapitulation" or "Comedy in the antique manner."

In general, however, and apart from such slips, due no doubt to carelessness, the translation is natural and fairly faithful, occasionally, indeed, an improvement upon the German of the original.

Literature.

THE MEMOIRS OF JOHN BIGELOW.

Retrospections of an Active Life. By John Bigelow. Three volumes. New York: Baker & Taylor Co. $12 net.

The worst may as well be said at the beginning. Mr. Bigelow's book is very, very long. We state the fact mildly, if plaintively; withstanding the temptation to make it more entertaining by stating it violently. Mr. Bigelow can doubtless remember reading many of Macaulay's book-reviews when they first appeared, and if he recalls the review of Nares's "Memoirs of Burghley" he may perhaps reflect that, if book criticism is to-day less interesting than in the days of his youth, it is, at any rate, more considerate and careful. Macaulay begins:

The work of Dr. Nares has filled us with astonishment similar to that which Capt. Samuel Gulliver felt when he first landed in Brobdingnag, and saw corn as high as the oaks in the New Forest, thimbles as

large as buckets, and wrens of the bulk of turkeys. . . . We cannot sum up the merits of the stupendous mass of paper which lies before us better than by saying that it consists of about two thousand closely printed quarto pages, that it occupies fifteen hundred inches cubic measure, and that it weighs sixty pounds avoirdupois. Such a book might, before the deluge, have been considered as light reading by Hilpa and Shalum. But unhappily the life of man is now threescore years and ten, and we cannot but think it somewhat unfair in Dr. Nares to demand from us so large a portion of so short an existence.

If we cannot wholly spare Mr. Bigelow the reproach conveyed in the second half of the last sentence, we can at least record our pleasure in the palliating circumstance that his own span of life has so far exceeded the Scriptural limit. We do so, moreover, in the confidence that he will amiably wish a considerably increased longevity to a reviewer who has not been content to review his book without actually reading it. Like Dr. Nares's, it contains about two thousand closely printed pages; but we hasten to admit them octavo, and not quarto. Its weight is less than twelve pounds, and its cubic measure we have scorned to take. On the other hand, it must be said that, whatever the value of these innumerable letters, their quality is distinctly documentary rather than literary. They are meat for the historian and monographist rather than the general reader. They are more appropriate to a government publication, or, at any rate, an appendix, than to the text of a book commended by its inviting title of "Retrospections" and by the attractive personality and interesting career of its author; a book made to be bought and read—and to be reviewed—by people who are in no sense specialists in the particular phase of a limited period to which the greater part of it is devoted. The carefully selected title seems to us, therefore, measurably inaccurate. Here is not merely retrospection, but an actual reconstituting of a great part of the landscape which one is invited to join the author in looking back upon.

We would not make the stricture too severe, nor dwell too long on that aspect and those parts of the work which, while they may give it its chief value to the specialists, have so little attraction for other readers. One would much rather hasten, with the early and casual reviewers, to the purely reminiscential parts, and dwell on them entirely. But some estimate of the serious and bulky documentary contribution to history is necessary. Unquestionably, that contribution has value. Nowhere else, probably, has there been brought together in one book so much material indispensable to the historian of our relations with France—perhaps one might even say, our relations with Europe—during and immediately following the civil war. Although one could wish that the letters were fewer, and that fewer of them were given in full, so that the comment might be more plentiful, the comment is frequently illuminating, and such as no one but Mr. Bigelow could give. He has not written, and does not claim to have written, a history of the foreign relations with which he deals. Neither, we venture to add, has he presented anything which will essentially alter the general view of the course of those relations now taken by competent historians; and that fact implies, of course, a limitation of the value of what he contributes. In his own "France and the Confederate Navy" he had already set forth the substance of much of what is here more elaborately presented and sustained. Future historians will draw from the later treatment of the subject amplifications and incidents and corroboratory foot-notes, rather than fresh contentions; but they will draw from an abundant and a not ill-arranged supply. Still, we cannot help thinking it would have been better if Mr. Bigelow *had* made his contribution in the form of a careful and reasonably brief history of the events with which he deals in the second and third, and part of the first, of these huge volumes. There is no particularly good systematic account of the subject in existence, and if he had undertaken to make one, he might have given us a better book than any he has yet written—the life of Tilden not excepted.

Only one other criticism of the book as a contribution to history need detain us from enjoying it as reminiscence. The spirit Mr. Bigelow displays when he is dealing with his antagonists, the Confederacy's representation in Europe, and with other Confederates and with the Confederacy itself, will not, we think, commend the book to a younger generation of readers, whether Northern or Southern. With one exception, we have not noted a single characterization of a Confederate enterprise or man that is not either contemptuous or bitter. To dwell on the unfitness of Mason and Slidell for their mission, particularly on account of their pro-slavery antecedents, was doubtless proper and pertinent, and not unjust. But the consistently disparaging allusions to all that was done for the ill-starred Richmond government abroad, and to its servants everywhere, would far better have been withheld. The old notion of the Confederate movement as a mere criminal conspiracy is thus too much countenanced. So far as foreign relations were concerned, Mr. Bigelow would have us believe that the conspiracy was at work in the persons of our traitorous foreign representatives throughout Buchanan's administration. Specific allusions are equally uncharitable. Judah P. Benjamin, for instance, is dismissed as "a soldier of fortune politically," who, after the fall of the Confederacy, "took refuge in London, where he died." With no other knowledge of him, one would hardly infer that he died the leader of the English bar, after a career, begun *de novo* late in life, that has hardly a parallel in the history of the legal profession. One other instance of this sort of thing must suffice. Referring to Jefferson Davis's being at West Point in 1860, Mr. Bigelow remarks:

> It was during the two or three weeks he then spent at the Academy that he effected the corruption of Hardee, who could not resist the temptation of wearing the chevrons of a major-general, though regretting, I know from personal conversation with him afterwards, that he had to secure them at the cost of living the rest of his days and dying a traitor.

Good taste and fairness apart, the accuracy of Mr. Bigelow's knowledge and recollection of this incident will hardly go unquestioned. People who knew Gen. Hardee will find it particularly difficult to believe that he ever pronounced himself a traitor. It is interesting to observe that, in the one pleasant remark Mr. Bigelow makes about a Confederate, it is Lee who obtains his approval.

Most of the retrospections proper come at the beginning, in the first half of the first volume, and what Grant said of all biography—that the most interesting part is that pertaining to youth—holds fairly true in this instance. Mr. Bigelow's boyhood was sweet and wholesome, though not particularly eventful, and he writes of it very simply and pleasantly. It had not, however, the hardships common to the boyhoods of so many of his contemporaries who became famous and are now long since dead. He himself enjoyed it, apparently, quite as much as he has lived to enjoy the marvellously changed American life of his mature manhood and old age, and which, for some pages, he engagingly contrasts with the life he knew when railways were but beginning and gas and telegraphy and electricity and sulphur matches quite undreamed of. From one passage it would appear that he inclined to enjoy it too well. Writing to his father, in 1833, the bursar of Washington College had but one fault to find with him. "I think," said this deponent, "he only needs to have the exuberant spirits of youth tempered with a few more years to be a credit and happiness to those who are interested in him." The years have been granted, the growth of the country has added some millions to the number of those interested in him, and they undoubtedly account him "a credit"; but it is still a question whether the years have wrought quite the change in his temperament which the bursar hopefully anticipated.

Exuberant spirits usually mean ani-

mated human relationships, particularly friendships, and this they have continuously meant for Mr. Bigelow; but they also meant, with the character behind them, school and college once left behind, a quick plunge into work and affairs. At eighteen, he was a law student in a New York office, and a few months later a member of the Column, then a little club of youngsters, but to which W. M. Evarts and Parke Godwin afterwards belonged, and which finally, after the death of all its members except Godwin and Bigelow, bestowed its tradition and its emblem upon the Century Association. A year or two more, and he had acquired a lawyer's license, committed himself to homœopathy, and greatly widened his acquaintance. Politics and writing for periodicals followed quickly. When he was thirty-one, turning finally away from the law, he joined Bryant on the *Evening Post*.

His editorial career was remarkable, and all the more remarkable because it was, as such careers go, decidedly brief. In 1848, at the suggestion of Samuel J. Tilden, and aided by an endorsement from Charles O'Conor, the famous Irish-American lawyer, he bought an interest in the firm of William C. Bryant & Co., publishers of the *Evening Post*, for which he agreed to pay $15,000, and set about earning the money, by helping Bryant to increase the *Post's* circulation and income. How effective his help was appears from the relations into which it quickly brought him with public men of great reputation, and from the *Evening Post's* own gains in influence, as well as circulation, which made it, with but one or two possible exceptions, the foremost high-class newspaper of that time. The practical success of Mr. Bigelow's efforts appeared even more clearly, when, twelve years later, he sold his interest in the paper to Parke Godwin. Here is his record of the connection.

> I became a proprietor of three-tenths of the *Evening Post* in November, 1848. Subsequently my share was increased to a full third. The whole had cost me $17,100. I was told that Mr. Henderson, our business partner, sold his third to Mr. Villard some years later for $500,000.
>
> The net income of the *Evening Post* property for the year ending November 15, 1850, was $15,708.31. For the year ending November 15, 1860, it was $68,774.23. In the twelve years that I had spent on the paper, I had managed to pay out of its earnings what it cost me; I had lived very comfortably; I had purchased a country place of considerable value; I had had two trips to the West Indies, to which I devoted five or six months, and a tour in Europe with all my family, of nineteen months; and was able to retire with a property which could not be fairly valued at less than $175,000.

The cream of reminiscence is, however, not the record of things done, but the intimate view of famous or otherwise interesting personalities; and Mr. Bigelow evidently had from the first not merely abundant opportunities to meet important contemporaries and a gift for friendships, but during his first sojourn in Europe he had also got the habit of making notes of talks and impressions. To nine readers out of ten what he says of his many celebrated friends, and of some celebrities whom he encountered otherwise than as friends, will be much the most attractive of all these pages.

The fruitful friendship with Tilden began very early, but not before Tilden had become the careful and studious politician, and the difficult personality, he seems always to have been. Two aspects of him are well brought out by two anecdotes Mr. Bigelow gives: one of a call the two friends made on Gov. Wright, and the ludicrous care Tilden took, while insisting on Bigelow's staying, to keep him from hearing anything that was said; the other of his coming to the Post Office a day or two after the election of 1860, haggard and profoundly depressed, listening for a while to the talk of some jubilant Republicans, and then declaring, with a deeply impressive solemnity: "I would not have the responsibility of William Cullen Bryant and John Bigelow for all the wealth in the Sub-Treasury. If you have your way, civil war will divide this country, and you will see blood running like water in the streets of this city." After saying which, he withdrew, leaving Bigelow thoroughly frightened, not at his accurate prophecy, but lest he had lost his reason!

Bryant, of course, Mr. Bigelow saw daily; but there is rather less said than one expects of such purely personal relations with Bryant the editor and man as that daily intercourse must have involved, and more laudation of Bryant the poet. Of Bryant the man he does, indeed, say: "I had never met then, nor have I met since, a man of higher moral standards"; but Bryant the poet he first pronounces "the most eminent man of letters our country had then (1848) produced," adding at once, "I don't think I would take great risk in saying, has yet produced"; and later, in a letter to Montalembert, calls him "the first English poet of his age." Bryant's spotless character can probably bear the praise awarded it, but the extravagant estimate of his literary achievement must doubtless be set down as an indiscretion of friendship. A more convincing tribute is Mr. Bigelow's remark that for twenty years after withdrawing from the *Post* he kept finding himself asking, whenever in doubt about a course of action: "How would Mr. Bryant act under similar circumstances?"

N. P. Willis and George William Curtis are two other American men of letters who appear early and pleasantly. Godkin first appears about 1850, before he had become in any sense an American, although in America; and Mr. Howells in 1860, with an introduction from James T. Fields, the Boston publisher. Of the public men, Sumner enters by letter as early as 1848, and it is by letters that we oftenest hear of him and from him throughout, except in the summer of 1859, when Bigelow found him in Paris under treatment for the injuries he had received from Preston Brooks. Toward him also Mr. Bigelow's attitude is for the most part thoroughly admiring. This, however, appears after the record of some talk the two had about books:

> Sumner cannot bear to have any one talk as though anything could be found in books about literature and literary men that he did not know. I have seen him snap up poor Bemis, one of his satellites, and Mr. Lyman also, in a most ferocious way, for attempting to quote a book to him, as if he did not know it already.

One of the most interesting contrasts in the book is that between Sumner's letters and the usually despairing war-time ones of Thurlow Weed, whom Mr. Bigelow seems to have known even better. Preston King and Gov. E. D. Morgan were other public men of the period whom he knew well. Of Seward, after their multitudinous exchanges by letter and a close personal acquaintance, which came later, Mr. Bigelow makes an estimate almost wholly favorable; many readers will doubtless think that, in the matter of Motley's retirement from his post at Vienna, the defence of Seward is hardly fair to Motley.

The list of famous foreigners who come more or less fully into view is longer and more impressive; too long and too interesting to be even recounted, since even to recount is to be tempted into quotation. Perhaps an exception may be made in favor of Thackeray —or, rather, not entirely in his favor, for one glimpse of him, at his own dinner table, does not show him in such a light as "Henry Esmond" would suggest:

> Thackeray, at whose side I was seated, was suffering with chills and fever. He drank a great deal, as it seemed to me, and garnished his food with red pepper and curry to excess, for the purpose, as he said, of staving off or drawing off the chills. He succeeded in bringing on a profuse perspiration about eleven o'clock; at the same time he said he was tipsy, and talked a little to verify his diagnosis.
>
> He and Quinn throughout the dinner kept sparring with each other, at the expense to both of a good deal of personal dignity. Quinn frequently called him a humbug, and other names of that ilk, with a degree of familiarity which could well have been spared. Thackeray said at an early stage of the dinner, "Look here, Quinn, you must not be so familiar. My daughter told me the other day that you were too familiar."

Mr. Bigelow's distrustful and not otherwise particularly admiring attitude towards Gladstone seems to have been

taken early; it appears, at any rate, in the first accounts of him, including the long account of his inaugural address as Lord Rector of the University of Glasgow. Mr. Bigelow's warmest English friendships seem to have been with men of the Cobden school—particularly Cobden himself, and John Bright, and William Hargreaves. This was not unnatural, nor was it unnatural that in France he found himself drawn most strongly to men who helped him help his country—particularly Laboulaye and Montalembert. But he makes one quite as thoroughly acquainted with the justly distrusted monarch to whom he was accredited, and with the Empress, and with the unfortunate but not really culpable foreign minister, Drouyn de Lhuys.

We have said that the chief charm of reminiscence is in the disclosures about persons; but it may attain, and Mr. Bigelow's does now and then attain, an even higher interest. Now and then, as when, while on a visit to the West Indies, he is led to read Swedenborg, and then to re-read the Bible, and again after visiting the Carthusian Convent near Pisa, he touches themes of the gravest and most universal human concern. His attitude towards them is profoundly religious, and what a man who has seen so much of life, played his part in it so well, and still faces it so manfully, permits himself to confide of his own deeper beliefs has perhaps a higher value than anything of mere experience he reports. The book is in this way helpful, tonical. It is so also in another way. If we have wished it briefer and more free from a heaviness its plan entailed, it has been partly because we have wished more Americans might read it and gather, from the cheerfulness that pervades it and from the long patriotism it reveals, fresh zeal and fresh hope for their country, as well as for mankind.

CURRENT FICTION.

The Haven. By Eden Phillpotts. New York: John Lane Co.

Though the scene of this story is a fishing village, instead of the favorite moors of Mr. Phillpotts, its tone and effect are very like those of his tales of the inland. Nothing of equal force has succeeded "The Whirlwind," but the series of careful and sympathetic studies continues to add stone upon stone to his interpretation. When it is finished, it will have done for Devon what Mr. Hardy did for Wessex. Brixham is a Devonshire coast village, once of importance, but now approaching the last days of profitable hand-trawling. Its harbor has always been small, and an unfinished breakwater stands as a visible symbol of its arrested fortunes. As in "The Three Brothers," the chief figure in the story is a man beyond middle age, Captain John Major, one of the "Quay Lords" of Brixham, and one of the last successful adherents to the hand-trawling system. Major is a man of conscious and rigid piety, amazingly patient under the visitations of Providence, and as amazingly intolerant of the unorthodoxy of his fellowman. He is devoted to the sea, and it is the ambition of his life that his son shall succeed him as a master trawler. But the son cleaves to the land, marries the daughter of a farmer, and is apparently lost to the sea. The old skipper's hopes thereafter become centred in a grandson, who has a natural passion for the sailor's life; and, in the end, the son himself is driven back by a great bereavement to the consciousness of the sea as his own inherited solace. Major's wilful daughter and wild son-in-law play a hardly inferior part in the narrative; and, as usual, there is a group of village worthies in the background who act as chorus. The distinctive thing about Mr. Phillpotts's Devonshire worthies is their extreme outspokenness. They have none of the self-worshipping reticence of the Scotch or Yankee countryman, but blurt the most appalling truths into each other's ears on every occasion. In consequence, one has a sense of dealing with a human nature unglossed and articulate. Mr. Phillpotts's people are never altogether good or bad; his interpretation is, in sum, wholesome, and hopeful.

The Price of Lis Doris. By Maarten Maartens. New York: D. Appleton & Co.

Mr. Maartens has the air always of an expert story-teller rather than of a man who is under any sort of inner compulsion. He experiments pleasantly with a good many styles and themes, and attains tolerable success with all of them. Like some other writers of current fiction (though not many, according to the publishers' announcements), he is a man of talent rather than of genius. And one suspects that he has sacrificed something—the acquirement, let us say, of a characteristic and assured manner—in the adoption of an alien tongue. He disports himself in English with somewhat self-conscious agility.

"The Price of Lis Doris" is in some respects an advance upon the earlier novels. Its theme is more simply handled, its action more continuous. The two chief persons, Lis and Yetta, are of exceptional charm. But not a little doubt is cast upon them through their connection with an extremely improbable plot. Lis Doris is a Dutch boy who longs to become a painter. He (a grocer's son) is befriended almost from his birth by Yetta, the daughter of the village parson; she is a few years older than the boy. When they grow up, she marries a rich and villanous amateur in order to get the money for Lis's education. Later, Lis produces some remarkable landscapes, and allows the amateur to pass them off as his own in order to insure Yetta's happiness. She (rather incredibly) does not understand what has happened until her rascally husband's death, and is then bound by a written promise not to marry Lis. Luckily for Mr. Maartens, Lis dies. The factitiousness of the whole plot cannot be atoned for even by the clever passages of description and minor characterization which abound. For the rest, Mr. Maartens is too often merely facetious: he does not seem to suspect that he may share the deficiency of humor which he notes in his countrymen.

The New June. By Henry Newbolt. New York: E. P. Dutton & Co.

That the fourteenth century has irresistible charms for Mr. Newbolt perhaps we should have known from an earlier romance, "The Old Country." "The New June" is proof positive. Here is a picture of the England of Richard the Second. One John Marland, squire to the King's nephew, is the figure on whom the experiences of the story are draped. The central motive of the romance is the adoring homage paid to Richard by his little band of adherents. For his service neither life nor love nor the soul was too great a gift. The inconsistencies of his character, the intrigues of his reign touched not at all this personal attachment of his devotees. These, according to his needs, jousted, journeyed, fought, hid, waited, and fought again—even unto death.

Mr. Newbolt's tale steps heavily at the outset. Also, for all the ardor of its loyal liegemen, the riddle of Richard is left unsolved for us, and no analyzing light is thrown upon his reign—only a fine romantic glow. Facts are less the author's concern than truths which he has drawn up from a hundred wells of chronicle, history, genealogy, heraldry. Blended, with imagination as a solvent, his findings make up a book which, if ponderously elaborated at moments, is, all told, a worthy and rewarding work.

Veronica Playfair. By Maud Wilder Goodwin. Boston: Little, Brown, & Co.

Fiction is doing a mighty work for Biography. The youngsters of to-day have every reason to be on bowing terms with the celebrities of the past. The generations which fed on Pope, Swift, and Gay having passed away, and—almost equally—the generations which were nourished on Benjamin Franklin, a younger race of readers may well be gratified to absorb the old authors in the guise of appetizing *entrées*. There is something peculiarly appealing in the thought that Franklin, the apostle of labor-saving, should in his own turn be boiled down to quintessence and handed out in a portable form which makes su-

perfluous the study of many gigantic volumes. "The Eighteenth Century Without Tears" might well be the title of a capacious shelf of modern stories. It is, perhaps, better to meet the world's giants in compressed form than never to meet them at all. Wherefore welcome to a freshly uttered tale of the period of powder and wig and impromptu verse, where the above-named wits and others freely skip and frisk.

It had been known that Swift had, underneath all, a kind heart. How kind, we see in his fatherly befriending of Veronica Playfair. In truth, this young girl has it in her to draw forth the best of every creature. Bolingbroke stands between her and her confounding. Lady Mary Montagu deigns to ask her to write her impressions of Bath. Pope and Gay inevitably make verses to her, but for Franklin it is reserved to be the devoted friend, concealing his ardor that he may truly serve her. For it appears that it was Veronica with whose mother he lodged in Duke Street (see the autobiography); Veronica who was the cause of his tardiness in returning to Philadelphia and Miss Read; Veronica to whom he first uttered many of the wise dicta which have been said or sung in his journals—even read there by some elderly folk. The book is admirably written and put together. It is for each individual reader to say whether he takes his biography-and-fiction in an unthankful or in a joyous spirit.

NEW LIGHT ON BISMARCK.

Bayern und die Wiederaufrichtung des Deutschen Reichs. Von Prof. A. von Ruville. Berlin: Hermann Walter.

This is an ingenious and interesting book. It throws new light upon a critical period in the founding of the German Empire. In November of 1870, when the time came for statesmanship to supplant war, Bismarck found himself in an apparently complete deadlock with the South German representatives. Bavaria and Würtemberg solidly blocked the way to the kind of German unity which he thought necessary. For some days the disagreement was acute and seemingly insoluble. But suddenly the opposition broke down and the South Germans yielded everything to Bismarck. Now, the reason of their surrender, according to Professor Ruville, was that Bismarck came into possession of powerful weapons against them which they could not resist. By chance a detachment of German soldiers captured a large amount of French diplomatic correspondence in the villa at Cerçay, whither Rouher had sent it for safekeeping. It was at once delivered to Bismarck in Versailles. This was well known, as it was also that shortly thereafter the negotiations concerning a united Germany came to a swift conclusion; but the connection between the one fact and the other has not before been pointed out with anything like the detail and plausibility displayed in this volume.

Professor Ruville's thesis is that among the papers taken at Cerçay were secret letters to and from Napoleon's Cabinet deeply compromising the very plenipotentiaries from Munich and Stuttgart then withstanding Bismarck at Versailles. There is, of course, no direct evidence. The documents themselves are carefully locked up in Berlin. No one has been allowed to see them—not even Von Sybel. Bismarck permitted in 1871 the divulging of some fragments concerning Benedetti, but never hinted in public at the existence of correspondence such as Professor Ruville postulates. Yet there are many scattered allusions to it. Rouher caused to be published in the *Peuple Français* a note, stating:

> The letters of Benedetti are not the only documents which fell into the hands of the Prussian Government. All the private correspondence exchanged in 1865 and 1866 between the French Government and the Governments of Bavaria and Würtemberg was also left at Cerçay, and is now in the hands of Prince Bismarck.

This is strong testimony to the fact, though it tells nothing of what was in the letters. Others were more explicit, if still mysterious. Professor Ruville ransacks biographies and letters and reports and newspapers to bring together every scrap of evidence available; and proceeds by a process of inference and historical reconstruction to establish what must have been in general the nature of the papers which Bismarck made use of to such good effect. The author's method he describes (p. 15) as that of the "broken medal." Having found one irregular fragment, it is not hard to pick out from among a mass of others placed before you the particular bit that fits the edges of the one you started with. Professor Ruville admits that such conjecture as he builds upon cannot attain to certainty. "For the entire play of forces, we must wait for the opening of the archives, which may be hoped for in a few decades." Still, he argues, it is possible to trace the steps of the whole negotiation so minutely, and to establish the main facts so securely, as to put beyond question "much, and that the weightiest, which will surely be found in the archives."

In order to work up to the "dead point" at which Bismarck found himself in his *Einigungswerk*, and from which he so successfully and, if we may believe Professor Ruville, so dramatically passed on, we are taken through an exhaustive study of Bavaria's domestic politics and relations to Prussia, France, and Austria during the years 1865-70. Count Bray, who was Minister of Bavaria for most of this period, had been a diplomatic representative at Vienna, where he fell under the influence of Beust. By heaping up extracts from Bray's speeches and letters, our author makes it clear that Bavarian policy was distinctively averse to any further aggrandizement of the North German Confederation and sought an *entente* with Austria and with France. The same was true, in a degree, of the other South Germans. Napoleon counted upon their benevolent neutrality, if not their active aid. When the Bavarian army was mobilized in 1870 and put under the orders of the Prussian General Staff, the event was a shock both to France and Austria. It followed upon King Ludwig's decision that the French declaration of war constituted the *casus foederis* under which he was bound to act in accordance with Bavaria's defensive alliance with Prussia. This was obviously one powerful motive with Bismarck in trying to goad the French into taking the formal initiative. He knew how uncertain yet how indispensable were the South Germans. But he did not then know that a lucky accident would place in his power the means of compelling them to assent to his subsequent plans for the unification of Germany. Having in his hands their incriminating correspondence with Napoleon, he had only to hint at publishing it at a time when, after the bloody battles and great victories, it would make them odious in the eyes of all Germans. There was nothing left for Count Bray, who had been resisting Bismarck at Versailles, except to surrender unconditionally.

We have only suggested the copious argument and citation by which Professor Ruville makes out the high probability of his theory. Granting even that he has hit upon only a part of the truth, he has at least shown us another of the astonishing achievements of Bismarck. The amazing thing is not that good fortune should have brought to him at the crucial hour the spoils from Cerçay, but that he should have made use of them with such consummate skill; not thinking of them as dynamite wherewith to blow up his opponents, but rather as an irresistible lever with which to move them out of his way; gaining his end while not publicly humiliating his enemies, and saving the good name of the South Germans. As our author says, the whole affair was an extraordinary example both of Bismarck's *Glück* and of his *Selbstbeherrschung*.

PRAGMATISM AGAIN.

The Meaning of Truth: A Sequel to "Pragmatism." By William James. New York: Longmans, Green & Co. $1.25 net.

In gathering together this volume of essays, elsewhere published separately, Dr. James has done a real service, to his friends and to his opponents alike,

by presenting a clearer view of the import and implications of the pragmatic controversy, and by giving us something in the nature of an autobiographic sketch of the development of his own thought. The limits of the pragmatic doctrine, as he conceived them, and its bearing upon the philosophical tenets otherwise maintained by him, have not always been clear to his readers; and we now seem to see that this lack of clarity was due in no small part to the fact that he himself came only gradually to perceive these limits, and to define accurately the trend of thought that guided him.

No one who has followed the movement of the philosophical discussions of the last decade, in which Dr. James has taken so prominent a part, can fail to see how profound a debt is owed to him for his leadership in the contest against what may be called "abstractionism." His bugle call has awakened many men from their "dogmatic slumber" and has turned them from a fruitless contemplation of abstract problems to a more valuable study of the concrete facts of life. And this is true not only within the realm of philosophy, but in that of science as well.

It is unfortunate, however, that the points at issue in the pragmatic controversy have too often failed of appreciation because of unrestrained expressions of antipathy on the part of the pragmatists, who in this case have been the assailants. Where one who clings to well-established tenets finds himself attacked in terms of violence, he is not unnaturally led to feel that he may well await a calmer criticism before attempting to reply. This silence may easily be interpreted to imply disdainful inattention; and, in truth, such disdain on the part of his opponent has been too readily assumed by the pragmatist. Nor, when finally his opponent has been stirred to answer, does it aid in the restoration of those amicable relations so necessary to fruitful debate to meet thoughtful criticism of pragmatic contentions, as they are understood by the critic, with assertions that the critic indulges in slander (p. 274), or with suggestions that he attributes to the pragmatist views that are idiotic (p. 212), silly (p. 273), or sophistical (p. 297). That the occasional use of phrases similar to those just quoted misrepresents our author's broadly sympathetic nature is, of course, evident to those who have a thorough knowledge of his writings, and they would be passed over lightly by the anti-pragmatists but for his close alliance with Dr. Schiller of Oxford, whose language has often been irritatingly unrestrained. As matters stand, however, Dr. James unhappily appears at times to brandish a "philosophical shillelah," to quote a late English commentator, in a manner that has quite naturally put his opponents on their guard without inducing in them a receptive attitude of mind.

Taking the facts as they appear, it must seem to the unimplicated observer that the critics of the pragmatists have had ground in the latter's statement of their case for such misunderstandings as exist. For surely serious students of the pragmatist's writings have not been without excuse, if they have overlooked the fact, which Dr. James now brings into strong relief, that his contentions refer to the theory of knowledge alone, and not to the theory of being—to epistemology and not to ontology. One may search diligently through Schiller's latest important work, "Studies in Humanism," and find only incidental and easily missed acknowledgments of this fact: and the anti-pragmatists have almost with one accord assumed, and it must be granted not altogether without warrant, that the attack of Pragmatism is against ontological positions. Dr. James has therefore done us a marked service in emphasizing, as he does in the book before us (*e. g.*, pp. xix, 215), the point that his own position at least has direct significance only in relation to epistemology, whatever may be the implications of his theory of knowledge for ontology.

With this granted it at once appears possible for the anti-pragmatist to assert that the pragmatic definition of Truth in terms of "workableness" is little more than a brilliant description of a fact, which has been overlooked perhaps, but which is tacitly accepted by all. The scientist, for instance, finding his concept "workable," although ignorant of pragmatic doctrine, immediately assumes that it must be true, and endeavors to coördinate it with the body of concepts that he has otherwise learned to call true: and on the other hand, coming to believe a certain concept to be true, he directly bends his efforts to show that it is "workable." And the same process is discoverable in the less accurate thinking of the common man. But to conclude from this fact that Dr. James's service to philosophical interpretation is without great significance would be a signal error. It may possibly be, as Kantian students tell us, that we can find implicit in the writings of the Königsberg master all that the pragmatists contend for: but it is still surely a large gain to have made explicit, through our author's brilliant insight, what has heretofore been merely implicit; and it is a larger gain to have had this explicit doctrine isolated, as it were, for purposes of consideration through its concrete description by such a distinctive name as Pragmatism. And however much Dr. James may insist upon his obligations to Charles Pierce, it must be evident to all that, but for his own virile defence of the doctrine to which in future the word Pragmatism must apply, this doctrine might have remained for long without specific designation, and its broad significance might thus have failed of recognition.

The most important source of the unfortunate misunderstanding between the epistemological pragmatist and the ontologist, above referred to, is, however, to be found in the fact that the word "Truth" is commonly used in two senses (see Century Dictionary): first, to designate "a fact, a reality, a verity," and, secondly, to indicate the quality of "trueness"; for evidently the first of these meanings has ontological, while the second has epistemological significance. When, for instance, we speak of a truth, or of Truth as a whole, we refer to existence as such; and our thought bears reference, not to theories relating to the acquisition of knowledge, but to theories of being: we then use the word truth, not with epistemological, but with ontological, implications. When, on the other hand, we speak of the truth of a given proposition, we refer to the experience of mental stability which yields belief; and our thought bears reference, not to theories of existence, but to theories of knowledge: we then use the word truth, not with ontological, but with epistemological implications. Dr. James has at last brought this source of confusion into prominence; although it does not appear that we are warranted in holding, as might be suggested by his remarks on page 196, that his opponents are alone responsible for failure to take account of this distinction of meanings; for there would be little difficulty in showing that he himself, and the pragmatists in general, have been equally guilty.

Turning now to the supposed implications of this epistemological doctrine, we find an interesting sidelight thrown upon our author's contentions by the *quasi* autobiographical suggestions of his latest book. We find here that his enthusiasm in reference to Pragmatism is largely due to the fact (p. xiii) that it removes a stumbling-block in the way of the acceptance of his "radical empiricism." He holds that the "prevalent idealism" teaches that "the truth-relation is contentless experientially," while he himself aims to show that it is experiential through and through. He frankly acknowledges himself to be a dualistic realist (p. 217), and thus accepts fully the objective existence of Truth (in the ontological sense) which his opponents have often supposed him to reject; in fact, he prides himself upon his alliance with those who accept the uncritical conceptions of common sense, and we now perceive that it is this alliance that brings him into conflict with "prevalent idealism." But it is open to his antagonists to hold that he has been concerned to crush a man of straw; they may assert that the ideal-

ism he attacks is much more Platonic in form than any modern idealistic theory of prime importance. Thus his opponents feel that his vigorous blows fall short of their mark. Thus he is disappointed to discover that they claim to have emerged from the conflict unscathed.

This is not the place for discussion of the author's interesting theory of knowledge. Our experience in connection with his elucidation of the pragmatic doctrine leads us to hope that in future writings he will make clearer the meaning and significance of his contention in this regard. For as matters now stand the course of his thought is not altogether perspicuous when he speaks of "the knowing of a percept by an idea" (p. 106); and of this knowing as consisting of a "*resemblance* between a reality and the feeling's quality" (p. 6), while at the same time he rejects (p. 78) "the vulgar 'copy' theory." Nor is he thoroughly convincing when, after this, he treats of what most men would call assimilation as the primary cognitive functioning, which finally appears in what is usually recognized as full-fledged cognition where there is an appreciation of the "I" as knowing both the idea and the object, and also that the two are related. In his exposition we constantly find the activity of this "I" implied as in necessary disjunction from both object and idea, and this fact must make one hesitate before granting his basic conception, even were his meaning in speaking of the "resemblance" of idea and reality quite evident.

The reader of this review must perceive that the present book is an important contribution to current philosophical discussion. It is too technical to permit the display of the literary gifts of the author as they appear, for instance, in his lately published "Pluralistic Universe"; but his grace of manner fascinates one who is technically informed, and is persuasive where a less able writer would have failed to attract. It is regrettable to find in this, as in other of the author's late writings, the adoption of a mannerism, opposed to common and valuable English usage, in the printing of adjectives bearing personal reference without capital letters. To find him writing, for instance, of "an Absolute of the roycean type" is disturbing to those who speak our own tongue; and we may well imagine that to a foreigner, less familiar than we are with the writings of Professor Royce, the phrase might be quite unintelligible.

Life of Commodore Thomas Macdonough, U. S. Navy. By Rodney Macdonough. Boston: The Fort Hill Press.

Frequently, the names of our naval heroes are associated by the public with but one episode in their respective lives. For instance, Perry and Lake Erie, Hull and the Constitution, Macdonough and Lake Champlain, are virtually synonymous terms. We may congratulate ourselves upon the fact that our naval officers have lacked the opportunities of frequent and protracted warfare; for it is a fact, in spite of the shining examples of Paul Jones, Decatur, and Farragut, who could each count more than one day of glory. And yet the bracketting of the man and his most brilliant feat of arms may obscure the value of character and technical preparation in fitting him to profit by his one great chance. Thus Commodore Macdonough's biography is particularly useful in bringing into relief the inherent and acquired faculties of its subject. No one can read this careful chronicle by his grandson without conceiving a high estimate, both of the man himself and of the successful leader.

Macdonough entered the navy in 1800, and served as midshipman on board the Ganges during a brief cruise directed against French privateers in the West Indies. The following year, he sailed for the Mediterranean to take part in our operations off the Barbary coast. Here he was busily employed until 1806, save for a few months' intermission. He was exceptionally fortunate in his superior officers and associates, among whom were Alexander Murray, Charles Stewart, Jacob Jones (who, commanding the Wasp, captured the British sloop-of-war Frolic), Bainbridge, Porter, Decatur, and Lawrence. In such company, a steady, industrious, and intelligent young man could not fail to develop in usefulness and in capacity. In the rough school of experience and under these gifted instructors, he acquired the knowledge and skill which, subsequently, were destined so well to serve his country. What, indeed, might not be expected of Decatur's favorite midshipman," and the lieutenant in whom Bainbridge had "the highest confidence"? Macdonough happened, by good luck, to be on board a prize vessel when the Philadelphia ran aground off Tripoli, thus escaping the prison to which his shipmates were consigned after the surrender. Joining the Enterprise under Stephen Decatur, he accompanied his captain not only in the daring capture and burning of the Philadelphia, under the Pasha's batteries, but in numerous engagements with the Tripolitan gunboats. Such was his apprenticeship.

Upon the declaration of war with Great Britain in 1812, Macdonough applied at once for active duty. On September 28 he was ordered to assume command of our slender naval forces on Lake Champlain. The importance of this link in the chain of communications between the St. Lawrence and New York was fully appreciated at Washington. The Secretary of the Navy instructed Macdonough to gain and keep the supremacy on these waters at all hazards. The British on their side were no less alive to the issue. To build and launch new ships as rapidly as was possible under the circumstances, to collect the necessary guns, anchors, and other equipment, to enlist the necessary crews, and at the same time to maintain a bold front against the enemy whenever he appeared, demanded extraordinary powers. The "commodore," as he was now called through courtesy, was equal to the occasion. Tireless energy, tact, persuasion, the ability to inspire confidence and to arouse enthusiasm, were all happily combined in this young master-commandant, barely thirty years of age. Having created a small squadron under harassing difficulties, he defeated a superior British force on September 11, 1814, winning for himself undying renown in the action off Plattsburgh, now known as the battle of Lake Champlain. The victory stopped effectually the advance of Sir George Prevost and his corps of over 10,000 veterans from Wellington's army, flushed with the triumphs of the Peninsula and of Waterloo, and seeking to isolate New England from the rest of the United States through seizing and occupying the Hudson River Valley. Its effect in facilitating the negotiation of peace at Ghent can be readily imagined. The momentous event is described in minute detail by the author, but it is Macdonough's personality—exemplified in dangers and difficulties overcome, in the affection he inspired, in tender generosity towards his captives—which makes us wish to know him more intimately. And this biography, which is based on authentic records, public and private, is free from undue adulation. Fairly well written, well printed, and well illustrated, this book will be widely read, for, besides telling of gallant deeds, it memorializes a life as exemplary as it was heroic.

The Court of Louis XIII. By K. A. Patmore. New York: Brentano's. $3 50.

An entertaining and vivacious résumé of the best known memoirs of the period. It bristles with piquant anecdotes, which, although amusing, do not, in every case, seem to have any special relation to the narrative. Some of the most highly spiced are given in the original, the author evidently feeling that, at least for English readers, French, like Latin, *brave la pudeur*. The style is highly colored and frequently startlingly pictnresque. Mrs. Patmore never hesitates to use the first phrase at hand if it clinches her meaning.

The Louis XIII of Mrs. Patmore is the Louis XIII of a long tradition which has been entirely exploded in France during the last half century, but which still persists in England. He is "lout-

ish," has a taint of Charles IX in the blood (of whom he was only a very remote relation), is "a degenerate," and even his "frigid purity" comes in for censure. Thus the picture we get from the author is that of a monarch without energy, a mind incapable of resolution, an automaton whom Richelieu manipulated for his purposes, and who obeyed slavishly a minister he detested thoroughly, though never daring to shake off his yoke. Yet in every chapter of the narrative we come upon incidents which disprove her appreciations of the King's character and her account of his relation to the great cardinal. The impression left on the reader is that of an energetic, intrepid soldier, always cool and calm in the presence of danger, hard to himself, kind and considerate to the men under him, austere and impassive before his nobles, but genial and even familiar with the common soldiers —and this simply from the facts related by the author, in spite of her quite unwarranted deductions. This "degenerate" worked unceasingly over state papers in time of peace, rose early, went to bed late, and, on his campaigns, spent the whole day in the saddle without complaining.

If the author had consulted the *Papiers d'Etat* of Richelieu, published in 1875, and the King's letters to the cardinal, which were issued some years after, she would have been able to control the untrustworthy gossip of De Motteville, Bassompierre, and the other aristocratic defamers of Louis and Richelieu. From this correspondence it will be seen that, far from being the cardinal's puppet, or privately detesting him, Louis shared in all the great deeds of his minister, and loved his person as much as he admired his genius. The two hundred letters addressed to the cardinal in the King's own hand, all evincing a direct and intelligent participation in public affairs and a sincere affection for the minister, refute the legend of the crowned slave and his hated master. On the other hand, it is clear from the reports of Richelieu that he never ventured on any measure without having the King's direct authority. Louis had to be informed of the most insignificant details, and so far was Richelieu from always dictating the policy of his master that we find him humbly acquiescing when Louis insists on certain political changes. Thus, several of the reports submitted by Richelieu have annotations on the margin in the King's own hand in which an opinion the very reverse of the cardinal's is briefly and decisively given.

If Louis is depicted as a colorless symbol rather than the virile and conscientious sovereign which he was really, Richelieu fares even worse. He is the Richelieu of the scandalous chronicle and of Victor Hugo, de Vigny, and Dumas. The author has given an intelligible and fairly accurate account of the great cardinal's policy, but we should have had a better idea of it if it was related in a more concentrated fashion in a special chapter, instead of being chopped and scattered over several chapters in chronological slices. Every one can now see how unfortunate it was that Richelieu should have centralized power in the King when he might have associated the country with the government by strengthening national and local liberties. But his excuse is that, with the forces at his command, he could not do otherwise. The general movement of French society was, unhappily for the future of France, entirely different from that of England, and hurried him in a direction it was impossible for him to change. The wish to make the dying words of a great man an epigram is universal, and Mrs. Patmore repeats the *mot* very unjustly attributed to Richelieu:

"Does your Eminence pardon your enemies?" probed a priest assisting in the final preparation for the death transit.

"I have no enemies but those of the State," replied the dying voice, with untottering conviction.

But the real words of the cardinal's reply, according to the testimony of his bitter enemy, Madame de Motteville, were: "Je prie Dieu qu'il me condamne si j'ai eu d'autre intention que le bien de la religion et de l'état," and they no doubt expressed his own conception of the tenor of his life.

But Mrs. Patmore has written a most amusing book, however imperfect it may be as history. The Odyssey of the Duchesse de Chevreuse, through the south of France, may have suggested to Gautier his "Mademoiselle de Maupin." Her adventures are even more laughable and almost as indecorous.

The Legends of the Jews. By Louis Ginzberg. Vol. I. From the Creation to Jacob. Philadelphia: Jewish Publication Society. $2.

Mohammed called the Jews the "People of the Book." The title was certainly justified by the history of Rabbinic literature both before and after his date, in the Talmud and the Midrashim. Everything which engaged the thought and the imagination of the Jewish people was connected in some way or other with the words of the Old Testament. Law and Legend, what passed for science and what was thought to be history, were equally connected with the verses of Holy Writ. The Jews went even further and developed new adventures for the heroes of Scripture and gave new interpretations and sought out hidden meanings for the adventures already recorded there. These constitute a large part of the "Hagada," or legendary lore of Talmudic times. They form the subject of Dr. Ginzberg's "Legends of the Jews," the first volume of which has just been issued by the Jewish Publication Society of America.

This deals with the supplementary legends, relating to the chief heroes of the Pentateuch from the Creation to Jacob. Another volume is to deal with the remaining heroes of the Pentateuch; while a third, already written and printed but not yet published, collects the legends about the remaining Biblical characters from Joshua to Malachi. A fourth volume is to contain an introduction, notes, sources, and requisite indexes. When completed, the work will constitute a most valuable collection, giving, for the first time in English, or indeed any modern language, some insight to the intellectual and imaginative processes of the Jewish mind from the first millennium after Christ. There is certainly nothing so full or trustworthy in the English language. It is true that, many years ago, a couple of volumes were produced by the omniscient Baring-Gould, entitled "Legends of Old Testament Characters"; but these were an uncritical *pot pourri*, and suffered from the inaccuracy which is usually associated with omniscience. In German, Dr. Wuensche has translated, with fair accuracy, many of the Midrashim, in which these legends are found. Yet, even in that all-embracing tongue, no attempt has been made to bring together all the legends about Biblical characters, except in a few instances, as in the monograph of B. Beer on the hagadic legends relating to Abraham.

Dr. Ginzberg has had an almost unique opportunity before him, and seems to have practically exhausted the field, sweeping into his net not only those legends of Islam which might reasonably be supposed to have a Jewish origin, but also many passages from the Fathers of the Church, such as Origen and Jerome, who are known to have been acquainted with Jewish legend. This is the field from which, indeed, Dr. Ginzberg reaped his first harvest of scholarship. Until the fourth volume appears, giving Dr. Ginzberg's sources, it will be impossible to judge whether he has not cast his net too widely in the patristic sea. One doubts, for example, whether the Creation legends of the Jews were so full of references to the Messianic Period as is represented by these collections. And, in the earlier portions of this volume, the similarities between Christian and Jewish myth and legend, about creation and about man, about sin and the Devil, are so striking as to raise doubts as to the source either of the one or of the other. Either Christian theology owes more than has hitherto been suspected to Jewish beliefs, or Dr. Ginzberg has included in his sources passages "contaminated" by Christian dogma. This is again a matter on which no judgment

can be passed until the appearance of the fourth volume enables us to determine how far Dr. Ginzberg is dependent upon purely Jewish sources and upon Church tradition assumed to be Jewish.

Meanwhile, putting aside these points of method, one can only express gratitude for the erudition and skill which have brought together so much instruction, and, one may add, amusement into the present instalment of Dr. Ginzberg's work. It required no little literary skill to make up such a mosaic as we have before us, pieced together from fragments often in different languages and frequently from different climes and times. This Dr. Ginzberg has done with great success and his efforts have been seconded by the skilful manner in which his work, originally written in German, has been put into quasi-Biblical English by Miss Henrietta Szold. Their combined efforts have produced a work full of interest and equally full of instruction.

The Story of Pisa. By Janet Ross and Nelly Erichsen. New York: The Macmillan Co.

Of this volume, which belongs to the Mediæval Town Series, Mrs. Janet Ross has written the historical chapters, while the description of the city is from the pen of Miss Nelly Erichsen, who has also contributed the drawings which illustrate it. Pisa has waited long for a good history and a good guide-book, but the second of these needs, at any rate, is fully supplied by the work before us. From the point of view of the tourist, who desires to do his sight-seeing intelligently, no more charming book could well be imagined. Here is no barren catalogue after the manner of Baedeker, but a full and vivid account of the mediæval city, which is thoroughly worth reading in one's own study, even if one does not know Pisa and has no immediate prospect of visiting it. Miss Erichsen has gone to the sources not only for her facts, but also for her inspiration, and it should be very difficult for any one to write after her. Certainly, nothing better than her portion of the book is to be found in all the series.

Of the historical section, on the other hand, we are not able to speak quite so highly. We fully realize that it is no light task to write the history of such a town as Pisa in five short chapters; but that does not blind us to the fact that Mrs. Ross has not entirely succeeded. She would, we think, have been well advised to remember that the series for which she was writing was a Mediæval Town Series, and to have confined herself to the story of the Commune. Then, her narrative, though in the main sufficiently accurate, hardly ever rises above the level of a chronicle, with the result that the mental pabulum it affords, while no doubt nourishing, is more than a little dry. We remember that, in our boyhood, we occasionally sampled the bran which was provided for the sustenance of our tame rabbits, and the sensations which we then experienced were vividly recalled by the perusal of her pages. The art of adequate condensation is not an easy one, and, even when acquired, can hardly be exercised without much study and patience. Mrs. Ross would have done better had she digested her facts a little longer before putting them on paper. Still, it can scarcely be denied that, whatever its shortcomings, her work constitutes a useful résumé of Pisan history, while of actual errors, we have found extraordinarily few. In her account of the efforts of the Viscounts to preserve their authority (p. 28), she might profitably have told us who and what the Viscounts were—the ordinary tourist certainly will not know—and her narrative of Pisa's dealings with Sardinia should, in a second edition, be corrected after consulting Professor Besta's "Sardegna Medioevale," so recently reviewed in these columns. The word *castello* should not be translated "castle," when the reference is to the town of Pontadera (p. 56); and we cannot imagine why, on page 51, *quadrelle* is rendered "quadrangular shafts." This is a definition rather than a translation, and we possess the very same word in our English "quarrel." We may, perhaps, add a query to Miss Erichsen's statement that "clothyard shafts" were shot by the Pisans in their faction fights (p. 128)—we were under the impression that they used cross-bows—but these are all the disputable assertions which we have discovered in a book of above four hundred closely printed pages. There are very few in the series like it; and though, as we have said, the description of the city is the best part of it, the whole volume is excellent and should find a place in every library which has a shelf for works on things Italian.

Notes.

Those who are interested in the eloquence of our perpetual candidate may satisfy their thirst in the two volumes of the "Speeches of William Jennings Bryan, Revised and Arranged by Himself" (Funk & Wagnalls). A biographical introduction has been supplied by his wife.

Miss Josephine Tozier, who some time ago published an entertaining volume, "Among English Inns," has now ready a book entitled "Susan in Sicily," to be issued in February by L. C. Page & Co.

From Laird & Lee we receive an "English-Italian and Italian-English Dictionary" made in convenient form and size for the traveller's pocket. Various grammatical tables and lists of words add to its usefulness.

Our old friend, the "Almanach de Gotha," comes to us this year (from Lemcke & Buechner) with portraits of the Princess of Wales, the Prince of Wales, Mohammed V, and President Taft. For the rest, we have the same useful dictionary of information in regard to the aristocratic families of Europe and in regard to the government of the countries of the world.

The Funk & Wagnalls Company announces the following books to be issued early this year: "The Crowds and the Veiled Woman," by Marion Cox; "Types from City Streets," by Hutchins Hapgood; "The Good of Life and Other Little Essays," by W. C. Wilkinson; "Nervous States: Their Nature and Causes," by Paul Dubois; "Makers of Sorrow and Makers of Joy," by Dora Melegari; "History of Socialism in the United States," revised edition, by Morris Hillquit, and "Dominion and Power," by C. B. Patterson.

A. C. McClurg & Co. will soon have ready a book by Dr. William S. Sadler of Chicago, entitled "The Science of Living; or, the Art of Keeping Well." The same house announces a volume from the pen of Hon. Isaac N. Phillips, reporter for the Supreme Court of Illinois, which is said to give an original analysis of Lincoln's character. The book will be published in good season for Lincoln's birthday. "The Diary of James K. Polk," which was promised for last autumn, has been postponed until the coming spring, on account of the great labor attending the preparation of the work.

A fifth edition of Alfred W. Pollard's "English Miracle Plays, Moralities, and Interludes" is issued by the Clarendon Press, showing from the fourth edition "a few corrections and alterations, . . . some of them due to suggestions by Dr. Skeat." A scholarly work is thus brought nearer perfection.

The development of Mesopotamia by following the ancient systems of irrigation has now been taken up by the Turkish government. Sir William Willcocks, the engineer in charge, describes these systems and their present intended application in the *Geographical Journal* for January, and incidentally discusses an old Biblical question. He locates the Garden of Eden in a region to the northwest of Bagdad and believes the Ararat of Noah to be near Ur of the Chaldees, the birthplace of Abraham, in the southern part of the delta. The first results of the completed work will be the bringing into cultivation 3,000,000 acres of land now desert and an appreciable addition to the world's production of wheat and cotton, which he proposes to carry to the markets of the world by a railway from Bagdad to Damascus. This number also contains the valuable paper of Mr. Albert Perry Brigham on the "Development of Wheat Culture in North America," read at the recent meeting of the British Association.

Of the papers by Thomas Wentworth Higginson bound up together, after the title of one of them, "Carlyle's Laugh" (Houghton Mifflin Co.), several, at least, have been printed in various magazines and earlier books, and one of them, an essay on George Bancroft, in our own pages. All of them

are of such a literary or historical quality as one naturally expects from Col. Higginson, and a fair proportion deal with other Americans of letters: Cooper, Brockden Brown, Thoreau, Alcott, Norton, Stedman, Edward Everett Hale, Scudder, Emily Dickinson, and others. It is natural, too, that of the American papers a clear majority have to do with New Englanders, most of them known personally to the essayist. And there is a pleasant retrospective flavor to the papers on Göttingen and Harvard a Century Ago, on Old Newport Days, and on A Half-Century of American Literature. This last essay is a plea for individuality, or at least nationalism, in our literature. To the Cambridge critic there would seem to be no great need of apeing English standards. Even our newcomers unconsciously say with David Wasson, writes Col. Higginson, "The Englishman is undoubtedly a wholesome figure to the mental eye; but will not twenty million copies of him do, for the present?" There is, undoubtedly, a tendency in the United States to transfer intellectual allegiance to science rather than to literature; our author recognizes this, but thinks a change will come in due season. We may close this note in quoting the words of Clarence King, formerly director of the United States Geological Survey, spoken shortly before his death, and reproduced by Col. Higginson as bearing on this point:

> With all its novel modern powers and practical sense, I am forced to admit that the purely scientific brain is miserably mechanical; it seems to have become a splendid sort of self-directed machine, an incredible automaton, grinding on with its analyses or constructions. But for pure sentiment, for all that spontaneous, joyous Greek waywardness of fancy, for the temperature of passion and the subtler thrill of ideality, you might as well look to a wrought-iron derrick.

All the original editions of Cotton Mather are rare, but the scarcest surely is "An Elegy on the Much-to-be-deplored Death of that Never-to-be-Forgotten-Person the Reverend Mr. Nathanael Collins," Boston, 1685. A single copy exists in the library of Brown University. Otherwise it was to be had only in the limited edition of the Club of Odd Volumes. In order to obtain an example, a descendant of the Rev. Nathaniel, Dr. Holdridge Ozro Collins, has been impelled to edit an exact reprint which bears the press mark of the Baumgart Publishing Co., Los Angeles, Cal. It is well printed and follows the unique original in every typographical and orthographical peculiarity. Based on Spenser's famous lament for Astrophel, it is in the main a travesty. We prefer to represent it by a pair of stanzas that yield some authentic afterglow of Elizabethan eloquence:

> O Ghastly Omens! if Paræus dy
> Let Heidelberge look to 't. If Austin go
> Let Hippo tremble. If Elisha fly
> After his Master, next year brings a wo.
>
> I fear of both sorts now Mortalities,
> Of Famines too I fear the worst, I fear
> The Gallop of no less Calamities
> Than can be wrap'd in a pale Comet's Hair.

The Clarendon Press is issuing an edition of Spenser's Works in three volumes, two of which, containing "The Faerie Queene" edited by J. C. Smith, have already appeared. In making his text Mr. Smith has chosen for the first three books the second edition of 1596, for the second three books the first edition of 1596, and for the cantos on Mutability the first edition of 1609. This choice, which represents the text so far as it was emended by Spenser himself, is the only logical procedure, and was followed also by Prof. R. E. Neil Dodge in the Cambridge edition. These two editors differ, however, in one respect. Professor Dodge for the first three books retained the spelling of the 1590 text, holding that the changes introduced in this respect in 1596 were the work of the printer and not of the author. Mr. Smith follows the 1596 text more rigidly, and indicates in the footnotes the slightest departure from it; he gives also the principal variations of 1590 and 1609. The Oxford text follows the Elizabethan usage of u and v, i and j, but avoids the long s; the Cambridge text modernizes in these cases. Of the type and page of the Oxford edition little need be said; they have the same excellence as is to be found in the Blake and the Caroline Poets issued within recent years. The unscholarly reader will be troubled by the absence of a glossary, but it may be planned to supply this need in the third volume when it appears. Those who are satisfied with the bare text cannot desire a better edition than this.

Major Arthur Glyn Leonard's "Islam: Her Moral and Spiritual Value" (London: Luzac & Co.) is a vigorous plea for Mohammed, his religion, and its adherents. He does not deny that Islam and its founder have limitations and faults, but he holds that Mohammed was a sincere and earnest reformer, a great patriot and statesman, and points out that the religion he established has proved sufficient for a large part of the human race. Islam, he insists, is not a menace to Christianity, but a serious and, in the main, moral faith, worthy of respectful study by Europeans and Americans; he observes justly that it should not be held responsible for the barbarities of certain of its adherents. In a highly laudatory "foreword" the well-known Moslem historian and apologist, Judge Syed Ameer Ali, says that, while some of Major Leonard's remarks about Mohammed will not be approved by Moslems, he has gone to the fountain-head, the Koran, and has grasped the spirit of Islam. The volume is well written, and the author's sincerity and enthusiasm make it decidedly attractive.

Miss Esther Singleton's skill in bookmaking is displayed with characteristic success in her volume entitled "Dutch New York" (Dodd, Mead & Co.). Out of material culled from diaries and letters, wills and inventories, court records, and other similar documents, she has constructed a panorama of the daily life of a citizen in New Amsterdam, in which a circumstantial account of orchards and gardens, houses and streets, dress, furniture, and plate prepares the way for sketches of housekeeping habits, education, religion, courtship and marriage, taverns and excise laws, sports, and trade. For background, there is some good description of contemporary life in Holland. Granted that the incidents chosen are typical—and Miss Singleton has a pretty sure historical sense in her field—they show the seventeenth century Dutchman in America to have been, so far as circumstances permitted, a tolerably faithful counterpart of the seventeenth century Dutchman at home. For a generation before the English conquest, he lived well, furnished his house substantially, collected bric-a-brac and pictures, entertained generously, worked hard, drank deeply—every fourth house in New Amsterdam sold liquor—cherished his wife and children, drove sharp bargains, even with his best friends, worshipped after the approved reformed order, and met death with a serene consciousness that his burial, like his christening, would be attended with pomp and ceremony proportioned to his station. Such books as this few will venture to read through, but they add worthily to our historical information at the same time that they pleasantly beguile the idle hour. The presswork of the volume is attractive, and most of the illustrations, though distributed without much regard to the subject matter, are well executed. The date of William Byrd's trip to Albany (page 199) is evidently a misprint for 1685.

Basil Stewart's "My Experiences of Cyprus" (E. P. Dutton & Co.) is now reissued in revised and enlarged form. It gives a spirited account of an island that but for bad communications and accommodations would be sought by tourists. The photographs of the noble remains of Famagusta, the accounts of early frescoes crumbling from the walls of a score of churches whet the curiosity. The chief deterrent is the climate, for which our author can say little good. On the whole, this book has a melancholy cast. One reads of the natives equally anxious to destroy an old wall or a young tree, of the burden of the Turkish tribute, to which England foolishly acceded when she took the island, of a home government vacillating always and attempting needed reforms by halves. But this sadness is in the matter itself, not in the manner, which is refreshingly vivacious. Of the Turkish navy we have never heard a dull anecdote, but rarely has a better one come to us than this with which our author sweetens his sad conclusion:

> A short time ago the Sultan of Turkey had occasion to confer some decorations on certain British naval officers stationed at Malta. He accordingly dispatched a squadron of cruisers from Constantinople with orders to sail for Malta and invest these officers with the decorations. After an absence of three months the squadron returned to Constantinople. The commander-in-chief, being asked if the decorations had been duly conferred, replied: "We could not carry out your Serene Highness's wishes; Malta no longer exists, and we were, therefore, unable to find it."

The excellent compendious "History of Mediæval Philosophy," by Maurice de Wulf, professor at the Catholic University of Louvain, has appeared in a third edition, translated into English by P. Coffey of Maynooth College, Ireland, under the sanction and supervision of the author (Longmans, Green, & Co.). The preface, in unlubricated English, is from the author himself; and an examination of the work corroborates his statement that this is a veritable third edition, with some revision and with the bibliographical notes brought down to date, so as to include whatever of importance has appeared since the publication of the second edition (in French) in 1905. The work begins with an elaborate sketch of Greek philosophy, and especially Neoplatonism, as the store from which mediæval philosophies were so generally drawn; and proceeds to its main task of "placing in their proper historical set-

ting, the numerous philosophical systems of the Middle Ages and tracing their mutual doctrinal relations." The word "doctrinal," as used here, should not be taken in the common sense of dogmatic or theological; for the work consistently carries out the author's purpose of treating mediæval philosophy as rational investigation, and as distinguishable from "scholastic theology, which, in its dogmatic aspect, is a body of doctrines received through a positive revelation from God" (p. 101). It is doubtful whether this distinction is really applicable to mediæval thought; but at all events an observance of it has enabled Professor De Wulf to present a most serviceable manual of mediæval philosophy, disencumbered as far as possible from the parallel, or rather interwoven, development of patristic-scholastic dogma. The learning and competency of the author in his chosen field are unquestionable.

The Columbia University Press (Macmillan Co.) has published an Assyrian Primer by J. Dyneley Prince, Ph.D., professor of Semitic languages in Columbia, to meet the need of a series of progressive lessons for beginners in Cuneiform. The main body of the book, including the sign lists, and exercises, is an autograph reproduction. The glossary is printed from type, the Cuneiform characters being transliterated into Hebrew. We note the fact that Dr. Prince has recently been elected Senator for Passaic County, in the State of New Jersey, having previously been speaker of the House, because it is so unusual to find a practical politician occupying a chair of Semitic languages and publishing books of this nature.

The Rev. Robert F. Horton, the author of "Great Issues" (Macmillan), represents the modern recrudescence of Muscular Christianity. His will to believe is so strong and large as to admit lodging space for a reasonable amount of alien science and even skepticism. He is a lover of the cerebral water-tight compartment. Keep your science and your faith apart and neither will trouble the other. Obviously this is sound mediævalism; in fact, the merely ancillary position of science is hinted at if not affirmed. Myths, Religion, Morality, Politics, Socialism, Philosophy, Science, Theology, Literature, Art, Life, Death—such are the truly great issues that are here cheerfully elucidated. Mr. Horton's manner has dignity and force, but he strides all obstacles with the seven-leagued boots of the devout pragmatist. "The churches seem to be dying, but Christianity is living," is a characteristic paradox. As to the story of Christ, he believes it to be essentially true, but if it were indeed a myth it would have equal moral claims upon us. For Christian Science he entertains a tenderness, since the doctrine seems to provide cash values in personal serenity. Our essayist is widely read, and his illustrations are frequently better than the substance of his discourse. He was at Oxford "in the days of the æsthetes," but to judge by the essay on art it did him rather little good. In general, he exemplifies a sort of temperamental optimism that easily invents the few intellectual warranties it needs. All his suppositions come out well. For instance, he writes: "If Protestantism is a failure, as Dr. Newman Smyth implies, and as it would seem from the decay of the Protestant churches on the Continent, the alternative is not a return to Catholicism, but a return to Christianity." Our two quotations suggest the mystical and undefined sense that Christianity has in this book. In fact, the landscape of "Great Issues" has no metes and bounds. For that reason genial, long-winded folk of roving mood will like it immensely. Cautious folk who prefer to keep their intellectual bearings may as well be warned off once for all. One must share Mr. Horton's robust religious impressionism to profit by his counsels.

Absolutely new philological material is brought to light in the recently published "Grammatik der Dschaggasprache," by J. Raum, for several decades missionary under the auspices of the Leipzig Society in Africa. This volume constitutes the eleventh in the series edited by Prof. E. Sachau, the director of the Oriental Seminary in connection with the University of Berlin and published as the Archiv für das Studium deutscher Kolonialsprachen. This grammar lays a solid foundation for the study of the languages spoken in the vicinity of the Kilimandsharo, and is a worthy companion work to Meinhoffe's able "Versuch einer Lautlehre der Bantusprachen." A learned introduction has been added, with historical, anthropological, and ethnological discussions. The literary contents of the grammar are largely myths, sayings, proverbs, riddles, and the like, collected by the author in his intercourse with the natives.

The National Society for a History of the Risorgimento appealed, in its recent congress at Florence, for a little "good sense" in the rules governing research in Italian state archives. Of political documents only those antedating 1815 are now accessible. For later periods a special request must be made, separately for every document, to the Minister of State. Even then, permission is rarely given for any paper later than 1848, and, when granted, is surrounded with endless precautions and restrictions. These are enough, one historian declares, "to wear out the patience of even the most persistent investigator." Similar regulations have recently been put in force by the minister of education regarding all papers, both political and private, in the government libraries. The congress also appealed to the government to restrict the work of the commission, appointed by the Minister of Education, to obtaining useful contemporary documents and to leave to this society the task of preparing and publishing the projected history. Further evidence of the government's attitude is furnished by its withdrawal of support from the proposed exhibition of historical documents in the new monument to Vittorio Emanuele at Rome, on the semi-centennial of the Risorgimento, in 1911.

In 1871, Prof. Alexander d'Ancona published, from two virtually identical manuscripts, preserved in the National Library of Florence, a fourteenth century text of "La Leggenda della Reina Rosana e di Rosana sua figliuola." The edition was limited to 153 copies, so that the number of readers was necessarily small. With the object of extending their circle, Miss M. Mansfield has now translated the booklet into English, under the title of "The Tale of Queen Rosana and of Rosana, Her Daughter, and of the King's Son Aulimento" (London: Nutt). The work has been excellently done; and it has, as she observes, a special interest because the legend in question affords an almost unique example of the evolution of a *Chanson de Geste*, through the Ensample, to the Morality Play. The text is preceded by an invaluable introduction; and we heartily recommend this charming little volume to all those who are interested in such matters.

Dr. Wills De Hass, physician and anthropologist, died in Pittsburgh on Monday at the age of ninety-two. Among his publications were "History of the Early Settlement and Indian Wars of Western Virginia," "History of West Virginia," "Attempts to Separate the West from the East," "The Civil War in Virginia," "Pre-Historic America," "The Mound Builders," and "Reminiscences of Half a Century."

Henry T. Coates, editor and author, died at his home at Berwin, a suburb of Philadelphia, on Saturday, after a short illness. He was sixty-seven years old. Among the publications which he edited were the "Fireside Encyclopædia of Poetry" and the "Children's Book of Poetry." He was the author of "Short History of the American Trotting and Pacing Horse." Mr. Coates was for many years a member of the firm of Porter & Coates and Henry T. Coates & Co., Philadelphia. He was widely known among book publishers.

From Bologna comes the report of the death of Francesco Bertolini, professor of ancient history and vice-principal of the university.

Stanislaus Lucas has just died at Breslau, in his fifty-eighth year. He was the author of a number of historical novels, including "Der Senator" and "Graf Gaschin."

Science.

Military Hygiene for Officers of the Line. By Alfred A. Woodhull, A.M., M.D., LL.D. Fourth edition, rewritten, and greatly enlarged. New York: John Wiley & Sons. $1.50.

The Elements of Military Hygiene. By P. M. Ashburn, Major Medical Corps, United States Army. Boston: Houghton Mifflin Co. $2 net.

In its original form, Dr. Woodhull's book was an abstract of lectures on military hygiene given at the Infantry and Cavalry School at Fort Leavenworth. The present revision attempts to answer the natural inquiries of the line officer, who is solicitous about the welfare of his men; and subjects belonging exclusively to the medical staff have been omitted. Dr. Ashburn's book is the outcome of the author's idea that the sanitation of the army would be greatly improved if line officers and enlisted men could be made, through their interest in the subject, to coöperate more freely with medical officers. The chapters on the causes of disease and the prevention and

control of epidemics are of especial value, and if properly understood by the rank and file would do much to prevent the spread of infectious diseases, both in the field and in camp.

For sake of comparison, the views of these two writers on the much discussed question of alcohol are worthy of mention. Dr. Ashburn believes that alcohol is as much, if not more, abused by Northerners in the tropics than at home. Not that alcohol is more harmful in the tropics than elsewhere, but because its excessive use in all climates irritates a hard-worked "sluggish" liver, already subject to congestion. Its excessive use among soldiers proceeds mostly from idleness, evil example, or carelessness. Heat stroke and heat exhaustion, he says, are much more likely to occur in a drinking man than in a total abstainer. Dr. Woodhull notes the fact that whiskey was once a part of the ration, but now is supplied only through the medical department. He says:

> The sum total of work done with alcohol is less than that done without it. The quality as well as the quantity of work done is diminished. . . . This is strikingly evident at the target range, and would be still more conspicuous under the conditions of war. . . . The administration of alcohol in disease is entirely distinct from its use as a beverage in health, and is a question of therapeutics, not of hygiene.

The causes and prevention of malaria, yellow fever, and typhoid, the soldier's greatest enemies, are thoroughly discussed by both writers and brought up to date.

Both of these volumes will serve well the purpose for which they were written.

The Columbia University Press will publish at an early date a volume on "Ants: Their Structure, Development, and Behavior," by Dr. William Morton Wheeler, professor of economic entomology in Harvard University.

Every one engaged in the care of plants, even in the most amateurish way, must feel the need of having certain questions in regard to moulds, rusts, smuts, and mildews, answered in a straightforward manner. To such persons Prof. B. M. Duggar's "Fungous Diseases of Plants" (Ginn & Co.) will be welcome. The diseases are described clearly, and are well illustrated. Professor Duggar is admirably fitted by his acquisitions in plant physiology to take a broad view of plant pathology, and his treatise is characterized by its symmetrical proportions and true perspective. With this excellent work in hand, any intelligent lover of plants ought to recognize the special foes with which he has to contend, and get sound hints as to ways and means of meeting them. The author uses the word hopeful "control" when alluding to the treatment of fungous diseases, and this sanguine spirit is a good asset when one undertakes the hard task of fighting them.

Drama.

The great need of the theatre to-day, as has been often pointed out in this journal, is capable and enlightened management. Plays of a high literary and dramatic order are rare enough now, and are likely to be still more rare in the future, if they cannot be assured of adequate and intelligent representation. Plays of such notable quality as "Sappho and Phaon" and "Ulysses" were sacrificed to managerial incompetency. Many other similar, if less flagrant, instances might easily be quoted. The latest miscarriage of this sort occurred in the case of "The Faith Healer," of William Vaughn Moody, which fell far short of its legitimate effect, when acted in the Savoy Theatre here, owing partly to the grave error of the producer. Henry Miller, in casting himself for a character to which he was unsuited either by his artistic methods or his temperament, and partly to injudicious changes in the text made solely for theatrical effect. The play itself, in its original shape, has been reviewed fully in the *Nation* (March 18, 1909), and it is not necessary to describe it again in detail. Briefly, it is a psychological study—intellectual, emotional, poetic, and truly dramatic—of Ulrich Michaelis, a desert-bred zealot, who, deeming himself inspired after a vision of Christ, proceeds to work miracles by faith. One Indian boy, accounted dead, he restores to life. After apparently healing a confirmed paralytic, he encounters a girl for whom he conceives an earthly passion. Believing this to be sinful, he is conscious of a loss of power, and when the paralytic relapses and an infant in his charge dies, he regards himself as a traitor to his mission and a discredited prophet. But when he learns that the girl is no temptress, but a repentant Magdalen, in search of spiritual healing, he recognizes the sanctity of human love and feels his power restored. The paralytic walks again, and the infant rallies. As the curtain falls he expresses an ecstatic hope that he is about to scale heights of love and life of which he has not dreamed hitherto. All the other personages of the play—a materialistic farmer, his saintly wife Mary, his practical sister Martha, an orthodox parson, a skeptical doctor, a superstitious old negro, etc.—typify various phases of thought, are depicted with great skill and veracity, and play their several parts in the drama in a logical and effective fashion.

The piece was played in its original form in the West without success, and then remodelled. Four acts were condensed into three, scenes were transposed, new matter was added, and vital passages excised. These changes—whoever was primarily responsible for them—were disastrous. The gain, if any, in purely theatrical situation was insignificant, the loss in progressive psychological development deplorable. But the intellectual, poetic, and emotional qualities of the play—even in this mutilated shape—would have asserted themselves if the John the Baptist figure of Michaelis had been embodied by some more spiritual, imaginative, and eloquent actor than Mr. Miller. His rugged personality and the slow, massive dogged energy of his style, helped him to triumph in "The Great Divide," but were fatally inapplicable to the character of the haggard, fiery, rhapsodical seer Michaelis. But actor-managers, it seems, must play the leading parts or forfeit their self-respect. The worst of it is that any misconception on their part, of their own histrionic abilities, may ruin the prospects of the finest play, to say nothing of the author. "The Faith Healer," although somewhat vague in its meaning and intent, as if Professor Moody were himself in doubt concerning the true nature of the phenomena he discusses, is a remarkable work, deserving of far more sympathetic treatment than it has received.

It is good news to hear that we are soon to have the opportunity of seeing and hearing Edith Wynne Matthison in the New Theatre. She is in the front rank of living actresses. She will be seen in a production of Maurice Maeterlinck's "Sister Beatrice," and in a revival of "The Winter's Tale."

Because they have not been able to find the right actor and actress, Liebler & Co. have been prevented from putting on here C. S. McLellan's play, "Judith Zaraine," which will be seen in London this week.

"The Tenth Man" is the title of the new comedy, by W. S. Maugham, which will be produced in London soon, with Arthur Bourchier in a leading part.

Monckton Hoffe, the author of "The Little Damosel," is at work upon a new comedy for Charles Hawtrey.

The members of the Incorporated Stage Society of London have chosen for their next production a three-act play entitled "The Way the Money Goes," by Lady Bell, who has long taken the deepest interest in the industrial classes. It is with the condition, the requirements, and the aspirations of these that her latest work is concerned. One of the evils attacked is that of gambling.

Mr. Bourchier has entrusted to Kenneth R. Barnes the adaptation of Paul Hervieu's play "Connais-toi," which he will produce in London under the title of "Glass Houses," and has also commissioned Miss E. M. Symonds ("George Paston") to make a one-act piece out of a single situation in a French play which he purchased for this purpose. In this he and Miss Violet Vanbrugh will appear as workpeople. A new play by H. M. Vernon, the author of "The Deputy Sheriff," may possibly be another of Mr. Bourchier's future productions. The title of this play, which has a Chinese background, will be "Mr. Wu"—Wu being, so to speak, the Chinese equivalent of Smith.

Music.

TWO OPERATIC NOVELTIES.

Jules Massenet is one of the most prolific of opera composers, but if Oscar Hammerstein continues to produce his works at the present rate, the list will be exhausted ere long. To "Sapho" and "Hérodiade," which he produced earlier in the season, he has now added "Griséli-dis," with a cast including Mary Garden and Dalmores, besides two singers, Messrs. Dufranne and Huberdeau, who

coöperated at the first production of this opera in Paris, on November 20, 1901. "Grisélidis" is, like the "Jongleur de Notre Dame" (which followed it), a musical miracle play, in which things mundane, eclestial, and diabolical are commingled quaintly and continuously, in the true mediæval fashion. The plot is based on the old story of the peasant woman Griselda, who preserves her vow of fidelity amid the most cruel tests. The Devil plays as prominent a part as in some of the mediæval mysteries and miracle plays. Had this rôle been assigned to that prince of devils, Maurice Renaud, the success of Massenet's opera would have been assured. As it is, it seems in doubt, as the music is not strong enough to atone for tiresome episodes in the plot. It is a peculiarity of this opera that the chorus is invisible throughout, though it plays an important rôle. Nothing could be more quaint and enchanting than the harmonized choral echoes of the Devil's Incantation in which, from the dark forest, he summons the spirits of evil to bring the Shepherd lover of Grisélidis to her garden.

The Metropolitan Opera House also has produced an opera new to this country—"Germania," by the millionaire Italian composer, Alberto Franchetti. It is a work in the grand and pompous Meyerbeer manner, relying for the emotions it evokes more on patriotic and historic considerations than on the music. It depicts scenes in the seven years preceding the battle of Leipzig and the reclamation of Germany from the domination of Napoleon, the love affairs of two German students supplying the operatic element. There are many dull moments in the plot, and the music is persistently tedious, except where the composer borrows German student songs or a motive from Puccini's "Tosca." If he had had the gift of creating individual melodies, he might have rivalled Puccini, for he has the theatrical instinct. The scene in a crypt where Queen Louise appears and stirs up patriotic sentiment is very effective, and it stirred the audience to great enthusiasm. With a cast including Caruso, Amato, and Destinn, and with a superb scenic setting, the opera under the devoted leadership of the composer's personal friend, Mr. Toscanini, was sure of a brilliant temporary success.

The management of the Corea concerts in Rome announces its intention of enriching its orchestral programmes from time to time with a choral number. Except two from Wagner the selections for the coming season have been taken from operas which are now rarely heard, but which require a larger and better-trained orchestra than choral societies are usually able to command. The chorus from the opening scene of "Tannhäuser," and probably also the Chorus of Flowers from "Parsifal," will be directed by Michael Balling, leader of the Bayreuth festivals; the choral from Liszt's "Dante Symphony," by Luigi Mancinelli of the Costanzi, Rome; that for men's voices from Liszt's "Faust," by Georg Schneevoigt of Finland, and selections from either Schumann's "Manfred," or "Paradise and the Peri," by William Mengelberg of Holland. In continuance of the policy of employing several directors, each for a series of concerts, Vincent D'Indy, Gustav Mahler, Pietro Mascagni, and Safonoff have also been engaged as conductors.

Art.

THE DISCOVERY OF ARTISTIC AMERICA.

It is an amusing coincidence that just as German experts are eulogizing the American art collector and deploring the exit of masterpieces from Europe, an American consul in Scotland should solemnly warn his fellow-countrymen that they are notoriously the dupes of the wily European dealer in antiques. Both opinions are measurably true, being expressed of different kinds of Americans. It is pleasant to think that the balance of veracity lies with those hardy European discoverers who were tempted over here by the reports of the Hudson-Fulton loan exhibition of old Dutch painting.

Before that memorable show there had been inklings in the Old World of remote art Golcondas beyond the Atlantic. The names of Morgan, Widener, Altman, Frick, and others have bogey-like resonance from Bond Street to the Via Condotti. The inner circle of serious students even knew of such gradual and normal accumulations of fine works as the Havemeyer collection, and that of Mr. John G. Johnson, and Mrs. John L. Gardner, not to mention a throng of lesser collectors of the same fine stamp. But in the main, until recently the artistic wealth of America was more or less legendary to Europe. It was the location of some dozens of perfectly well-known masterpieces—Rembrandts, Halses, Vermeers—that lent historic verisimilitude to the legend of artistic America and brought over the Columbuses in numbers.

The reports of the land are of two-fold character. Dr. Friedländer of the Kaiser Friedrich Museum, Berlin, is statistical. He shows that we have outstripped Germany numerically in Rembrandt, Hobbema, and Vermeer, and sounds the alarum against our aggressiveness. Dr. Justi, of the gallery of modern paintings at Berlin, is lavish of compliments to the temper of our collectors and to the quality of their treasures. He is glad to refute the unamiable report that we prevail by the brute force of our money and are easily taken in. Both forms of tribute are welcome, but both need scrutiny. Dr. Friedländer's quantitative tests are misleading. It is true that we are well stocked with Rembrandt portraits of widely varying worth, but his masterpieces are almost all in European galleries, while for his extraordinarily significant work in landscape and Scripture narrative very few of our collectors have shown the slightest appreciation. Dr. Justi's enthusiasms we would gladly appropriate undiminished, but they recall faintly the classic visit of Charles Eliot Norton to Chicago. For years he had used that municipality as the antithesis of æsthetic righteousness. Then came the Columbian exhibition, and with difficulty he was drawn from Cambridge to the untried sensations and hazards of the Middle West. So astutely were his routes, his associations, his commissariat, his goings and comings planned; so opportunely did animated conversation prevent what might have been offences to a sensitive eye, that Mr. Norton returned to proclaim his belief that since Athens at her prime there had never been a more promising artistic life than that of Chicago. We would not disturb Dr. Justi's enthusiasms, but we could have taken him to collections that must be described in something less than superlatives.

What is really remarkable in the situation of America as regards art is less the springing up of connoisseur collectors of the highest class—they still are very rare birds among us—than the steady growth of a wider comprehension and more delicate taste among the collecting public at large. We are gradually reaching the condition where New York is a true market for art, not in the sense that the very rich will pay sensationally for objects that hit their fancy, but in the sense that cultured well-to-do people will buy fearlessly excellent objects of almost any description, while quietly rejecting the worthless things that crowd the market. This was not always so. It was only some twenty-five years ago that masterpieces of Japanese painting were held up in our best salesroom while the auctioneer pleaded in vain for ten-dollar bids. That could not happen to-day. One marks, too, a gradually widening scope of private collections that come into the auction-room. The appalling monotony of Barbizon, the Institute, the Chinese porcelain is being broken. To the rescue comes the art of Italy, the Netherlands, Scandinavia; and the superb handicraft of the Near East. Our situation is somewhat perturbed by the presence of buyers of enormous wealth and relatively little insight. This introduces a speculative element into prices beyond the wont even of the most speculative of trades. But even the very rich are capable of education, and will gain it whenever they bestow upon themselves the priceless gift of reasonable leisure.

Meanwhile the sober mood with which

a well-trained lad approaches his majority is that which befits artistic America. From the reports of discoverers who come over to see if she has really grown up, she has nothing to fear, and when these verdicts evince a friendly, if unguarded, enthusiasm, she should be ready with the mitigating smile of self-knowledge and self-criticism.

OLD MASTERS AT THE ROYAL ACADEMY.

LONDON, January 14.

The Royal Academy, whatever its weakness, has the strength that comes from "sitting tight" through adversity as through prosperity. Its great virtue is silence. There were critics to see in the success of the National Loan Collection at the Grafton Gallery a menace to its Winter Exhibition, and a few were moved to suggest a policy by which it might best escape the danger of competition. The Academy, true to its traditions, conscious that it had prepared the way for the Grafton success, held its peace, neither showed fright nor promised amendment, and now, at the usual moment, has opened the usual Winter Exhibition of Old Masters, which, moreover, it has managed to make one of the best it has held in several years. The general average is higher than at the Grafton; it is, on the whole, better hung, and its recently redecorated walls make as effective a background; while more attention is paid to chronological order, with more complete decorative harmony and unity as the result.

The collection opens, in the first room, with the early Italian painters, mostly from the well-known collection of R. H. Benson. It is a room "made to the hand" of the attribution hunters, for in many cases, even to the mere unscientific eye, the name of the master has a finer distinction than the work to which it is attached, and it is with the less fine work necessarily that the scientific critic is chiefly concerned. Botticelli, Bellini, Carpaccio, Leonardo are a few of these masters, according to the catalogue, though not always according to the modern authority, and if, before the show is over, their names are still further juggled with, the loss to the masters themselves will not be serious. However, the work of the earliest Italians, and there are many Primitives here, always has charm. Painters who were controlled strictly by a fine decorative convention could not, at their worst, go far astray. Angels trumpeting against a gold background, Madonnas encircled by cherubs' heads and wings, figures well balanced in a pleasantly formal landscape, do not lose all their decorative effect upon walls where they were never designed to hang. Besides, in this first room, several pictures are more than pleasantly and conventionally decorative.

In the other rooms, not only the Italian, but almost all schools, are included, though the French and German are but poorly represented. The Italians of later date are chiefly Venetians. There is a small version—the Duke of Devonshire's—of Veronese's Susanna, a version also of Titian's Daughter of Herodias, and these, with Palma Vecchia's Laura Dianti and one or two Tintorettos or echoes of Tintoretto, recall the greater splendors of the same group in Venice, or, for that matter, no further away than the National Gallery. There are also two impressions of Venice by Guardi. One shows the often-painted never-hackneyed Rialto, the other the no less familiar San Giorgio on its island; both seen from well-known points of view, both giving the usual detail of barges and gondolas in the foreground, and both enveloped in atmosphere and set between water and sky so full of light as to seem almost modern. It is curious to compare them with the Venice by Turner in another room—J. Pierpont Morgan's Depositing of Giovanni Bellini's Three Pictures in the Church of the Redentore—in which the effects of air and light strike one as so exaggerated after Guardi's truth and simplicity, that the picture seems positively old-fashioned.

Hanging with the Venetians are the very few examples of the Spanish school. Two by Velasquez might be passed in complete indifference, or scepticism, were nothing known of their history. One is an Immaculate Conception, the other a St. John Writing the Apocalypse. The astonishing thing is that they suggest not so much immaturity as the adherence to formula that kills originality. You would say, not the work of a young man with the world and his art before him, but the work of the well-trained painter with nothing to say for himself and yet with the power to repeat ably what others have said or are saying. The Immaculate Conception recalls slightly the Coronation of the Virgin of the Prado, that is, in type, but both the pictures shown have a perfunctoriness of vision and treatment alike that recalls anybody rather than Velasquez. However, there seems no question of their authenticity, both being accredited even by Beruete, who is so generous in bestowing upon Del Mazo many other paintings of which I, for my part, would be much less willing to deprive Velasquez. The two now in question were, it is said, the productions of his very early years, while he was still entirely the pupil and follower of his father-in-law, Pacheco, and before he had freed himself so well from the formulas of the schools as to carry on tradition in his own way. As examples of his work in his student days, they have their great interest, and, considered as students' work, they are immensely able, a promising foundation for better things to come. To them the attention might be drawn of the clever young student of to-day, boomed into notoriety until he disdains study, scorns industry, and looks upon some display of eccentricity as a sure sign of genius.

Much space has been given to the Dutch and Flemish schools, whose pictures fill the room devoted to water-colors in the spring, and overflow into one or two others. The collection is well chosen, has fine things in it, but leaves little to be said of the painters that has not been said many times already. There is no surprise like the rarely beautiful Oehterveldt of a few years ago, nothing by any one artist that is not surpassed in the national collections. A so-called Rembrandt, described as a portrait of himself and Saskia, and not without distinguished qualities, will give—or, rather, has given—rise to plentiful discussion. Hals has not been left in possession of all the portraits exhibited as his, nor need his admirers resent the liberty taken. Of the pictures left to him, though one portrait has already been selected for reproduction by the Arundel Society, none has the vivacity and vigor of the Hille-Bobbe—and this, too, is questioned—another version of the Fishwife of Haarlem, whom he has made as famous as Dante made his Beatrice or Petrarch his Laura. Two huge canvases by Jordaens, a portrait group of husband and wife and the King of Twelfth Night, both belonging to the Duke of Devonshire, are more than amazing in their technical ability and ingenuity, and are vivacious with a degree of vivacity that Franz Hals had the intelligence—or the genius—never to attempt to emulate. For they seem to me to prove nothing so much as how little ability and vivacity avail without artistic restraint and dignity. There are landscapes and at least one fine Portrait of a Man by Rubens. The Jane Lane, lent by J. Henry H. V. Lane, is among the most interesting Lelys I have seen, because it portrays not only the type of feminine beauty then in vogue, but individual character. The lady had a history—she assisted in the escape of Charles II—and she looks it: looks like something more than the mere round-eyed, red-lipped, sensuous ladies of whom Lely and Kneller have bequeathed to us such an endless gallery.

The pictures of the British school are chiefly portraits of the eighteenth and early nineteenth centuries: Reynolds, Gainsboroughs, Romneys, Raeburns, Hoppners, of which the supply appears to be inexhaustible. The Academy always seems able to find a few that have not hitherto been publicly exhibited. I do not remember ever to have seen before Gainsborough's large full-length Sir Charles Morgan, lent by the Equitable Life Assurance Society, of which he was once president. A short man, the por-

trait suggests, and one not too richly endowed with manly beauty, but Gainsborough has given him a dignified presence that counts for far more and has rendered his costume with a feeling for textures rarely excelled in the portraits of the most beautiful and daintily dressed women who sat to him. Reynolds's Lady Mary Leslie, another painting I do not remember to have seen before, is amusing in its artificial convention. The lady is surrounded by absurd baaing lambs, but the conceit is so naïve and obvious that it does not irritate as Reynolds's more elaborate allegories sometimes do. The convention is as obvious, but less naïve, in his portrait of George III, the property of the Royal Academy, where royalty becomes so entirely a question of royal robes that the man inside them disappears. It is funny to turn from it, in its flamboyancy, to Maria Cosway's George IV as Florizel, as young ladyish a conception of royalty, as pretty an interpretation of masculinity, as any lady artist of today might produce. The Romneys are not remarkable. Hoppner, for all the recent booming, only now and then rose to the point where he could hold his own with Reynolds and Gainsborough, and this point he did not reach in the single example that now represents him. The portraits of Sir John Sinclair in Highland uniform and of Sir John Clerk and Rosemary Dacre, his wife, are among the more famous Raeburns, but neither can approach in distinction the two by the same artist that were sent to the Hundred Women Show last summer in Paris. With this work of later generations, two or three Hogarths have a place.

That there should be so many British pictures in Great Britain for the Academy to draw upon is not surprising. But I must confess that this year, as seldom before, the Academy's winter series of old masters has made me marvel at the number of works by the masters of foreign schools that still remain in the private collections of the country, despite the outflow into Germany and America that the pessimist loves to deplore as continuous. The Grafton Gallery Exhibition that, in a moment of enthusiasm cooled by the intervening months, was hailed by British critics almost as a discovery of the treasures of the private British collector, is still open. The Salting and Mond bequests to the nation have just been announced. And yet, here is the Academy that has been showing old masters for forty years and that really should have the credit of popularizing them before the organizers of the Grafton Exhibition were heard of, holding the best Winter Exhibition of their work it has held for years.

It can hardly be regarded as an honor to E. J. Gregory, the Royal Academician who died some four months since, to have had the Black-and-White Room reserved on this occasion for his work. The public's avoidance of the Black-and-White Room during the Summer Exhibition is an ancient jest. It is so small that only a few of Gregory's pictures and drawings can be shown in it, and these have been crowded together as if to serve as a reminder of the difference in the Academy's methods of hanging for old masters and for modern painters. At the best, Gregory was not an artist to stand unabashed the comparison evoked by his present surroundings. He was technically accomplished, a finer craftsman than many of the older Academicians, his contemporaries, who survive him. There are here studies of water in movement, or of the detail of dress or furniture, that for truth and observation could not easily be excelled. But if his eyes were open to fact, they were blind to the beauty to which it is, after all, a secondary consideration. He had not cultivated the art of seeing, which is a more essential part of the artist's stock in trade than the art of expression. In saying this I am not sure that I am not touching on the secret of the inferiority not only of Gregory, but of the modern Academical painter, to the masters of all time; but this is too large a subject for the end of an article. N. N.

The spring exhibition of the National Academy of Design will open on Saturday, March 12, and will close on Sunday, April 17. Exhibits will be received only on February 23 and 24, between the hours of 9 A. M. and 5 P. M. The jury of selection will be Herbert Adams, Hugo Ballin, Gifford Beal, Emil Carlsen, F. S. Church, E. Irving Couse, Kenyon Cox, Charles C. Curran, Charles Melville Dewey, Charles Warren Eaton, A. L. Groll, Birge Harrison, Childe Hassam, William H. Howe, W. L. Lathrop, Will H. Low, Hermon A. MacNeil, J. Francis Murphy, Walter Nettleton, Edward H. Potthast, Henry Prellwitz, Leonard Ochtman, William S. Robinson, Edmund C. Tarbell, Alexander T. Van Laer, Douglas Volk, and Irving R. Wiles. The hanging committee will be composed of H. Bolton Jones, John W. Alexander, and Isidore Konti.

The 105th annual exhibition of the Pennsylvania Academy of the Fine Arts opened to the public on Sunday, January 23, and will remain open until March 20. The following awards are announced by the jury of selection and award, consisting of W. Elmer Schofield, chairman; Thomas P. Anshutz, Frank W. Benson, Emil Carlsen, Charles H. Davis, Charles W. Hawthorne, Robert Henri, Joseph T. Pearson, jr., Carroll S. Tyson, jr., Frederic P. Vinton, and Irving R. Wiles: The Temple gold medal for the best picture painted in oil without regard to subject to Howard Gardiner Cushing for his portrait No. 418 in the exhibition; the Walter Lippincott prize of $300 to J. Alden Weir for the landscape painting entitled The Hunters' Moon; the Jennie Sesnan gold medal for the best landscape in the exhibition to Childe Hassam for his painting entitled Summer Sea; the Carol H. Beck gold medal for the best portrait in the exhibition, completed within the last three years, to Adolphe E. Borie, 3rd, for his portrait entitled Lady with a Black Scarf; the Mary Smith prize for the best picture painted by a woman, resident in Philadelphia, to Mrs. Alice Mumford Roberts for her picture entitled The Morning Air. The *Nation* will review the exhibition at length in next week's issue.

Following is a list of the principal paintings and drawings from the Cyrus J. Lawrence collection, with the prices they brought at Mendelssohn Hall January 21: Bonvin, Convent School, $1,200; Boudin, Low Tide, $500; On the Beach, $875; Village on River, $825; Mary Cassatt, Mother in Red Dress with Child, $1,025; Au Jardin, $950; Mother Feeding Child, $650; Daumier, Les Avocats (2), $900; Lawyer Arguing His Case, $700; Les Pièces de Conviction, $1,025; Les Avocats (3), $875; L'Atelier de l'Artiste, $1,225; A l'Hôtel Drouot, $1,550; Les Curieux à l'Etalage, $2,600; Degas, Avant la Course, $2,300; Fantin-Latour, A Wood Nymph, $1,500; Jongkind, Honfleur, $1,250; Monet, Fishing Boats, $240; Vetheuil Winter, $2,650; Grotte de Port Domois, $3,050; Vetheuil Spring, $4,650; Falaises à Dieppe, $2,700; Pisarro, Hiver en Pontoise, $1,100; Puvis de Chavannes, Mother and Children, $1,850; Sisley, Le Quai à Sable, $1,225; Vue de Moret, $1,100.

Louis Mark, the genre impressionist, of Budapest, Hungary, will exhibit his paintings in the galleries of the National Arts Club during March.

August Will, the artist, died on Sunday at his home in Jersey City. He was born at Weimar, Germany, seventy-six years ago, and came to this country at the age of twenty-one. For nineteen years he had a studio at Broadway and Astor Place. He was a teacher of art for thirty-eight years, and numbered among his pupils many well-known American artists. He worked in oils, water colors, and pen and ink. He illustrated for many years for the *Century*, *Harper's*, and *Scribner's*, and other magazines, and did much work for the Methodist Book Concern's publications.

Finance.

OBJECT LESSONS.

Following a break on the Stock Exchange, last week, which was marked by such declines as 8⅜ points in United States Steel common, 6⅞ in Union Pacific, 4¾ in Southern Pacific, and 4⅜ in Amalgamated Copper, and a brief recovery from those low quotations, the present week opened with a renewed and overwhelming relapse. In two days, the Steel shares fell 5¾ points, Union Pacific 9⅛, Amalgamated Copper 6, Reading 8, and the rest of the list collapsed with them. To the majority of experienced observers, this wholesale readjustment of values was a natural enough sequel to the market of last autumn, when a prolonged and violent speculation for the rise was conducted in the face of tightening money,

depleted bank reserves, hostile attitude by Europe, and absence of the real outside investor on whom the great speculators ultimately had to rely, to sell out their stock holdings and pay off their bank loans.

This aspect of the present situation was not the less obvious from the fact that in two other markets where speculation had equally hoisted prices to abnormal altitudes—the markets for cotton and wheat—an exactly similar collapse has occurred this week. But the Stock Exchange did not take kindly to the explanation, and the word was passed about, in that curious way in which such watchwords circulate in Wall Street, that the market was administering an "object lesson," based on the Washington proposals for company legislation. On general principles, the theory was plausible. Railway and banking authorities disliked the programme outlined in Mr. Taft's recent messages. People who dread such legislative programmes might logically draw out their capital from shares of the companies affected. A fall in prices of these shares, such as withdrawal of capital by investors would occasion, had occurred. Therefore the inference: dread of the Washington proposals caused the break in prices.

On the theory that the present month's decline has been thus caused, the first instinctive comment possibly might be that the time for the markets to get frightened was when the Taft proposals were first positively made. That time was last September, when the President, in his public speeches, outlined a policy in some respects more drastic than what he has laid this month before Congress. What the stock market witnessed, in response to the September speeches, was such enhancement of values, during that very month, as 7 points in Union Pacific stock, 7 in St. Paul, 9 in Southern Pacific, 12 in Reading, and 12½ in Steel common.

Replying to intimations, in the Northern Securities hearing of 1904, as to a genuine "object lesson" of this sort the majority opinion of the United States Supreme Court had this to say:

> Many suggestions were made in argument based upon the thought that the Anti-Trust Act would in the end prove to be mischievous in its consequences. Disaster to business and widespread financial ruin, it has been intimated, will follow the execution of its provisions. Such predictions were made in all the cases heretofore arising under that act. But they have not been verified. It is the history of monopolies in this country and in England that predictions of ruin are habitually made by them when it is attempted, by legislation, to restrain their operations, and to protect the public against their exactions.

Whatever one may choose to say of the reasoning of the honorable court, its assertion of fact must stand. It should be interesting, therefore, to see what has followed recent action, whether by courts or by Congress, of a character which invited prediction of an "object lesson." There was, for instance, the first decision against Northern Securities, on April 9, 1903. The stock market broke violently; yet Wall Street hardly wasted attention on the verdict. It was busy watching the efforts of powerful promoters, caught in a trap by their own recklessness, to market what one great financier called "undigested" and another "indigestible" securities; no reference being made to "object lessons." The Supreme Court's affirmation of that Circuit Court decision came on March 14, 1904, and the instantaneous sequel was the buying of railroad stocks in enormous amounts, by some of the very financial leaders whose Northern Securities experiment had been blockaded. Before the year was over, stocks such as Union Pa-

An Exceptional Issue of 6% Bonds

Secured by a Thousand Farms

Here are brief facts about one current issue of Irrigation Bonds. They will illustrate what ideal security lies back of such bonds when the issues are rightly selected.

The Bitter Root Valley Irrigation Co. owns one of the largest irrigated fruit land projects in the world. The Company is composed of well-known men who are wealthy, experienced, and capable. The land to be watered consists of about 40,000 acres in the heart of our greatest fruit belt—in the famous apple region of the Pacific Northwest.

A large part of the valley has been under irrigation for many years, so the possibilities of the land have been demonstrated. Fruit land in the valley has lately sold as high as $1,000 per acre.

The water rights are unassailable, and the total water supply is more than sufficient for all needs. For the irrigable land is distinctly limited by the mountainous bounds of the valley.

$2,500,000 Invested

The Irrigation Company has invested in the project about $2,500,000, or about twice the total bond issue. And the bonds are secured by a first mortgage on all the property which the Irrigation Company owns.

The bonds are additionally secured by first liens on the lands and the orchards watered. These liens are given by individual land owners in payment for the land and the water rights. Forty per cent. of the price is paid down, and the balance, secured by the liens, is payable in annual instalments.

To secure each $1,000 bond there are deposited with a Trust Company as trustee $1,400 of these first liens on farm land.

The average price at which this land has been sold is about $200 per acre. The minimum price at present is $250 per acre. Yet the bond issue is limited to $30 per acre, or to less than one-sixth the average selling price of the land.

Double Security

Thus the bonds have double security. The first is a mortgage on all the property which the Irrigation Company owns, and the Company's investment is nearly twice the whole bond issue. The second security is these first liens on farm land—on land which is worth more than six times the amount of the bonds which it secures.

One can hardly conceive of more ample security. Yet these bonds pay six per cent. interest, because the demand for irrigated land is so great that the projects are very profitable.

Part of these bonds mature each year from 1914 to 1919. One may have his choice of maturities.

Ask for the Facts

In the past 15 years we have purchased 75 separate issues of Reclamation Bonds—Drainage and Irrigation. All have been secured by first liens on good farm land, and not a dollar of loss has resulted to any investor.

Irrigation bonds have now become the most popular bonds that we handle. No other large class of bonds offering equal security now pays six per cent.

We have issued a book on Irrigation Bonds, based on all this experience. Every investor, small or large, owes to himself its perusal. Please write for the book to-day. Cut out this coupon so you won't forget.

cific, Great Northern, Reading, Louisville, and New York Central—all more or less remotely affected by the Northern Securities decision—had scored advances ranging from 30 to 60 points

On June 29, 1906, the Hepburn Railway Rate Act became law. No legislation in our recent history had been marked by so vigorous protests from the interests affected, or by so positive prediction of disaster to investments, and to no one were such views ascribed more definitely than to Mr. E. H. Harriman. Yet it was Mr. Harriman who, within two months, nearly doubled the dividends on Union and Southern Pacific stocks, bid up their prices 27 and 24 points, respectively, and, in the same half-year, bought through the Union Pacific's credit and surplus funds, at the very high ruling prices, $131,000,000 worth of the very railway stocks whose value the new law was supposed to jeopardize.

This retrospect does not prove at all that the court decisions and legislative moves in question may not have been dangerous, or that Mr. Taft's proposals are not a menace to financial stability. Those points are still left open for discussion. The above-described sequence of events appears to prove, however, that Wall Street ought to be careful about ascribing the "January break" to the news from Washington. But is it true, then, that the old-fashioned "object lesson" of the Stock Exchange has become a mere tradition of financial history? Probably not at all. The collapse on the New York stock market, during January, provides at least one object lesson. It teaches the consequence of creating fictitious values, putting up stocks to absurdly unreasonable prices through brute force of borrowed money, and preventing the liquidation of such hazardous accounts, when bank resources began to be exhausted, through expedients which disguised a situation that they could not remedy. In a general way, it was the real investing public which administered the lesson.

FOR SCHOOL AND CHILDREN'S ENTERTAINMENTS

The House of the Heart

And Other Plays for Children

By CONSTANCE D'ARCY MACKAY. $1.10 net; by mail, $1.15.

Ten well-written short plays in verse to be acted by children.

"An addition to child drama which has been sorely needed. The plays are accompanied by stage directions and costume suggestions and the novice in play drilling cannot stray far afield in presenting them. They are varied in subject and suited to the different festivals of the year."—*Boston Transcript.*

"Good and wholesome, will rejoice the soul of every teacher. A volume unequaled for years."—*Living Age.*

Henry Holt and Company 34 W. 33 St. New York

The Conclusion of a Great Work.

A Literary History of The English People

From the Earliest Times to the Civil War. By J. J. JUSSERAND. Three vols. 8vo., with Frontispieces. Each $3.50 net.

Vol. III. (Completing the Work) From the Renaissance to the Civil War: Part II. Now Ready. Previously Issued: Vol. I. From the Origins to the Renaissance. Vol. II. From the Renaissance to the Civil War. Part I.

"Mr. Jusserand's qualifications for the task which he has undertaken are of a high order. There are few foreigners, and certainly very few Frenchmen, who have so intimate a knowledge of English life. He has already gained great distinction as an original investigator in more than one period of English literary history, and although his point of view in the present work is unmistakably that of a Frenchman, he shows a degree of sympathetic insight which is seldom met with in foreign critics of our literature."—*London Athenæum.*

Character

¶ is one of the most difficult attributes to define but it expresses a great deal.

¶ The Century Magazine has character.

¶ It is this quality which makes it a stimulating influence in the intellectual life of the world.

¶ Its well-chosen articles, not sensational but entertaining, important and authoritative—

¶ Its brilliant fiction, reflecting the best in modern literature—

¶ Its beautiful art, delighting the eye with the work of great painters—

¶ All these bear the impress of that high character which makes it a liberal education to read

THE CENTURY MAGAZINE

¶ Fascinatingly entertaining; cultured, dignified, and refined.

¶ You will be surprised by the great number of its rich contents which are of real interest and entertainment to you.

Single copies, 35 cents.
Yearly subscriptions, $4.00.
At all the best book-stores and news-stands.

Sturgis & Walton Company, 31-33 East 27th St., New York

A NEW VOLUME OF
MR. WILFRID BLUNT'S MEMOIRS

India under Ripon:
A PRIVATE DIARY

By WILFRID SCAWEN BLUNT, Author of "The Secret History of the English Occupation of Egypt." 10s. net (post free, 10s. 6d.).

Like his "Secret History of the English Occupation of Egypt," this book is very outspoken, and reveals much of the inner machinery of Government in India as well as the intimate thoughts of the leaders of native opinion twenty-five years ago.

India says: "Nothing wounds so deeply and so effectually as the terrible truth, and there is no ingredient more potent in the gentle art of making enemies. . . . We shall not be surprised, therefore, to learn that the Government of India has set its ban upon Mr. Wilfrid Blunt's latest essay in plain speech."

Important New Books

ENCYCLOPAEDIA OF RELIGION AND ETHICS

Edited by JAMES HASTINGS, D.D. **Vol. II. Cloth, $7.00 net**

The second volume of this great undertaking, the first volume of which was published in 1909

"The immense variety of subjects included in the field of religion and ethics is strikingly evinced by the Encyclopædia, of which the first volume has appeared. The great work collaborated by nearly two hundred scholars of eight nations, representatives of various religions, Western and Oriental, seems to contain 'the materials of a history of human progress or decline' from the earliest to the present time.'—*The Outlook.*

"This new Encyclopædia will be an essential for the library of every student of religion and ethics."—*The Independent.*

STUDIES IN THEOLOGY

A new and important series of hand-books for ministers, theological students, and general Bible readers which attempts to bring all the resources of modern learning to the interpretation of the Scriptures, and to place within the reach of all who are interested the broad conclusions arrived at by men of distinction in the world of Christian scholarship on the great problems of Faith and Destiny. The volumes are critical and constructive and will each contain bibliographies for the guidance of those who wish to pursue more extended studies.

Each volume, 75 cents net

A Critical Introduction to the New Testament. By Arthur Samuel Peake, D.D., Professor of Biblical Exegesis and Dean of the Faculty of Theology, Victoria University, Manchester. Sometime Fellow of Merton College, Oxford.

Faith and Its Psychology. By the Rev. William R. Inge, D.D., Lady Margaret Professor of Divinity, Cambridge, and Bampton Lecturer, Oxford. 1899.

Philosophy and Religion. By the Rev. Hastings Rashdall, D.Litt. (Oxon.), D.C.L. (Durham), F.B.A. Fellow and Tutor of New College, Oxford.

Revelation and Inspiration. By the Rev. James Orr, D.D., Professor of Apologetics in the Theological College of the United Free Church, Glasgow.

THE EPOCHS OF PHILOSOPHY

Edited by JOHN GRIER HIBBEN, Ph.D.

An important new series of some fifteen volumes covering the chief periods in the history of philosophy and written by the greatest authorities in Great Britain and the United States. *Each volume $1.50 net; postpaid $1.65.*

LITERATURE OF THE OLD TESTAMENT

By PROF. S. R. DRIVER, D.D. **$2.50 net**

This new (tenth) edition of this famous book revised and corrected.

"It is the most scholarly and critical work in the English language on the literature of the Old Testament."—Prof. Philip Schaff, D.D.

THE PROBLEM OF HUMAN LIFE

By RUDOLF EUCKEN **Second Edition. $3.00 net; postpaid $3.30**

Translated by W. S. Hough and W. R. Royce Gibson

"A better introduction to the history of philosophy it would be hard to find."—*Nation.*

"It is a work of profound knowledge, it shows a happy faculty of generalization, its illustrations are drawn from the most varied sources and handled with complete mastery. Above all, it is fervent in spirit and unremitting in its appeal to a spiritual unity as the proper interpretation of human existence. In all these respects it is a notable work, and we are not surprised to learn that it has a far greater vogue in Germany than could possibly be obtained by any mere treatise on philosophy."—*Westminster Gazette.*

Memoirs of Henry Villard
Journalist and Financier
1835-1900
Two volumes, with Portraits and Maps.
$5.00 *net.* Postage, 35 cents.
An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.
"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.
"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle.*

Modern Constitutions

A Collection of the Fundamental Laws of Twenty-two of the Most Important Countries of the World, Translated into English, with Historical Introductions, Notes, and Bibliographies

By WALTER FAIRLEIGH DODD

2 Vols., 724 pages, 12mo, cloth; postpaid, $5.42

This work contains the constitutions or fundamental laws of the Argentine Nation, Australia, Austria-Hungary, Belgium, Brazil, Canada, Chile, Denmark, France, Germany, Italy, Japan, Mexico, Netherlands, Norway, Portugal, Russia, Spain, Sweden, Switzerland, and the United States.

E ch translation has been carefully made, and the constitutional texts are given as now in force. Notes have been used sparingly, and have been confined almost entirely to information regarding constitutional amendments, election laws, and other matters absolutely necessary for the understanding of the texts. Each constitution is preceded by a brief historical introduction, and is followed by a select list of the mo t important books dealing with the government of the country under consideration.

THREE IMPORTANT NEW BOOKS DESERVING OF SERIOUS STUDY

THE SUBSTANCE OF SOCIALISM, by John Spargo
(Author of "The Spiritual Significance of Modern Socialism.")

Part I. The Socialist Hope.
Part II. Private Property and Personal Liberty in the Socialist State.
Part III. The Moral Value of Class Consciousness.

EVOLUTIONARY SOCIALISM, by Edward Bernstein
A Criticism and Affirmation.

This work is of the utmost importance to those students of world politics who wish to understand the real meaning of the German Revisionist movement, of which the author is the leader.

THE POET OF GALILEE, by William Ellery Leonard
Assistant Professor of English, University of Wisconsin.

A literary study, absolutely unique, of the authentic fragments of the discourses and sayings of Jesus as embedded in the *Synoptic Gospels*, a psychological analysis and reconstruction of the imposing personality and genius of the great Galilean, rather than an abstract exegesis of his theology or ethic. Though conscientiously based upon the results of modern scholarship, it is neither technical nor polemic, and, though frankly emphasizing the humanity of Jesus, it should be welcome and helpful to thoughtful men and women of any creed.

Each book $1.00 net, at all book stores; postpaid, $1.10.

MOFFAT, YARD & COMPANY

NEW BOOKS OF REAL IMPORTANCE

MOFFAT, YARD & COMPANY

A VERY IMPORTANT CONTRIBUTION TO THE WORLD'S KNOWLEDGE

CENTRAL AMERICA AND ITS PROBLEMS

By FREDERICK PALMER, F.R.G.S.

This is the only book in existence which describes Central America.

It deals with Nicaragua, Guatemala, Honduras, Costa Rica, San Salvador and Panama, with three chapters on Mexico in its political and ethnographical relations to Central America and its political relations to the United States.

The work is not only a vivid description of existing conditions, but an authoritative work valuable for reference about history, populations and resources. It is a book for all public and private libraries.

It is the result of a recent thorough investigation, on Mr. Palmer's part, of all these republics; and he found there conditions worse than those in Russia and Turkey. The story is almost incredible.

Fully Illustrated, 8vo, $2.50 net. By mail, $2.70

"THE BEST AMERICAN BIOGRAPHY OF MANY YEARS"

LIFE AND ART OF RICHARD MANSFIELD

WITH SELECTIONS FROM HIS LETTERS

By WILLIAM WINTER

Note that this is no ordinary biography, but one of the most notable examples of fearless creative art this country has produced.

It is a work of breadth and form, of amazing insight, of searching analysis, a life portrait, painted, like the portrait of Cromwell, "wart and all."

The object of the book was declared by its author to be, "to make an authentic record of the Life, a just estimate of the Achievement, a veritable picture of the Man." This he has accomplished.

The first volume deals with the Life; the second with the Art. Both are of the greatest possible interest.

With 72 Illustrations, 8vo. Two Volumes. Boxed, $6.00 net. By mail $6.40

UNIQUE AMONG NATURE BOOKS

WHO'S WHO AMONG THE WILD FLOWERS
By W. I. BEECROFT

Not for the student so much as for the uninstructed lover of flowers. No one who owns it need remain five minutes in ignorance of the identity and nature of any wild flower in the Northern part of the United States.

150 Illustrations. $1.25 net. By mail, $1.30

NOTABLE AMONG ANTHOLOGIES

WASHINGTON'S BIRTHDAY
(Our American Holidays)

Edited by ROBERT HAUN SCHAUFFLER.

This discloses Washington from the human rather than the heroic point of view. It is made up of writings from many sources, historical, political and patriotic, and stands possibly at the head of the books in this celebrated series.

12mo, $1.00 net. By mail, $1.10

THE FOURTH GOSPEL IN RESEARCH AND DEBATE
By BENJAMIN WISNER BACON, D.D., LL.D.

One of the most notable controversial books published in several years. It is destined to exert a profound influence upon the solution of a problem of admittedly supreme importance in the field of New Testament criticism and interpretation.

8vo, $4.00 net. By mail, $4.25

The first general work on Eugenics. "As epoch-making as Darwin's first announcement to the world."—Charleston *News and Courier.* *8vo, $2.50 net. By mail, $2.75*

MOFFAT, YARD & COMPANY - - NEW YORK

The Nation.

NEW YORK, THURSDAY, FEBRUARY 3, 1910.

The Week.

The decision of the House of Representatives to entrust to the Ways and Means Committee the investigation of high cost of living, is on the whole satisfactory. That committee is powerful and influential, both in its scope of authority and in the character of its membership. It is not too early, however, to warn the committee that it will not do to restrict the inquiry. Some of the comments ascribed to the Republican members of the committee suggest a purpose of investigating primarily the influence of the tariff. Now, the tariff unquestionably has some influence on cost of living; in certain lines of cotton manufacture, for instance, where the plea of the manufacturers was for protection against "cheap foreign goods," that fact has been publicly recognized by the protected interests themselves. It is also true beyond question that, in all industries with foreign competition and a protective duty, the automatic safeguard against home prices raised to exorbitant heights by Trusts or speculators is prevented by the tariff from operating. All this will be investigated, if the investigators are honest.

But there will also readily be discovered industries and commodities in which the tariff has either a secondary influence on prices, or no influence at all. Protectionist members of the Ways and Means Committee would probably make much of the fact that, while "index numbers" made up of American prices exclusively show an extraordinary rise in average cost of necessaries, such "index numbers" as the London *Economist's*, based wholly on English prices, show an exactly similar movement. It is easy to imagine such discoveries made use of to "whitewash" the tariff. Now, if impartial investigators were to show—and we believe it to be possible—that the pressure on consumers has been greater than in England, they will have contributed something useful to the investigation. Their inquiry as a whole, however, must take very much wider scope if it is to be of any value. Not least important is investigation into the power of Trusts and combinations over necessaries, and into the arbitrary exercise of that power. This is a problem into which partisan politics need not enter at all, and it is of the highest practical importance. We suggest, furthermore, that no such inquiry will be complete unless some account is taken of the quality of goods turned out, as well as their price. There is not a housekeeper in the United States who has not been complaining, in the case of numerous articles now controlled by powerful combinations, that she cannot buy, even at the present higher prices, goods of the durability of those she bought a decade ago.

Representative Foelker of New York State has introduced a joint resolution for a new form of Constitutional amendment authorizing the levy of an income tax. Its design is to meet the objections urged by Gov. Hughes, and would specifically exempt from taxation incomes derived from "bonds or other obligations" of the United States, as well as those of States, Territories, dependencies, and municipalities. The grant of power would then be simple—that is, Congress might lay an income tax without being compelled to apportion it among the States. Some such amendment of the amendment, as we have more than once said, must be adopted by Congress and submitted to the States if there is to be any Constitutional amendment at all. As the case stands to-day, the form of amendment laid before the State Legislatures has practically no hope of adoption. There were few signs of activity in connection with it even before Gov. Hughes's message, and since then it has been everywhere in a state of suspended animation. The question before Congress is accordingly merely this: does it really desire to have this power of enacting an income tax in national emergencies? If so, there is but one thing to do: submit the amendment in a shape to which there can be no objection except by those who are opposed to an income tax of any kind.

In 1907, a Commission on Old Age Pensions was appointed in Massachusetts to study the various systems devised in other countries and in use among industrial and railway corporations. Its report in a volume of 500 pages has lately been published, and from a summary printed in the Boston *Transcript* we infer that its work has been thorough and valuable. The Committee came out strongly against any scheme of non-contributing old-age pensions, such as the one lately introduced in Great Britain. This it condemns on the score of expense, of discouragement of thrift, of a disintegrating effect upon the family, and of an unfavorable influence upon the rate of wages. Yet a plan of contributory retiring pensions for public employees, including those of towns and cities, is emphatically recommended by the Committee, and the scheme of retiring allowances for aged workmen is urged upon large employers of labor, the whole to be based squarely upon the contributory principle. In line with this vigorous and wholesome assertion of the duty of self-reliance is the recommendation that "thrift should be included among the subjects of compulsory instruction in the public schools." All told, this report appears to be a timely and telling document.

The fear of Harmon weighs heavily on the Republicans of Ohio. To beat Harmon at the polls next November, the Republican politicians have made up their mind to hesitate at nothing, not even at giving the people what they want. A public utilities bill introduced in the Legislature last week is intended to cut the ground from under the Governor's feet. It calls for the appointment of a commission of three members to exercise control over all "express, telegraph, telephone, sleeping-car, freight line equipment, electric light, gas, natural gas, pipe line, water works, messenger, signal, union depot, water transportation, heating, cooling, street railroad, and railroad companies." The bill forbids rebates, free passes, the issuing of stock at less than par, and the holding by a corporation of more than 10 per cent. of the stock of any public utility. The commission has full powers to "regulate rates and service, to make and publish valuations of utilities, and to enforce a uniform system of accounting." In short, Gov. Harmon is

to be totally undone by means of a bill of far-reaching reform—broader even in scope than the New York law associated with Gov. Hughes's name. But we imagine that Gov. Harmon's reputation may survive the obloquy connected with having indirectly forced the Ohio Republicans to enact a measure of real public merit.

Whatever the specific merits of the proposition as to Alaskan coal lands which has been made by Mr. John E. Ballaine, a wealthy landowner of that Territory, one merit it certainly has. It should serve the purpose of conspicuously fixing the attention of the country on the absurdity of giving away, or selling at nominal prices, public lands that contain mineral resources. We have been applying to such lands methods that had their origin in the homestead policy of pioneer days, and that have no relevance to the conditions of the present time. The royalty principle is recognized in Mr. Ballaine's offer, and its appropriateness to the disposal of mining lands is unquestionable. Even in our cities, we have got beyond the stage of giving away valuable franchises for the asking; surely, our national government, with all the expenditure of thought and energy that has been given to the public-land question, may be expected to deal with it in a spirit more enlightened than that of the thoughtless wastefulness of former times.

We are glad to note that the lessons of the Cherry, Ill., coal mine disaster are not to go wholly unheeded. At least there have been introduced into the Illinois Legislature some bills which cannot be denied passage if the Legislature really wishes to safeguard those who work in the mines. Primarily, there are to be established three fire-fighting and rescue stations to serve the three great coal fields—the northern, southern, and central districts. It is planned to bring groups of miners there from time to time in order to give them special instruction in fighting fires and using rescue equipment. According to the *Survey*, the provisions of another bill provide for the removal of stables from mines, and a carefully specified water-supply and distribution, or automatic sprinkling devices. Other requirements will be:

Chemical fire extinguishers, hand-pump buckets, and barrels of water in all entries and passageways; testing of these appliances and a fire drill every fortnight; regulation of the amount, conveyance, and storage of fodder and bedding; installation of telephones and gong signals throughout every mine; instruction of all employees in giving instant warning of danger, and adequate penalties for the wilful neglect, refusal, or failure to obey the requirements of the act upon the part of managers, all classes of mine workers, and mine inspectors.

We note that this summary makes no mention of caches of food for shut-in miners, or for direct-surface communication through tubes. But we are assured that the bills have been drawn after the most careful study of foreign and American practice and legislation.

Edouard Rod, who died in Paris on Saturday, was a notable type of the versatile scholar and man-of-letters, as he flourishes at his best in France. That he was a Swiss by birth only falls in with the tradition that self-centred, self-contented Paris shall be conquered by the children of the provinces she is so little concerned with, or by the children of abroad. Rod began as a novelist of the school of Zola, diverged into the field of criticism, spent five years at the University of Geneva, and then took up the novel again, at a very great remove indeed from the Naturalistic School. In his later work, critics have found a keen searching into human motive and a sense of austerity which they have explained as manifestations of the Genevan conscience. Yet Rod's novels were peculiarly French in that they fell within that large class of French fiction which is written for a small and thoughtful domestic public, without hope or chance of winning much reputation abroad. His critical work in the *Revue des Deux Mondes* has been more conservative in ultimate intent than in form or superficial expression. It brought him within sight of a place in the French Academy, for which he was recently an active candidate.

Some of the Conservative newspapers in England are suggesting a "joint Cabinet" for a couple of years, made up of moderate men from both leading parties. This foolish proposal may be taken as showing how hard Conservative hopes die. Yet whatever else the general election has proved or failed to prove, it leaves the Conservatives severely defeated. The Liberals have not got the majority they desired and perhaps need in order to form a strong Government, but at all events the Conservatives remain clearly a minority party. It is only necessary to ask what their strength has been in Parliaments before the last one, to see how far they have come from regaining their former position. They have gained 100 seats, but even so are weaker, both absolutely and relatively, than they were in 1886, 1892, 1895, or 1900. In the first of the years mentioned, after the defeat of Irish Home Rule, Lord Salisbury counted upon 393 members of the House of Commons out of 670. Even in 1892, when the Liberals came in with a small majority, by the aid of the Nationalists, the Conservatives mustered 314, or something like 40 more than they have to-day. In 1895, the Conservatives had a majority of 152, their own strength being 411, while in 1900 their majority was 134, and they were able to rally 402 votes on a division. Thus it appears that even their great gains this year leave them much weaker than they were in any election of the past twenty-four years, except the abnormal polling of 1906. The "swing of the pendulum" did not carry them back to what they were even in 1892. For a party with such tell-tale figures against it to propose claiming a share in the Government is pretty cool.

Almost before the British general election is over, the announcement comes that an important beginning will immediately be made in the carrying out of a measure adopted by the Liberal Government for dealing with the problem of unemployment. The system of national labor exchanges devised by Winston Churchill, president of the Board of Trade, will be put in operation by the opening of 100 exchanges this month, to be followed by 150 more during the coming six months. This is a practical measure for the diminution of perhaps the greatest economic evil under which the country is suffering, and it is a measure involving no dangerous departure from well-tested economic principles. In this matter, it is to be assumed, too, that the experience of Continental countries will serve as a most useful guide to the Government; especially in Switzerland has the organization of this method of preventing unemployment been systematized with excellent results.

The time, by the way, is especially propitious, since the amount of unemployment in England has been steadily diminishing during the past six months, so that the Government will be helping the processes of nature rather than forcing them.

It is gratifying to learn that the tariff war with Germany and France is not to be declared. Final settlement is not yet announced, but it is evident that all three Governments are anxious to come to an agreement, and with certain concessions made on either side, the trouble is reported officially to be in a fair way to be averted before February 7. There can be no doubt that President Taft is sincerely desirous of living at commercial peace with all the world. He has never thought of the Payne-Aldrich bill as a club. Its terms, so far as they relate to tariff treatment by other nations, he has all along been ready to interpret in the broadest and most liberal fashion. But even if there were not this good will on his part, he might well hesitate before exposing himself and his party to the odium of enacting a tariff which was unsatisfactory at home and threw our foreign trade relations into confusion and turmoil.

The Liberal Ministry in Spain has now been in power for a little more than three months, and is able to give a fairly satisfactory account of its stewardship. Premier Moret took office in the face of violent denunciation by his predecessor. Señor Maura accused him of having led the Liberals into a position where they were false to their duty as a constitutional party. They had become, he asserted, enemies of the monarchy, and had attacked and overthrown the Conservative Government for doing precisely what they themselves would have been forced to do in its place. This declaration of implacable Conservative hostility put an end to those little arrangements of mutual if temporary support between parties which have been so long customary in Spanish politics, and involved the new Ministry in unusual difficulties. Moret, however, has resolutely gone his own way, and has a good deal to show for his short term of office. The Riff campaign has been brought to a close in a way not to hurt the pride of the army or the people; Catalonia has been pacified and martial law in that province abolished; while the Government's decree giving new powers to municipalities, like its appropriating some $1,700,000 for new school buildings in Madrid, has had an excellent effect. Moreover, even the antagonism of the Clericals has been somewhat appeased by talk of revising the Concordat in agreement with the Vatican. But the real test will come in the approaching general election, when it will be decided whether fear of the Republican and Socialist alliances of the Liberals is acute enough to drive the country back into the arms of the Conservatives. However, it is an almost unbroken political tradition in Spain that the Government always wins in the election of the Cortes. It gets turned out of office later by factional divisions, and then a new Government comes in, to win and be beaten in the same way.

Among the numberless things that Japan has learned from Europe and this country is the use of the "vested interests" argument. In explaining to the Japanese Diet just why the Mikado's Government could not accede to the Manchurian proposals of Secretary Knox, Baron Komura, Minister for Foreign Affairs, reminded his hearers that "there have grown up numerous undertakings which have been promoted in the belief that the railway would remain in our possession." The Baron's hope that the Powers "will equally recognize the justice of our attitude in the matter," may or may not be realized so far as formal diplomatic opinion is concerned. But in their heart of hearts the Governments must admit that the argument from vested interests reaches home. Great Britain came into Egypt to restore peace and has overstayed by a generation, largely because of the need of protecting the vested interests created during the temporary period of occupation. France in Morocco, Russia in northern Manchuria, ourselves in the Philippines, have gone pretty nearly through the same process. A divine mission or manifest destiny necessitates our seizing upon some desirable piece of territory, and vested interests keep us there. Japan's investments in Manchuria, in the form of blood and treasure alone, give her an excellent case under the ethical code that now obtains in the court of the nations.

Cuba's celebration, last Friday, of the first anniversary of the reëstablishment of the republic was doubtless the more hearty and hopeful for the subsidence of the threatened race issue in the island. President Gomez has been in consultation with the negro leaders, and apparently an amicable agreement has been reached on the general policy to be pursued. The political rights of colored Cubans are to be fully assured. They may hold elective and appointive offices without objection, and make such use of the suffrage as they see fit. At the same time, they see the wisdom of avoiding needless social clashes, and their leaders are reported to have been successful in persuading their followers not to go out of their way to demand service in any hotel or restaurant where the patronage is almost exclusively white. Yet, politically, the negroes are organizing to make their influence felt as never before, and to secure their full rights under the law. Their programme calls for a republic "without race discriminations," and a career open to talent irrespective of color. One item in their proposals may well strike a chill into certain patriots from the United States. It is the demand for the overhauling of "all concessions granted from the beginning of the first American intervention." This is put forward "as a matter of morality." Was there ever such impudence?

That New York is not the only place where police prisoners are tortured to obtain confessions every one is well aware. But it is only in India that greater dependence seems to be placed upon the efficacy of the "third degree." During 1909 many questions were asked in the British Parliament as to the extorting of confessions by ill-usage or actual torture, with a view to bringing out the extent of police misconduct of this character. It appears that, while actual torture is only occasionally used, the Indian courts know that it is employed from time to time, and therefore suspect every confession produced by the police. It is even said that a confession is regarded by some judges as *prima facie* proof that the charge against the prisoner is a false one. Thus the torturing defeats its own end —the conviction of the offender. This is as it should be.

ARTIFICIAL HARMONY.

A Republican millennium is now heralded at Washington. The lion and the lamb are to lie down together and a little child shall lead them. Which, being interpreted, means that insurgent Republicans and regular Republicans are to go on thinking of each other the same unutterable things, and to oppose each other tooth and nail, but are all to do exactly as the President wishes. The various State delegations in Congress are to meet in succession and highly resolve that they will stand by Mr. Taft. He is to be the great pacificator of his party. If incredulous people ask whether this is not a crying of peace, peace, when there is no peace, they are told to look at the actual results. The hatchet is being buried—at least, until after the autumn elections. Even the warring and apprehensive Republicans of New York are to be made a hopeful band of brothers by a visit of the President to Albany in March. His smile is everywhere to radiate harmony and good cheer. The party will "get together" like two naughty and quarrelling boys held upon a father's knees.

We will not call this childish, though it does seem to savor of childhood's boundless belief in the power of a big brother to do impossible things. Nor shall we deny that important results may flow from this seeming determination of the Republicans to sink differences, for the time being, and make a brave show of union in support of the President. The outward strife in Congress may abate. A part of the President's legislative programme may be written into law. Upon the critical campaigns in New York and Ohio, as upon the work preliminary to the Congressional elections in November, the party may enter with a fair semblance of being harmonious and hopeful. But, when all is said, these things are wholly exterior. The union which it is proposed to exhibit is purely mechanical. What we need to find out is the truth beneath the superficial appearance. The real motives and the actual political forces at work—what are they?

To start with, a clear-eyed observer cannot fail to note that this effusive demonstration of trust in President Taft, and of willingness to do whatever he bids, is a trifle sudden. That sentiment certainly did not exist in any overwhelming form when he was asking Congress to live up to the pledges which he and the Republican party had made to the people in the matter of tariff revision. At that time, the Presidential smile had no invincible compulsion. Nay, Congress withstood Presidential appeals and even threats. In fact, it was intimated to him pretty plainly that he would veto the tariff bill at his peril; that was solely his affair, and the Republicans would wash their hands of it and gleefully go back to the Dingley tariff, if he chose to be headstrong about the matter. Now, we ask, what has wrought the great change since last August? Is it a new conviction of the President's wisdom, or a perception that he is so popular that he cannot be opposed safely? Plainly, nothing of the kind. It is fear for their own skins that is now the unifying force among the Republicans. When the tariff bill was passed, the elections were fifteen months away. To-day, their shadow is already upon alarmed Congressmen and party committees, and they are asking what they must do to be saved. There is no secret about this. The President himself puts the case frankly on the ground of a party emergency. He cannot be under the illusion that the factions of his party are suddenly smitten with a great admiration for his vigor in leadership. They are simply warned that if they do not hang together they will be hanged separately.

This artificial harmony may persist for a time, and, as we say, have a marked influence on the course of legislation during this session of Congress; but in the nature of the case, it cannot last long. Political irreconcilables will inevitably fly apart. This present coming together of Republican insurgents and the Aldrich-Cannon machine will surely deserve to be written of historically like the famous reconciliation between Lord John Russell and Palmerston. "They met and embraced and hated each other worse than ever." In that instance also, it was "the good of the party" that brought antagonists together, but in as hollow a truce and with as little lasting result as are almost certain to mark the forced union now on display. And if one asks how in detail this joining of opposites is going to work out in actual political coöperation, the answer cannot be very encouraging. If the insurgents are to speak at all in their districts and States, what is there left for them but to defend their attitude, and to go on attacking the selfish oligarchy in control of Congress? If, on the other hand, Speaker Cannon and his lieutenants should take the field, with Aldrich and his aides, how could they make speeches without either stultifying themselves or angering the insurgent Republicans? He must be a political dreamer who thinks that votes can be made in that way or elections carried.

With all the signs there are of an irrepressible conflict within the Republican party, it is as foolish to think that it can be really staved off by a temporary gush of harmony, as it was to fancy that Edward Everett could extinguish the incipient national conflagration of 1860 by squirting upon it, as Goldwin Smith says, the rose-water of his oration on Washington.

ROOSEVELT'S LAW OF LIBEL.

The decision by Judge Hough puts a judicial stamp upon one of the legal aberrations of Theodore Roosevelt. In his special message to Congress of December 15, 1908, President Roosevelt attempted to set up, or revive, the doctrine that the Government of the United States can be libelled. Of certain statements made by the New York *World*, he declared that "they are in fact wholly, and in form partly, a libel upon the United States Government." That he meant this in a legal sense, and not merely as a bit of angry rhetoric, was shown when he went on to affirm that the owner of the *World* "should be prosecuted for libel by the Governmental authorities." And, in fact, the Attorney-General of the United States did initiate the proceedings which have now been brought to an inglorious end. Mr. Roosevelt's own appointee as a Federal judge has decided that the President's law was unsound, and that the principle which he sought to establish had in it "consequences of a very serious character."

The Government suit against the *World* and the Indianapolis *News* never should have been brought, but inasmuch as President Roosevelt insisted upon its being brought, it is well that it has broken down at every point. Indictments were first found in the District of Columbia, and then it was sought to have the editor of the Indianapolis *News* removed thither for trial. But

Judge Anderson of the Federal Court made short work of that. The libel laws of Indiana were ample protection for any aggrieved citizen, and action should be begun in the jurisdiction where the offence was committed. After this fiasco in Indianapolis, the Attorney-General procured the indictment of the *World* in New York, but under a strained construction of a Federal statute which Judge Hough has now decided to be wholly insufficient to warrant the indictment. There remains, of course, a possibility that an appeal may be taken to the Supreme Court, but there is no likelihood whatever that that tribunal will countenance the fantastic mixing up of jurisdictions and confounding of distinct laws which President Roosevelt attempted. Thus the disposal of the case against the *World* marks one more rejection by the courts of legal contentions which Roosevelt advanced in his confident wrath.

In the jubilations over this result, as a great triumph for "the liberty of the press," we are not able to join unreservedly. It is true that if what Roosevelt declared to be the law had been held by the courts to be the law, newspapers might have been subjected to vexatious prosecutions by foolish officials. But these gentlemen would find that there are judges in Washington, if they succeeded in getting an editor taken there for trial; while the doctrine that the Government, as distinct from individuals, can be libelled would be as easily riddled judicially in the District of Columbia as in New York. Moreover, the only pretence, in the *World* case, that there is a Federal law of libel lay in the assumption that the State penal code had been somehow slipped into an act of Congress. So if the indictment had not been quashed, the trial would have virtually gone on in accordance with the New York libel law. Under it, Mr. Charles Taft and Mr. Douglas Robinson—not any fancied "Government," but the persons who were supposedly libelled—could proceed against the *World* to-morrow. As Judge Hough remarked, "the extremely defamatory matter printed as set forth in the indictment" rendered the publisher "liable at common law in every county of the State of New York." The point to bear in mind is that the decision of Judge Hough is no warrant at all for reckless and unfounded charges in the press. No liberty of the press in the sense of license has been upheld. Newspapers must still walk with the fear of the law of libel before their eyes. That law is severe—in some respects too severe; but it is the local law, not a far-away Federal artificiality invented for the occasion. Even an editor, it is now settled, has the same right as a burglar to be tried in the jurisdiction where his crime was committed.

In reality, it is not so much the liberty of the press that was involved in this *World* suit, as the liberty of men in office to make fools of themselves. That was the absurd thing all along—that certain men temporarily in power should confuse their personal comfort with the peace and dignity of the United States. Walter Bagehot said that Gibbon seemed at times to lose his personal identity in that of the Roman Empire, but even Gibbon would not have held that an attack upon him was doing despite to the imperial majesty of Rome. President Roosevelt, however, could not discriminate between hard words about him or his friends, and hard words about the Government. He said that the accusations made in the *World* were an attempt to "convict the Government of wrong-doing of the basest and foulest kind." He should have remembered that Presidents may come and go but that the Government is always there, something independent of them and above them. "The Government at Washington still lives!" exclaimed Garfield in front of the Treasury building in Wall Street, when the news came of Lincoln's death. A Government beyond the reach of the assassin's bullet is certainly beyond the libeller's pen.

THE WONDERS OF PALLADINO.

It would be a pity to condense into a brief statement of essentials the artistic story that Professor Münsterberg tells in the *Metropolitan Magazine* of his experiences with Palladino. He plays round the subject in the most varied fashion, throwing out a suggestion here, a conjecture there, and interspersing the whole with philosophical reflections. He does not profess to be able to demonstrate his conclusion. He admits that it will always be possible, for those who are so inclined, to continue to think that all the Palladino marvels which have not been shown up as tricks are genuine phenomena. He even states with the greatest emphasis that he himself is "entirely unfit for such an investigation," and therefore undertook it only because the pressure upon him was too strong to resist. And so description, philosophy, argument, personal considerations are all blended together in such a way that it is quite impossible to reproduce the effect in a summary.

But let us begin with the last point mentioned. The admission that he is "entirely unfit for such an investigation" is by no means so innocent as it sounds. Professor Münsterberg declares his unfitness for the detection of trickery; but he takes care to involve in his own humiliation all his fellow-scientists. The generally received notion that men of science are especially fitted to make such investigations, he declares to be altogether erroneous. "They are trained through their whole life to breathe in an atmosphere of trust. The scientist who experiments in his laboratory and studies the laws of physics or chemistry or biology has not the slightest reason to be afraid that nature will play tricks or resort to fraud." The man of science never questions the honesty or good will of his collaborators; "there is perhaps no profession which presupposes the good faith of all concerned so instinctively." Professor Münsterberg is too good an artist to point out in so many words the full effect of these remarks; but in reality they are a two-edged sword. They are not only designed to play havoc with the claims of Lodge, Crookes, Schiaparelli, *et al.* to special authority when they declare that there has been no trickery; they are calculated also to enhance enormously the value of any result of the opposite kind. Here am I, a poor, innocent scientist; I can't hope to expose an expert trickster, but if by good luck I should expose her in one point, you may be sure that there are a hundred others that I have not been able to find out.

In spite of his disclaimer, however, Professor Münsterberg shows that he kept his wits about him fairly well during the séances. He saw and felt a great many things that he could not explain; but he brings forward a formidable array of circumstances that point to trickery all the way through. But first of all, he brushes aside the idea that Palladino is a simple peasant woman. She is a woman of most delicate- perceptions, not

only physical but mental; her face has an expression of "sympathy and almost of brilliancy"; she has exceptional vivacity and cleverness, and an "inimitable charm." She studies the persons with whom she has to do, and watches unceasingly every change in their expression or attitude. Her fundamental reliance is on the diversion of their attention from what is going on; and everything is directed toward that end. One very pretty point was scored by Professor Münsterberg in this connection. When the room was light, Palladino kept fastening everybody's attention on the necessity of preserving the chain round the table by continuous contact of the hands; the moment she saw any break in the chain, the phenomena stopped. But Münsterberg and his next neighbor agreed at a certain time to hold their hands so that from where Palladino sat it looked as if they were touching, while, in reality, their fingers were bent inwards so as to leave a gap of several inches in the chain; and the phenomena went on quite undisturbed.

It was at the last séance he attended, however, that Professor Münsterberg really scored. Everything was going swimmingly. "John" was at his best:

> He touched me distinctly on my hip, and then on my arm, and at last pulled my sleeve at the elbow. I plainly felt the thumb and the fingers. It was most uncanny. And finally, John was to lift the table in the cabinet. We both held her hands, we felt both her feet, and yet the table three feet behind her began to scratch the floor and we expected it to be lifted. But instead, there suddenly came a wild, yelling scream. It was such a scream as I have never heard before in my life, not even in Sarah Bernhardt's most thrilling scenes. It was a scream as if a dagger had stabbed Eusapia right through the heart.
>
> What had happened? Neither she nor Mr. Carrington had the slightest idea that a man was lying flat on the floor and had succeeded in slipping noiselessly, like a snail, below the curtain into the cabinet. I had told him that I expected wires stretched out from her body, and he looked out for them. What a surprise when he saw that she had simply freed her foot from her shoe and with an athletic backward movement of the leg was reaching out and fishing with her toes for the guitar and the table in the cabinet! And then lying on the floor he grasped her foot and caught her heel with firm hand, and she responded with that wild scream which indicated that she knew that at last she was trapped and her glory shattered.

Of course, it is always possible to fall back upon what has now become the standard view of the believers in these wonders. They admit that Palladino and her like sometimes resort to fraud, but they say that this is but the yielding to a natural desire to get results by fraud when they will not come the other way. However, there has hitherto at least been put forward a certain plausible distinction between the cases where fraud was discovered and the other cases; it has been asserted that the frauds were clumsy and easily detected, whereas the successful performances were of an incomparably more difficult kind. But here was the regulation exhibition, and no inkling of the true explanation of it had occurred either to Münsterberg or anybody else until it was obtained by means of a counter-trick. It was not the watchfulness of the accredited observers that unmasked the fraud. The miracle-mongers will have to fall back on some inner line of defence. They will have to give up the only thing that furnished reasonable ground for people in general to pay any attention to the fantastic doings reported by a few men of scientific standing—the supposition, namely, that what Crookes, or Lombroso, or whoever he may be, did not detect, could not have been present. Nor is the lesson by any means a new one. The famous Slade, for instance, gained great prestige with his slate-writing which long baffled numbers of scientific men; but ultimately he was exposed, and sentenced to a term in an English jail. We say ultimately, but in fact this was not the last chapter. He afterwards attracted worldwide attention by performances in the way of causing complicated knots to be untied without any bodily contact with the rope, to the entire satisfaction of the eminent German astronomer Zöllner; and the feat transcended anything else ever recorded, for the knots were of such a character that, under the conditions imposed, it was mathematically impossible for them to be untied by any motion conceivable in three-dimensional space. Nevertheless, the whole thing was afterwards shown to be nothing but ordinary sleight-of-hand. Nor does it seem at all likely that either the paths of the fourth dimension or the gates of Heaven will ever be unlocked for us by the Slades or the Palladinos.

DEATH-RATE AND HEALTH.

A newspaper in New York has been displaying much wonder over an exhibit of death-rates of New Jersey towns and cities, which it sets forth and discusses. The places are given in a table in the order of their mortality, beginning with East Orange, Bloomfield, West Hoboken, and Perth Amboy, whose death-rates run from 11.15 to 13.68, and ending with New Brunswick, Jersey City, Harrison, Passaic City, Morristown, and Hoboken, with death-rates ranging from 19.19 for New Brunswick to 22.91 for Hoboken. The differences between the top of the table and the bottom are, it will be seen, very great; and while, in some cases, a large divergence might from known conditions be expected, there are others in which one would say in advance that the places concerned ought to show up about equal in matters of health and mortality. Now some of these unexpected differences may be referable to conditions that need looking into; but it should not be forgotten also that, in the case of rapidly growing places, the rate of mortality, taken by itself, furnishes no trustworthy measure of their healthfulness.

When we see a death-rate of 11.15—like that of East Orange, which heads this list—we may be sure that it must be due to some peculiarity, not of the health conditions, but of the composition of the population for the time being. A permanent death-rate of 11.15, in a community of stationary population, would mean that the average length of life of all persons born in that community was ninety years; and we all know that any insurance company that should undertake to insure lives in East Orange and similar places on that basis would soon go into bankruptcy. The fact is that East Orange is a rapidly growing place and that the new arrivals are mostly at such time of life, and in such conditions of health and comfort, as make the death-rate among them for some years almost negligible. And all through the list, this kind of consideration has great weight. Take the point particularly emphasized by the scandalized newspaper, that "Perth Amboy (13.68) and New Brunswick (19.19), both on the Raritan and both manufacturing places, are so wide apart in their death-rates." The population of these places, as given in the table above mentioned, is 29,173 for Perth Amboy, and 24,384 for New Brunswick. Now, if we turn to the census of 1900, we find that Perth

Amboy had at that time only 17,699 inhabitants, whereas New Brunswick had 20,006; so that Perth Amboy has gained 11,474, or 65 per cent., while New Brunswick has gained only 4,378, or 22 per cent. If we go back to the census of 1890, we find that, whereas New Brunswick's increase has been only 31 per cent., Perth Amboy's increase has been no less than 207 per cent. The inference is that the two cities present such differences as to the age and condition of the annual additions to their population as to make any comparison of their health conditions by mere comparison of the death-rates quite impossible. And, in the same way, the fact that Orange has a death-rate of 19.08, whereas East Orange gives the banner figure of 11.15, does not indicate a difference of any such magnitude either in the healthfulness of the places or in the individual condition of their people; for while Orange shows a gain of only 42 per cent. since 1890, East Orange shows a gain of 100 per cent.

The pitfalls of statistics are as the sands of the sea for number, but in the case of mortality figures, which are so often brought to the attention of the general public, it is worth while to point out some of them. A remarkable instance of the result of overlooking essential elements was provided by Chicago some years ago. Figures presented by the Chicago Board of Health were declared to "demonstrate beyond dispute that the average duration of life in this city has more than doubled within a single generation." It was expressly pointed out that this was not a matter of death-rates, and had no connection with census figures; the point was that the average age at death of all decedents in Chicago had risen from 13.9 in 1869 to 19.6 in 1892 and 29.4 in 1898. Likewise it was stated that while in 1872 those whose age at death was above seventy formed only 2.7 per cent. of all who died, this percentage in 1898 had risen to 8.8. The unhesitating inference was made that the improvement of health conditions had brought about an amazing lengthening of human life. But what had really made the age of those dying in 1898 so much greater than that of those dying in 1869? Simply that in 1869 Chicago was a city of young people, and by 1898 a lot of these young people had grown old. You can't have many people dying above the age of seventy when nine-tenths of your population consists of people who have immigrated into the place within the preceding dozen years or so, at the age of from twenty to forty, and of their young children.

Another conspicuous instance was furnished about the same time by a high official of the Federal Government, who pointed out, in reply to criticisms as to army sanitary conditions in the Philippines, that the death-rate among the soldiers was somewhat less than the death-rate of New York city. But the death-rate in New York city among the picked class represented by our soldiers in the Philippines is not twenty or ten, or five per thousand, but practically *nil*. Among men of the military service age, who have recently passed a searching physical examination such as is required for the army, the death-rate is negligible; and so the comparison with New York's general death-rate was not merely inconclusive, it was absolutely worthless. In this comparatively simple matter, as in the more complex problems of economics, you must get well behind the surface of your figures before you can venture on drawing a conclusion that is entitled to any weight.

THE NEW STANDARD OF COLLEGE TEACHING.

Those who heard President Woodrow Wilson at the Dartmouth inauguration felt that they were listening to a prophet. It is idle for Harvard, Yale, and other institutions to claim that his preceptorial conference is merely their quiz section under a more pretentious name. It is an entirely different thing: different not merely in degree, reducing the number of students from twenty or more to five or less: but different in kind; changing the relation from that of examiner and examined to that of teacher who is learning the needs of his students and how to meet them, and learner who is teaching his teacher how to teach. As this method hitherto has been confined mainly to a single university, and has been there dependent on a large special fund, it may be interesting to read the first report of its working in a college small enough to be able to afford out of its regular funds to give elementary classes this costly kind of teaching.

This first report by Prof. Allen Johnson, of the department of history and political science, is as follows:

After some eight weeks' trial of the conference scheme in the department of history and political science, we are prepared to present some of its aspects. I will state first just how the conferences are organized.

The class of seniors in government is divided into five groups of five students each. These groups meet weekly in our seminar room, at the library, for a half-hour conference. In addition to chapters in Lowell's "Government of England," readings have been assigned in Lee's "Life of Queen Victoria," Churchill's "Life of Lord Randolph Churchill," and Morley's "Life of Gladstone." So far as possible the discussions have been made to turn upon phases of English public life. The chapters relating to Gladstone's education gave an excellent opportunity for an excursus into Oxford undergraduate life as presented by John Corbin in his "American at Oxford." Comparisons and contrasts with our American undergraduate life were suggested and eagerly debated by members of the several conferences.

The class in History 7 (American history) is divided into nine conference groups averaging four members each. The readings have hitherto been in American biography. Washington, Jefferson, Adams, Hamilton, Jay, Morris, Madison, Ellsworth, were the characters first studied. In each case a good biography was read, as well as portions of the letters and public addresses of these typical statesmen of the Revolutionary period.

This programme is somewhat ambitious and has proved a heavy burden, for besides these seven hours of conference work, I have continued to lecture to each class three times a week. Indeed, I find that the preparation for a conference is quite as arduous as for a lecture. Even a book read years ago must be skimmed over so that its salient features may be made the subject of discussion in conference. It requires no little tact to draw out the men and make them do the talking.

Besides his three lectures every week Mr. Scott has seven hours of conference work. The number of students in his groups ranges from one or two to six, according to the readings assigned. So far as possible, by individual conferences at the beginning of the semester, Mr. Scott endeavored to form an estimate of the capacity and interests of each student; and on the basis of this inventory he has made his groups and chosen his books. The following works are now being read, in addition to regular class work: Taine's "Ancient Régime," Saint Amand's "Marie Antoinette," Cunningham's "Outlines of English Industrial History," Tallentyre's "Life of Voltaire," Monroe's "History of Education," Koser's "Friedrich der Grosse als Kronprinz," "Essays in Anglo-American Legal History," Coolidge's "United States as a World Power."

Mr. Scott and I are convinced that from a pedagogical point of view this conference scheme is admirable. I quote from a brief statement which Mr. Scott has drawn up for my use: "It is sometimes possible," he writes, "under the conference system, to connect historical work with what will later be the student's professional interests. For example, the students who expect to study law are reading 'Essays in Anglo-American Legal History,' in order to get a background for later work in the law school. Many students entering the law school are bewildered because they are unfamiliar with legal terminology. Readings such as those

given can in some measure obviate these difficulties. Then, too, law should be studied in the light of its evolution in order to determine underlying principles. I have one student who expects to study in Germany. I am reading with him Koser's 'Frederick the Great as Crown Prince,' thus correlating historical with language study. German manners and customs are often discussed at these conferences. Some students expecting to enter the ministry have been studying the life of Voltaire, who, as the arch-enemy of the church, has interested them."

Mr. Scott has touched upon a point which we are keeping constantly in view; viz., the coördination of historical with other college work. So far as possible we are trying to make these readings contributory to the educational work of the college. One of the most encouraging results has been the disposition of some students to bring information acquired elsewhere to bear upon their historical readings, and to interpret ideas in terms of their own experience. It may seem a far cry from Virgil to Jefferson; but the effort of one youth to prove that the Father of Democracy must have read the Eclogues was good evidence of his desire to coördinate his academic experiences. We have been repeatedly gratified to find students reading surreptitiously more than was asked, from sheer interest in the subject. One of Mr. Scott's students asked to have his readings changed, because he was going to read the book assigned anyway, and he wished to read something bearing upon legal history. I have found several students reading the letters of Hamilton and Madison and Jefferson, because they were interested in these personalities. This is no small achievement, if, indeed, it is the outcome of discussions in conference.

It is odd to find how reluctant students are to express publicly among their fellows ideas which may seem pedantic. The student who suggested the Virgil-Jefferson theory immediately blushed and felt called upon to apologize for his audacity. Learning is evidently almost completely dissociated in the minds of most students from the chief concerns of academic life. Here is where the conference may accomplish much. It follows that if the best results are to be secured, the number of students in a conference should be small. Our experience leads us to believe that when a conference group numbers more than five, it becomes simply a quiz section—a danger which we have constantly to guard against.

Professor Johnson's report itself indicates the cost in time and labor involved in this change; and the gains in interest and knowledge resulting from it. The cost in money for the transformation of these three courses is simply the cost of one additional instructor; which is for this year $1,200, but would permanently be $2,000 or $2,500: since men who can do this work well are much more rare than men who can give formal lectures: and one who succeeds should be promoted and retained at all costs. The application of this method to the small college permits one great improvement over the method unavoidable in a great university. In the small college the professor himself does his own conference or preceptorial work: and the preceptor is himself the lecturer to his whole class. In a university with classes numbered by hundreds that is obviously impossible: the lecturer and the preceptor for the same class are two different persons; with different degrees of maturity, experience, and salary.

I have called this not a new education, but a new standard of education. No institution is rich enough to put all its teaching on this individual, intimate, vital basis. Having some other things to do besides teaching, I cannot afford to teach my own class of sixty in this way. But I can at least confess that my teaching as a result is not first-rate. All teaching that deals exclusively with men in large groups is second, third, or fourth-rate. If it is merely lectures from day to day with an occasional written examination, it is fourth-rate— D, if we apply the scale by which we measure students' work. If it supplements the lecture by regular, frequent written work in and out of the class, it would rank as third-rate, or C. If, alternating with the lecture, or as an essential part of it, the teaching of a class includes a free exchange of questions and answers from both sides and a genuine discussion in which all thought of examination is lost sight of by both parties, it may rank as second-rate—what corresponds to B work on the part of the student. But from now on the highest mark, or A, must include as an essential feature the costly personal work where teacher meets learner, man meets man, in groups so small that formal barriers are broken down; individuality is recognized; and teacher and learner touch each other through their common contact with the subject taught.

Some subjects need this method much more than others. The sciences, through the laboratory method, and English, have it largely already. Formal subjects, like mathematics and the elements of languages need it less than other subjects; because here apprehension of particular facts accessible to all counts for so much more, and personal appreciation of great principles and interests counts for so much less.

The subjects which need the preceptorial method most and in which it will bear the richest fruits, are history and government, economics and sociology, literature and philosophy. An institution in which these half-dozen great humanities should be taught in lectures supplemented by conferences by carefully selected, adequately paid teachers, of the requisite learning, industry, sympathy, tact, and patience, would be a better kind of institution, whether a great university or a small college, than any now existing. It will take a generation of generous benefaction and wise administration to put any university or college permanently and soundly on such a basis. But it is something to see and recognize the new standard; to measure present failure honestly by it; to measure progress not by the multiplication of new courses, but by the intensity and vitality of instruction in the fundamental courses we have already; to lift one department at a time up to this higher plane—in short, here and there to give to the institution that teaches as well as to the student who is taught a merited rank of A.

Bowdoin College, Brunswick, Me.

NEWS FOR BIBLIOPHILES.

The 1909 volume of "American Book-Prices Current," just issued, comes out later than usual. This is explained by the greater bulk of the work, owing to the increased number of books worthy of record. In the 954 pages are recorded 16,750 lots of books and manuscripts which have been sold for $3 or more during the year. The large total of the past season is due to the high average of lots in several sales, notably those of the Henry W. Poor library and those of Edwin N. Lapham and the late J. C. Chamberlain and John G. Heckscher. The number of catalogues from which selections have been made is 151, containing about 126,000 lots. The present is the fifteenth annual volume of this publication, edited by Luther S. Livingston and published by Dodd, Mead & Co. The first volume, for 1895, described 6,025 lots and contained 472 pages.

The 1909 English "Book-Prices Current," edited by J. H. Slater, being Volume XXIII of that useful publication, is also just at hand. Whereas one pound was at first the minimum limit of price for the English record, of recent years Mr. Slater has been including numerous lots selling for smaller sums. The total number of lots described in the present volume is 8,747, selected from about 58 catalogues describing 36,083 lots. Aside from the two parts of Lord Amherst's library, the first sold in December and the second in March, the offerings at the London auction rooms were generally quite ordinary.

The English record is arranged in chronological order, necessitating an index which in the present volume fills pp. 651 to 763. In the American book everything is arranged in a single alphabet, all copies of the same book being placed together, and no index is required. It has been asserted that the chronological arrangement has advantages in keeping the books of a library together. But these records are generally consulted for prices on specific books, and the greater ease in consultation of the alphabetical list more than compensates for any advantage which the chronological arrangement may have. And sometimes, as in the present volume, two parts of a library (*e. g.*, Lord Amherst's) are separated by many pages.

William Nelson of Paterson, N. J., a zealous collector and student of New Jersey history, has added another to the series of privately printed works which he has prepared from time to time. This is a bibliography of "The Controversy over the

Proposition for an American Episcopate, 1767-1774." The advisability of the appointment of American bishops was first put forth by John Ewer, the Bishop of Landaff, in a sermon delivered before the Society for the Propagation of the Gospel in Foreign Parts, on February 20, 1767. In this sermon he deplored the heathenism and infidelity prevalent in America, and the lack of efforts to convert the Indians. He was replied to by Charles Chauncy, Thomas Bradbury Chandler, and William Livingston in pamphlets issued immediately, and the controversy continued for some years. Thirty publications and editions are described by Mr. Nelson, and copies in the larger libraries located.

On February 8, the Anderson Auction Company sells a collection of autographs, comprising specimens of Randolph Caldecott, Charles Darwin, Andrew Johnson, John Morley, Samuel Pepys, Ruskin, Scott, Daniel Webster, and others.

On February 8, 9, and 10, the Merwin-Clayton Sales Company sells a selection of books from the library of Stephen Emmons of Portland, Me., and the second part of the library of the late Charles Warren Stoddard. Included are books on California, New York, Rhode Island, etc., and a long series of first editions of Bret Harte.

Correspondence.

THE SERVICE PENSION OF THE CARNEGIE FOUNDATION.

To the Editor of The Nation:

Sir: An official action taken two months ago, but only now publicly announced, by the Carnegie Foundation for the Advancement of Teaching seems to have certain ethical aspects that deserve consideration, not only from members of the teaching profession, but also from the public at large. Those aspects will, I think, become sufficiently apparent from a brief recital of the facts in the matter.

Upon its incorporation in 1906 the Foundation announced that it would grant retiring allowances to teachers in accepted institutions upon two grounds—old age and length of service. The conditions relating to the old-age pension are not relevant to the present communication. The rule relating to service pensions reads as follows: "Any person who has had a service of twenty-five years as a professor, and who is at the time a professor in an accepted institution, shall be entitled to a retiring allowance"—computed in a specified manner. Between April, 1906, and November, 1909, many university teachers and many governing boards based definite plans and actions of their own upon the supposition that, so far as its resources extended, the Carnegie Foundation would do what it had announced that it would do. The expectation of a service pension was, in some cases, named among the inducements offered men who received calls to institutions upon the "accepted list" of the Foundation; it was in other cases a motive for the refusal of otherwise advantageous calls to institutions not upon the Foundation. In instances either known or reported to me, teachers nearing the time of eligibility for a service pension have in a great variety of ways altered their plans, modified their domestic arrangements, made personal sacrifices, in order that, with the aid of the pension, they might be able to retire and carry through without distraction some project of study or of literary production. Some, expecting an early relief from all teaching duties, have foregone leaves of absence which they might have claimed; some have taught in summer schools or night schools who would not otherwise have done so; some have made investments or taken insurance with express reference to the time of their prospective retirement. After institutions, families, and individuals have thus, for nearly four years, been permitted and encouraged by the Carnegie Foundation to be vitally influenced in the conduct of their affairs by an expectation based upon the Foundation's explicit announcement, the entire system of service pensions is now abruptly abolished, "except in the case of disability unfitting" the applicant "for work as a teacher as shown by medical examination"—which, of course, is purely a disability pension.

The question whether the scheme of service pensions for professors under sixty-five and in good health was originally a wise one I do not here discuss; it is a question of policy concerning which a good deal might be said on either side. But two considerations in the matter seem so plain as to afford no ground for differences of opinion. One is that, unless the Carnegie Foundation is to be guilty of an act of bad faith it should promptly supplement its recent action by the proviso that at least all persons within ten years of the time of eligibility for a service pension, under the old rule, may still claim such pension when their time comes round. The other patent fact is that, unless so supplemented, the latest action of the Foundation must hereafter render impossible any confidence in the stability of policy of that corporation. In the Federal act of incorporation by which the Foundation received legal entity two classes of prospective beneficiaries are specifically distinguished and equally emphasized: college teachers "who by reason of long and meritorious service or by reason of old age, disability, or other sufficient reason" shall be deemed entitled to pensions. The service-pension feature has similarly been especially emphasized in the public reports and explanations of policy of the president of the Foundation. A body which at a moment's notice abandons one of the two purposes constituting its proclaimed *raison d'être* is equally likely to modify the other to any assignable degree.

I can scarcely suppose that any one will think it relevant to note that the Foundation has always retained the power to alter its rules "in such manner as experience may indicate as desirable." All public bodies, doubtless, have such power to amend their regulations; but it is not commonly conceived that the power can justly be exercised in such a way as to have a retroactive effect, or to nullify equities acquired or expectations reasonably aroused by virtue of the previous regulations.

Arthur O. Lovejoy.

Columbia, Mo., January 17.

THE ENGLISH ELECTION.

To the Editor of The Nation:

Sir: In reading over and pondering on the speeches made by Liberal, Conservative, and Labor leaders in Great Britain on the Budget bill, one cannot fail to be struck by the fact that no considerable part of the British electorate seems seriously to contemplate the abolition of the House of Lords. Twenty-five years ago we used to hear the rhythmic cry that the House of Lords must be "ended or mended." It has certainly not been "mended" during that period, and, so far as a detached observer can see, there is slight chance at present of its being "ended." The reason for the continued existence of an hereditary, irresponsible body of legislators in the midst of so democratic a government as that of Great Britain, undoubtedly lies in the fact that a second chamber of some sort is felt to be absolutely necessary under British political conditions. One of the most telling arguments adduced in the campaign is that the leaders of the majority of the House of Commons, elected possibly five or six years previously, may not really represent the views of the majority of the electors. Assuming such to be the case, which might very well happen, you have in the prime minister a *pro tempore* uncrowned, irresponsible, absolute monarch, ruling over the destinies of a country ostensibly the world's type of representative government and the mother of parliaments. With the Crown's veto power dormant, if not dead; with a second chamber impotent, and with a Parliament of possibly nearly seven years' standing, you have just that phenomenon—a condition of affairs not pleasant to contemplate. Hence, the average British voter, whatever his political party affiliations, entertains little or no resentment against the Lords for having appealed to the country on such an occasion. The House of Lords, however unworthy they may be, occupy the place filled by our Senate and Supreme Court. And, after all, there remains the undoubted solid psychological fact that the average Englishman loves a lord—with all his faults. Why? The suggestion is offered that a satisfactory answer to this question might afford an illuminating thesis for some aspiring doctor of philosophy in the fields of history, political science, and psychology.

But perhaps the most astonishing feature of the campaign has been the discussion of the merits of the doctrines of Free Trade and Protection. Middle-aged and older readers of the *Nation* will remember that this question was settled once and for all time years ago—in favor of Free Trade. Protection had absolutely, from a logical point of view, not a leg to stand upon. England was to be the manufacturing country of the world, and all the outlying countries were obediently to bring their raw materials to her to be manufactured into products which they were thankfully to take back in British ships to their homes for consumption, after having drawn suitable bills of exchange on London. But, reply the wicked Protectionists, *tempora mutantur nos et mutamur in illis;* the dream has not come true; since Cobden's time Germany has come to the front, and so has the United States—both under Protectionist régimes—and our supremacy is now everywhere seriously challenged, and

in places superseded. We are no longer Little England; we are an Empire, and the colonies which we now call our "sisters" are anxious to draw closer to us in an economical and political sense—and preferential tariff is the thing. The world of Cobden and Bright is not the world of to-day, and theories which fitted facts of their day do not fit ours. Let us "face facts," said Mr. Balfour, as they are to-day. The significant fact for the philosophical American observer is that arguments for Protection receive a respectful hearing to-day by the British electorate in the home of Free Trade.

The campaign speeches, as reported in the English papers, are of a very high order of merit; there is a most commendable absence of purple rhetoric and appeal to the galleries. They give one the impression of a sincere, urbane, scholarly gentleman honestly discussing controversial questions before an intelligent, well-balanced audience—in that peculiarly English oratorical fashion of rounded periods adorned with the artifice of deliberately fishing for exactly the right word or phrase, whereby the effect is heightened by appearance of spontaneous inspiration. The speeches, though addressed to the level of a man of merely ordinary intelligence, are pervaded with a pungent literary flavor and packed with proverbial British sound common sense. In the exchange of amenities between the protagonists, Balfour and Asquith, the irony is sometimes exquisite and always excruciatingly courteous. As an illustration, I quote the following from the London *Times's* verbatim report of Mr. Asquith's speech at Haddington:

> . . . . He [Mr. Balfour] told you that we have to deal in this country with what he described as the growing problem of unemployment, and while he is candid enough to say that very properly, in his view, the whole difficulty was not going to be solved by what is called tariff reform, still he used these words, which I call your attention to: "The greatest part of the difficulty—namely, the employment of the really competent workman in the prime of life—must be diminished by a *rational system*." Mr. Balfour has an advantage, I agree, which is possessed by nobody in this controversy. We know very well what Mr. Chamberlain and his followers mean by tariff reform. All our opponents know very well what we mean by free trade and by the Budget. But neither friend nor foe has any but the dimmest idea of what Mr. Balfour means by his rational system. If, therefore, I make one or two comments on what I believe him to mean, I do so with this reservation, that I may be completely misunderstanding him. I do so with the better grace because I myself have exhibited an amount of pertinacity and importunity amounting almost to rudeness in an attempt to extract from him fuller and further illumination. Let us assume for the moment, and for the purposes of argument, that tariff reform and Mr. Balfour's rational system are equivalent or synonymous terms. . . .

"Amounting almost to rudeness" is certainly delicious. E. L. C. MORSE.

Chicago, January 24.

A HOUSE DIVIDED AGAINST ITSELF.

To the Editor of The Nation:

SIR: Why were we brought to the verge of a disastrous tariff war with Germany? Because we insisted on attempting to coerce that nation to modify its laws on the inspection of imported cattle and meat. What was our avowed object? To regain a market for American meat. Have we a large surplus glutting the home market? Far from it. What would be the effect of reopening the German market? Naturally it would raise the high price of meat still higher. Who would sell their meat to the Germans? The packers. What do the Germans say about these inspection laws? They say they are sanitary regulations for the preservation of the public health. What do we say about it? We say this is but a subterfuge and the real object is to keep out American meat for the benefit of German land owners. Possibly narrow-minded carpers might object that this does not behoove us who maintain duties exceeding 1,000 per cent. on some articles under a Constitution which only authorizes a tariff for purposes of revenue; but our statesmen are practical and robust, and, like Horace Greeley, not scared by the ghost of consistency. But are they not pursuing a consistent American policy? Certainly food is as much a necessity as clothing, and it is quite in the line of historical precedent to say that a cheap steak makes a cheap man. Mr. Knox may yet do something for our poor suffering stocking manufacturers now protected from the competition of German cheap stockings by but a feeble duty of 70 per cent. The department of state should be backed up with a long pull and a strong pull and a pull all together. *Vogue la gallère.*

But how is Mr. Knox backed up by his brother Cabinet officer, Mr. Wickersham? Does he instruct his subordinates to prosecute the associations of boycotters of meat for conspiracy in restraint of trade in violation of the Sherman act? Does he try to bring them within the analogy of Lowe vs Lawler, 208 U. S., 274 (Danbury hat case), where the facts alleged with regard to the boycotting of a certain manufacturer's hats were held to constitute a part of such conspiracy? Not at all. On the contrary, he has called their attention to the acts of a certain association of packers with the view of raising the price of meat with directions to try to crush them under the penalties of the Sherman act. This is more than the mere ghost of inconsistency. It is the very body and bones of the monster.

ELLIS S. CHESBROUGH.

Chicago, January 25.

THE ANNIVERSARY OF PROF. HEINRICH BRUNNER.

To the Editor of The Nation:

SIR: Heinrich Brunner, professor of law in the University of Berlin, will celebrate on June 21, 1910, his seventieth birthday. A committee of prominent German jurists has been formed to assure due recognition, on this anniversary, of Brunner's achievements as teacher and as writer. It is proposed to publish, as is customary on such occasions, a volume of essays prepared in his honor, and also to raise a fund for a permanent memorial. In view of the fact that Brunner's researches in early German law and the law of the Frank Empire have direct bearing upon the legal history of all the West-European states, including England, and thus the results attained by him have been of the greatest value to French, Italian, and English legal historians, it has seemed proper to give to the lawyers and historical students of all these countries, and of the United States, an opportunity to contribute to the memorial fund.

All who are familiar with the development of legal history during the last forty years are aware that Brunner, in his monumental "History of German Law," has cleared up many important and previously obscure points in Anglo-Saxon and in Anglo-Norman law, and that long before the appearance of this work he had shown, in a now famous little book, the true origin of the English jury. No reader of Maitland or of Thayer is ignorant of the debt which English history owes to Brunner. It is hoped that American lawyers and other Americans who are interested in legal history will largely embrace this opportunity to do honor, during his life, to one of the most eminent of living scholars, and to testify that, in spite of all estranging material conflicts, the civilized world is solidary in its supreme interest—its culture.

Since the value of the memorial will depend far more on the number of subscribers than on the amount of their subscriptions, it is hoped that no one who wishes to contribute will hesitate to send a small sum. By direction of the central committee, American contributions are to be sent to the undersigned. MUNROE SMITH.

Columbia University, New York City, January 31.

LIVING CHARACTERS OF FICTION.

To the Editor of The Nation:

SIR: In the course of your delightful editorial on the fiftieth anniversary of the *Cornhill Magazine* (January 20), you ask: "What character in any novel written since 'mid-Victorian' days has become a household word?"—and you imply, of course, the answer, "None." I venture to think, however, that such a reply is rightly to be taken with some degree of limitation not wholly derogatory to the authors of later times.

The fact, it seems to me, is that, since the "mid-Victorian days," though we have produced a larger proportion of persons able to read, we have produced a proportionally smaller number of persons able to read well. The public of the present pays less attention to the best of its literary contemporaries than was paid by the preceding generation to the work of the best men of that period. It is likely that Mr. Pecksniff and Col. Newcome would not have attracted so much notice had they appeared in 1909 as they attracted by their introduction in 1843 and 1855, and this for the reason that we read neither so much nor so carefully as did our fathers.

For those, however, who have escaped these modern faults, is there not a balm even in the Gilead of fiction later than "mid-Victorian"? Surely, in their minds, that "bonny fighter," Allan Breck Stuart, is as real a being as any who actually drew sword for the young Pretender; surely they must still, o' nights, hear the honey-tones of Long John Silver and the raucous voice of his parrot crying "Pieces of eight!"; must surely know in their own lives many a Jim Pinkerton. Silas Lapham's is certainly a familiar name among them; the inquiring intelligence of Mr. James's Maisie has furnished them with a colloquial metaphor, and the mention of Tess calls up

for them a person as genuine as the immortal Becky. Nay, more: if these characters be, alas, the monopoly of the few, regret as one may the later Mr. Kipling, even those who read most carelessly will respond with a ready grin to the mere naming of Mulvaney.

REGINALD WRIGHT KAUFFMAN.

New York, January 26.

VERSE AND THE ACTOR.

TO THE EDITOR OF THE NATION:

SIR: Dr. Gummere, in his timely and suggestive article entitled "Poetry and Elocution" (the *Nation*, November 11, 1909), justly scores the professional elocutionist and the actor for disregarding the essential metrical scheme of their poetic lines and reading them as nearly as possible like prose. An interesting commentary on the inability of German actors in the second half of the eighteenth century to read their iambic lines properly, as well as their general disinclination to produce plays written in verse, is afforded us by a couple of Schiller's letters. On December 18, 1786, Schiller wrote from Dresden to Friedrich Schröder, the actor and manager of the Hamburg Theater:

Now I must ask you above all things for information as to whether I shall have to turn my "Don Carlos" into prose for your stage, inasmuch as there is always the danger that the minor actors will declaim their iambic lines badly.

In a letter of earlier date, October 9, 1786, addressed to Georg Gösehen, the Leipzig publisher, he says:

I could very well imagine that the Vienna actors dislike to produce plays in verse, although the Emperor has requested it a number of times. But I am not going to put my "Carlos" on the stage in verse, anyway.

Of the two stage versions which Schiller prepared, one was actually in prose.

JOSIAH DWIGHT WHITNEY.

Life and Letters of Josiah Dwight Whitney. By Edwin Tenney Brewster. Houghton Mifflin Co. $2 net.

If only as an offset to the tedious legend of Darwin desiccated by his studies this life of the geologist Josiah Dwight Whitney would be valuable. He was a remarkable instance of the versatility that may accompany the severest special studies. The undergraduate who reports that he spends his time "fiddling, painting, reading Goethe's autobiography," in his sixtieth year begins the study of Russian, being "curious to see if I am too old to learn anything." The aged recluse professor at Harvard has a library of rare musical texts that was a resource for the head of the school of music. The German university student who had tried to be a lawyer at home falls in love with the new science of philology, and by sending Bopp's "Comparative Grammar" home to his brother William, is instrumental in making the greatest philological career that America has yet seen.

When young Whitney was sent to school at New Haven he carried from his father a letter which we must quote in part. The lad was to be prepared for usefulness "in whatever sphere Providence may design for him." That there should be no mistake as to the meaning of education, the father adds: "When I say 'education,' you will understand me as meaning not merely cultivation of the intellect, but also of the heart and manners—everything, in short, that prepares a man for usefulness here and happiness hereafter." Not the least interesting feature of this biography is the sidelight it sheds upon the cultivated home-life at Northampton of a family zealous of the best in heart and mind.

After graduation at Yale young Whitney vacillated. For want of a better plan, at twenty, he went to Philadelphia to study with the famous chemist, Dr. Robert Hare. His time seems to have been divided pretty faithfully between the laboratory and the gayeties of society. It was a better move that made him the student assistant of Charles T. Jackson, the Boston mineralogist, who had had the best training of Europe, had discovered anæsthesia, and incidentally was State geologist of New Hampshire. On this survey, in 1840, young Whitney made his first acquaintance with field work. In the published records appeared the first scientific writing by his hand, and the first of those delicate topographical drawings which adorned many of his works. He had tasted the joys of the open and of self-support. The work ended, and a new period of hesitation began. It was a summer in the uncongenial atmosphere of a Northampton law office that fixed his vocation, and in 1842 he sailed for Europe to pursue his studies in chemistry and mineralogy. Five years he stayed, returning to be one of that remarkable second generation of pioneers that fairly domesticated European science in America. His wanderings ranged from Italy to Russia. He managed to be the serious student of Rose and Liebig and yet to drink in the spirit of the Old World. His correspondence of this time, largely addressed to his brother William and his sister Elizabeth, is vivid. At Paris he heard Liszt play, and writes: "Who but Liszt can make the piano sing, laugh, thunder? His soul is in his fingers' ends, and he seems to feel every note as if the piano were a living part of himself." From youth to old age Whitney's letters abound in such racy passages, a caustic humor often enlivens them, with a shameless and usually successful propensity for punning. His enthusiasm for his more famous brother's career was constant. He writes to the young philologist at Berlin: "Did I not steal from dear old Bopp and Grimm many a lecture, going away always with a longing desire to turn up double, some day, and set one-half at work on philology?"

Returned home in 1847, his true career opened rapidly before him. His old chief, Jackson, gladly associated him with the Congressional survey of the Lake Superior region. The summers of '48, '49, and '50 were devoted to this work. Jackson, owing to failing health, retired, and the brunt of the report fell on Whitney himself. In the early fifties, besides finishing the report and conducting a prosperous business as consulting mineralogist, Whitney put together laboriously his first popular book, "Metallic Wealth of the United States," which was published in 1854, the year of his marriage. His object in the book, he later wrote, was chiefly to protect the public against the unscrupulous and unscientific statements of mining speculators. The marriage detached him from an ideal bachelor headquarters, "Clover Den," at Cambridge, where the Latinist Lane and the astronomer Winlock, with Whitney, "united in adoring a gracious lady whom they called the *Angebetete*, but whose chief function was to preside over mixed dinners." Naturally, marriage terminated the cult on Whitney's part.

Here one might inquire why the eminently clubable nature of the man, as shown at "Clover Den" and everywhere in his letters did not include an easy walk and conversation among men at large. Through life a kind of diffident offishness affected his public relations. In California they thought him "an easy man to quarrel with." The fact seems to be that Whitney's indisputable superiority made him intolerant of fools or merely vague mentalities. He was clear cut, and expected that rare quality in others. His scientific peers and his assistants adored him, but ordinary men found him cold. The forthrightness of the man is illustrated finely in an incident with Clarence King. When the United States Geological Survey was founded in 1879, King and C. V. Hayden, two pupils of Whitney, were both candidates for the directorate. Whitney, after weighing the case, recommended Hayden, whereupon King wrote immediately: "I do not doubt that your reasons are sound and good. . . . I have no blame for you in the matter. I believe you always act fearlessly and, as you think, strictly right. No man can do more." It should be added that King vindicated the right of individual judgment by carrying off the position of chief geologist under the nose of his old chief.

Desultory service on several State surveys led gradually to his most important work, the survey of California. The enormous task of mapping the State,

then far larger than it now is, occupied Whitney from 1860 to 1874, and remained uncompleted. It was a chapter of high endeavor and adventure, of patient toil and most distasteful electioneering. The project was cut out on too ambitious a scale, and money had to be begged from unwilling legislators. Throughout, the undertaking had to meet the formidable opposition of the tricky prospector and mining broker or the vehement exploiter of valueless oil fields. Then the task had to be done from the bottom. No topographical maps existed. It was essentially an exploration, and it is no wonder that the most permanent results were in the field of topography. Whether Whitney himself or one of that pair of young free lances, Clarence King and J. T. Gardner, who came to his aid, invented what is now the classic manner of mapping a mountainous country, is matter of doubt. It is enough to say that the method of triangulation and observation from high mountain tops was worked out in the California survey and inherited by the fortieth parallel survey and that of the United States. The old army method of elaborate triangulation with observation from below had broken down. It was found that with a simple triangulation from peaks, the intervening masses could be drawn in free hand with sufficient accuracy. With the addition of the plane table and the camera such is the approved method to-day.

Whitney was now well past fifty, but his energy made the remaining twenty-two years of his life very full ones. He managed to enjoy an ideal research professorship at Harvard, the faculty of which he had already nominally served for a decade. He made what scientific salvage he could of the notes of the California survey. Always a reactionary against the hypothesis of a Continental ice cap, he lived to see his views prevail. Naturally, his philologist brother associated him in the scientific work of the "Century Dictionary," and the exasperated correspondence that was interchanged illustrates both the elder brother's wide reading and temperamental vehemence. He keeps the old relish in life against difficulties; completes his musical collections; writes from Vienna that he manages to sit through and enjoy the Niebelungen Ring, "by dint of staying in bed most of the daytime." After the affliction which in a single day of 1882 robbed him of his wife and only daughter, his life became one of seclusion once more; but a busy retirement, dignified by the acquaintance and correspondence of his peers in many lands. In the summer of 1896 he died "without pain and without fear," near those White Mountains among which he had won his spurs. The highest peak of the United States south of Alaska bears his name. It was imposed against his wish by his loyal associate, Clarence King.

Whitney was a noteworthy member of a family remarkable even in that New England which so readily produces great families. He represented, without the formal religion of his ancestors, their energy and scrupulosity. He never sought or attained popularity as writer, organizer, or teacher. He consecrated himself with a certain proud doggedness upon his work. He represents to us a kind of ancient virtue; he was the Cato of American science. His biographer admits that Whitney "sacrificed the California survey to a standard of conduct that had gone somewhat out of fashion in the years which followed the war." In a commercial age he upheld ideals of pure science. With his *non placet* he was a little too ready. Meaning it only for fools and knaves, he too often seemed to include the average, vague, harmless, human biped. It is something to have lived in a realm of thought where averages were intolerable.

CURRENT FICTION.

Trix and Over-the-Moon. By Amélie Rives. New York: Harper and Bros.

The "Trix" of this story is another woman created by a woman for women. This may not seem true at first glance, since she is presented as a boyish young person, more devoted to her horses and dogs than to her husband or her son—clearly, you say, not the kind of woman women approve of. Her boudoir looks like a harness-shop; her chief joy is in the breeding, breaking, hunting, and "showing" of fine horseflesh. Finally, she deliberately risks not only her own life, but that of the unborn, because she enjoys being a sportswoman better than being a mother. All this is uningratiating enough as baldly stated; but Trix is helped out by the atmosphere of the story, which is frankly that of horse-idolatry. Neither her husband nor her seven-year-old son cares for horses: a fact which removes them at once beyond the pale of sympathy. Since the child cannot stick on a horse, he is doomed to be left to nurses by his riding mother. And a man who cannot share his wife's horsy preoccupation would naturally be a third-rate author, whose literary effusions she would naturally greet with shouts of laughter. Also, he would naturally be too weak to prevent the virtual suicide and child-murder. No doubt the reader is encouraged to deplore Trix's judgment, and to admire the self-sacrifice of the old woman who heroically saves her from herself. But he (or she) is expected to admire her as a sportswoman, and as "the gray mare" in the matrimonial paddock. Apart from the horse-glamour in which the tale is swathed, not even her love for the open or her habit of quoting Horace can conceal the fact that she is a hard and selfish little woman. But the fact that one takes her so seriously is a tribute to her credibility. The old mammy and the Scotch nurse are a skilfully contrasted pair; and aside from its ethics (against which, in this day of the suffragette, the fearful male must enter his protest), the little story has merits of tone and finish beyond anything that has come of late from the author of "The Quick or the Dead?"

They and I. By Jerome K. Jerome. New York: Dodd, Mead & Co.

Mr. Jerome's vein of whimsy does not run out, and his vein of sentiment steadily broadens. The rollicking nonsense of "Three Men in a Boat" is not absent from "They and I." The main theme is frequently broken into by extravagant anecdote and pure fooling; but the main theme, none the less, is of an amiably moralizing strain. There is a close analogy between this book and "Reveries of a Bachelor." All sorts of problems concerning the happiness of the family and the home are touched upon with sensibility if without conclusiveness. A group of persons, the supposed family and acquaintances of the interlocutor, are presented. No real story is told about them, though certain potential romances among the younger members of the group are adumbrated. But the subject is romance itself—romance in contact with reality. The family proper consists of the father; a daughter, Robina, on the verge of womanhood; a younger child, Ethelbertha, *enfant terrible;* Dick, a son, who has made rather a mess of things at the university, and is sure of no further achievement than falling in love; and an invalid and for the most part absentee mother. Most of the more serious dialogue takes place between the father and Robina. His attitude toward her is altogether free from fatherly nonsense—how free is suggested by the fact that he advises her to read "Tom Jones" so that she may get acquainted with one aspect of the actual creature, man. "The Tom Jones," he says, "is there in all of us who are not anæmic and consumptive"—Thackeray's opinion. But the tone of paternal rakishness is not carried to the point of offence. The philosophy of the book is as wholesome as that of the professional sentimentalist—the humorist whose vision fails ever so little of the perfect focus—can possibly be.

The Demagog. By William Richard Hereford. New York: Henry Holt & Co.

Mr. Hereford's strong points are detail and elaboration. We have protracted showing of both in this story of the

ambition of David Holman, multimillionaire owner of mines and of many newspapers, to become the President of these United States. Posing as the Friend of the People, he conducts his campaign through the columns of the paper he edits in New York. Without conscience or consideration, and with the magnetic personality and the gray eyes turning to black indispensable to conquerors, he pursues his end, intriguing, bribing, trampling, as may be needful. All the sordid particulars of a corrupt political contest are laid before the reader. One righteous man is found in Sodom, a district attorney with red hair and light blue eyes, known as the "boy-reformer." A woman with philanthropic ideals pins her faith to the people's friend for a time; she, with Holman's Spanish-American dark-eyed ward, supplies the feminine element in the tangled web.

The scenes of plot, counterplot, bribery, eaves-dropping, and corruption are most painstakingly worked out; the subeditors, office boys, bosses, saloonkeepers, and attendant citizens are painted in with fine brush-work. But on reviewing them all, we cannot say that the incidents lead with inevitableness to the end. They are related but not connected. The device by which the dictator loses his nomination in the New York convention has the merit of unexpectedness, if not of probability. The subsequent proceedings, inspired by the "boy orator," led to "that stampede which will never be forgotten." "Her" hat floats down from the gallery with a cargo of timely plumes to be seized and waved as symbols, while the vast assemblage sings "Yankee Doodle." In spite of the defeated candidate's later tears, disappointment, and remorse he has been too minutely portrayed for the reader fully to share the author's hope that over his "tortured soul" a better day was to dawn.

Green Ginger. By Arthur Morrison. New York: Frederick A. Stokes Co.

The author of "The Hole in the Wall" and "Tales of Mean Streets" is not so well known in America as a good many English story-writers of less ability. These tales and sketches show him in his lightest mood, which is very light indeed, yet not altogether trifling. His humorous touch has now and then a suggestion of Mr. Jerome or Mr. Jacobs, but the resemblance is rather as between Britishers than as between members of a "school." He has a quaint knack of his own, and makes the most of it in these "whim-whams from the lande of green ginger." The collection includes more tales of mean streets, and various comic episodes in Cockney life are set forth with gusto. But there are three or four stories which stand out pretty distinctly from the rest, all dealing with a group of Essex worthies. It is here that one finds most unmistakably Mr. Morrison's characteristic humor. Cunning Murrell, Abel Pennyfather, Roboshobery Dove, and the rest are rustics as veritable as those of Mr. Hardy or Mr. Phillpotts. They are as amusing as the sea-dogs and wags of Mr. Jacobs, and have a good deal more reality as individuals. For their sake, if on no other account, the book deserves its hour or two at the hands of the reader who likes his fiction in small and pungent doses.

NEW YORK POLITICS.

Political History of the State of New York. By De Alva Stanwood Alexander. Vol. III. New York: Henry Holt & Co. $2.50 net.

If the third and last volume of this history of New York had not quite reached the high level of its predecessors, it would not have been surprising, for the historical sense of most writers is apt to grow less and their historical perspective distorted as they attempt to write of people and events of the recent past. It is a satisfaction, therefore, to find that in this volume, which brings the history of the Empire State down to the year 1882, the author has been able, on the whole, to maintain the same spirit of judicious analysis that characterized the first two parts. This volume opens with the firing on Fort Sumter and closes with the election of Grover Cleveland as Governor. For the period of twenty-one years between these events, Mr. Alexander has written what approximates a political history of the United States. Some natural criticism will be directed at his spending so much time in discussing national politics. He might, indeed, have obviated this by describing in detail the relatively unimportant course of State legislation, but it would have been at the sacrifice of the unity and coherence of his narrative, as well as its interest and value. For the political history of New York State is so closely interwoven with that of the nation, its party leaders are so frequently the leaders of their party in the nation, and their attitude in State politics is so often determined by national rather than State influences, that the political events within the State can be correctly interpreted only by constant reference to events in the country at large. As it is, much of the importance of Mr. Alexander's work is derived from the fact that it is far more than a mere "State history."

As in the earlier period, so in the years from 1861 to 1882, the history of the State is the history of a few dominating personalities rather than of policies or even parties. When this final volume opens, Weed, Seward, Greeley, and Seymour are still largely influencing the public and political life of the commonweath. But by the time the first decade is ended, they have one and all passed from the field of their activities. And long before they are gone, the personalities of two of the most skilful and adroit political leaders New York or any State has ever produced begin to impress themselves upon the life of the State, and, therefore, upon that of the nation. It is with these two men, Roscoe Conkling and Samuel J. Tilden, leaders of the two great opposing political parties, that three-quarters of the book has to do.

Mr. Alexander is not a hero worshipper; nor is he, on the other hand, a harsh critic, although at times he is a severe one. Throughout his history, he provides well-balanced and lively characterizations of the men of whom he writes, and these characterizations are among the most entertaining portions of his book. Of the Democratic leader he writes:

> Tilden was essentially an opportunist. He attacked the Tweed ring after its exposure; he made war on the canal ring after its record had become notorious; and he reduced the State taxes after the war debt had been paid. Upon these reforms he rode into power, and upon the cry of fraud he hoped to ride again to success. He was much too acute not to know that the cipher disclosures had robbed him of the rôle of reformer, but he seems to have been blind to the obvious fact that every one else was also aware of it. Besides he lacked boldness and was at times the victim of indecision. He was singularly unfortunate moreover in failing to attract a circle of admirers such as usually surround public men of great importance.

Mr. Alexander has a high opinion of Conkling's oratorical powers, but remarks that "his vanity and arrogance disparaged, almost as much as his brilliant rhetoric exalted him." Again, he declares that Conkling's "imperiousness and vanity clouded an otherwise attractive manner," and expresses the conviction that he was "a destructive rather than a constructive legislator."

There are times when the author's partisan preferences crop out, but these are neither so frequent nor so obtrusive as to weaken the value of his historical narrative. An example is the account of the contested election of 1876, which, while entirely fair, is obviously written from the traditional Republican standpoint. Again, in treating the "Stalwart"-"Half-breed" factional struggle, it is quite evident that his sympathies are with the "Half-breeds." His account of this bitter quarrel, which split in twain the Republican party in New York and paved the way for Cleveland's election in 1884, is, however, one of the most valuable parts of the book. Its history has never been better told. Nor is there anywhere else so good an account to be found of the Tweed ring operations. Mr. Alexander rightly tells it, not as an isolated in-

stance of municipal highway robbery, but as one phase of the assault on the State's governmental machinery and financial credit, of which the machinations of the Fisk-Gould conspirators presented another aspect.

The author's lively style—clear, forceful, and at times approaching the epigrammatic—makes the book entertaining reading. Occasionally, however, he carries his figurative writing a bit too far for so serious a work, as when (page 343) he writes that "the Tilden managers shiver," "threatened them with heart failure," and "the South wabbled." There are some mistakes due to careless proofreading, as "King County" for "Kings' County" (p. 491), "Tliden" for "Tilden" (p. 297), and "word" for "work" (p. 214). But these are peccadilloes. A little more than fifty years have elapsed since the publication of Hammond's "Political History of the State of New York"—which, with all its faults and peculiarities, is still a rich storehouse of American political history. It may be another fifty years before any one else approaches the subject. When that time comes, the author would do well to begin with the year 1882, where Mr. Alexander leaves off; for it would be almost superfluous for him to attempt to write of a period that has been so satisfactorily covered as Mr. Alexander, in these three volumes, has covered the political history of New York from 1777 to 1882.

Corpus Schwenckfeldianorum. Published under the auspices of the Schwenckfelder Church, Pennsylvania, and the Hartford Theological Seminary, Connecticut. Vol. I: A Study of the Earliest Letters of Caspar Schwenckfeld von Ossig. Edited by C. D. Hartranft, O. B. Schlutter, and E. E. S. Johnson. Leipzig: Breitkopf & Härtel.

Caspar Schwenckfeld von Ossig (1490-1561) was a Silesian nobleman, educated for the law, but, under the influence of the Lutheran Reformation, turning to theology and becoming a leader on the mystical side of Reformation thought. He remained a layman throughout his life, expressing himself mainly through correspondence and the writing of numerous treatises, but also by personal activity in gathering groups of followers in many parts of Germany. His chief theological interest lies in the consistency with which he insisted upon a spiritual interpretation of the Christian traditions and the comparative unimportance of authority or organization. This attitude naturally set him in opposition to the organized Reformation parties and led to persistent persecution of himself and his disciples. The most noteworthy community of the followers of the Middle Way, as they call themselves, is that which came to Pennsylvania in 1734 and has ever since retained much of its original simplicity of life and doctrine.

It was certainly a highly praiseworthy idea to collect together in one publication all the writings of the founder of a Christian sect, which in however humble a fashion has played its part in the reconstruction of the church following the outbreak of the Lutheran movement. It is inevitable that such a sect shall in the course of years disappear, and the present is the accepted time to save every valuable memorial of its activity. The initiative for the undertaking, the first volume of which is now before us, came to the community of the Pennsylvania Schwenckfelders through a communication from the later editor, Prof. C. D. Hartranft of the Hartford Theological Seminary, in the year 1884, the one hundred and fiftieth anniversary of the arrival of the Schwenckfelders in this country. A committee was appointed and arrangements made in the following year with Dr. Hartranft to make preliminary studies looking towards a monumental publication of everything that could illustrate the history and doctrines of the sect, beginning with the writings of the founder. The enterprise was soon interrupted by lack of funds, but was taken up again in 1888, Dr. Hartranft undertaking to go on with the work while acting also as president of the seminary. The first fruits of nineteen years' activity, therefore, are presented in this first volume.

Following the statement as to the progress of the work, there is an Introduction of about sixty pages, giving a brief sketch of Schwenckfeld's life and an analysis of the points in his doctrine and his literary work specially deserving attention. In this introduction we gain our first glimpse of the qualities of the editorial work which are to determine the success or failure of the whole undertaking. The tone is throughout one of protest and contentiousness, as if all the world had hitherto been against the subject of discussion and were being taken severely to task for its unfairness. If we could wholly accept the eleven claims to immortality here enumerated, we should have to conclude that it was Caspar Schwenckfeld, and not Luther, Zwingli, Calvin, or any one else who ought to be regarded as the chief representative of the true Reformation spirit. An intolerable verbosity obscures the meaning of much that is said and weakens the force of the argument it is meant to hammer in. The English impresses one continually as a speech that has been learned, abounding in Germanisms and never quite sure of itself.

There can be no question that thoroughness is a prime virtue in an editor; but there is an insanity of thoroughness which defeats its own purpose. This immense quarto volume of six hundred and sixty pages reproduces, besides the preliminary matter, only seven letters, of which one—to use a Hibernianism—does not exist, though it is described to the extent of two pages. The editorial method follows in each case a six or seven-fold scheme. First a bibliographical account gives a description of the manuscript to the minutest creases and discolorations, its history, and its editions. Then follows the original text with elaborate footnotes and divergent readings, then an English translation, or free rendering. Fourth, comes a disquisition on the language of the original as illustrating the writer's incomparable excellencies of style. Then under the head of "History" follows a dissertation on the circumstances of the time at which the letter was written. Next we have a theological essay setting forth at length the doctrinal matters referred to, or not referred to, as the case may be, and finally in three out of the seven cases, an extended German-English vocabulary, giving references to page and line in every case. The proportion of text to comment may be gathered from the case of Document Seven, a letter to the Bishop of Breslau, urging reformation. The whole space devoted to this document is four hundred and thirty-eight pages, of which the text itself occupies forty-one. Making every allowance for unnecessary verbiage, of which there is an irritating excess, it must be admitted that there is displayed here an enormous erudition. The editors have gone into the minutest details, for example, in the use of special verbal forms and even into the author's habit in employing each separate vowel and many of the consonants. In the historical sections there is exhaustive treatment of innumerable details. Our criticism is that such elaborate mechanism of scholarship and such exuberance of discourse on any and every remotest suggestion are not in place here.

Whether we are to expect similar detail in succeeding volumes we are not told, but the implication seems to be that this is intended as a model. In that case, the outlook for the future can hardly be encouraging. The editors tell us of about one hundred and twelve treatises published up to the year following Schwenckfeld's death, 1562, and this appears to have been only a beginning. It would be a distinct misfortune if so admirable an undertaking as this should fail or lag on account of an impracticable scheme of editing. What is desirable is a careful reproduction of an authentic text, with such an amount of intelligent and intelligible comment as shall make it clear to the ordinary reader. It is doubtful whether even a translation into English is essential. The function of the editor should certainly be to repress himself, not to seek

opportunities for learned display or for controversial encounter.

Greek Lands and Letters. By F. G and A. C. E. Allinson. Boston: Houghton Mifflin Co. $2.50 net.

In Greece all journeys are sentimental. Neither fashion nor commerce has yet supplied there the motive that peoples half the *tables-d'hôte* of the rest of Europe. The hardy traveller who threads the gullies of Arcadia on his mule or is swung up to the monastery of the Holy Trinity in a net, need not fear to find either bagman or motoring millionaire at the journey's end. Of the physical conditions of travel outside the chief towns, of the railways, the beds, and the food, little can be said save that they are "picturesque." In such a country it is obviously a spiritual guidebook that the traveller wants. The worthy Baedeker, always low-spirited, becomes positively depressed in Greece. Instead of distributing stars among the hostelries, he is reduced to pointing out the "least objectionable" or the "only possible." Under these conditions the one course open to the traveller is frankly to accept Greece as fairyland, and to wander there as nearly as possible in the frame of mind of a disembodied spirit. He will be glad, however, to retain so much of his carnal vehicle as will enable him to carry the manual compiled for the soul by Professor and Mrs. Allinson. It is not too much to say that the accomplished authors have dragged the whole of Greek literature for passages associated with Greek lands. Great passages and brief allusions, history, myth, and fancy, all are set in their local habitation, with a framework of comment to give them coherence. The general results of archæological investigation are observed without pedantry, in a suitable ancillary attitude. Passages cited are given sometimes in translations by well-known hands, sometimes in versions made by the authors themselves. The comments and enthusiasms of other scholars are often quoted. Works of art have the commanding position that belongs to them in Greece. The labor necessary to so comprehensive a scheme has apparently been done with conscientious and devoted care. From translation to proof-reading no pains has been spared. The book deserves to be widely used, and unquestionably will be so. With it in his hands, there is hardly a spot in Greece where the traveller will not know just how he ought to feel, and his grounds for feeling.

With no wish to criticise so beneficent a creation, but to point out to other lovers of Hellas that there may still be work to be done on these lines, certain considerations may be suggested. The citations from Greek literature are all made in English. Obviously to have given them in both languages would have made the book too large, and to have given them in Greek only would have limited its readers to the class that need it least. On the other hand, travellers in Greece are not divided into professors of Greek and those who know not so much as the alphabet. A considerable number of them are persons who have some knowledge of the language and who cannot accept the best translation as a substitute for it, but who are still unable, when standing, for instance, on the acropolis of Thebes, to produce from memory the elements that have gone to create their frame of mind. Such persons would, in general, prefer to have at hand a single chorus from the Bacchæ in its native music, sacrificing as much as might be necessary of somewhat elementary historical comment. In this respect W A. Gardner's "In Greece with the Classics," though a much slighter work, makes a stronger appeal to the Philhellene.

It must also be said, to encourage the others, that the general literary form of the book has suffered somewhat from the effort to charm the illiterate. It smells a little of the undergraduate classroom, where Hellenism must be made interesting at any price, even though the note be sometimes forced. The translations made by the authors are in general pleasing and are always close. An excellent example of strict accuracy, relieved by the legitimate extension of implications and adaptation of rhythms, is the passage from a famous chorus in the "Ion" of Euripides:

When the stars of the ether of Zeus lead out,
And the moon glides on as the dancers' queen,
And the daughters of Nereus join the rout,
Adown the sea or along the swirl
Of the rivers eternal that rush and whirl—
The ether, the moon, and the streams and the sea,
They dance to honor Persephone,
The maiden crowned with the golden sheen,
And Demeter, the Mother—ah, Dread is she!

Hungary: Painted by Adrian and Marianne Stokes. Described by Adrian Stokes. New York: The Macmillan Co. $6 net.

This stately volume appeals mainly to the eye. Seventy-five full-page plates, which indicate the artistic merit of the originals, display the picturesqueness of the land and its people, but they also emphasize the defects of the multi-color process, with its indiscriminate garishness in places where subdued tints are called for. No one, for instance, familiar with the monotonous sombreness —one of its characteristic features— of the Hungarian landscape, as viewed from a Danube steamboat, will accept as a faithful reproduction the Nile-like aspect of the scenery labelled "The Danube from Esztergom." Generally speaking, the plates dealing with architectural features appear to do more justice to the skill of the artists.

The writer's part is decidedly secondary in importance. The text consists of a string of more or less lengthy episodes —neither random notes nor consecutive narrative—whose chronology is obscure, and whose interest is dimmed by repetition. The author's stay in Hungary, at different intervals, extended over three years, and his story, such as it is, meanders back and forth in a way which is occasionally perplexing. Still, where he looks at men and things with an artist's eye, he has much that is attractive to report, and he is at his best in his praise of Hungarian hospitality, described as so boundless as to make country inns fit for the foreign wayfarer a superfluity. Magyar virtues, in high and low, are the constant theme of Mr. Stokes's song, but he has far less sympathy with some of the other races of Hungary. Much space is given to hunting and dancing and feasting, and he succeeds in conveying the charm of the primitive villages where the travellers were ever welcome, though willing models for the painters were not always forthcoming. But it is all essentially a one-sided picture of the country, indeed in part a portrayal of vanishing conditions; for there is scarcely a hint in Mr. Stokes's pages of the teeming life of modern Hungary. This, as he naïvely confesses, is altogether beyond the pale of his interests. "Hitherto," he says, "the generous Magyars have not been distinguished as a business people; but it is feared that, under modern conditions, they may deteriorate in this respect." On the whole, the author aims at accuracy in his statements, but he lets his fancy roam when he attempts to furnish, from memory, details of the feasting at a farmer's wedding in the Alföld, the fertile, great plain of Hungary. He thinks there were consumed, shortly before he and his wife arrived on the spot, "a dozen oxen, a score of calves, thirty swine, fifty sheep, a thousand fowls, and more eggs than were ever fresh at one time anywhere else."

The most conspicuous error in the book is the statement that Lake Balaton is, "with the exception of one or two lakes in Russia, the largest of Europe's inland seas." As a matter of fact, Lake Vener in Sweden is more than eight times as large, and Lake Vetter nearly three times the size. The spelling of Hungarian names is generally accurate, although the author does not profess to have been able to cope with the difficulties of the language. The statement that Bácsi is "pronounced Bartchy" does not indicate an acute ear for Magyar sounds. "Schäfsburg" (twice) and "Schäffsburg" (as the sketch-map has it) for Schässburg, "Theis" for Theiss,

and the alternation of "Széchény" and "Széchenyi" are among the minor slips. The city of Agram was not "destroyed" by earthquake in November, 1880, and "Tschec, or Slav," is wrong. Mr. Stokes includes in a list of Hungarian mineral springs the waters of Bilin and Giesshübl—both in Bohemia.

Notes.

Robert Underwood Johnson has been chosen to succeed Mr. Gilder as editor of the *Century Magazine*. Mr. Johnson joined the staff of the *Century* in 1873, and became its associate editor in 1881.

The Putnams announce "The Institutional History of Virginia in the Seventeenth Century," by Dr. Philip A. Bruce, whose previous books have contributed much to our knowledge of social and economic conditions in colonial Virginia. For his present volume, Dr. Bruce has drawn much hitherto unused material from early Virginia records and from the colonial documents found in the Public Record Office in London, the British Museum, and the Fulham and Lambeth Palaces.

A biography of that extraordinary man, Porfirio Diaz, president of Mexico, by Señor José F. Godoy, Mexican minister to Cuba, and long connected with the Mexican embassy at Washington, is soon to be published by the Putnams. To the author's narrative are added opinions or comment on the career and character of Diaz by James Bryce, British ambassador to the United States; Justices Day and Brewer of the Supreme Court, Gens. Bell, Grant, and Greeley, and many others.

Prof. Kenneth McKenzie of the department of Romance languages of Yale is preparing a "Concordance to the Italian Poems of Francesco Petrarca" (Oxford University Press), which is similar in form to the "Concordance to Dante's Minor Italian Works," published in 1905.

Some of the best of the English essays on conversation are being made into a book, to be entitled "The Lost Art of Conversation" (Sturgis & Walton Company), by Horatio S. Krans.

John Shawcross, who recently edited Coleridge's "Biographia Literaria" for the Oxford University Press, now performs the same service for "Shelley's Literary and Philosophical Criticism." The principal piece included is, of course, the "Defence of Poetry," but with it are printed a number of extracts from Shelley's letters and various reviews and brief essays, most of them immature, but all tending to develop the thesis that "the great instrument of moral good is the imagination, and poetry administers to the effect by acting upon the cause." Mr. Shawcross supplies an introduction, excellently well informed and not injudicious.

We wish to record here, but not to review, four new volumes (making eight now issued) of the excellent "Complete Works of Friedrich Nietzsche," edited by Dr. Oscar Levy, and published by T. N. Foulis of Edinburgh and London. The present instalment includes "Thus Spake Zarathustra," translated by Thomas Common with an introduction by Mrs. Förster-Nietzsche; "On the Future of Our Educational Institutions, and Homer and Classical Philology," translated by J. M. Kennedy; "Human, All-Too-Human," Part one, translated by Helen Zimmern, with an Introduction by J. M. Konnedy; and "The Will to Power," Books one and two, translated by Anthony M. Ludovici. A cursory examination of theso volumes has convinced us that the translations maintain the same accuracy and adequacy as those of the earlier issue. We repeat our congratulations to Dr. Levy for this progress in a work which promises to go on to completion, and which, when completed, will form a notable addition to English letters. Fuller consideration of Nietzsche's own office in the hurly-burly of modern philosophies and principles of action we reserve until the publication is further advanced.

Criticism of criticism is at best an exercise of a somewhat rarefied importance, and this importance is at an irreducible minimum in the case of a batch of criticisms emanating from a score of hands, with no internal correspondence, and the fact that they have all to do with the work of a single author their sole title to unity. We shall not, then, attempt any extensive evaluation of the various articles gathered together by Maurice Buxton Forman as "George Meredith: Some Early Appreciations" (Scribner). As in J. A. Hammerton's "George Meredith in Anecdote and Criticism" (Mitchell Kennerley), a notice of which was published in the *Nation* for September 23, 1909, here are excellent materials for the future biographer and critic. The twenty-three papers included embrace the period 1851-1883, or from the publication of "Poems" to the issue of "Poems and Lyrics of the Joy of Earth," the volume which immediately preceded "Diana of the Crossways." Mr. Forman has made no attempt to string together his materials, as did Mr. Hammerton, who aimed at some kind of continuity; he lets his documents speak for themselves. After the flashing dicta of Henley and Wilde in the earlier volume named, the present gathering-together of appreciations seems, for all their seriousness, somewhat flat; yet the names of George Eliot, W. M. Rossetti, Charles Kingsley, James Thomson, and Swinburne are among the contributing critics, and Henley himself has here a few pages on "The Egoist." The famous phrase of this last writer, reprinted in "Views and Reviews," and, most recently, in the "George Meredith in Anecdote and Criticism," about the novelist's holding in his left hand "the pen of a great artist," in his right "the razor of a spiritual suicide," is more striking, but perhaps says no more than the words reproduced here from his critique in the *Academy:*

> Mr. Meredith's style, it seems to me, has always been his weak point. Like Shakespeare, he is a man of genius, who is a clever man as well; and he seems to prefer his cleverness to his genius.

A useful volume has been issued by the Oxford University Press containing Goldsmith's two comedies and "The Vicar of Wakefield." The editor, C. E. Doble, has thrown his notes into the form of an explanatory and illustrative glossary. This arrangement is in many respects convenient, as it serves at once as a full index of names and phrases and as a comment on the text. This combination of offices, however, leads to some awkward results. Thus, it is well to have the occurrence of John Gay's name in "The Vicar" indexed, but it seems scarcely worth while to explain who Gay was. So, too, some of the definitions seem to us superfluous, if not childish. Is any one so ignorant as to need to be informed that "heartened" means "put in good heart, encouraged"? These are excrescences on a body of otherwise valuable notes. The illustrations are from various sources; those for "The Vicar" are reproductions of the pictures of William Mulready first printed in 1843.

The third volume of the "Papers and Proceedings" of the Bibliographical Society of America, recently issued, begins with a pleasant *causerie* by Dr. E. C. Richardson, librarian of Princeton University, on "Manuscript Hunting." This he characterizes as a sport, "prince among book sports," and as "a useful art to be compared with fur hunting or hunting for food," while it "bears the same relation to science that the hunting for rare orchids or rare birds and beasts does to natural science." The writer ends with a plea for a finding-list of manuscripts, which he regards as much more vital than the publication of facsimiles or even the calendaring of documents. George Watson Cole contributes a paper on the correct arrangement of the preliminary leaves of "The First Folio of Shakespeare." These two papers, with one by Judge Daniel Fish on "Lincoln Collections and Lincoln Bibliography," a short "Preliminary statement on collecting information in regard to early Scandinavian-American imprints," by J. C. M. Hanson, and an account by H. W. Wilson of his plan for a "coöperative printed catalogue" of books in public libraries, were read at the eighth meeting of the society, at Minnetonka, June 24 and 25, 1908.

"The Conquest of the Missouri," by Joseph Mills Hanson (McClurg), is a book strangely ill-named. Anything more unconquered than the great Missouri it would be hard to find; and in what sense the career of a steamboat man who, for nearly sixty years, has experienced its snags, sand-bars, and floods, can be called a conquest of the river, it would be hard to say. The book is the story of Grant Marsh, who, beginning as a cabin-boy, in 1846, at the age of twelve, has sailed the Mississippi and its tributaries almost to the present hour. It is a picturesque and instructive record. Captain Marsh is a sturdy figure, who deals valiantly with many hardships, encountering meanwhile great men and great events. The story is worth while.

No one, North or South, or indeed the world over, will deny that Stonewall Jackson was a character deserving of reverence and a military leader of surpassing brilliancy. As portrayed, however, by Henry A. White, in a volume of the "American Crisis Biographies" (George Jacobs & Co.), we find the "warts" omitted. He had no faults; he never came short. Impartial students find that there was some extravagance in his spiritual fervors; that his reticence became exaggerated into a marked defect; that his very singleness of purpose so narrowed him that he was blind to weighty considerations plain to broader minds. Marvellous soldier though he was, he was no more immune from error than were Napoleon and Hannibal. Lee himself

declared that his unnecessary tardiness caused the bloody defeat at Mechanicsville, and there is the best Confederate authority for believing that his inaction near Glendale withheld Longstreet from breaking through the retreating Federal column. In treating such points, Mr. White usually implies in his narrative that he is well aware that there are criticisms, but that they do not influence him. The book is Southern in tone, based on the best authorities, well written, and in a candid spirit. There is no bitterness toward the North, but a fair recognition of the bravery and conduct of the foes against whom Stonewall Jackson fought.

While the "Stonewall Jackson" is a presentment warmly Southern in its tone, the "Struggle for Missouri," by John McElroy (Washington, D. C.: The National Tribune Co.), is as distinctly Northern, though marked by no bitterness. It is a good account of an episode of the civil war which must not be lost sight of, interspersed with ample citations from documents, and made especially interesting through its discriminating characterizations of the principal actors. The field has been well worked, and Mr. McElroy gives us nothing new. It is well, however, to have this story in detail, with adequate illustration by means of portraits and maps.

For former students of the University of Virginia, who recollect that institution as it was from thirty to forty years ago, any minute record of its life during those years, however destitute of literary value, properly speaking, will possess a certain interest, but "The University of Virginia: Memories of Student Life and Professors" (The Neale Publishing Co.), by David M. R. Culbreth, M.D., who first matriculated there in 1872, apart from elementary crudities of style, is hopelessly diffuse and uncritical. In reading it we are reminded of an apothegm which we once heard fall from the lips of a professor whose picture adorns this volume, viz., that to write *for* Eternity one need not write *to* Eternity. Why all these "home-letters"—which are as dead now as the vegetation of the years in which they were written—synopses of casual sermons, and what not? Above all, why these long preliminary chapters on Jefferson, which would be out of place, even if they did not present an utterly false idealization of his character. Surely, one of the most active and powerful minds of his age had better products to offer than such precious specimens of copy-book morality as, "Always do what is right" and "Adore God; reverence and cherish your parents." As far as his domestic virtues were concerned, local tradition as well as more reliable sources of information might have taught our author that there was only too much truth in Moore's well-known line: "He dreamt of freedom in a bondsmaid's arms." Indeed, this very volume includes the picture of one striking figure—well-known to the students of the university for fifty years or more—who laid bold (though, doubtless, unjustifiable) claim to Jefferson paternity. The best part of the book is the series of sketches of the professors who made up the faculty of the university during the period of the author's residence there. But even these sketches are uncritical. Dr. Culbreth catches many genuine traits, to be sure, but the characterizations are too stilted and the men in question are often invested with an exaggerated dignity which it is to be feared that professors possess only for the students that are under them; for, as Crabbe has said:

> Unlike the prophet's is the scholar's case;
> His honor all is in his dwelling-place.

Nevertheless, these chapters, like those which describe the routine of student-life, contain material that may be useful to the future historian of the university.

Prof. Frank J. Goodnow has crowned his series of treatises on American city government by a comprehensive work on "Municipal Government" (The Century Co.), which aims to cover the entire field, at home and abroad, past and present. Starting with the Roman city-state, he traces urban development through its historic phases down to the present time. To bring so vast a survey within the limits of a book of 393 pages is a feat of condensation made practicable by the topical treatment. For instance, the chapter on the City Council discusses the organization of the Roman city, the mediæval Italian city, the English system, the German system, the Franco-Italian system, and the American system with some account of current process of charter change. Although Professor Goodnow is exact and trustworthy in all statements of fact, the effect of such massing is somewhat bewildering. One has to struggle to resist the impression that, when the American City Council and the English City Council are compared, like things are meant. But the English City Council is the whole city government, whereas the American City Council is only a part of the city government. This fundamental difference is adverted to by Professor Goodnow in several places, but the fact that he classes them together is apt to outweigh his explanation that they are not in the same class. The most valuable chapters are those which deal with the administrative tasks of modern city government—a field in which Professor Goodnow is master. He reaches rather pessimistic conclusions. He intimates pretty plainly that good government upon a popular basis is hopeless in the United States under existing economic and social conditions. To accept this opinion one must regard economic and social conditions among us as depraved to an extent for which no parallel may be found in any other civilized country. Must one believe that unfitness for good government is an American peculiarity? May not our failure be due to defective organization of public authority, within our power to amend?

"The American Newspaper" is analyzed in typical laboratory fashion by James Edward Rogers in a small volume issued by the Chicago University Press. Mr. Rogers may or may not have done much newspaper work himself. From internal evidence it should seem that he has not, for his painstaking essay on the history and evolution of the modern newspaper is, like most of such writings, "from the outside." In fact, much of what he has written, viewed purely as "copy," would not have escaped severity at the hands of the man who wields the blue pencil in the typical city room. Of course, Mr. Rogers puts his finger—an easy thing to do—upon the more crying evils of distorted publicity, This has been done before, and will be done frequently again, until the evils are removed. But it is hardly fair to say that the uninformed citizen who picks up this little volume will get quite an unbiassed opinion of newspapers. None the less, the essay has been carefully prepared, shows an exhaustive study of columns, and will fairly stagger the average reporter or city editor who finds all his "special extras," news introductions, "color stories," and "yellow freaks" treated here as so many salts in a test-tube.

When Canon Driver "warmly recommends" a book dealing with the Old Testament, as he has done in the prefatory note to G. H. Box's "Book of Isaiah" (Macmillan), we look for some worthy contribution to Biblical study. The epoch-making work of Duhm on Isaiah in the "Handkommentar" (1892) has been followed by the critical researches and contributions of Marti, Cheyne, and others, but the results of these labors have not hitherto been adequately set forth in English. Mr. Box has made a new translation of Isaiah based upon a corrected text, and though lacking in literary finish it has the merit of adhering closely to the thought and poetic form of the original. The notes and introductions to the separate sections discuss the Hebrew glosses, give the reasons for textual changes, and supply the necessary historical, social, and literary background. By the use of different types in the English text the reader is made aware of the translator's views in regard to the authorship of different sections. The work is in no sense devotional or homiletical, but the student and minister will find in it an invaluable aid to a proper understanding of the prophetic messages.

To those interested in colonial problems and the formation of governments may be recommended the recent work of H. E. S. Fremantle, entitled "The New Nation: A Survey of the Conditions and Prospects of South Africa." (London: John Ouseley, Ltd.). The author, in his double capacity as teacher in the South African College and member of the Cape Colony Assembly, is well qualified to throw light on the vexatious social and political problems of his country. "There are few South Africans," says Mr. Fremantle, "who would not agree that dying controversies must now be left to care for themselves, and dead controversies to find burial as they may." Despite the loss which the war inflicted on all concerned, he shows that it had a beneficial result in that it proved the virility of both sides: the endurance of the Boer won him an immortal name, while the good humor and courage of the British troops gained the respect of the Dutch. Briton and Boer have discovered an increasing compatibility and they are experiencing a growing attachment to a common country—results brought to the surface through the exercise of self-government. "A policy of trust was adopted," says Chief Justice Sir Henry de Villiers of Cape Colony, "with the novel result that a sullen and discontented people were, as if by magic, changed into law-abiding and loyal subjects." The moderator of the Dutch Reformed Church in the Transvaal thanked God, in a sermon, for the British flag which had made possible the union of the South African people. The grant of self-government is fast destroying

the mutual suspicion of South Africans by making them colleagues and co-partners in a new and large undertaking. Mr. Fremantle expects that Britain's policy will inspire the Boers with respect and confidence, by a scrupulous regard for their manners, religion, and language, as it already has won the loyalty of French Canadians, who to-day are the firmest supporters of English power in America. There are two especially suggestive chapters dealing with The Problems of Union and The Colored Races. In the former the author shows that the South African colonies have done wisely in agreeing on a policy of unification rather than the federative scheme in vogue in Canada and Australia. The national Parliament is to be omnipotent and the four constituent colonies, to be called provinces, are to have single-chambered Legislatures, having power to deal only with matters of purely local or private interest. South Africa will thus escape many of the embarrassments the United States has been heir to because of the uncertainty over the question of State rights. Mr. Fremantle has written a thoroughly informed book, in an attractive style; and from an impartial point of view as regards race jealousies. Fault may perhaps be found with his general attitude, which, to many, will seem too sanguine.

A manuscript of the "Coptic (Sahidic) Version of certain books of the Old Testament" from a papyrus in the British Museum (Or. 5984) is edited by Sir Herbert Thompson (H. Frowde). The MS., which is imperfect, contains parts of Job, Proverbs, Ecclesiastes, Song of Songs, Wisdom of Solomon, and Ecclesiasticus; it is regarded by Mr. Crum (Proc. Soc.Bibl. Archæol., 1902, xxiv, 174) as being "perhaps of the sixth or seventh century." A considerable part of the Sahidic version of the above-named books is here printed for the first time. The prologue to Ecclesiasticus (already printed by Crum in his Catalogue of Coptic MSS. in the British Museum) is almost complete. The quality of the text, according to the editor, is good, comparing favorably with that of the Turin MS. edited by Lagarde; both MSS. follow the Greek uncials in the misplacing of certain sections of Ecclesiasticus. The text is provided with critical footnotes, and there is a descriptive introduction.

The eighth annual report of the Gutenberg-Gesellschaft in Mainz, for the year 1908-9, is accompanied by two papers read before the society, one of which is a typological study of some broadsides issued by the authorities of Mainz and Erfurt during a controversy between the two cities, in 1480 and 1481, as to whether the latter should be independent of the former or not. The author, Dr. Adolf Schmidt, in Darmstadt, draws some conclusions of interest to the early history of printing, for instance, when he connects one of these broadsides, which is dated 1480, with Konrad Kachellofen in Leipzig, whose earliest dated book is of 1485. The other paper is a study of William Morris as printer, by Dr. Gustav Binz, the new city librarian of Mainz.

Bishop Cyrus David Foss, retired, of the Methodist Episcopal Church, died on Saturday night in Philadelphia, at the age of seventy-six. He was born in Kingston, N. Y., graduated at Wesleyan University, and was an itinerant minister from 1857 to 1875, when he became president of Wesleyan, where he remained for five years. He had visited the missions of his church in Europe, Mexico, India, and Malaysia, and in 1906-07 made a missionary tour of observation around the world. He published "Religious Certainties" and "From the Himalayas to the Equator."

James Hogg, the London publisher, died last month in his eighty-first year. He was a son of James Hogg, the Edinburgh printer and publisher, with whom he was associated in business. As editor of *Hogg's Instructor* in 1850, he met De Quincey, who thereafter became a regular contributor to that magazine, and whose collected works subsequently were published by this house. In 1858, with his brother John, he founded in London a branch publishing house, which afterward became responsible for the entire business of James Hogg & Sons. The firm was dissolved in 1867. Mr. Hogg had published "De Quincey and His Friends."

Louis-Edouard Rod, the French novelist, died in Grasse, France, on Saturday, at the age of fifty-three years. He was a Swiss by birth, and a native of Nyon, Canton of Vaud. He studied at Nyon and at Lausanne, and subsequently attended the universities at Bonn and Berlin. He went to Paris in his young manhood, and there, in 1879, came forward with a pamphlet defending Emile Zola's school of realism, "A propos de l'Assommoir." His first novel, "Palmyre Veulard," was published two years later. The book showed plainly the influence of Zola. The same bent manifested itself in several other volumes. Later, however, in "La Course à la mort," which was issued in 1885, he forsook the field of realism and produced a philosophical novel in the form of an autobiography, which revealed plainly the influence of Schopenhauer's pessimism. He interspersed his fiction with critical essays. In 1886 he published "Wagner et l'esthétique allemande," in which he defended Wagner against his French detractors. His "Les Sens de la vie," which appeared in 1888, was written in an optimistic vein, and in a measure neutralized the effect of his earlier work. M. Rod was one of the founders of the *Revue Contemporaine*, which he edited until 1887, when he became professor of foreign literature at the University of Geneva, where he remained until 1892. His most significant work in the field of criticism was "Les Idées morales du temps présent." His other works include, "Etudes et nouvelles Etudes sur le XIXe siècle"; "La Vie privée et la seconde vie de Michel Teissier"; "Le Silence"; "Les Roches blanches"; "L'Eau courante," "L'Inutile effort," "Un Vainqueur," "L'Incendie," "L'Affaire J.-J. Rousseau," and "Aloyse Valérin." M. Rod came to the United States in the spring of 1899 at the invitation of the Cercle Français of Harvard. He lectured at Cambridge on the history of French dramatic poetry. In addition to his visit to Harvard M. Rod made a tour of the American colleges. He spoke at Columbia, Williams, Brown, Vassar, Bryn Mawr, Yale, Princeton, Cornell, and elsewhere. M. Rod chose his characters chiefly among the "plain people" of the lower middle classes. He delighted in intimate studies of these characters. The author lived most of his active life near Paris, at Auteuil, not far from the Bois de Boulogne. He dwelt there in the utmost simplicity with his books and friends. He was a lover of American literature, particularly of the poems of Poe and Whitman.

The death is reported from Rome of Prof. Ludovico Nocentini, who was familiar with China and Japan, and had written much concerning those countries; two of the best known of his books being "Nell' Asia Orientale" and "L'Europa nell' Estremo Oriente, e gli interessi dell' Italia in Cina."

Science.

Handbook of Flower Pollination. Based upon Hermann Müller's Work, "The Fertilization of Flowers by Insects." By Dr. Paul Knuth. Translated by J. R. Ainsworth Davis. Vol. III. New York: Henry Frowde. $8.75.

A third volume now completes this comprehensive work. It is in every respect as thorough as the previous volumes, and, by its copious lists and index, places all of its diversified information easily at the disposal of the reader. It is almost incredible that this exhaustive digest of the literature of pollination by insects should only represent one of the many fields of research opened to observers by the genius of Charles Darwin. Even as far back as the close of the eighteenth century, attention had been called by an interesting illustrated book to certain connections between flowers and insects. But the relations of the visits of the insects to the blossoms were wrongly interpreted, and the work fell into disrepute as an illustration of misapplied research. In the main, the observations by Sprengel in 1793 were accurate and were faithfully recorded, but the riddle was not rightly read. The late Professor Hagen, a distinguished entomologist, was fond of describing the pleasure which he felt when his father used, on Sundays, to show him Sprengel's pretty pictures of insects visiting flowers, but the impression which he received from seeing them was that Sprengel had been guilty of a fearful waste of time.

When in 1864 Darwin rightly explained the relations between the different forms of the blossoms of the common primrose, and showed that the insect visitants effected an impregnation impossible except through their agency, he attracted innumerable observers to the study of that and other flowers. The investigations included every grade of scientific training. Such skilled observers as Asa Gray and such unskilled observers as beginners in grammar-school botany devoted themselves to the new study, and the recorded results of such observations soon constituted a voluminous literature. Hermann and Fritz Müller were among the earliest to give undivided attention to this line of in-

vestigation, and their unquestioned results were soon sufficient to merit publication as an independent work. But Hermann Müller's book gave also, as far as possible, in exhaustive German fashion, the results reached by other observers, and it therefore became authoritative.

After Müller's death, an ardent student of the subject of insect-pollination, who had devoted to it all of the scanty leisure left from the arduous and wearisome work of teaching in a Real-Schule was entrusted with the revision of Müller's treatise. By extensive travel and wide reading, Professor Knuth prepared himself thoroughly for this great task, and had carried it nearly to its completion just before his death. By other hands the revision was finished, and in its German form it is a monument alike to the genius of Müller and to the industry of Knuth. The English translation, like most of the recent English translations of German botanical works, is accurate and well-edited. It will long remain the standard work of reference both for botanists and entomologists who concern themselves with the relations of insects to flowers. One can gain some idea of the immense range of topics covered in this work when it is seen that the visits of above 2,800 different species of insects are described in more or less detail, and frequently with reference to the mechanism by which the transfer of pollen is effected.

Even to the general reader who cares only to get a notion of the interesting correlations between the insect and plant worlds, these three volumes will afford much interesting information. Philosophical readers who are in search of illustrations of adaptations and of evolutionary progress will find in the work abundant material of the highest order, while to teachers of botany the treatise is almost indispensable.

Drama.

Alcestis. By Carlota Montenegro. Boston: R. G. Badger. $1.25.

This poetic drama in four acts is written in fluent and melodious blank verse, full of graceful and vivid imagination and uncommon descriptive power. It is the ancient legend of the Thessalian King Admetus and his devoted wife, who died for him and was restored to him from the shades by Hercules, retold partly along the old classic lines, but informed by modern thought, enriched by new complications, and made to enforce a pregnant moral. Alcestis, a lofty type of womanhood, is a notable creation, drawn with much psychological insight and with inspiring charm. When the decrepit Pheres, the father of Admetus, and trusted friends shrink from dying in his place, it is her deeper spiritual self, the immortal spark within her, that prompts her to the sacrifice, against her mere will, and which enables her to prevail against the terrors and trials to which she is subjected. After her fatal vow her resolution fails her in contemplating the horrors of the Stygian passage, conjured up in a farewell meeting with Admetus, whom she vainly entreats to accompany her by means of suicide. While she is still despairing, Apollo, who has long served her in the disguise of a shepherd, reveals himself as a god, and in a scene full of beauty and passion offers her love and immortality. When she repels him, he tries to subdue her by fear, revealing to her a panorama of Death, the Furies, and other awful portents. Still she is steadfast, until she finally falls into a trance, wherein her spirit soars into space, encounters Truth and Hercules, and (in a passage in which myth, allegory, and speculation are ingeniously blended) realizes that, beyond and above the gods of Greece, there is something infinite and mightier.

It is then that Hercules, at the prayer of Admetus, meets and conquers Death over her unconscious body, and recalls her to life. But she is no longer the same Alcestis. New aspirations have been born of her experience and her love for Admetus is dead. She sees life in a new aspect, and knows that it is best fulfilled in noble deeds. Hercules, the man of action, has become her ideal, and the ensuing scene between her and that hero, in which she recounts the happenings of her trance, contains some of the most striking passages of the play. Hercules, like Apollo before him, avows his love for her, and she is sorely tempted. But her innate virtue, and his magnanimity, enable her to triumph once more, although she is still frigid towards Admetus. Finally, however, the mother passion in her, and the realization that she cannot discharge her responsibilities to her children while separated from their father, convince her that the true object of life is the performance of duty, and the play ends with a hymeneal address to her attendant Thessalian maidens, which unfolds as fine an ideal of the sphere and opportunities of womanhood as has often been written.

On the whole, this is a remarkable work. As acted drama, without the most drastic excisions, it would probably prove wholly impracticable. There are too many long speeches and too little action. To produce it as a spectacle would be a futile degradation. But it is, nevertheless, essentially dramatic in its development of character by circumstance. As descriptive romance, in which modern thought is expressed in terms of ancient myth, it is a most uncommon, and, in many ways, a brilliant achievement. The poetry in it is often of a very high order. It ranges from lyric beauty to tragic force, but it is not all of equally good quality. Miss Montenegro must beware of the dangerous literary facility which she evidently possesses. Her verse is sometimes prolix and prosaic, although it is always smooth and never slovenly. The thought is better than the expression. But at her best, especially in the scenes in which Admetus, Hercules, and Apollo are concerned, her work is admirable, in its analytical insight, its pictorial and emotional eloquence, and its dramatic and intellectual consistency.

The performance of "Twelfth Night," the first essay in the interpretation of Shakesperean comedy, by the New Theatre Company, was awaited with no little curiosity. On the whole, taking all the circumstances into consideration, it was a creditable achievement, but it revealed the weakness of the organization in more than one important respect. From the pictorial point of view, it left nothing to be desired. The scenery and the costumes were beautiful and appropriate. The liberality, good taste, and technical ingenuity of the management were manifested in many ways, especially in the accessories, the groupings, the invention of new "business"—as in the scene of the midnight revel—the simplification of the action, and the arrangement of exits and entrances. Such liberties as were taken with the text, for convenience sake, were altogether venial. In fact, the representation would have been almost perfect, if some of the leading players had undergone a proper course of training in the older poetic and romantic drama. The inefficiency of the modern, or natural, method, when applied to artificial and imaginative pieces, was exemplified in the New Theatre performances of "Antony and Cleopatra" and "The School for Scandal," and is once more obvious in the revival of "Twelfth Night." The representatives of Viola (Miss Annie Russell), Olivia (Miss Bateman-Hunter), and Malvolio (Oswald Yorke), all played with intelligible design, but succeeded in giving only thin, colorless, and spectral performances, because they did not know how—by artful exaggeration, by significant and varied utterance, and large, free, eloquent gesture—to bestow on these creatures of inspired imagination the needed touch of fantasy. Thus Viola, that dainty vision of feminine devotion, spirituality, archness, and grace, became an ordinary modern maiden in masquerade, alternately sentimental and skittish; the haughty and ardent Olivia a smitten schoolgirl, and the poor, distraught Quixotic egoist, Malvolio, a mere posturing grotesque. They may have been realistic; they lacked the elements of romance and poetry. Both these elements found expression in the embodiment of Orsino by the ex-Bensonian, Matheson Lang, who looked the prince and lover, and preserved the spirit and music of his lines. Another admirable performance was the Sir Andrew of Mr. Gottschalk, which was quaint, dry, humorous, consistent, and Shakespearean. The Sir Toby of Mr. Calvert was brisk, comic, and bibulous, but too laborious in artifice. It wanted unction and spontaneity. The Maria of Miss Busley again, though spirited and vi-

vacious, suggested effort rather than native humor. The only other characterization calling for special note was the Feste of Mr. Wendell, which was well conceived and neatly executed. The present company doubtless possesses much latent ability, but must be strengthened on the female side, and undergo much schooling before it can hope to reflect the full brilliancy of Shakespearean comedy upon the boards. It is a pity that the practice, that ought to have been preliminary, must now be done in public.

The latest play of Sir Arthur W. Pinero, "Mid-Channel," produced on Monday evening, in the Empire Theatre, is a disagreeable, but exceedingly able work. In respect of construction it will compare favorably with his best compositions, the story being told in swift, clear, logical action, and reaching a highly dramatic and logical climax and catastrophe. The personages are of a common type and very ordinary clay, but thoroughly vital. Theodore Blundell, a rich stockbroker, and his wife, Zoe—middle-class folk, with very little mind, but a liberal allowance of temper—having exhausted their early romance and having no interests in common, have drifted apart gradually, until their life has become one long quarrel. At last, after a more than commonly furious encounter, they part. The wife, travelling alone in Europe, becomes the victim of a false friend, in a moment of impulsive passion. Blundell consorts with a rapacious mistress and takes to drink. Both are miserable. At last a mutual friend brings them together and they agree to forget the past. Zoe, however, so irritates her husband by her resentment against the mistress that he becomes inquisitive about her conduct and finally forces her to admit that she has betrayed him, which he had never suspected. Maddened with rage he refuses all reconciliation whereupon she—in a passage which embodies the whole motive of the play—implores him to treat her mercifully, as he had from the first denied to her the right of motherhood—being unwilling to incur the responsibilities of children—and thereby had condemned her to the objectless and frivolous existence, which had led her into evil ways and resulted in her ruin. But he is irresponsive, and the wretched woman, deserted also by her worthless lover, realizes that she is a social derelict, and commits suicide. It is a dreary tale set forth with great skill and compelling power. The play failed in London, and is not likely to last long here. It is, indeed, of a sordid and repressing realism, which does not furnish much entertainment, but, as a social problem play it compels thought and exacts attention. Miss Barrymore, as the wife, shows more sincerity and eloquence of feeling than ever before, and is well supported by H. Reeves Smith, but the cast, as a whole, is of moderate quality.

The new play by Eugene Walter, "Just a Wife," which was produced on Tuesday evening at the Belasco Theatre, treats of the relations of the sexes and the rights of woman with a certain largeness of view and occasional theatrical effectiveness, but the conditions which it proposes are so improbable, its psychology so queer, its construction so unskilful, and its conclusions so indefinite that it is not a work of much significance. The contention appears to be that a mistress, in some cases, may have rights that even a wife is bound to respect, while the man should be held responsible for the wrongs done to both women. The heroine, a wife only in name from her wedding day, after six years of splendid neglect by her millionaire husband, vanquishes her rival, humiliates her masterful lord, and refuses to be reunited to him until he shall recognize her equal prerogative. The piece is not devoid of cleverness, but is marred by many puerilities.

Music.

Education Through Music. By Charles Hubert Farnsworth. New York: American Book Co. $1.

An Experiential Psychology of Music. By Karl Feininger. New York: August Gemünder & Sons.

Although music is now the most popular of all the fine arts, its vogue having been increased enormously within the last ten years by means of phonographs and "piano-players," it is undeniable that there is still a lamentable deficiency in the number of educated listeners who demand the best. More and more frequently attention is called to the fact that we must look to the public schools for a remedy. Of the millions of children a large proportion can be trained in such a way that they will prefer good music to bad or mediocre. The value of the public school from this point of view is illustrated by the fact that only about one per cent. of our population has a formal education beyond the age of fourteen, and that the musical instruction given during this period is for most people all the training they ever receive in the subject. It is therefore of the utmost importance that the little time set aside for music in the schools should be spent in the most effective way.

"Education Through Music," by Professor Farnsworth of Teachers College, Columbia University, is an attempt to demonstrate what method is most effective in making intelligent listeners and musicians of school children. He does not believe in the course that is ordinarily followed, which is "to give to those that have and to slight those that have not"—a course which makes a favorable impression on visitors and principals, but fails to do justice to the majority of pupils. Instead of appealing merely to those who are musically the most talented, Professor Farnsworth thinks "a form of work should be undertaken that will awaken musical thought and expression in the large majority of the class." His suggestions as to how such a result can be brought about cannot but prove helpful to thousands of music teachers, in schools or out. He makes it clear that the requirements of a good lesson—a great deal of interest, concrete illustration, and close application—may be present, and yet the vital part remain untouched.

The most notable aspect of his method is that he virtually begins where others end—with expression. And by expression he does not mean mere variations in the degrees of loudness and speed, but an understanding also of the reasons therefor:

> The hilarious winter song must have something of the shout, while the autumn song requires a subdued tone appropriate to the regret it expresses. There will be a difference in velocity: skating, or sliding, or snowballing, or the scurrying of snowflakes demands a brisk movement of the music; while the passing away of summer, the disappearance of the flowers, the sleep in the cold ground, and the drizzling rain will be expressed by a slower movement.

By the use of songs in which such language ideas as are already familiar to the child coincide with musical ideas, he can be easily led to the proper musical interpretation. The same result is achieved by an appeal to the emotions. Let a child sing, as a mere task, "Good morning, my dearest mamma," and you are likely to hear a thin, meaningless, coarse, or squeaky tone; but "awaken in the child the thought of her mother and of how much she loves her, get her to feel that she is singing good morning to her—and then let the song be sung again; there will be a magical change in its tone quality."

The secret of success in teaching music consists in adopting the Tom Sawyer policy—making the boys and girls think the work imposed on them is a great privilege. An effective plan is to make the class play they are a band. "The children get so interested in such work that the unmusical ones have been observed in process of being coached by the more musical during recess." All this is first-year work. In the second year, Professor Farnsworth would go as far as teaching the children to compose a song collectively and to criticise it. Each one can suggest a line or a tune, or part of one, and the class discusses which is the most suitable. "The argument between the partisans of the different versions is often spirited, and the keenness with which the children give reasons why one is better than another would surprise the person who has never attempted the work."

This is real educating. The difficulty is that only real educators can undertake it. Were there many of this kind the results would be so gratifying that music doubtless would soon have more time allotted to it in the daily schedule. The present volume will accelerate the movement for a more generous allotment of time, and give another blow to the notion that school music is a

mere "frill" or "fad." We have indicated only a few features of this book, relating to the first two years. What the author has to offer for the other six years the reader must ascertain for himself.

Feininger's "Experiential Psychology of Music" is as hard reading as Hegel's metaphysics. The author, who has had much practical experience as a violinist and teacher, seems to have scoured the dictionary of synonyms for the longest and most unusual words, and it is to be feared that in not a few instances he has done this to hide the absence of definite thoughts. Some pages of his book are, indeed, as chaotic as those of Mrs. Eddy's Christian Science bible. He defines music as "a mathematical, a dynamic-experiential, and an executive proposition"; tells us that "all instruments independent of breathing or bowing are constitutionally ungrammatical"; that "with the listener . . . music is externally a state and internally a being, or the truth of one, summed up, by his philosophical mind, as manifold sensations more or less agreeable —according to his experiential judgment." When he comes to give his opinions of the great composers, Mr. Feininger writes more intelligibly.

When Richard Strauss's "Elektra" had its first performance in Dresden, on January 25, 1909, there was as much ado about it as there was about Wagner's Nibelung festival at Bayreuth in 1876, and opinions diverged as widely. Some of the critics declared the new opera to be an advance even over "Salome"—a new milestone in the evolution of dramatic music; while to others it was simply a fresh attempt by a clever man to win temporary popularity and make money by catering to the sensation-loving multitude. Last season Oscar Hammerstein found "Salome" the most profitable opera in his repertory. It was therefore not surprising that he should have entered at once into negotiations for "Elektra." Strauss is a specialist in the making of bargains; he has apparently made up his mind to gather in all the money the world should have given to underpaid composers of the past. He asked $10,000 for the American rights of performance, and an advance guaranty of $18,000 in royalties, and he got them. Whether the manager will rue his bargain remains to be seen. "Elektra" had its first American performance on Tuesday in the Manhattan Opera House, at double the usual prices of seats. Is it "a milestone," or simply an opera manufactured to astonish the multitude with new tricks orchestral, and with sanguinary scenes to harrow the soul? Is it "a prodigious orchestral orgy" or a real music drama?

It must be admitted that the story of "Elektra" is less objectionable than that of "Salome." Strauss's opera is a setting of Von Hofmannsthal's drama, which in turn is based largely on Sophocles's tragedy. Elektra is nearly always on the stage, the personification of deadly hatred and vengeance. Her one thought is the assassination of her mother and the new king, who has killed her father. She tries to persuade her sister to aid her, but Chrysothemis shrinks from the task, which she then prepares to execute alone, with the same axe that had beheaded King Agamemnon in his bath. The return of her brother Orestes relieves her of this duty. The guilty royal pair are slain, and Elektra dances her joy till she falls down dead. Compared with this plot, in all its ghastly details, the blood-and-thunder operas of the "Young Italian School" are pastoral idyls. And the music is equally ghastly. Throughout the hour and three-quarters that the one-act opera lasts, there are only three or four oases of restful melody. All the remainder is a howling wilderness of voices and chaotic orchestral sounds, in which all the rules of composition are trampled under foot. The one thing Strauss seeks to create is "atmosphere"; and in that he certainly succeeds. The score calls for 120 instruments, among them seven trumpets, eight horns, and eight clarinets; there is also an unusual number of violas, to help in creating a sombre mood. As the dance of Salome is accompanied by the most beautiful music in that score, so, in "Elektra," the concluding dance of death is by far the best thing musically in this opera. It is a thrilling climax to which few things in music are comparable, and it will doubtless tempt many to see the opera over and over again for the sake of repeating the experience of the overwhelming finale.

Art.

THE PENNSYLVANIA ACADEMY.

The present writer has sometimes wished that the critics might clean forget their public position and limit their comment on exhibitions to a naïve statement that certain works have thrilled them deeply. Frequently, if this were the policy, nothing need be written at all. The critic's duty would be absolved by the headline and a statement of the duration of the show. An adjustable space of blank paper might be left to indicate just how profound the emotional dearth had been.

Such an amount of truth-telling would, however, make a critic's position soon intolerable, and the present writer means to attempt it only provisionally and with all apologies in the case of the Pennsylvania Academy's 105th annual exhibition. Brush's Portrait of a Lady, and Family Group; Sargent's Joseph Pulitzer; Mary Cassatt's Children Playing with a Cat; a Study of Pæonies, by Wilton Lockwood; Willard Metcalf's solemn hemlock grove entitled Icebound; George Bellows's titanic city bluff with nude boys swarming underneath—these things have emphatically enriched one's experience. Pictures that, while greatly comforting the eye, have produced a more qualified impression, are a lovely blonde hillock by Childe Hassam in the large gallery, Charles Hopkinson's sketch of a mighty surf, Alden Weir's lofty stretch of evening sky in the Hunter's Moon; Ernest Lawson's Heights of Hoboken, for the superb vigor of its foreground contours. Besides these few pictures, many have naturally confirmed tried pleasures, some have hinted challengingly at coming talent, certain ones, like George Bellows's revolting and unforgettable fist fights, have caused an interesting refurbishing of standards, but in general these have not greatly counted in pleasure or in experience. In sculpture, while much was engaging enough, nothing, unless it were Proctor's Bison, seems unqualifiedly memorable. But the visit was the more profitable for Olga Popoff's portrait head of her father, for Chester Beach's lissome bronze lads, and for that captivating bronze Kingfisher, which, with fairly Japanese felicity, young Albert Laessle has set on the proudly curving stem of a natural vine. A large and noble quality in Victor Brenner's group, Nature the Consoler, which had been missed on earlier too slight acquaintance, also rewarded the sojourn in the rotunda devoted to sculpture. In fact, an interesting feature of this exhibition, which contains always many objects familiar to a critic, is the new values that appear under better or at least different lighting and juxtaposition.

Enough has been written to show the complete impracticability of a perfectly open-hearted criticism. It is not tolerable that so little should be said of an exhibition which, in spite of a formidable list of abstainers, represents much of our most recent and most serious effort in sculpture and painting. Of course, the vein of sincerity is not yet quite exhausted. It would be easy but perhaps superfluous to show why Winslow Homer's mid-air tragedy of wild fowl stricken by the flying pellets above a crisping sea is masterly. It would be pleasant to draw the just analogy between the powerful suavity of Sargent's Joseph Pulitzer and the splendid characterization of Van Dyck's Frans Snyders, which New York has recently seen through Henry T. Frick's liberality. To persuade George Bellows that the demonic energy and reality of his ring fights are excesses of a good thing—that without attenuation of force the method could be refined—would be a public service, but he will doubtless find it out for himself. It would be more rewarding perhaps to show how the rich if sombre harmony of Mr. Metcalf's greens, grays, and russets, in his snow invested hemlock grove beside a dark river, is merely the legitimate outgrowth of a highly intelligent and a selective realism. If one simplifies with a sure sense of what is counting, poetic feeling and decorative effectiveness seem to be added unto one automatically. The tense and sparse idiom of Alden

Weir's interpretations of nature has been many times discussed in these columns, nor, except by way of acknowledging a steadily growing felicity of arrangement, is there anything new to say about Brush's beautifully thoughtful work.

The exhibition is perhaps more impressive in mass than in detail. Something like fifteen of our strongest painters are absent, and yet by a discreet combination of invitation with competition a display of singularly level competence has been attained. It is a competence that seldom emerges into an indispensable work of art, but has value as a foundation. After a period of chaos we are working out an approved technique. Our painting begins to assume the orderly aspect of a school. This modern method deserves attention not merely for its own merits, but with regard to older procedures. Except for a few individualists or reactionaries, there is now only one way of applying pigment to canvas—the so-called direct method. There is no underpainting. The virgin surfaces are reworked, very sparsely, usually only by way of accentuation. Glazings are practically abolished, and with them a peculiar velvety loveliness of paint; scumbles are rare. Everything is *premier coup*. So much for manipulation. Hals is the remote patron of the method, and only in a less degree Rubens. Velasquez is the object of much lip-worship, but the drift is away from his blacks and black grays in favor of a very blonde palette. As for the modern color scheme, it is impressionistic, but with a difference. In landscape black and brown have virtually been dismissed, the palette has been simplified, the tendency is rather to gain effects by juxtaposed strokes of pure pigment than by mixing the tone on the palette. Only a few painters limit themselves strictly to the primary colors, but the movement is in this direction. The actual stipplings of Monet are rarely employed consistently. For that matter, the dogma of vibrant points was never essential. Pissaro eschewed it in favor of a delicate touch not unlike that of Fantin or Boudin. Sisley always practised a more fluent gesture. Renoir has bound himself to no formula. In short, the impressionist movement, whose way of seeing nature has pretty well prevailed, was much more than a recipe shop. It dealt the final blow in the long fight against the brown tree with all that the symbol implied. At bottom its warfare was against unbalanced color, and even more against the main cause of disequilibrium, the colorless shadow. And here we should admit that it did most valuable service. How it came about that chiaroscuro was regarded as an end in itself and the chief means of artistic representation, it would take too long to tell. No more woful and disastrous fallacy was ever promulgated. A little study of the great masters of light and shade—Leonardo da Vinci, Giorgione, Correggio, and Rembrandt—will show even a careless eye that with these men chiaroscuro was emphatically not a means of representation but of expression. On simple principles of economy, there is no reason for shading a figure that already exists in virtue of its contours, unless that shadow lends an additional charm.

A corollary to the abolition of the colorless shadow has been the doctrine of the values, which is usually regarded either as an absolute novelty or as a deduction from and extension of the practice of Velasquez. The precious word value means nothing more than that the forms of a picture—or, since they are supposed to be highly simplified in a schematic sense, let us call them its planes—hold their place irrespective of contour and light and shade by the contrasted or harmonized relations of the color masses. Or to put the case more simply, in painting by color values, there is no division between painting and drawing, the method being unitary. Black and its mixtures are inert, and make dead spots in what must be a vibrating mosaic. Hence, black is thrown out of the window. Or rather, one may use it on condition of keying the whole picture in black and white and their mixtures with one other color. Much of Robert Henri's painting is of this kind. In short, we have a very logical distinction between painting in color, rejecting inert elements, and in tone, in which case any pigment may serve as a base. Suppose the way of color to be chosen, then the purples which baffle the plain man become a sheer necessity. Without black the grays inevitably become blue-grays or red-grays. The shadows in green necessarily take a violet tinge—they have it in nature, for that matter—so that the dull green pigment by the aid of the complementary color may simulate the vivacity of translucent foliage. All the secondary color of nature must be exaggerated in order that the poor resources of paint may reinforce each other through contrast and harmony. Having rejected black, the distinction between the highest light and dark of the picture is small, and this must be made up for by multiplying and intensifying the color intervals within the limited register. If one should seek two names to exemplify the consummate application of the new technique to picture-making, Mary Cassatt in figure-painting and Edward W. Redfield in landscape would naturally occur. Not that these painters are absolutely in a class apart, but that they illustrate a perfectly consistent and uneccentric mastery of the leading methods of this new century.

The novelty of this technique has been grossly exaggerated. The impressionist movement is less an innovation than a revival of beautiful methods of painting which persisted well into the eighteenth century. The Venetian school never yielded to the tyranny of the black shadow; the Dutch school, until its decadence, was saved from the artistic *débâcle* by its fine sense of tone. Rubens's whole work, both in the figure and in landscape, was a protest against the cult of the murky shadow, and his art gave the impetus to the sanest production of England and France for more than a century after his death. As for the Venetians, while the tenebrists were destroying any residual beauty in painting, the work of the City of the Lagoon became more defiantly blonde and luminous. Already in the nigh Renaissance Veronese had dispensed with the deep and lustrous shadows of the Giorgionesque tradition, coming at a single stride very near the modern notion of color. Piazetta, nearly a century later, regained the position of Veronese, while Tiepolo and Guardi worked with a limited scale of primaries, large planes, and direct stroke, quite as men try to work to-day. Guardi even understood perfectly the refulgent value of dots in masses, and Monet only improved on this method by using instead of tones mixed on the palette the primary pigments from the tubes. Tiepolo and Canaletto knew all about the placing of the forms through the values. The present writer once had the pleasure of seeing a Canaletto, one-half of which still lacked the dry linear finish. That portion had the exquisite balance of a Whistler. These things are recalled because of the amazing shortness of the memory of painters.

As a matter of fact the most significant traits of the modern style are contained in the painting of Rubens and Tiepolo. The former taught the use of the primaries and of frank color in shadow, the latter keyed the whole scale a little higher and added a more studied practice of atmospheric color balance. A more screaming luminosity than that of Tiepolo's best ceilings is possibly found in Sorolla, but there has been small available or desirable gain in sheer luminosity of paint since the last great Venetian stopped working. Where we have gained is in the application of frank painting and the blonde color scale—which, on the whole, had been exploited for purely decorative purposes—to the realistic matter of landscape. Our vision has grown finer for certain effects which the ancients neglected or merely summarized. In a sense, nearly everything that really counts in modern landscape is already potential in Rubens. But his landscapes are on a lower scale than is preferred to-day, and admit a depth of shadow and contrast of colors that a modern practitioner would avoid. Our technical advance has been rather slight. The coruscating quality of the dotted tech-

nique is a small and transient advantage. The real battle has been to preserve in the bright and limited scale the impression of full and sonorous color. The danger is lest biondeness degenerate into the generalized pink bloom of Boucher, or attenuate itself more acceptably in the nacreous grays of Fragonard. If modern art has gained in executive perfection, it is along the line of obtaining sonority without strong contrasts. What is meant may be illustrated by any figure of Mary Cassatt's, but is perhaps better exemplified in that *chef d'œuvre* of the modern spirit and method, Renoir's Mme. Charpentier and Her Children, at the Metropolitan Museum. That such painting absolutely excels a fine Rubens need not be asserted. Enough that it is freer from convention, closer in its harmonies, and a shade more colorful.

Certain tendencies in modern painting have not been discussed, because their vogue is passing, or because their modernity is in question. Whistler has not been lugged in, for example, though his influence, particularly in portraiture, is still strong. It may seem strange that nothing should be said of the newest ferment in Paris—of those self-made barbarians who are attempting to bring the art of design to what they conceive to be first principles. The excuse is patent that nothing represents this new tendency conspicuously at the exhibition which is the occasion of these digressions. It may be suggested that so far as the cult of Matisse imposes simple and mighty contours upon an art still debilitated by various formalisms, it can only have a tonic effect. The imposition of purely abstract color is neither wholesome nor compatible with the progress of our art. The attempt implies a deficient culture and an unhopeful, because abnormal, individualism. That the painters of Tibet have prevailed along these lines is beside the mark. The arbitrary color of the hieratic schools of the Far East was an established religious convention. In accepting it the artist put himself in social bonds which became means of strength. Such conventions are always useful, but they cannot be improvised successfully, even by the boldest inhabitant of Montmartre or Batignolles. M.

A small handbook on "Pottery of the Near East," by Garrett Chatfield Pier, a young curator at the Metropolitan Museum, should be welcomed by collectors; for, though the potteries of mediæval Egypt, Damascus, and a half dozen other makes roughly classified as Rhodian have long been sought by amateurs, there is singularly little information on the subject. Mr. Pier's bibliography, for example, includes only five names of authors. By citing journal articles it would have been only slightly extended. This little book is highly condensed, giving merely the distinguishing points of the various makes, and depending largely upon the sixty-four plates. It records the recent remarkable discoveries of glazed bowls, etc., at Rakka, in Mesopotamia, and at old Cairo. From contentious issues—the invention of lustre ware and the theories about silicious glazes in the early Christian era—Mr. Pier keeps himself free. The scope of his manual hardly permitted such digressions. We may here record an opinion that vitreous glazes, scantily represented in the ruins of Pompeii, were constantly made in Italy, after their introduction from Egypt, and *a fortiori* in Asia Minor. We merely lack examples from the earlier centuries of our era, and any day a well or a mound may give up these missing links. It is unlikely, in short, that so simple and useful a manufacture, once introduced, should have been forgotten. To the collector who already has some slight acquaintance with the typical glazes and patterns Mr. Pier's book will be constantly useful. With this aid it should be possible to place all but the more ambiguous pieces. It may do a good service too in directing students to the Metropolitan from the rapidly growing collections of which many of its illustrations are taken. The book is published by Putnams.

Mr. Bernhard Berenson needs no apology for republishing in a book his *Burlington Magazine* articles on Sassetta, "A Sienese Painter of the Franciscan Legend." The publisher, John Lane Co., has made a beautiful little book, provided with twenty-six collotype illustrations. Stefano di Giovanni, called Sassetta, is indeed one of the most winning painters of the fifteenth century. Not even Fra Angelico exceeds him in tenderness. Even in Siena, where sensitive calligraphy was the rule in picture making, and admirable handling of tempera colors expected, Sassetta's position is a high one. Mr. Berenson's theme is the Franciscan polyptych made for Borgo San Sepolcro, and now widely scattered in public and private collections. By comparing Sassetta's illustrations with those of Giotto and his school at Assisi and Florence, the conclusion is reached that the lesser man is far more faithful to the spirit of the Franciscan legend. Giotto and his pupils in comparison are blockish and insensitive. They are seeking a perfection of representation that is not compatible with the spiritual import of their themes. So is opened the large question of imaginative as contrasted with realistic design, which Mr. Berenson touches suggestively without exhausting, illustrating it from Buddhist painting of the Far East. In asserting that imaginative design must forego emphatic bulk and depend upon eloquence of contour he seems to be on safe ground. Sesshiu, Blake, Puvis, obviously exemplify this practice. We think he might have made a point which artists often fail to perceive, namely, that representative design unless superlatively successful is quite valueless. That ideal leaves no place for mediocrity, and this explains the absolute inertness of nine-tenths of European painting. Expressive or imaginative design, on the contrary, admits degrees of success. All the way down till failure is neared the result has a relative value. That is why Japan and China, until commercialism intervened, produced singularly little uninteresting painting. At all points Mr. Berenson's book is stimulative of such reflections. His subject being Sassetta as a Franciscan painter, the other pictures are treated summarily. A very little revision would have made the story complete, and we are sorry that these slight additions were not made. Our readers may be glad to learn that, apart from the example in the Jarves collection, New Haven, there are two fine saints' legends by Sassetta in the private collection of D. F. Platt, esq., at Englewood, N. J.

Stanhope Alexander Forbes, the English painter, who has exhibited many pictures (frequently of the *genre* type) at the Royal Academy, was elected a Royal Academician on January 6. At the same time, Ernest George, architect; William Orpen, painter, and Derwent Wood, sculptor, were made associates of the Academy, and Jean Baptiste Detaille was chosen Honorary Foreign Academician.

Johann Frederick Nikolai Vermehren, the distinguished Danish *genre* painter, died in Copenhagen last week. He was born in Zealand, the son of a glazier of Dutch extraction, and studied in Copenhagen, where his first picture was exhibited in 1848. The Reservist's Farewell, one of his best known pictures, is in the Art Museum of Copenhagen. He taught many of the best Danish painters.

Finance.

THE "STEEL TRUST DIVIDEND."

Events of the past week in Wall Street have brought to the front once more, and in an exceedingly striking way, the stock of the United States Steel Corporation. What has happened on this occasion was the announcing, through a "regular" and an "extra" dividend, of the largest disbursement ever made at any one date to holders of the common shares; that announcement being preceded, last week, by a decline of 4 points in the stock and followed by a further 1-point break. At its low price of the week, the stock sold on the Exchange 13¾ points below the top level reached in the wild speculation of last autumn, in which it was the conspicuous leader.

This very recent episode is so manifest a sequel to the incidents of 1909 that the present situation cannot well be understood except by glancing back at what actually happened last year. Prior to 1909, the dividend history of the company had been somewhat dramatic. Organized in April, 1901, one-third of its $508,000,000 new common stock was issued to buy the common shares of five existing combinations, on which no dividends were being paid. Nevertheless, the Steel Corporation itself paid 4 per cent. annual dividends, from the very start, on all of its own common stock. The company had been in existence hardly two years, when trade reaction so far cut down its earnings that, for part of 1904, not only was nothing earned on the common stock, but the "cumulative" preferred stock

Farm Land the Basis of Value

In making investments the first consideration should always be the character of the security. Every investor to whom income is important should learn the facts about Irrigation bonds. They form, in our estimation, the safest way to earn 6 per cent.

Secured by a Thousand Farms

Irrigation bonds are secured by first liens on good farm land—sometimes a thousand farms. The farms are worth usually at least four times the loan.

The farms are exceedingly fertile, and are not subject to crop failures. Any one season's earnings are generally sufficient to repay the whole loan.

The bonds are additionally secured by a first mortgage on an irrigation system, in which the investment is often twice the bond issue.

Some Irrigation bonds are municipal securities, which form—as do School bonds—a tax lien on the district. Some are issued under the "Carey Act," where the State supervises the project.

They are issued in denominations of $100, $500, and $1,000, so one may invest either little or much. All are serial bonds, part of which are paid annually so one may make long-time or short-time investments.

78 Issues Sold

In the past 16 years we have sold 78 separate issues of Reclamation bonds, all based on farm liens. Not a dollar of loss has resulted to any investor.

Our dominant place now gives us the pick of these projects. They are passed on by our own engineers and attorneys. And an officer of our Company constantly resides in the irrigated sections, watching the projects we finance.

We have issued a book based on all this experience—a book which every investor should read. Please cut out this coupon as a reminder to send for it. (16)

dividend was only partly earned. Between December, 1903, and October, 1906, the common stock dividend was suspended; in 1906 a sufficiently conservative policy was adopted in restoring the annual dividend at the rate of 2 per cent.

This continued until 1909. The property had gone through the panic of 1907 without disaster, though with net earnings, during half the ensuing year, cut down 50 per cent. from the year preceding. Its business was gradually recovering; but earnings had not at the opening of 1909, and they have not since that time, increased to the high level of 1907 and 1906. Nevertheless, a furious speculation in the common stock began, seemingly under the auspices of interests dominant in the management. Starting at the price of 41 in February of last year, the stock—whose highest previous level, even in the greatest "trade booms," had been 58¾—was advanced to 94⅞ in October. The market movement itself bore all the signs of manipulation on an extensive scale. There were days when one-third of a whole day's trading, in a hundred or more stocks active on the Exchange, was made up of Steel common—a phenomenon wholly inconceivable, even to professional Wall Street, on the supposition of bona-fide purchases by one set of individuals or interests from another.

To account for this extraordinary rise in price, two explanations were given out to Wall Street. One was, that the stock was about to be officially "listed" on the Paris Bourse, by way of attracting into the speculation the rich French investment community. The secret history of this negotiation has not been written; it would probably be interesting. The plan broke through, eventually, because of the French Government's interference. There remained the other explanation for the rise in the Steel Corporation's common stock—that the dividend rate was to be progressively increased, and that "Steel common would sell at par." In July, 1909, the directors increased the quarterly dividend from ½ to ¾ per cent.; in October, from ¾ to 1 per cent. The break in the stock from its high price of 94⅞ had begun before the October action on the dividend. Another quarterly meeting of the Steel Corporation's directors occurred on Tuesday of last week, after the day's closing on the Stock Exchange. On Monday, Steel common broke nearly 3 points, under sales once more one-third as large as the day's total business in all stocks. On Tuesday, the stock broke 3 points more. It was then announced, from the directors' meeting, that not only had a 1 per cent. quarterly dividend been declared on the common stock, as in October, but that an extra dividend of ¾ of 1 per cent. would also be paid from the earnings of 1909.

So far as concerns the market, it is only necessary to say that the price of Steel common was put up 2 or 3 points overnight, that enormous selling followed on the Exchange next day, and that it has continued. In regard to last week's extra dividend, there are several aspects in which that incident was interesting. It was first of all, no doubt, as the *Iron Age* put the matter, "an expression of confidence in the future." It has also a sentimental interest. When the extra dividend was predicted, early in the week, such predictions were based on the ground that the corporation's controlling interests did not wish to leave 1909 as a whole with any worse showing, in the matter of dividend distributions, than 1902, the only other year for which 4 per cent. was paid in full.

There was another Stock Exchange theory, that the extra dividend was a compromise with people who insisted on an annual rate of 5 per cent. This had its origin, probably, in the directors' action of July, 1906, when dividends on "Steel common" were resumed after nearly two years' suspension. It was then alleged that one party wanted a 2 per cent. annual dividend, and another 4 per cent.; for a compromise, one-half of 1 per cent. was declared for the June quarter of 1905, and another one-half of 1 per cent. for the quarter preceding.

But the real point of interest is the relation of the dividend paid to the earnings of the company. It hardly need be said that the net earnings of 1909 were smaller than those of 1907, or 1906. Most people will, however, be surprised to learn that notwithstanding all the increase in plant since 1902, through acquisition of the important Union Steel, Clairton Steel, and Tennessee Coal and Iron plants, and through extensive new construction, last year's net earnings of the Steel Corporation did not equal those of 1902.

Before paying the 4 per cent. common-stock dividend for 1909, a balance of $53,859,000 was left from the year's surplus earnings. This compared with a similar balance of $79,345,000 in 1907, of $72,908,000 in 1906, and of $64,586,000 in 1902, the first full year of the company's operation. Out of this balance in 1907, the company appropriated $54,000,000 for improvements and new construction, and $10,166,000 for common dividends. Out of 1906, it put $50,000,000 into construction and $10,166,000 into common dividends. From the balance of 1902—a year when the company's plant, as has been shown already, was very much smaller than to-day—$10,000,000 was applied to construction and $20,332,000 to the common stock. For 1909, $18,200,000 went to construction and $20,337,000 to the shares. Clearly, the policy of 1909 is the policy of 1902, and not of 1907 and 1906.

But, it is answered, the Gary plant is

finished and new construction no longer an urgent necessity. As to this, the *Iron Age*, a high technical authority on such points, remarked last November:

When in such years as 1908 these appropriations are suspended, there is nothing more certain than that they must be resumed later, and on a scale compensating for the omissions of periods of leanness. . . . In the period of prosperity the industry is facing, it is to be expected that a return will be made to the scale of appropriations that marked the last years of good earnings. It would not be surprising, in view of the tentative plans of some of the subsidiary companies for extensions, the further requirements of the Gary programme, and most of all, the activities of the Steel Corporation's competitors in new construction, if the amounts set aside in 1910 and 1911 exceeded the average of 1906 and 1907.

Letters and Memorials
OF
Wendell Phillips Garrison

Late Editor of The Nation

1865—1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait. It likewise preserves the notable letter of appreciation addressed to Mr. Garrison by more than two hundred contributors to the *Nation* on the completion of his fortieth year of service, and his acknowledgment thereof.

The book has been privately printed at the Riverside Press, but as it is believed that it will be prized by many who long had literary or friendly relations with Mr. Garrison, or who have been readers of the *Nation* for many years, the opportunity is given to such to secure it. It would also find fitting place in public and private libraries which possess and treasure the bound files of the *Nation*.

RECENT BOOKS OF IMPORTANCE AND VARIED INTEREST

The Life of Richard Brinsley Sheridan — **By Walter Sichel**

"It is the most thorough and the most authoritative biography of Sheridan that has yet been written."—**Professor Brander Matthews.** "For all-round completeness on the subject there is no work to compare with these two substantial, handsome, and well-printed volumes. Mr. Sichel seems to have neglected not a single source of information."—*London Chronicle. Two volumes. Illustrated.* $7.50 *net. Postpaid,* $7.90.

Diplomatic Memoirs — **By John W. Foster**

"His knowledge of international law and the enormous experience of affairs which his official positions have given him, make the two volumes of his recollections an epitome of the United States foreign relations in the last forty years."—*Philadelphia Ledger. Two volumes. Illustrated.* $6.00 *net. Postpaid,* $6.40.

Greek Lands and Letters — **By F. G. and A. C. E. Allinson**

"It would be difficult to praise too highly 'Greek Lands and Letters.' It is a solid book of extraordinary charm and suggestiveness."—*Chicago Tribune.* "An extremely interesting volume about one of the most interesting countries in the world."—*Christian Intelligencer. Fully illustrated.* $2.50 *net. Postpaid,* $2.66.

Wanderings in the Roman Campagna — **By Rodolfo Lanciani**

"Professor Lanciani writes with all the fascination that comes from profound knowledge and intense enthusiasm."—*San Francisco Argonaut. Richly illustrated.* $5.00 *net. Postpaid,* $5.40.

Autobiography of Nathaniel Southgate Shaler

"It is an inspiring life record, written with rare literary charm, and which every American who takes pride in his country's great men must read with a feeling of enthusiasm and admiration. We cannot recall the life story of any scientist of recent years which makes such a wide and human appeal to all manner of men as this delightful work."—*Brooklyn Eagle.* With a supplementary memoir by his wife. *With many illustrations.* $4.00 *net. Postpaid,* $4.25.

Emerson's Journals — *Published for the First Time*

Edited by Edward W. Emerson and Waldo Emerson Forbes.

"Invaluable not simply for their bearing upon the history of literature but as an intimate revelation of one of the noblest spirits of his own or of any day."—*Northwestern Christian Advocate. The first two volumes now ready. With portraits. Price, each,* $1.75, *net. Postpaid,* $1.88.

The German Element in the U. S. — **By Albert B. Faust**

"There has been no work in English which told in a comprehensive way what the United States owed to the Germans. Professor Faust has satisfied this need. . . . His two volumes will be read with satisfaction and grateful appreciation as their revelations of power are recognized."—*Chicago Tribune. In two volumes. Fully illustrated.* $7.50 *net. Postpaid,* $7.90.

The Right to Believe — **By Eleanor H. Rowland**

Professor William James says: "I have just read with great interest and satisfaction your little book, 'The Right to Believe.' The style is animated and quick, the illustrations clarifying, and the argument wonderfully well articulated. . . . It is a fine and brilliant performance, and far more difficult of achievement than a large number of 'laboratory researches.'" $1.25 *net. Postpaid,* $1.36.

The Piper — **By Josephine Preston Peabody**

"Beautiful in its conception, exquisite in its expression, tinged with a fine humor not ill suited to its subject, 'The Piper' is a little drama not only to dream over, but to be proud of."—*New York Mail.* $1.10 *net. Postpaid,* $1.20.

Recent Books

Charles Dickens and His Friends

By W. TEIGNMOUTH SHORE. Mr. Shore takes us at once into the very midst of Charles Dickens's large and distinguished circle of friends. Scarcely a name famous in the Victorian era but is associated here with that of Charles Dickens.

Profusely illustrated. Postpaid, $1.90; net, $1.75.

Little People

By RICHARD WHITEING, Author of "No. 5 John Street," etc. A keen and searching yet sympathetic and humorous study of the average man, "the quiet folk" of every rank and class who form the vast majority everywhere. "Unusually attractive . . . unaffectedly gentle and optimistic." *The Nation.*

Postpaid, $1.65; net, $1.50.

Cassell's Atlas

Consisting of 88 exquisitely colored maps, containing the latest and most complete information relating to all quarters of the globe. The maps have been made specially for the work by Messrs. John Bartholomew & Co., of the Edinburgh Geographical Institute, a guarantee of their beauty and accuracy. *Postpaid, $5.25; net, $5.00.*

Adventures in London

By JAMES DOUGLAS. According to Mr. Chesterton, James Douglas "is by far the ablest of the Impressionists." He here gives nearly a hundred unhackneyed flashlight "impressions" of London—the farce and comedy and tragedy of the greatest city on earth.

Frontispiece. Postpaid, $1.90; net, $1.75.

Every-day Japan

By ARTHUR LLOYD, M.A. Mr. Lloyd has written this remarkable book after twenty-five years' residence and work in the country. It gives an extraordinarily vivid insight into every phase of the life of the Japanese, viewed at close quarters. *With 8 color plates and 96 half-tones. Postpaid, $4.25; net, $4.00.*

London Town Past and Present

By W. W. HUTCHINGS. Unique, comprehensive, and incomparable in value. It limits itself to no one period of time or to no one part of the Capital. It recounts in vivid language all the important events from Roman times to the present day.

Lavishly illustrated with hundreds of reproductions of old prints, drawings, and photographs. Cloth, quarto, two volumes. Postpaid, $8.00; net, $7.50.

The World's Great Pictures

With 13 colored plates and over 400 illustrations. A superb volume of reproductions of pictures by the great artists of Europe from the earliest time. The text deals biographically with the artists and descriptively with their work, and traces the progress of painting from the thirteenth and fourteenth centuries.

Gilt top. Postpaid, $3.85; net, $3.50.

New Editions

The Home Life of the Ancient Greeks

Translated from the German of Prof. H. BLÜMNER by ALICE ZIMMERN. The third new edition is ready of this scholarly, yet thoroughly readable work, which deals intimately and exhaustively with the domestic life of ancient Greece. *Index. Numerous illustrations. Postpaid, $2.20; net, $2.00.*

A First Sketch of English Literature

By Prof. HENRY MORLEY, LL.D. A thoroughly revised and expanded edition of Professor Morley's standard work is now in preparation. The new edition will be brought down to the deaths of Swinburne and Meredith.

The Other Side of the Lantern

By Sir FREDERICK TREVES, BART. An Account of a Commonplace Tour Round the World. One of the most intimate and fascinating of travel books. Sir Frederick, the physician to the King, had unique opportunities for close and leisurely observation on his tour.

"His book has color, atmosphere, imagination, and charm . . . it is a notable triumph."—*London Daily Mail. With 40 half-tones, gilt top. Postpaid, $4.25; net, $4.00. Cheap Edition, postpaid, $2.50; net, $2.00.*

The Story of the Heavens

By Sir ROBERT BALL, F.R.C.S., President Royal Astronomical Society. The astronomical lectures and books of Sir Robert Ball enjoy an almost unprecedented popularity. He has here written a popular "Astronomy" which has already reached a sale of many thousand copies. *New Edition, with 18 colored plates and other illustrations. Postpaid, $3.75; net, $3.50.*

The Library of English Literature

By Prof. HENRY MORLEY, LL.D. Five volumes. New Edition with Supplement to each volume, bringing the work up to date.

It is doubtful if any one man has exercised so widespread and beneficial an influence in bringing home to the Anglo-Saxon race the full value of their rich literary heritage as Prof. Henry Morley, and in none of his books written to this end has he been so successful as in "The Library of English Literature." It satisfies, as perhaps no other work of its kind does, the wants and difficulties of students and general readers.

Five volumes, gilt edge, library style. Per volume, $2.50 net.

George Borrow

By R. A. J. WALLING. The elusive personality of George Borrow is a perpetual source of interest. Mr. Walling has managed to throw new light on George Borrow, and a considerable amount of fresh matter relating to his strange career is embodied in this volume.

Frontispiece. Postpaid, $1.90; net, $1.75.

Prominent Fiction

The Red Saint

By WARWICK DEEPING

Author of "Uther and Igraine," etc.

The story of a saintly maid who moved among rough, uncouth men in warring, mediæval Sussex. It is a romance of genuine charm and color.

(Fifth Impression.) Frontispiece in color, $1.50.

The Shoulder-Knot

By Mrs. HENRY DUDENEY

Author of "Trespass," etc.

The "shoulder-knot" is an incubus, an imp of terror that saps the man's strength and twists his mental vision. Mrs. Dudeney is at her best in this story of power. *(Ready February 17)* $1.50.

Mary Gray

By KATHARINE TYNAN

Author of "Peggy the Daughter," etc.

A wholesome, fresh romance of a young girl, whose quiet excellence is adding many discriminating readers to Miss Tynan's audience.

Four illustrations in color, $1.50.

CASSELL PUBLICATIONS HAVE BEEN STANDARD FOR SIXTY YEARS

Cassell & Company, Limited

43-45 East Nineteenth Street New York City

Important New Macmillan Books

READY THIS DAY.

The New Book by the Author of "The Art of Cross-Examination"

Francis L. Wellman's Day in Court
or, The Subtle Arts of Great Advocates

It is seldom that a volume which can be regarded by legal minds as rich in hints of high practical and professional value, has also an interest for the general reader keener than most fiction. Yet this is what may be said justly of Mr. Wellman's books.
Ready this day. Cloth, 8vo, $2.00 net; postpaid $2.18.

Mr. Frederic Paxson's The Last American Frontier

Relates with an abundance of life and romance true stories of the adventurous years during which "the Great American Desert" vanished from the map and the pony express and the road agent flourished along in western gulches.
In the Series of *Stories from American History. Cloth, illustrated, $1.50 net; postpaid $1.62. Ready this day.*

Dr. H. C. King's *new book* **The Ethics of Jesus**

President King of Oberlin has done nothing more stimulating than this clear, practical analysis of the simple principles of practical ethics which form the bulk of the teaching of Christ. *Cloth, 16mo. Ready this day. $1.50 net; postpaid $1.60.*

Dr. Andrew M. Fairbairn's Studies in Religion and Theology

These valuable papers by the former head of Mansfield College, Oxford, author of "The Philosophy of the Christian Religion," etc., form, taken together, a study of the church in idea and in history. The book has been long in demand by students of religion. Its author is unrivalled for the range of his learning, and the breadth and sympathy of his generalizations carry with them an unusual sense of mastery of a great subject. *Cloth, ready this day, $3.50 net; postpaid $3.68.*

Professor William L. Phelps's Essays on Modern Novelists

Professor Phelps of Yale discusses the novel as material for the study of contemporary life, and by way of illustration takes up the works of modern writers of a wide range. The *Boston Transcript* sums up a long leading review by calling these papers: "As vital considerations of literary problems as have been brought to the thinking public in many a long day."
Cloth, 12mo, $1.50 net; postpaid $1.60.

Professor C. T. Winchester's *new book*
A Group of English Essayists of the Early Nineteenth Century

Professor Winchester of Wesleyan revives an acquaintance with the first English masters of this intimate, self-revealing art. It is uncommonly interesting to compare their work with that of such contemporary essayists as Chesterton, Dobson, Lucas, and Belloc. *Cloth, 12mo, $1.50 net; postpaid $1.60.*

Dr. Robert F. Horton's *new book* **Great Issues**

Is precisely the book for the man who feels that the pressure of detail in modern life is liable to obscure his vision of life as a whole—of the really big ideas which count, and which every man with any influence must face.
Cloth, 12mo, $1.50 net; postpaid $1.60.

Professor Francis G. Peabody's *valuable new book*
The Approach to the Social Question

Professor Peabody of Harvard has supplied an introduction to the study of social ethics which deserves the word "indispensable." He shows how philosophy, social science, economics and ethics respectively contribute to the solution of this fundamentally religious question. *Cloth, 12mo, $1.25 net; postpaid $1.35.*

Professor Samuel G. Smith's Religion in the Making

Professor Smith of the University of Minnesota has thoroughly tested the methods of sociology in interpreting the Bible, and finds the Scriptures an unequalled source of sociological material. His book is one of unusual interest.
Cloth, 12mo, $1.25 net; postpaid $1.35.

Dr. De Groot's *new book on* **The Religion of the Chinese**

Dr. De Groot of the University of Leyden, one of the highest living authorities on the subject, was invited to this country to deliver the lectures which form the basis of this book at Hartford before audiences especially interested in missions. Uniform with Dr. Jevons' *Introduction to the Study of Comparative Religion.* *Cloth, 12mo, $1.25 net; postpaid $1.35.*

Dr. Horace G. Underwood's The Religions of Eastern Asia

Dr. Underwood of Seoul aims to analyze the eastern conceptions of God and their results in tradition and life, and to compare these with Christian ideas. *Cloth, $1.50 net; postpaid $1.60.*

Mr. Herbert Croly's The Promise of American Life

The book cannot be neglected by thinking men. It is the wholesomest antidote possible for the prevalent feeling that while American democracy has been disappointing, it is likely to become even more so in the future. The work is strong and sound, timely and interesting. *Cloth, 8vo, $2.00 net; postpaid $2.14.*

TO BE READY NEXT WEEK.

Mr. G. E. Woodberry's The Inspiration of Poetry

Mr. Woodberry is himself a poet of distinction and also a critic of poetry who may be trusted as a guide to its deeper meanings and more subtle beauties. He applies to a special list of the world's great names his probe for the sources of the inspiration which each possesses. *Ready next week.*

Dr. Irving King's The Development of Religion

A study in the social psychology of primitive religion, tracing out the gradual building up of the religious attitude through activities which appear in primitive social groups. *Ready next week.*

Dr. Henry van Dyke's *new book* **The Spirit of America**

Professor van Dyke of Princeton discusses the permanent elements, the convictions and ideals which have developed present Americans and are influencing them. His Sorbonne lectures on which the book is based were received with heartiest sympathy by French audiences. *Cloth, 8vo. Ready February 16.*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 10, 1910.

The Week.

The clique that rules in the Senate and guides the destinies of this nation must be beginning to wonder whether their tariff victory of last summer was not, after all, of the Pyrrhic order. When a befooled and disillusioned country voiced its resentment against the Aldrich and Cannon crowd, there must have been few who believed that punishment could come so soon after them. If there was hope of relief, it was of relief in some extraordinary way. The guilty men might die or be suddenly converted or go mad and resign. But who was sanguine enough to foresee that within half a year Cannon would be a sinking craft, and that they of the innermost circle of Olympus, Hale of Maine, Lodge of Massachusetts, Scott of West Virginia, would be anxious about their places in the Senate? Insurgency has become a nation-wide disease within the Republican party. When the closed Senatorial preserves in New England begin to fall away from their feudal owners we seem to be indeed on the eve of a *débâcle*. It is now impossible that the Aldrich-Cannon crowd can ever play another thimble-rigging game on the country. The question is whether they can escape the consequences of their past deeds.

The Administration policy of perfect frankness is plainly being followed in Ohio. It is openly admitted by the President that there is great danger of the Republicans losing his own State this year. Hence the need of beginning in February a campaign to prevent the re-election of Gov. Harmon in November. After frequent conferences at the White House, the Ohio Senators, with members of the Republican State Committee, decided that something vigorous must be done, and accordingly Mr. Wade Ellis resigns from the Department of Justice to take charge of the campaign in Ohio. He has been known as the chief "Trust-buster" of the Administration, but while it is important to curb Trusts, it is still more important to curb Harmon. This preliminary display advertisement will, of course, fix the attention of the country upon the fight in Ohio, and make the Democratic Governor of that Republican State even more of a national figure than before. If he wins, or makes a rousing campaign while failing of actual election, his nomination by the Democrats for the Presidency in 1912 will be highly probable. The elaborate preparations of the Administration to make war upon him will necessarily work towards that result.

The full text of the Federal incorporation bill proposed by the Administration is now published and it proves the so-called "outline" of the measure, printed a week or two ago in some of the newspapers, to have been based on rather absurd misinformation. The bill as drafted does not at all give a free hand to holding companies. It does provide machinery whereby a corporation may be formed under a Federal charter "to take over the property and business of any existing corporation" chartered by a State; but the primary purpose of the provision seems to be simply to enable State-chartered corporations to reorganize under the Federal law. Even this change of form is surrounded by careful restrictions. It must be approved by vote of two-thirds of the capital stock of the corporation whose business is to be acquired; it must be favorably passed on, after investigation and appraisal, by the Commissioner of Corporations, and it holds legally responsible for any mis-statement the directors applying for such transfer of property. Furthermore, the proposed bill explicitly provides that if the Sherman Act or any other Federal law shall be violated, through contracts, combinations, or attempt to monopolize interstate commerce, the offending corporation's charter shall be forfeited and a receiver appointed for it. Clauses affecting issue of both stock and bonds are drawn with the manifest view to preventing such financial exploits as the industrial combinations of 1899 and 1901, on the basis of inflated capital, and the bonding of numerous railways in 1902, and of the Union Pacific particularly in 1906, for the purpose of buying other railway stocks at inflated prices. As matters stand to-day, there is little probability of the enactment of such a law in the present session of Congress. It is well, however, to have so careful and thorough a draft of the plan made public at this time, so that criticism, favorable and unfavorable, may be given to it.

Ex-Senator Edmunds's letter to Mr. Charles P. Howland on the Anti-Trust Law presents more than one element of unusual interest. In the first place, it comes from a man of eighty-two, but is written with a vigor and incisiveness much more suggestive of twenty-eight; and it comes from a man who was, for a generation, one of the small and remarkable group of great lawyers in the United States Senate. There are, in Mr. Edmunds's letter, two particular statements of fact that deserve special notice. The first is that the Anti-Trust Act, which is habitually referred to under the name of Senator Sherman, was not his work, or the work of any other member of the Finance Committee; it was completely rewritten by the Judiciary Committee, and was really the work of "one of the members of that committee"—which is merely Mr. Edmunds's way of saying that it was his own work. The other particular statement of fact is that, in the Knight case, the decision in which did so much to weaken the efficacy of the law, the feeling of members of the bar of the Supreme Court was that the case had been very feebly and inefficiently presented to the court. As for Mr. Edmunds's general views, they agree with a growing conviction in and out of Government circles—that a vigorous upholding of the law along lines that time will make plainer is capable of accomplishing great and vitally needed results. No law administers itself; and in establishing a law so comprehensive and complex in scope, we must be prepared for difficulties and delays.

The verdict last Friday of a jury at Hartford fixing at $74,000 the damages which the hatters' union must pay to a firm whose business it had sought to cripple or destroy by means of a boycott, is only a logical carrying out of the decision of the Supreme Court. The question of law was taken before that tribunal on demurrer, and it held that a labor union was exactly on the footing

of a corporation in being subject to prosecution for conspiring to stifle competition and obstruct the flow of interstate commerce. After that, the facts being established, it was only left for a jury to assess the damages in accordance with the law. Here is no question of refusing workingmen the right to combine, no quarrel about "government by injunction," but just the simple principle that laboring men and labor unions must submit like everybody else to the law of the land. An appeal is to be taken on the ground that the damages are excessive—they are automatically tripled by the Anti-Trust Act, so that the total would be $222,000—and doubtless the lawfulness of making the individual members of the union liable will be argued before the courts. That is within the rights of the men. They are as much entitled as millionaire bankers to exhaust their legal remedies. But the more thoughtful and sober leaders of labor organizations must see that, with the law laid down as it was in the Gompers case and now in the case of the Danbury hatters, such boycotts must be abandoned as illegal.

The refusal of Western railways to comply with the demands of the firemen for a heavy increase of wages and other changes was accompanied by an expression of willingness to arbitrate the question of wages. This would seem to indicate a recognition of the changed conditions that must be reckoned with, and probably, above all, of the advance of prices. Whatever the causes of increased price, the increase itself is a palpable fact, and one that is world-wide in its manifestation; and all employers of labor will have to give this fact adequate recognition sooner or later. What was insisted on, in season and out of season, by the opponents of free silver is now taking place, though the era of advancing prices has come about in quite other ways than the adoption of Mr. Bryan's proposal. The working people of the country were warned that when the dollar was cheapened—that is, when prices were raised—they would be among the last to have the higher scale of prices applied to what they had to sell, labor. This was the experience of the civil war days, with the greenback standard, and it is our experience now. Salaries, of course, are slowest of all to rise, and go up, naturally enough, only after it has become perfectly clear that the new scale of prices has become fixed; but next after salaries in slowness are wages. The time has now arrived, however, for a general recognition of the question of wages as related to high prices, and thoughtful employers of labor will not ignore it.

The fact that Mr. Procter has withdrawn his offer of half a million to Princeton University will excite keen interest among all who appreciate the influence exercised by our colleges and universities upon the tone of national life. Just what the precise questions were upon which disagreement developed is not clear at the time of this writing; but the essential nature of the difficulty is no secret. On the one side are those who find nothing to object to in the growth at our colleges of luxury and of social distinctions based on wealth. On the other side are those who look upon these developments as an evil in their immediate effect upon the young men involved in them, and as an even more serious evil in their effect upon the spirit of the place. They find the prominence of luxurious living and of the exclusiveness of wealth tending to displace learning and intellectual distinction from its natural position of dominance in the college world; and they find it subversive of the democratic ideals for which American institutions of education ought to stand. Between these two mental attitudes there is an irrepressible conflict. All the pressure of circumstance is in favor of the steady growth of luxury, and if it is to be resisted, it can only be by persistent firmness in opposing it in the face of temptation. If, as seems clearly to be the case, President Wilson has been actuated by this feeling in taking his position on this question, he and the trustees who have sided with him have earned the approval of the whole country.

Aside from the forces that are silently operating everywhere to raise the scale of luxury and to make wealth a predominant factor in all human relations, the American college has been subject to two special influences. The first is the general ambition to grow in numbers; the second is the desire to stand well with a class from which it so largely derives its financial resources. In view of these things it can, we believe, be said truthfully that the colleges have done better than there might have been good reason to fear that they would do. The democratic idea has remained fundamental; the encroachment of plutocratic notions and of snobbish standards has continued to be nothing more than encroachment, though sometimes a very serious one. But while the colleges have done better than might easily have been feared, they have not done so well as might reasonably have been hoped. Many a departure from sound traditions and worthy ideals has been permitted for want of a firm assertion of principle. And such assertion has a value far transcending the immediate purpose that called it forth. It has a tonic influence as a pronouncement of attitude, over and above its direct effect.

The Maryland Legislature has, for some years, been making the small annual grant of $25,000 to the Johns Hopkins, and it appears that there is some danger of this grant being discontinued by the present Legislature. Such action could be justified only on the theory that to keep money in the State Treasury is a gain to the State, no matter how much value there might be to the State in its expenditure. The Johns Hopkins University does for Maryland what no other establishment does. It is the only institution of higher learning in the State. Its presence supplies a stimulus to intellectual activity and ambition, the value of which to the people of Maryland is inestimable. It has, in the past thirty years, done more to give distinction to the State and to its chief city than any other agency. It has caused the adoption throughout the country of higher university standards than had previously been known; and it has itself maintained these standards in the face of great difficulties, its financial condition being in painful contrast with that of any of its principal rivals.

So the garrulous, cowardly, spiteful blackbird in Rostand's barnyard masterpiece is supposed to typify the press! For who has suffered from the stupidity and impertinences of a debased press like Edmond Rostand, unless it be George Bernard Shaw or Richard Strauss? These tender souls, so averse to the slightest taint of publicity, so timid in confiding their hopes and their

doubts to a great, big, bouncing world, naturally fall into the tradition of whacking the newspaper in the sacred name of Art. Hundreds of thousands of dollars in advance royalties, and the four corners of the globe waiting breathless for the masterpiece to be translated and put on—such things bear testimony to an art of publicity compared with which the idle gossip of the reporter is like the first tottering footsteps of the babe in arms. Balzac was never tired of picturing a debased press which blackmailed vice and sold two-line notices to deserving virtue at exorbitant prices. Conditions may still be the same to-day. Nevertheless, the law of compensation that rules the universe sees to it that the successful genius shall exact from the editors ten columns of free newspaper notice for every stickful the struggling artist must purchase with his money or his self-respect.

The British Labor party is rent between joy at its increased influence as holder, with the Nationalists, of the balance of power in Parliament, and sorrow at its actual loss in numbers. From nearly sixty in the last Parliament, the Laborites have dropped to forty-odd, a loss proportionately larger than that the Liberals suffered. This falls in line with the general trend of the election, which was a triumph of moderate opinion. The Labor members, as the extreme left wing of the Government coalition, were bound to suffer most. The outcome, so far as Government policy is concerned, is as yet uncertain—how uncertain is shown by such widely differing rumors as that which relegates the radicals, Lloyd-George and Winston Churchill, to a back seat in the Cabinet, and that which foresees the inclusion of one or two Labor members in the new Government. In theory, there is no reason why Mr. Asquith should, on the face of the country's pronouncement, give added recognition to the Laborites. In practice, there are their forty valuable votes to be taken into account. One probable result will be greater recognition for the Laborites by the Government, accompanied by a greater moderation on the part of the Labor members themselves.

On the adjustment of our tariff relations with Germany upon the basis of minimum duties on both sides, the people of both countries have reason to congratulate themselves. There probably was at no time any strong reason for fearing a different conclusion to the negotiations, though certain stumbling-blocks, owing to the shortness of the time at the disposal of the negotiators, threatened the possibility of failure. The bottom fact was that the responsible heads of both Governments were too sensible of the mischief that would be done by a tariff war to do otherwise than make every effort for mutual satisfaction. The potash trouble, which suddenly obscured the sky, we hear nothing of to-day; presumably all ground for objection on our part was removed when it was made plain that there would be no violation of existing contracts with American concerns. President Taft has earned, and will receive, recognition for his successful management of a difficult negotiation. At the same time, there is always, to any mind with a trace of philosophical detachment, an element of the ludicrous in the solemn rejoicing of two protectionist countries when they have succeeded in preventing an aggravation of the difficulties which their tariffs naturally interpose. It may be a good thing not to have the bars put up higher than they are; but it is a bit funny that people who insist on a six-foot fence and think it a priceless blessing, should be so very sure that to be saved from a seven-foot fence is an occasion for devout thanksgiving.

The secret workings of reaction in Russia are now dragged into the light through the efforts of Vladimir Burtseff, a scholar of radical affiliations, who has made the study of the Russian revolutionary movement his life-work. His disclosures regarding the system of espionage by which the Russian Government combated and crushed the revolutionary movement which began in 1905, are by this time fairly familiar. That system, in a few words, consisted in having agents of the secret police take a leading part in the revolutionary propaganda and initiate acts of terrorism in order to supply the Government with an opportunity and an excuse for employing ruthless methods of repression. The Government's spies penetrated into the very heart of the revolutionary councils. It was a terrific shock to those who have the cause of Russian reform closely at heart when Vladimir Burtseff, about a year ago, proved, before a revolutionary tribunal in session at Paris, that Azeff, the leading spirit in the Central Committee of the Socialist-Revolutionary Party, was a government spy. The revelation was both a shock and a tragedy. It meant that for years the revolution had been fighting an utterly hopeless fight. It meant that thousands of Russian men and women had gone to their death, not in a struggle against tremendous odds, but in a struggle that offered the opponents of the Government no chance at all.

But the Azeff affair had also its almost comic aspects. It threw a glaring light on the mixture of ruthlessness and inefficiency, of stupidity and cunning, of Imperial despotism, bureaucratic wire-pulling, and more or less petty palace intrigue, which goes by the name of government in Russia. Repression had not even the excuse of high effectiveness, such as, for instance, a secret police system would have in Germany. While the Government's agents were fighting the revolution, they were busy betraying one another. The fact is that Azeff, although a traitor to the revolution did bring about the assassination of the minister of the interior, Von Plehve, in 1904, and of the Czar's uncle, the Grand Duke Sergius, in February of the following year. How came it that an agent of the Government, even if it was necessary for him to play out the full revolutionary rôle, was allowed to strike so perilously near to the throne? The answer is found in the jealousies and intrigues of the Government's hired men. The police at Moscow were at odds with the police at St. Petersburg, and the regular police authorities at St. Petersburg were jealous of the extraordinary authority that came to be vested in General Trepoff, upon whom devolved the special task of guarding the Czar's sacred person. To protect the Czar, General Trepoff needed a man like Azeff, and if Azeff, to keep his hold on the revolutionary movement, found it necessary to kill a minister or a grand duke, he was practically allowed to. It was personal politics with a vengeance within the ranks of the government's defenders. It was government by chaos; and to this may be attributed the long stand the revolutionaries managed to make in spite of the odds against them.

THE DEFEATED REFORMER.

In the ever-repeated contest between the "practical politician" and the "fool reformer," the reformer is always getting the worst of the fight. He never "gets there." His childishness, self-conceit, folly, want of horse sense, is the constant theme of the successful politician and the clever newspaper man. He makes a mess of every favorable situation, he lets every practical opportunity pass him by. He is constantly fighting the bosses, and the bosses simply laugh in their sleeves; they know that their business is a solid institution, whose foundations rest on the bed rock of human nature, while he is a feather-brained enthusiast, tilting at a castle of stone with a wooden spear. They let him play at the game of reform, and get what amusement he may out of it, while they go on their way as if he were not. He may make a deal of noise in the newspapers, but when it comes to counting the votes he is not "in it." In fact, if it were not for his incurable childishness, he would long ago have given up trying to accomplish anything, seeing that he hardly ever scores a success, and when he does is unable to hold its fruits for any length of time.

This is what we hear from the practical politician and from many practical men who are not politicians, and it is what a surface view of events may seem to justify. But when we come to think about the matter, we see that something else is happening besides the carrying of elections, either by the friends or the enemies of political improvement. Just as, in struggles between parties, the defeated side may impose upon the victorious party the necessity of adopting the very policy against which it had been fighting—as was done sixty years ago in England by the free-traders, as has been done more recently by the Democratic party in our own country in some important directions—so the reform agitations in our politics, while continually meeting with defeat, are continually bringing about the results toward which they are directed. The classic instance of this is the case of civil service reform. There has never been a time when it could be said that civil-service reform had at last carried the country, or had come anywhere near carrying the country. It began as an agitation stirred by a little group of earnest men, and advocated by a very few superior journals; and from that day to this, it has never counted among its genuine adherents more than a small minority of the members of Congress. But at an early stage it got itself embodied in an act of Congress, at a time when the public conscience was peculiarly roused; and in the face of the aversion and hostility of the great majority of Congressmen, it has grown stronger and stronger ever since. At the present time its principles govern appointments and promotions in about 200,000 Federal offices; every President, every high executive officer, has for years been emphatically its friend; and there is scarcely a respectable newspaper in the country that is not its hearty supporter. And all this has been accomplished by the steady pressure exercised by the merit of the cause. It must be traced to its source in the persistent efforts of a handful of men who were laughed at for years as the most visionary of visionaries, the most unpractical of theorists.

What is thus exhibited on a national scale and in a clear-cut way in this conspicuous instance manifests itself less definitely, but no less effectively, in a thousand shapes in other governmental matters, both national and local. In spite of all deficiencies and discouragements, the standard of American city government is steadily rising, and has advanced far beyond what was familiar to the men of twenty or forty years ago. The opportunity for abuses is tenfold what it was in those simpler days, but abuses are held in check by an increase in the efficacy of public opinion and by a great change in the standards of public judgment. And this has not come to pass of itself. It has been brought about by unceasing effort, and especially by the fight for reform, ever beaten and ever renewed. If the "Oh, well" people had had their way—the people who would admit that thus and so was very bad, but who knew that nothing could be done about it and that it was sure to stay—we should have been not only as badly off as ever, but a great deal worse. Again and again, the politicians have won, but had first been made so uncomfortable that they found it best to "pander to the better element." Whenever a painful inch has been won in this way, it has been pretty sure to stay won; and by slow accumulation we have gained in the course of time a great deal. Many a thing which would have been a matter of course in the days of Fernando Wood or of A. Oakey Hall would to-day seem to Tammany itself too shocking to be thought of.

Sanguine people in Boston, it is stated, are hoping that Mayor-elect Fitzgerald will be as good as some of his promises, and a great deal better than his record. They point to Mayor Gaynor, and say: "Is he not on his mettle, and trying to justify himself after all the unkind words spoken in the New York campaign? Well, that is the case with Fitzgerald." Now, whatever may be the case as to either Mr. Gaynor or Mr. Fitzgerald—two men, by the way, about as different as possible, in their past record—certain it is that precisely that thing has happened again and again; the reformers and the "kickers" have been beaten at the election, but have in large measure had their will nevertheless. Their candidates have failed to get the offices, but their principles have been recognized by those who did. Thus, though from day to day, it may have seemed as if nothing was being accomplished, a glance backward through the decades shows that the good work has yielded good and substantial fruit.

THE ARMY ELIMINATION BILL.

We have received within the last ten days many requests from army officers for aid in opposing Senate bill 1018, which provides for promotion in the army by elimination. Introduced in similar form in 1906 and 1908, it is now being vigorously pushed in Washington, by those who are hopeful of its passage because it does not carry an immediate and definite increase in expenditure. Its purpose is to insure a regular flow of promotion at a rate sufficient in the opinion of the War Department to bring officers into the upper grades at an age it deems desirable. This the bill does by providing annual elimination of officers—if there be not sufficient vacancies caused by death, resignation, or retirement for age or disability. It was recommended by President Taft when Secretary of War in these terms:

> It is a remarkable fact that our organization and our promotion laws are such as to insure in the greater part of the fighting force the minimum of promotion with a maximum of rust and decrepitude, exactly the reverse of what a wise policy would dictate. It is to remedy in some degree this unfortunate and unwise condition that this bill is offered. It makes no extravagant

demands on the Treasury. It does injustice to no man. It is believed that it would, in practice, operate most beneficially to give our mobile army one of the most essential features of such a force, *i. e.*, field and company officers possessed of zeal and physical energy.

Now, if these were the facts, why is the army rising up to protest against so benevolent a measure? But, as the *Army and Navy Journal* has said, no elimination bill can fail to work some injustice, and the service is convinced that this particular bill would do vast injustice. As for the Treasury, it will feel no particular burden in the first few years, but Mr. Taft himself declared that the bill would speedily increase the retired list of 1,556 officers, as it then was, to 3,763, which would mean a very considerable drain upon the public funds. Moreover, it would establish what ought to be regarded as a vicious principle, even though it has been adopted in the navy, viz., the pensioning of able-bodied and professionally qualified officers in order that others may more speedily acquire high rank and larger pay. The excuse for this is the necessity of putting young men in places of responsibility—regardless of the fact that some of our most famous military and naval commanders have, like Farragut, Robert E. Lee, Winfield Scott, and many others, borne the heaviest responsibilities when well past the prime of life.

But Mr. Taft went furthest astray in his advocacy of the Elimination bill when he averred that it would work "injustice to no man." A correspondent of the *Army and Navy Journal* readily punctures that by citing specific cases. Although it does not appear on the surface, the bill is really based on the principle of "age in grade." The idea is to eliminate officers by drawing a deadline at a certain age. For instance, it is understood that no captain will be permitted to remain in active service who has passed forty-four. But officers do not enter the service at the same age. Those from West Point are usually younger than those from the ranks or the volunteers, and men have come in from civil life at a very youthful age. For instance, Capt. J. L. DeWitt, Twentieth Infantry, entered as a lieutenant at eighteen years and nine months, and had, therefore, twenty-five years and three months in which to become a major, while Capt. Joseph Frazier, Fourteenth Cavalry, commissioned at twenty-six and a half years, had only seventeen years and a half in which to become a major. The unfairness of this needs no demonstration; distinguished service, attainments, count for naught, since all promotion is by seniority up to the grade of general; that is, no one shall be advanced out of order, and it all becomes a question of age at entry into service.

Moreover, the pension feature of the bill—the eliminated officer is to receive a percentage of his pay, arrived at by taking one-twelfth of the square of his years of service—is regarded by the service as a breach of contract. One captain writes us:

> On entering the service, as I did nearly twenty-five years ago, the government held out the inducement that . . . if one was not killed before he was sixty-four, he would be retired on a certain stated pension—three-quarters of his pay at date of retirement. If disabled in the meantime, the retirement was the same. Now, having gone through two campaigns and long-continued exposure in the tropics, and after nearly twenty-five years of service, this bill says to me: "Some one desires quick promotion—you happen to be a couple of years over the age for grade limit set in this bill—your service has been admirable; you have been recommended by seniors continuously; we have no criticism to offer on either your mental or physical capacity or condition—but you are just beyond the age for that grade, and we regret (?) we have to eliminate you to improve the service."

Not only so, but the actual pension offered is pitifully small. One first lieutenant, if eliminated for age, would, in our knowledge, receive $6.75 on each $100 of his present pay of $2,000. Capt. U. G. Worrilow, Twenty-ninth Infantry, who came up from the ranks, could be eliminated this year as over forty-four on a retired pay of $50.40 a month, or *less* than he would have received had he remained in the ranks and retired as a first sergeant! Capt. Frazier after twenty-four years of service would receive $71.10 per month. Other officers who came in from the volunteers and the reorganization in 1901, and are already over age as lieutenants, would be cast adrift in middle life with their families to care for on retired pay of from $18 to $30 a month. And yet Mr. Taft could see no injustice in this bill for any man!

We do not believe that the bill will pass; it ought never to leave the committee-room. In our experience, no worse measure dealing with army affairs has been devised. It would destroy ambition and interest in their work among all officers devoid of War Department or political influence, and would send many scurrying back to civil life. It would make the army a hot-bed of intrigue, wire-pulling, and politics, and the army is sufficiently cursed in these respects already. Elimination is possible enough under existing promotion laws, if boards of examination for advancement would rigidly do their duty and disqualify men who are morally unfit, have become professionally rusty or physically disabled, or are merely worthless generally. To this extent the remedy for existing evils, if the present bill is defeated, lies in the hands of the army itself.

SCIENCE LOST IN THE SCIENCES.

Prof. E. B. Tylor has just resigned at the age of seventy-eighty the chair of anthropology at Oxford, which he had held for more than a quarter of a century. It is fully fifty years ago that he came to the front with studies which perhaps entitle him to the name that has been bestowed upon him by admirers, "the father of anthropology." The work of scientific investigation and inference which he and his fellows did was undeniably important and fruitful. They set the world right in regard to the actual beginnings and early progress of human society. By accumulating great masses of fact and making the appropriate deductions therefrom, they showed what primitive culture really was, as opposed to previous imaginings about the original constitution of society, "natural right," and the whole range of ideas which we associate with the name of Rousseau. This was a fine achievement. Those who fed on Tylor's books about Mexican civilization or his "Researches into the History of Mankind," got not only a large amount of interesting information, but also a new way of thinking about the whole problem of man's development on this earth. From those works on anthropology they acquired a point of view and a method by which to judge all writings and speculations and phenomena bearing on the subject.

In the course of Tylor's life the field which he began to work has been enormously cultivated. Many learned crimes have been committed in the name of anthropology. Material has been flung forth in profusion, and new theories

have grown upon every bush. And in the presenee of all the minute monographs and painful ransaeking of the world to snap up a few overlooked trifles, it is undoubtedly the case that we do not feel the same sense of surenoss and movement that we did in the early work. This may no doubt be in part because Tylor and Sir Henry Maine and the others were, in a sort, pioneers opening to us a fascinating new country; but there is more in it than that. They had their facts better in hand than do many of their successors; did not so much lose themselves in details; kept up a more rigorously scientific habit of mind throughout. If they did not spread before us so much matter as the moderns, they gave us more science—that is, ordered knowledge, facts made luminous by great working hypotheses.

We have a great many more sciences nowadays—a fairly bewildering multiplicity of them—but have we as much science? This is a question which Prof. John Dewey asked in his address before the Ameriean Association for the Advancement of Scienee at Boston. His theme was "Science as Subject-matter and as Method," and a part of his contention was that we are in danger of losing science in the sciences. There has been a great influx of seientific studies; the courses in schools and colleges are overburdened with them; all modern education is more or less colored by them. But have we got as much out of them as we expected? If we have not, one reason may be that we have been so swamped in the faets that we have not had time to drill our minds in the meaning of the facts. We have accumulated faster than we could interpret, and have got a lot of ill-assorted knowledge about many things without having fortified ourselves in the proper mental habit for approaehing all knowledge and sifting all facts. As Professor Dewey puts it: "Science teaehing has suffered because science has been so frequently presented just as so much ready-made knowledge, so much subjeet-matter of fact and law, rather than as the effective method of inquiry into any subject-matter."

There have been many sneers in recent years at "scientific method." If we eould believe some leaders in the intellectual world, there is no sueh thing, except in very narrow limits. One way of getting at the truth is as good as another. Things are pretty largely in a state of flux and uncertainty, anyhow, and if we can manage to flounder out upon some usefnl piece of dry ground amid the welter, let us not inquire exactly how we got there. But all this flouting of seientific method is, of course, only a disparaging of the human mind. We have to find out how to reason and how things happen, and when we speak of the laws of thought and the canons of logic and the relations of cause and effect we really mean scientific method, whether we call it by that name or another. Educated men ean have no other guide as they confront the new and untried things that continually thrust themselves into the world. Facts and appearances are continually changing, but the rational way of looking into them and drawing the proper inferences from them must always be the same.

It is on aecount of losing hold upon this spirit of all science that we are so much exposed to-day to what may be called the ravages of the sciences. One almost despairingly concludes, sometimes, that the more the world knows, the more superstitious it becomes. The very triumphs of science become food for unreason. Wireless telegraphy is seized upon to justify a belief in messages from angels; radio-activity explains the miracles; occultism makes itself the handmaiden of seience. If these things are so—and who can deny them?—the reason is that we have cultivated in one way and another the attitude of marvelling in the presence of scientific discovery, instead of endeavoring to grasp its rationale, and that we have been more eager to appropriate the results of scientific conquest than to fix in ourselves the scientific habit of mind. So far as it can be said that this has come about in consequence of our being flooded with new sciences and fresh developments of old ones, we must agree with Professor Dewey that, in such case, "the natural common sense of mankind has been interfered with to its detriment."

"IT'S ME."

A notable development of present-day civilization is the tightening bond of sympathy between science and the small boy. Things that the small boy has been for ages forbidden to do, to eat, or to say, nowadays reeeive the stamp of approval from science. It is good for a boy to have three helpings of pie and all the jam he can raid, because his growing organism demands it. It is good for him to smoke cigarettes because the operation reveals the first adventurous stirrings of the adolescent soul and because a stomach-aehe teaches him the truth that Nature demands a price for everything. It is good for him to play truant, because that is his way of protesting against the conventions of our artificial modern life. And among other things, it is good for the small boy to say "it's me" and "it's her," because that is the way everybody will speak a few hundred years from now. No less a specialist in English philology than Professor Jespersen has been the last to put the case for the small boy and his elder brother.

Professor Jespersen is certainly right to this extent, that the partisans of "it's me" and "it's him" have the rest of us against the wall. The average teacher in the public schools, feeling that he is a man before he is a pedagogue, now boldly asserts that "it is I" is pedantic, and "it's me" is becoming increasiugly proper. But if our guardians of the grammar-book lose their savor, wherewith shall we be salted? Perhaps the school-teacher would be a little more timid in knocking down the idols at whose feet he is supposed to minister, if he did not have behind him the sanction of a higher law; and that higher law goes by the name of "usage." Now, usage is a shibboleth of comparatively recent origin; but its vogue has been great and inevitable in this democratic age. It is not so much that usage stands for something as that it stands against something else. Usage cries defiance to the iron laws of the grammar, with its feudal caste of things absolutely proper and things absolutely improper. The grammar, with its laws and exceptions, means long and painful study. But anybody can walk out into the street and pick up usage. It is the triumph of Rousseau in the field of linguistics.

The principle behind the modern revolt against the grammar is sound enough; provided, that is, the grammar is really as black as its enemies have painted it. It is not to be denied that language was made for man, and not man for language, and that language is consequently a living, growing thing, and that all grammarian pedants, potentates, and pretenders who assume to say, "This is eternally right" and "That is eternally wrong," had better get out

of the way of the wheels of progress. Whereupon strong young hands drag out that ancient scarecrow of the grammarian whom generations have girded against: the grammarian who preaches prunes and prisms, and the expulsion of prepositions from the end of sentences, and the use of "if I were he" in expressing the idea of doubt, instead of "if I was he," or, better still, "if I was him," or better still, "if I wuz him." Poor, traduced grammarian, the wild young *sansculottes* hang you from the lantern for trying your best to do what they curse you for not doing—to find out what is this mysterious thing called usage, and to set it down piously and patiently in your book.

For this poor devil of a grammarian might lift his ensanguined head and feebly try to make the point that usage is not a standard, but a flux; not a thing, but the resultant of two forces pulling in opposite directions. Usage is established just as much by the conservative who insists on saying "it is I" as by the radical who says "it's me." Asking the conservative to throw up the sponge because "it's me" seems bound to win is contrary to the law of balance that shapes everything in the universe. In the battle between linguistic innovation and linguistic conservatism, usage is the inevitable compromise. It is good that there should be people who say "it's I" and people who say "it's me." Otherwise we should have either petrifaction or anarchy. It is not a question of right or wrong, but of temperament; and no man should do violence to his temperament. If you positively must say "if I was him" instead of "if I were he," say it; but abstain from calling names because your neighbor is a timid, quiet man who believes that the subjunctive may be used to express doubt or contingency, and prefers to write "through" instead of "thru." Let us remember that it is the men of his kind that have kept such precious drops as "lemon" and "pazaza" out of the well of English undefiled.

There will always be people who embrace the new, even when the new takes on such aspects of loveliness as blossom in "enthuse" and "electrocute." There will always be people who believe that there is a fine economy and discipline in getting along by established rule. The two types are necessary to each other, and we cannot understand why the hot-blooded ones should sneer about pedantries and affectations. Surely no old-fashioned user of "it is I" has inflicted on others one fraction of the pain that he suffers every time he reads of "the Senator whom everybody says is bound to win out." The same forces that are working for the triumph of "it's me" are working for the triumph of the Senator whom everybody says. We will not deny that our position in this case is a desperate one. Our great-grandchildren will probably welter in an indiscriminate sea of whoing and whoming. But till the flood rises over our heads some of us will stand by the old gods and refuse to speak of the Senator whom everybody says is bound to win out and the servant girl who the butcher told he loved her.

What if Byron did write, "There let him lay," and Shakespeare said, "Damned be him who first cries hold, enough"? Shakespeare, in the course of his life, might have slipped on the ice and broken a leg without making fractured legs an essential attribute of genius. Life is guided by norms, and not by aberrations. And it is the grammarian's duty to find out what the norms of language are. If most of us sneer at the grammarian to whom most of us are indebted for the familiar literary allusions with which we garnish our speech, it is only the way of the world.

SHELLEY.—I.

I.

In confessing that he wrote his life of Shelley* as a middle-aged man for other middle-aged men, Mr. Clutton-Brock forgot to reckon with the wit of his youthful reviewers; and yet, if by middle-age he means the experience of life, what right, after all, has Shelley or any other darling of the Muses to be immune from that censure? The biographer's real fault is rather an amazing ingenuousness in trying to ride at once the horses of both youth and maturity. On one page he analyzes "Prometheus Unbound" as a drama of a single event, and that causeless, acted by characters who drift about aimlessly and who do not know who they are or what relation they bear to one another: that is the critical attitude of mature commonsense. It is the audacious enthusiasm of youth when in a later passage he insists that the author of this drama proves himself an "intellectual poet." It is the same double-dealing when in one place he asserts that Shelley's ideas and emotions underwent little change; and then, a few pages after, with a covert allusion to Matthew Arnold, declares that the poet "was not a vapid angel singing silly hymns; but a man who only learnt to live well and write well by sharp experience." Now, Shelley is "a being prophetic of some higher state to which mankind shall attain, and unfit for this life only because he was fit for a better"; elsewhere his Paradise is pronounced "a mere impossibility, an incongruous mixture of present pleasure of the flesh with imagined delights of the spirit."

I do not quote these acrobatic feats of criticism to ridicule Mr. Clutton-Brock's book, which is indeed as a whole an illuminating piece of work; but because they are so characteristic of our modern way of dealing with facts and tendencies. Look, for instance, into Miss Vida Scudder's school edition of the "Prometheus," with its long Introduction—not a very wise production, perhaps, but significant as a woman's conception of a peculiarly feminine genius and as a specimen of what commonly, no doubt, passes in courses of literature. You will there find that the drama "has a noble and organic unity," although, while the second act is the most wonderful thing "in the whole cycle of English song," the third "drops into bathos" and is "weak, sentimental, empty." The poem as a whole is "a work of resplendent insight," yet its interpretation of evil—that is, the very heart of its theme—is "hopelessly superficial," and man is depicted in it as "a creature of no personality, scarcely higher, except for his æsthetic instincts, than an amiable brute."

After all these knights and ladies of the romantic pen seem to discover in Shelley traits pretty much like those which they so magnificently disdain Matthew Arnold for announcing. Nor is the present the only field of their inconsistent attack. Mr. Clutton-Brock cites for reprobation a long passage from Hazlitt's "Table Talk"; yet most of what the old bludgeoner says can, with some change of emphasis, be matched in the modern biographer's own pages. In like manner Miss Scudder puts the ancient reviewers in the stocks to show by comparison how wise we since have grown. She quotes from *Blackwood's* of September, 1820, and from the *Quarterly Review* of October, 1821:

> In short, it is quite impossible that there should exist a more pestiferous mixture of blasphemy, sedition, and sensuality, than is visible in the whole structure and strain of this poem ["Prometheus"], which, nevertheless, and notwithstanding all the detestation its principles excite, must and will be considered by all that read it attentively, as abounding in poetical beauties of the highest order. (*Blackwood's.*)

In Mr. Shelley's poetry, all is brilliance,

*"Shelley: The Man and the Poet." By A. Clutton-Brock. New York: G. P. Putnam's Sons. $3.50 net.

vacuity, and confusion. We are dazzled by the multitude of words which sound as if they denoted something very grand or splendid: fragments of images pass in crowds before us; but when the procession has gone by, and the tumult of it is over, not a trace of it remains upon the memory. The mind, fatigued and perplexed, is mortified by the consciousness that its labor has not been rewarded by the acquisition of a single distinct conception. (*Quarterly.*)

Really, with the best will in the world, I cannot see that Miss Scudder differs so much from the reviled reviewer of *Blackwood's*, except that she seems to feel no indignation against an author whose sense of evil is "hopelessly superficial." Nor does Mr. Clutton-Brock stand very far from the *Quarterly* when he says that "in a story there should be some relation of cause and effect, otherwise it will not hold together; in 'The Revolt of Islam' there is none"; and admits that "in its very absurdity it shows the character of Shelley's mind." The chief difference is that Mr. Clutton-Brock apparently thinks it quite a small matter if a long and professedly philosophical poem leaves the reader perplexed and without any distinct conception of what it is all about.

II.

Now these names represent no isolated paradox of taste, but the almost constant current of criticism from Shelley's own day to this. Their dilemma is due, I think, to a fact which his contemporary critics held, if anything, too belligerently in view, and which his modern worshippers commonly allow and then deliberately forget—that his was a genius fine and impressionable, meant by nature for the perception and utterance of rare truths, but marred in its very essence by the obliquity of time. His work is a confirmation in a way of his master Godwin's theory—though contrary in direction to his master's design—that education is a power to shape the destinies of man. The value of Mr. Clutton-Brock's biography lies in the clearness and frankness with which he unravels Shelley's motives and ideas; and this value is enhanced, perhaps, by the biographer's sympathy, paradoxical indeed, but so profound as to make him in the end deny utterly the logic of his premises. But we need not go to the commentators on Shelley's life to discover the influences that worked upon him. Sufficient testimony may be found in his own Letters, which have just been brought together and excellently edited by Roger Ingpen.* The new material here offered is slight, but the collection has the merit of setting the recently discovered letters to Elizabeth Hitchener—and others less important—in their proper place in the full correspondence. I do not see how any open mind can go through these letters without feeling that Shelley was powerfully affected by the prevailing forces of the age (which is commonly conceded), and that his character and poetry suffered a certain perversion from this influence (which is often conceded and denied in the same breath).

Those directing forces were the twin spirits—if they were not one power in dual manifestation—of revolution and romanticism. The revolutionary spirit, whether for weal or for ill, had breathed upon all the finer minds of the age, and indeed not upon the minds of that age alone. But the impulse that came to Shelley was not merely revolt against tyranny, or even the wanton itch for change—*neoterism*, as the ancients called it. That kind of political excitement may or may not have a perverting effect upon a poet. Milton lived in such a time of upheaval; and if the excess and bad taste that here and there mar his later works are attributable to the harsh pride of rebellion, it left his deeper insight untouched, even, perhaps, strengthened the wings of his fierce aspiration. But with Shelley revolution meant the fluttering of an opaque and dizzying flag between the poet's inner eye and the truth of human nature. He was peculiarly the child of his age, betrayed by his own feminine fineness of nature, and lacking that toughness of fibre, or residue of resistant prose, which made Byron and Wordsworth followers but not altogether the victims of the ever-despotic Hour. With a childlike credulity almost inconceivable he accepted the current doctrine that mankind is naturally and inherently virtuous, needing only the deliverance from some outwardly applied oppression to spring back to its essential perfection. With Rousseau the perverting force had been property. With Shelley it was more commonly personified as Jehovah or Jove,

> Foul tyrant both of Gods and Human-kind.

Shelley was a pretty wide reader of Greek, and it may be that in writing his allegorical drama on this creed he had in mind not only the "Prometheus Bound" of Æschylus, but for a remote analogy to his personification of evil went back to Homer's blind *atê*, which Zeus cast upon the minds of those who were doomed to sin. And in so far as he did this he would only have voiced a universal and unreasoning sentiment of the human heart; for Achilles was but the type of us all, when in the stress of bewilderment he cried out against the government of the world:

> It is thou, father Zeus, that givest to men the great passions of evil (μεγάλας ἄτας).

But Zeus was to Homer at least a living being, whereas Shelley's Jehovah is merely a symbol of a power in human destiny tremendously energetic, yet, if you seek it, non-existent. And Shelley, when he made of man's bewildered outcry a rigid philosophy and principle of action, might have remembered also the words of Zeus (to which Pope has given so amusing an anti-Calvinistic twang):

> Perverse mankind! whose wills, created free,
> Charge all their woes on absolute decree;
> All to the dooming gods their guilt translate,
> And follies are miscall'd the crimes of fate.

III.

To Shelley's old detractor of *Blackwood's* (when religion was a fairly serious concern) his philosophy was "pestiferous blasphemy"; his modern academic admirer merely disregards it as "hopelessly superficial." To me, I confess, it is chiefly unliterary, destructive, that is to say, of that self-knowledge out of which the great creations and the magnificent joys of literature grow. The importance of Shelley's Letters also is largely derived from their confirmation of this critical attitude by their betrayal of the same force at work in his conduct. It is not that he was by nature base or sensual or cruel; on the contrary, his life was ennobled by many acts of instinctive generosity, and his feelings were normally fine. Nevertheless, there was some flaw at his heart; some weakness of overweening self-trust, which exposed him to the most insidious poison of the age, and in the final test left him almost inhuman. "In all Shelley did," wrote his wife after his death, "he, at the time of doing it, believed himself justified to his own conscience." The words have been used by Matthew Arnold as a text; they would have been still truer to character if to "at the time" Mrs. Shelley had added "and always." Opinions may differ in regard to Shelley's culpability toward his first wife, Harriet Westbrook, although no chivalrous mind, I think, can read his letters at the time of his elopement with her and, later, of his desertion of her for another woman, without feeling a touch of resentment at his self-absorption and his complete assumption of righteousness. And resentment deepens into detestation at his letters written when the abandoned woman, a pitiable thing no matter what her fault, drowned herself in the Serpentine. On the day he heard the news, or possibly the day after, he wrote to Harriet's supplanter:

> Everything tends to prove, however, that beyond the shock of so hideous a catastrophe having fallen on a human being once so nearly connected with me, there would, in any case, have been little to regret. Hookham, Longdill, every one does me full justice; bears testimony to the upright spirit and liberality of my conduct to her. There is but one voice in condemnation of the detestable Westbrooks. If they should dare to bring it before Chancery [they did dare, and nothing derogatory to them transpired], a scene of such fearful horror would be un-

*"The Letters of Percy Bysshe Shelley." Collected and edited by Roger Ingpen. Two volumes. New York: Charles Scribner's Sons. $6 net.

folded as would cover them with scorn and shame.

Little to regret, save the shock to his nerves of so unpleasant an event. Mr. Clutton-Brock observes that Shelley did not do himself "full justice in this letter." He did not, for he was by birth neither maniac nor brute; but he wrote on that day a lurid comment on the effect upon individual character of revolutionary Pharisaism; nor did his sentiments change with time, for in a letter to Southey four years later he wrote of the event in the same vein. The malignant reviewer of *Blackwood's* called those principles "pestiferous"; Miss Scudder rebukes the reviewer and styles them "superficial." Perhaps it is more critical to reflect merely that, as Mrs. Shelley said, the poet's verse was inspired by the passions of his private life, and that the horrors threatened in "Prometheus" against the "foul tyrant both of Gods and Humankind" sprang from precisely the same source as the imprecations upon the Westbrooks. "I have confidence in my moral sense alone," said Shelley once in a letter to Leigh Hunt; "but that is a kind of originality."

IV.

With that moral self-complaisance went another trait, if indeed it was not merely a different aspect of the same influence. By Shelley each emotion as it arose in his breast was accepted as justified in itself, without pausing to consider its cause or consequence. The full meaning of this emotionalism can be grasped only by a long view into the past. To the great writers of the seventeenth century human nature was a thing to distrust as containing tendencies of ruinous evil. "Men naturally know no Good," said Jeremy Taylor, voicing the constant opinion of his age, "but to please a wild, indetermined, infinite Appetite." But along with this fear of undisciplined nature, went a belief in the efficacy and virtue of certain supernatural emotions, in an infinite appetite that was not wild and indetermined—in enthusiasm.

The following age—and this was the whole force of Deism, one of the most important movements in history—brought about a complete reversal of this position. The very titles of the leading publications show the change: Dr. Clarke writes on "The Unchangeable Obligations of *Natural* Religion"; Wollaston elaborates his "Religion of *Nature* Delineated"; Butler preaches "Upon the *Natural* Supremacy of Conscience," etc., etc. But this rehabilitation of nature, toward which the eighteenth century, and particularly England of that age, labored so assiduously, was based, in the earlier years, on a constant distinction: nature was used almost without deviation as a synonym of reason; and strong emotion, or enthusiasm, was equally condemned as contrary to nature, and perilous. Pages might be filled with the utterances of deists and even the opponents of Deism on this head, but nothing, perhaps, can be found more characteristic and inclusive than the simple words of her father to Mrs. Elizabeth Carter, the learned translator of Epictetus: "'You seem extremely fond of her [Mrs. Rowe's] writings. I have seen some that have in them a tincture of enthusiasm. 'Tis proper to caution you not to read them with too much pleasure. Enthusiasm grows upon us insensibly." In that distrust of free emotion lay the strength of the time, the power that made its belief in nature ancillary to its belief in order and subordination (cf. Butler's "Sermons" and Dr. Johnson's conversation *passim* on subordination); here, too, lay the cause of its limitation, for this dread of enthusiasm cut off the great inspirations of the preceding age as well as the disturbing passions. The fascination of the century for the student is to watch the rise of this hated spirit of enthusiasm through all obstacles to the surface. The word was long repudiated even by those who were bringing back its force; so Wesley cries out: "The reproach of Christ I am willing to bear; but not the reproach of enthusiasm." Who can measure all that has passed in the inner life of man between the timidity of Dr. Carter and the bold utterance of Shelley in the preface to "The Revolt of Islam": "It is the business of the poet to communicate to others the pleasure and the enthusiasm," etc.? There is expressed the elevation and the power of the romantic renaissance; the peril of the movement lies in the fact that with its return to seventeenth-century enthusiasm it retained the eighteenth-century acceptance of nature, now without restriction, thus leaving to itself no inner check.

All the revolutionary poets of England were affected by the same emotional philosophy, however their practice was modified by other principles. Wordsworth proclaimed it in his worship of the "impulse from the vernal wood," but with an admixture of Puritanic asceticism which made of it a kind of passive discipline. Byron possessed with it a saving self-reproach and cynicism. In Keats it was qualified by an æsthetic humility which rendered him in the end curiously docile to tradition. Few things are more significant in the romantic poetry of England than the change in Keats's versification from the license of his rhymed couplets in "Endymion" to the almost Chaucerian regularity of "Lamia." Whether or not that change will appear altogether a profit, it must be admitted that no such organic development can be discovered in Shelley; nor in his correspondence will you find anything comparable to the long letter of Keats to Reynolds (May 3, 1818) in which he questions the very principles of his own poetic theory. "The thought of such discipline," wrote Keats himself to Shelley, "must fall like cold chains upon you." Shelley, indeed, grew in metrical skill and power of expression, but from first to last his procedure was essentially unaltered: his "Prometheus" is only "Queen Mab" writ large; his "Epipsychidion" reëchoes in firmer strain the vagaries of "Alastor." Always his philosophy, whether magnified into a shadowy mythology or expressed in human drama, whether it be the love and hate of Prometheus or his own relation to mankind, is the voice of enthusiasm, of unreasoned emotion.

It would not be profitable to follow out all the workings of that emotionalism, but one aspect of it shows so curious a link between the man and the poet as to deserve emphasis. Critics have commented on Shelley's extraordinary faculty of self-deception in regard to his friends, who so often were angels of light when first they appeared to him under the radiance of his own imagination, and demons of malevolence when they came to be known as real men and women having wills at variance with his. This form of delusion was not due merely to the inexperience of youth, for at the end of his life in Italy he was subject to the same revulsion, if not so violently expressed, toward such friends as the Gisbornes. But the classic example (classic as being so perfect an expression of a trait common to all the Rousselian tribe) is in the letters to Elizabeth Hitchener. These were for some time known in manuscript, and forced even the most ardent romanticists to admit a certain weakness in their hero. They were then printed in a separate edition, but the full weight of their testimony is best understood by reading them as they are now incorporated by Mr. Ingpen in the general correspondence.

Miss Hitchener was a young schoolmistress with whom Shelley became acquainted shortly before his marriage to Harriet Westbrook. Her notions were liberal and her fancy ardent; "an *esprit fort*," Medwin called her; "ceruleanly blue," who "fancied herself a poet." After his marriage Shelley began to send her letters in the most rhapsodical vein of adulation. She is the sister of his soul: "I look up to you," he exclaims, "as a mighty mind. . . . I anticipate the era of reform with the more eagerness as I picture to myself *you* the barrier between violence and renovation"; with his brain and his heart she constitutes the Trinity of his Essence; she must leave all and come to live with him and Harriet—"nothing shall prevent our eternal union in the summer"—and to defer to the opinions of those who foresee scandal in such a union is to sacrifice "to the *world!* to

the swinish multitude, to the indiscriminating million, to such as burnt the House of Priestley, such as murdered Fitzgerald," etc. Well, this female paragon closed her school, and joined the young married couple in July of 1812; in November of the same year she had left them, and Shelley is soon writing to his friend Hogg of "the Brown Demon, as we call our late tormentor and schoolmistress. . . . She is an artful, superficial, ugly, hermaphroditical beast of a woman." To another friend he describes her as "a woman of desperate views and dreadful passions, but of cool and undeviating revenge."

Are not these fragments of correspondence a curious comment on the statement of Mr. Clutton-Brock that most of the characters of "Prometheus" are "so abstract that we do not even know who they are"; and again that "The Cenci," which deals with human beings, is even "far more unreal" than the "Prometheus," which is professedly allegorical? As Shelley judged his friends from the immediate emotions they aroused in him, or from some fanciful association with the emotion dominant in his mind, without a care for the various and real springs of action in himself or them, so he created his poetical characters. P. E. M.

NEWS FOR BIBLIOPHILES.

Since printing our notes on Thackeray's "English Humourists of the Eighteenth Century" (*Nation*, January 27), we have examined a copy of the first American edition of the book published by Harper & Bros. the same year, 1853. Although the title-page of this edition does not contain the words "Delivered in England, Scotland, and the United States of America," agreeing in this with the first English edition, the variations of the text show that it was printed from the second English edition, and not from the first. This American edition has a positive first edition value as it contains a seventh lecture, "Charity and Humour," not printed in England until 1885. The lecture was written and delivered in New York for the benefit of the "Ladies Society for the Employment and Relief of the Poor."

It was with a shock of surprise that we read the title-page of the catalogue of Sotheby's sale of February 24 and 25: "Catalogue of Books, Pamphlets, Tracts, Poems, Plays, etc., from the Britwell Court Library." Now, the library at Britwell Court, Buckinghamshire, is regarded as about the finest in England remaining in private ownership. It was formed by William Henry Miller (1789-1848), who was one of the largest buyers, especially of English poetry, at the several sales of the great library of Richard Heber, dispersed in 1834, 1835, and 1836. The collection has been kept intact and enlarged by later owners. On the death of Wakefield Christie-Miller, in 1898, it passed to his sons, then minors, we believe. Although no such statement is made by the auctioneers, a glance at the sale catalogue shows that the books are duplicates and imperfect copies, and not an important selection from the library itself. Some important and valuable books are, however, included, among them the first edition of Milton's "Areopagitica" (1644), uncut, and in the greater part unopened; Abraham Fraunce's "Countess of Pembroke's Yvychurch" and "Countess of Pembroke's Emanuel" (1591), both imperfect; "The Song of Mary the Mother of Christ" (1601), recently reprinted by William Loring Andrews; Painter's "Palace of Pleasure" (1566-1580), imperfect; Gay's first book, "Wine, a Poem" (1708); and several first editions of the books of Dryden, Pope, Swift, and other writers.

On February 15 and 16, C. F. Libbie & Co. of Boston will hold an important sale of autograph letters and manuscripts, partly from the papers of Joseph Willard, president of Harvard College. Eight letters of Washington will be offered, one dated April, 1754, written to Gov. Dinwiddie, one dated May, 1758, and one dated November 3, 1761. Such early letters are extremely rare. Among other important Revolutionary names, specimens of which occur in the sale, are John Hancock, John Adams, Israel Putnam, Elbridge Gerry, William Heath, Benjamin Lincoln, and others. There are also many early documents written or signed by New Englanders of prominence before the Revolution, a set of Episcopal Bishops, comprising two hundred and fifteen names, and manuscripts and letters of Bryant, Emerson, Longfellow, Thoreau, and others.

On February 15 and 16 the Merwin-Clayton Sales Co. of this city sells a collection of books and pamphlets, and on February 17 a collection of books from the library of the late Dr. William H. Egle of Harrisburg, Pa. No items of special note are included.

Correspondence.

THE BACONIAN ACROSTIC.

To the Editor of The Nation:

Sir: In a letter printed in your issue of January 20, Mr. Frederick E. Pierce of Yale University makes public some calculations as to the possible frequency with which one might find a given name hidden by the application of a given method in the first folio of the plays of Mr. William Shakespeare.

I wonder whether Mr. Pierce could be persuaded to use the carefully and laboriously obtained figures, the results of which he gives us so lucidly, in another calculation which shall take into account *all* the factors of the problem. He says that "for the sake of simplicity" he has "disregarded certain factors."

When we are calculating the recurrence of a given name in *any* place, as is the case with Mr. Pierce, we should naturally pursue a different line of calculation from that which would be necessary to show what the chances are that a suspected name will *recur in a series of closely corresponding places*, such as the first or last page or column, the prologue or the epilogue, of works suspected on other grounds to be put forth by the man whose name is the subject of discussion. This point may be illustrated by analogy.

There are many marbles in the world. One could describe the methods by which marbles are made. One could also calculate the average number of marbles which might be held in the pocket of each citizen. Quite another calculation would be necessary to determine the average number of marbles which would be held in the pockets of boys under twelve years of age. Still another calculation would be needed to determine how probable it is that any given kind of marble will be found in the pocket of the head boy of any given school.

The doctrine of chances is a difficult and subtle matter in mathematics, and yet we base our keenest bargains upon it, and most of the acts of everyday life. Its use in special cases is sometimes striking. For instance, the mind, in emergencies, makes curiously short cuts with the doctrine of chance. The mathematician can follow in the wake of the analytical faculty, and prove the validity of its deductions, but he cannot begin to equal the lightning rapidity of reason. Suppose I find a crowd in the street. A dead man lies in their midst, killed by a motor. A policeman comes up and asks if any one knows the name of the dead man. One says that he thinks that the dead man is John Jones of Summerville; another says, "No, I think his name is Brown; he lives in Worcester." Still another is quite sure that he is Ephraim Hutton of New Haven. And so on through the crowd. Perhaps several men will suggest other names. One little man, however, pushes his way through the crowd, and, after a careful look, says with some conviction in his tone, "I am pretty sure that that is John Spoopendyke of Podunk. He has been missing for some time, and that looks like him." The policeman then examines the dead man's pockets, and finds some letters; say, ten addressed to Henry Roberts, several letters addressed to other men also not suspected by the crowd, and one letter addressed to John Spoopendyke of Podunk. The policeman very naturally telephones to Mrs. John Spoopendyke, and tells her that her husband is hurt. He may prove to have been wrong in supposing that our Mr. Spoopendyke was her husband; for the dead man might be her cousin; but the policeman would in all probability have telephoned to the right place. The policeman would find it difficult to explain mathematically why he was so sure that the dead man was Mr. John Spoopendyke. The mathematician could compute the chances against the dead man being some one else. To the average intelligent mind such computation is unnecessary. In common phrase, a man "puts two and two together" very rapidly.

Had there been no little man to suspect that the dead man was John Spoopendyke of Podunk, the policeman would have hunted up the home of the man whose name occurred on most of the letters in the dead man's pockets. He would have been wrong had he suspected that that was the name of the dead man.

It is the factor of *recurrence in corresponding places*, and also the factor of *pre-existing suspicion of identity*, which Mr. Pierce has omitted from his calculation. They are the crucial factors in the mathematical problem presented by the acrostics as they are shown in my book.

Mr. Pierce characterizes my volume as "ponderous," and I am sorry that he found it heavy. No man could handle so large a book without becoming conscious of its

weight, and I am happy in having so good a reason for believing that a mere weariness of the flesh must have caused Mr. Pierce to overlook the two essential factors to which I have ventured to call his attention. WILLIAM STONE BOOTH.

Cambridge, Mass., January 24.

TO THE EDITOR OF THE NATION:

SIR: Mr. Booth objects to my calculation, on the ground that I ignore a very important fact, *viz.*, that a large part of the acrostics which he found are on the first and last pages of the plays. I had not overlooked this fact, but refrained from discussing it before, purely for the sake of simplicity and brevity. I will take it up now.

It will be remembered that my calculation dealt only with spellings beginning with an F; and forms like BACON and BACONO are to be disposed of by a similar, but separate, process. How many F-acrostics should we expect on the first and last pages? A play in the First Folio contains, on an average, about twenty-five pages; consequently, all the first pages taken together would be about one-twenty-fifth of the whole book, and should contain about one-twenty-fifth of the total number of acrostics. One-twenty-fifth of 200-400 (my previous estimate for the whole Folio) would be between eight and sixteen What are the facts? On the first pages of the plays there are fourteen F-acrostics. They are between eight and sixteen.

Now turn to the last pages, where we should also expect between eight and sixteen. At first it seems as if we had run into trouble here, for there are thirty. But a moment's observation shows us where the difficulty lies. At the bottom of each last page stands the word FINIS, and Mr. Booth uses the capital F of this repeatedly as a starting point. Since this word occurs on no other page, it obviously offers an unnatural stimulus to acrostics on the last page. It usually stands in the middle, where it can be taken with either column above it, and thus creates about seventy F-blocks in excess of the number which would have existed on a corresponding number of pages anywhere else. Nineteen of Mr. Booth's acrostics use the F of FINIS, and would not exist without it. Deducting these from the original thirty, we have (under the normal conditions existing on other pages) only eleven left. Again they are between eight and sixteen. In other words, on the first and last pages we find just what we should expect by the laws of chance.

As to the "preëxisting suspicion of identity," to which Mr. Booth calls attention, that means nothing here. The most ardent Baconian would not believe that Bacon, the omniscient, the life-long master of ciphers, used a form which could not be identified as intentional, even when discovered. The great philosopher would not have been so foolish.

I wish to say candidly that a skilful mathematician could find places in my previous paper where some deductions from my estimate would have to be made. But he would also find places where additions would have to be made; and the additions would offset the deductions. I am willing to discuss these points if the public wish it. But I doubt if this will be necessary. If Mr. Booth's acrostics are to mean anything, he must prove that they occur not only more frequently than we should naturally expect, but more frequently than they could *possibly* be supposed to occur by chance. To do this, he would have to prove, not that I have made an error of ten or fifteen per cent., but that I have made an error of several hundred per cent.

FREDERICK E. PIERCE.

Yale University, January 29.

A GEM MUTILATED.

TO THE EDITOR OF THE NATION:

SIR: "Aliquando bonus dormitat Homerus"—and never more inopportunely than when, in the dryness of age, he "revises" what he struck out in the rich glow of youth!

I am of those who place Holmes's "The Last Leaf" among the most exquisite of English lyrics. I should hardly dispute one who claimed for it the first place there. I experienced, therefore, a genuine shock, recently, when, on opening a newly acquired copy of the doctor's poems, I found a thoroughly destructive change in one of its most expressive stanzas.

Of the almost perfect poem, the fourth stanza is most beautiful:

> The mossy marbles rest
> On the lips that he has prest
> In their bloom,
> And the names he loved to hear
> Have been carved for many a year
> On the tomb.

And the third is almost equal to it, in all the qualities which make poetry precious:

> But now he walks the streets,
> And he looks at all he meets,
> So forlorn!
> And he shakes his feeble head,
> That it seems as if he said
> "They are gone."

It was wonderful art, or rather supreme genius, which could make the attributes of senility contribute to a picture so graphic, so pathetic, and so poetical.

And in the two words of the third line of this stanza the whole burden and suggestion of the poem are actually condensed. Its point and climax are there. Alas, *were* there. For I find, in this recent edition, that some malign influence, at a time I know not of, led the gifted author to replace them with three others, quite commonplace and hardly better than padding—"Sad and wan."

What was the doctor thinking of, when he thus mutilated his own wonderful creation? Surely, he had but partly awakened from his after-dinner nap! Or, perhaps, some youngster from college assured him that such a rhyme as "-orn" with "gone" was inadmissible, and with hasty geniality the veteran of letters yielded to the sophomore—yet, even so, saved little to the rules.

Really, in this unhappy change of two words in the fine product of a young man's muse, English literature suffers a distinct loss. I earnestly appeal to Dr. Holmes's literary executors to restore the original reading in all future editions. J. M.

Philadelphia, February 2.

COLLEGE TEACHING.

TO THE EDITOR OF THE NATION:

SIR: There is much in President Hyde's article in your last number that commands ready enough assent, the argument in favor of small classes and tutorial instruction being beyond discussion, as an average proposition. But the deductions of President Hyde will not hold as he presents them, because they are based on an assumption which, while it may possibly apply to a national system of schools, does not fit the case of the great universities.

He says, "all teaching that deals exclusively with men in large groups" is at best second rate. "If it is merely lectures, . . . with an occasional written examination, it is fourth rate." This is a beautiful example of methodology run to seed, and is so obviously untrue that were it not for the recent invasion of the intellectual field by highly organized and destructive hordes of standardizers, it would seem hardly worth dipping one's pen to reply.

The standardized teacher is one thing; the teacher that makes the greatness of a university is another; the argument that holds with the one does not hold with the other. And the system that deliberately turns its back on the first rate man is a faulty system. I have conversed with men who, nearly half a century after the event, were still under the influence of the almost legendary snap course of James Russell Lowell on Dante. Was this then, a fourth-rate course according to the "new standards of college teaching"? Would it have been improved had Lowell been induced to eat into his time and mental energy by holding conferences with his men? The false assumption that lurks behind President Hyde's dicta is one that a commercial community has almost of necessity attached to its intellectual workers. The thing cuts very deep. Were certain tendencies unchecked, the intellect of our country would be standardized after the manner of our steel, beef, and oil enterprises, while our universities would be reduced to the exclusive functions of normal schools dedicated to the production of pedagogical Frankensteins.

Still, we must live in hope, while uttering an occasional word of protest. After all, from Abélard to Nathaniel Shaler, the exponents of the "fourth rate teaching" have won the verdict of humanity, and so perhaps we need not view too despondingly the Draconian edicts of the "New Standard of College Teaching."

R. M. JOHNSTON.

Cambridge, Mass., February 5.

FORESTS AND RAINFALL.

TO THE EDITOR OF THE NATION:

SIR: May I be permitted to add a few lines to your recent editorial in regard to the effect of forests on rainfall, and, indirectly, on agriculture? Dr. Ellsworth Huntington, in his essay on "The Climate of the Historic Past," says:

> It has often been asserted that the destruction of forests has been the cause of the diminution of rainfall. In the Lop basin the opposite appears to be the case; the supply of water has diminished and therefore the forests have died. Rainfall unquestionably controls forestation, but

neither in the Lop basin nor in other parts of central and western Asia is there any good evidence that forests have an appreciable effect upon rainfall.

Personally, I was impressed, both in Colombia and in Peru by the fact that agriculture is in a less developed stage in the tropical forests on the eastern slope of the Andes than in the semi-arid region of the plateau where there are no forests and do not seem to have been any for centuries. It would undoubtedly be a benefit to the people of the plateau were their governments to promote forestry, for it would add greatly to the comforts of life. But it seems to be extremely doubtful whether the presence of such forests would add to the rainfall. HIRAM BINGHAM.

Yale University, February 4.

"CUSS" AND "KAUZ."

TO THE EDITOR OF THE NATION:

SIR: In Raabe's "Zum wilden Mann" I have just come across Kristeller's words: "Mein damaliger Prinzipal war ein drolliger alter Kauz"—and something in the tone prompted at once the rendering, "a funny old cuss." I drew on a vocabulary once quite respectable in a rural community I used to know, where men spoke of a "wammus" without ever suspecting, I think, that there was a German word "Wamms." This suggests to me an origin for the term "cuss" which would seem much more in keeping with its lenient tone than the usual connection with "curse."

May not this latter association be responsible for driving out of decent speech a word originally quite innocent of blasphemy? E. V. M.

Chicago, February 3.

Literature.

THE ORIGINS OF CHRISTIAN SCIENCE.

The Life of Mary Baker G. Eddy and the History of Christian Science. By Georgine Milmine. New York: Doubleday, Page & Co. $2 net.

The Mask of Christian Science. By Francis Edward Marsten. New York: American Tract Society. $1.

Miss Milmine's study of the founder of Christian Science was first published in *McClure's Magazine*, about two years ago. It has since been brought up to date by the addition of a brief account of the controversy centring about Mrs. Augusta Stetson and the First Church of Christ, Scientist, in New York. The present volume recalls in more ways than one that other piece of historical writing from the hand of a woman which brought *McClure's* much profit and reputation about five years ago, namely, Miss Ida Tarbell's story of the rise of the Standard Oil Company. Since Miss Tarbell showed the way, the periodical press has been swamped with contemporary history and politics; but, in the entire clutter of denunciation, *exposé*, and "uplift," it is hard to find a trace of either the scientific spirit or the scientific method, which the historian of John D. Rockefeller brought to her work. The present volume is one of the rare exceptions. If scientific history presupposes the absence of a definite point of view on the part of the writer, the term will not apply here. Miss Milmine, like Miss Tarbell, is plainly not in sympathy with the persons or the movement she describes. But the indictment, if we choose to call it that, is framed dispassionately. The damaging evidence is elaborately built up and skilfully arranged, but the reader is left largely to form his own conclusions. The amount of original research involved in the writing of the book must have been very great. The result is an historical record of high value and of fascinating interest; the credit for the latter we may assign in great measure to the inherent possibilities of the subject in itself without denying the author a generous share.

We imagine that the great majority of Christian Scientists will not find Miss Milmine's book particularly agreeable reading. At the same time, there is no reason why the ardent Christian Scientist should read and lose his equanimity. If we were asked to state in a single phrase what effect the book produces on the disinterested reader, we should say that it demolishes Mrs. Eddy without necessarily demolishing Christian Science. The destructive force of the story does not consist in the fact that from her earliest childhood Mary Baker G. Eddy is shown to have been a creature of nerves and hysteria, with all the symptoms of what grosser minds might interpret as a devilish temper. Criticism in delving into the origins of religious movements is prepared to deal with the phenomena of neurosis. More important is the fact that, in spite of very striking aberrations of will and intellect, the founder of Christian Science does not succeed in rising above the commonplace. There is nothing of the dæmonic drive that makes great prophets, even when they are false prophets. Up to the age of forty-five her life is restless, cramped, uncertain, in part unfortunate, and on the whole futile. In 1866, with the death of the healer, Quimby, at whose feet in Portland, Maine, the future Mrs. Eddy had spent an ardent novitiate, she begins to find herself. She appropriates Quimby's manuscripts and definitely gives herself to the pursuit of metaphysical therapeutics, for which New England had long offered a promising field. The virtues she now begins to display are dogged resolution and a Napoleonic recklessness in utilizing other people's labor and happiness for her own purposes. It was not till 1875 that "Science and Health" was published. It was not till the early eighties that Christian Science began to move rapidly forward.

Mrs. Eddy was above sixty when she began building up a new faith, a new church, and a large personal fortune. To have accomplished all that, and to remain, even to the present day as our author asserts, the absolute mistress of her church and her fortune, would apparently argue an exceptionally gifted personality. Yet that is not the impression the record of her life produces. Mrs. Eddy had will, it is true; but in addition to that she had nearly all the faults upon which an infant cause will often make shipwreck. She was irritable, violent, and tactless; she exacted blind obedience from her followers, and would not brook the mere thought of a possible rival in the field. Her earliest converts one after the other fell away or were driven away. The air of commercialism always hangs heavy about her. In 1881 she is the Massachusetts Metaphysical College, and charges $300 for a course of twelve lessons in healing. In 1899 she calls upon all devout Christian Scientists to supply themselves with the "Mother Spoon," an ordinary silver spoon, sold at $5 apiece by the Christian Science Souvenir Company of Concord. Christian Science literature remains to the present day Mrs. Eddy's jealously guarded monopoly. But it is evident that a leader who works for her own pocket all the time is not in the tradition of successful leadership. If Mrs. Eddy succeeded it must have been largely in spite of herself.

Hence we are tempted to take issue with Miss Milmine when she declares, towards the end of the volume, that "what Mrs. Eddy has accomplished has been due solely to her own compelling personality." There is far more truth in the statement that "her genius has been of the eminently practical kind, which can meet and overcome unfavorable conditions by sheer force of energy, and in Mrs. Eddy's case this potency has been accompanied by a remarkable shrewdness which has had its part in determining her career." But, after all, practical genius, energy, and shrewdness are not uncommon qualities. When they are unaccompanied, as in Mrs. Eddy's case, by any deep spiritual impetus, we are in danger of being compelled to admit that the qualities which explain the upbuilding of a large dry goods business will explain the upbuilding of a new church. For our own part, we prefer not to look to Mrs. Eddy at all for an explanation of her success, but to call it predominantly the work of chance. Among a large number of practitioners in the allied fields of mental healing, spiritism, new thought, and other branches of "metaphysics," Mrs. Eddy happened to be the lucky person.

When, therefore, we say that the devout Christian Scientist can let Miss Milmine have her way with Mrs. Eddy without feeling his faith imperilled thereby, it is precisely because such a

man can look upon his faith as a great truth upon which Mrs. Eddy has fortuitously stumbled. In so far as Mrs. Eddy's character and her career are in consonance with science, well and good; where her personality cannot escape rough handling, why, Mrs. Eddy is only a human being like the rest of us. The paradox is this: that Mrs. Eddy is and has been the head and front of the Christian Science Church, and that Mrs. Eddy is not an essential part of the theory of Christian Science. She is "Mother" and Pastor Emeritus, and the only Christian Science author, and she holds the appointment of the rulers of the church in her hands; but she is not necessary to salvation. Whoever has agreed to cast off error and buy a copy of "Science and Health" is hencetorth master of himself in Science. As a matter of fact, Mrs. Eddy's most devoted followers have more than once broken away from her, on the very ground that her practices antagonized the principles of her own faith. The fact that those who threw off the yoke of Mrs. Eddy's obedience have never succeeded in establishing a rival Christian Science organization would, at the first glance, tend to show that Christian Science and Eddyism must go together. But this is a conclusion that only the outsider can insist upon. The true believer cannot admit that after Mrs. Eddy's death his truth will become error. His copy of "Science and Health with Key to the Scriptures" retains its efficacy, whatever happens to Mrs. Eddy or her reputation.

Where Miss Milmine does knock a breach in the wall of Christian Science complacency, is first, by her analysis of the way Science has, in later days, been compromising with Error, and, secondly, in her summing up of the present strength of the Christian Science Church. Our writer shows that the general impression of the Christian Science membership as running into vague hundreds of thousands is quite erroneous. The number of Christian Scientists in the world is between 50,000 and 60,000. Their wealth, their rapid growth, and above all, the activities of their excellent press bureau, are given as reasons why their numbers are so generally overestimated. In their relations to the laws under which they live, the Christian Science healers are steadily growing more cautious. In the beginning, Mrs. Eddy's followers practised surgery and obstetrics as well as medicine proper. Surgery was given up many years ago. In 1901, Mrs. Eddy announced that Christian Scientists must submit to vaccination. In 1902, the teaching and practice of obstetrics were abandoned. In December of the same year Mrs. Eddy advised that Christian Scientists should decline to treat infectious or contagious diseases. This may be only bowing the head to Cæsar; but it is also a wise policy which tends to enhance the prestige of Christian Science by restricting the possible scope of Christian Science failure.

Mr. Marsten's book is sharply controversial. He assails in sledge-hammer fashion, where Miss Milmine gets her effects by simple narration. Such facts of Mrs. Eddy's life as Mr. Marsten employs are obviously drawn from Miss Milmine's biography.

CURRENT FICTION.

San Celestino. By John Ayscough. New York: G. P. Putnam's Sons.

Many readers of the *Nation* will recall Mr. Ayscough's "Marotz," a modern story of convent life written from a point of view perfectly free from bigotry as well as devout and sympathetic. In "San Celestino" he has essayed a more difficult task—an almost impossible task, one might have said—with equal or greater success. The story of the ascetic and recluse who was made Pope against his will, and after a vain struggle summoned courage to abdicate, might naturally be made a subject of sermon or rhapsody. This book is, in a sense, a book of devotion, written, as the author says, with "reverent tenderness"; but it is utterly free from either preaching or hysteria. Mr. Ayscough's purpose has been "to conceive an image" of the hermit who founded the order of the Celestines, and to convey it. His wish to interpret the beauty of the life of contemplation does not merely find a convenient embodiment in the hermit Peter who was forced to become Pope. He has come to possess a vigorous impression of the man himself, and is extraordinarily successful in recording it.

The story could not develop more simply and naturally, from the moment when Pietro di Murrone, the poor noble's son, leaves his country home to study theology at Salerno, to his last hours with a single faithful brother of his order, in the virtual prison at Fumone. In a way, the whole interpretation is an apology for *il gran rifiuto.* "It has been Celestine's terrible misfortune," says his apologist specifically, in bringing his study to a close, "that the keynote of earthly judgment should have been struck by an unequalled genius who was incurably a politician: for Celestine knew nothing and cared nothing about politics. As a politician he was to Dante's eyes merely a failure, and Dante had no pity for failures." In Mr. Ayscough's eyes, on the other hand, a saint fulfils his being through virtue of his saintship: the great refusal of Celestine was a refusal to consent to the futility which had been thrust upon him. To shake off the empty title was against no law of the Church, and a mere obedience to the law of his own being. As the writer admits, this book is neither a history nor a novel. "It may be called," he adds doubtfully, "a work of the imagination." As such it is sure to be recognized by readers of whatever faith who hunger after sincerity in the fiction of the hour.

Warriors of Old Japan, and Other Stories. By Yei Theodora Ozaki. Illustrated by Shusui Okakura. Boston: Houghton Mifflin Co.

Here is a familiar but ever enthralling repertory: Tametono, the archer; Yorimasa, the knight; Yoshitune, the clan champion; Benkei, the flower of retainers—of these, we never hear enough. Raiko, the slayer of a goblin more hideous than Polyphemus; Sano, the poor Samurai, who to warm a supposedly obscure guest, broke up the last of his precious garden trees; Shiragiku, with her long-lost brother; that spiritual sister of Cinderella, the Princess with the Bowl; Lazy Taro, who made himself a poet and courtier before learning that he was a king's son—all these real and fabled personages have been made into English before. Yet Mrs. Ozaki's version, by reason of its earnest simplicity, the spirited pictures of Shusui Okakura, and other artists of archaizing character, and the general attractiveness of the typographical form, should more than hold its own. We may quote a passage which suggests how the notorious stoicism of the Japanese has been compatible with artistry:

> Now the Japanese have always considered it a virtue to repress their feelings. . . . No matter what happens, one must learn to present an impassive countenance to the world, whether the heart be bounding with joy or withering with pain. Instead of making a display of your emotion, control it, and compose a poem or a beautiful sentence.

Mrs. Hugh Fraser, by way of introduction gives Mrs.. Ozaki's story. Her training, like her parentage, was equally divided between England and Japan. By marrying the Mayor of Tokyo, she may be said to have chosen for Nippon, while remaining an ideal interpreter between the two nations.

The Nest of the Sparrowhawk. By the Baroness Orczy. New York: Frederick A. Stokes Co.

The beautiful young heiress and the wicked middle-aged guardian of this figment will have their haunting suggestion of previous acquaintance for all but the youngest readers. Conscious of this possibility, no doubt, the author has expended not a little ingenuity in contriving brand-new setting and incident. The guardian, Sir Marmaduke de Chavasse, has well-nigh unparalleled powers of chicanery, and his villany is not compromised by that fatal tincture of virtue which is threatening to give our romantic fiction some inconvenient resemblance to life. Let ill-enough alone:

if black night be your subject, why use whitewash? The present business takes place during the Protectorate, and Sir Marmaduke is nominally a Roundhead of severe life. He is probable heir to an earldom, but meanwhile is in hard straits for money. Hence his designs against the heiress—which he prosecutes in a remarkable, not to say preposterous, manner. Fortunately, if not so remarkably, there is a modest and excellent young man who loves the heiress with a disinterested and despairing love, which is in due time rewarded (the villain having ceased to be), not only with the hand of the lady, but with a less predictable succession to the earldom in question. If, as we suspect, the sole excuse for this order of fiction is that it should be consummately well done, "The Nest of the Sparrowhawk" must fall. But we have a further suspicion that the hand of commerce may be trusted to catch it, and to turn it to good account, from the author's point of view.

Marie of Arcady. By F. Hewes Lancaster. Boston: Small, Maynard & Co.

A story of Bayou Bienvenu, "a land of small farms and large loves, and of loyalty to love," where live the descendants of French exiles from "Arcadia," presumably Acadia. Hither flies in later days another refugee, little Marie—on her mind a secret which is not disclosed till the end of the book, but hangs like a veil over the course of a pretty little story and lends it depth and texture. The main charm of the tale, however, is not the secret, but the Bayou life, with its naïve customs and neighborly community of interests. Children at school, boys and girls courting, elders working, bargaining, or dispensing kindly wisdom from their doorways, make a gentle and contented world, where the few shadows only emphasize the sunshine. The dialect, which most of us must take on faith, is at least an interesting and important feature in the story.

The Concentrations of Bee. By Lilian Bell. Boston: L. C. Page & Co.

Those who already know "The Jimmies," "The Jardines," and their friends will be prepared for the atmosphere of Mrs. Jardine's latest chronicle. "We are easy-going folk, and will not strive long to be good in any direction," she declares. So that fair warning is given of the tricks and plots that offset the Bohemian good-will and good-nature of this fantastic circle. They plan happy marriages for their favorites and unhappy ones for the punishing of their antipathies. They say and do some amusing things; they do and say many flat ones and many flamboyant ones. Extravaganza's nature is to be unreasonable, but not necessarily cheap. The reader is rather in the attitude of visiting in a family whose jokes are exclusively mutual; side-splitting to the inner coterie, but to the non-elect just a bit dry and tasteless.

ROMANTIC PHILOSOPHY.

The Eternal Values. By Hugo Münsterberg. Boston: Houghton Mifflin Co. $2.50 net.

Never, perhaps, in the history of universities have there issued from a single institution of learning at any one time so many radically dissimilar versions of the universe as have come from the Harvard faculty of philosophy during the past decade. It would be too much to say that Harvard has a complete set of current philosophical tendencies; it has, however, not only a uniquely diversified set, but also one in which each example is an important, a strikingly executed, and an uncommonly well defined specimen of its type. He would be an exigent philosopher, indeed, who could find nothing to please him either in the pragmatism of Professor James, with its numerous subsidiary implications; or in the mechanistic naturalism, curiously combined with a sort of æsthetic and ethical humanism, of Professor Santayana; or in the aggressive metaphysical realism, united with a distinctive form of moral and religious idealism, of Professor Perry; or in one or the other of the two kindred, yet significantly different, idealistic systems of Professor Royce and Professor Münsterberg. That would, on the other hand, be a prodigy of higher synthesis which should reconcile all of these; for there is scarcely one important doctrine of any of these writers which is not rejected with emphasis by at least one of the others. The fact that five metaphysicians living in one community are so little able to agree upon a common platform may be regarded as circumstantial evidence favorable to the opinion that philosophy is not yet an exact science. But so long as it is not one—and yet remains an indomitable hope of human reason—that university is fortunate which brings together in one faculty such eminent and typical representatives of so many of the varieties of reflective reaction upon the universe.

Yet—one wonders whether quite so much divergence is inevitable. Its occurrence amid conditions so favorable to real "dialectic"—to that social process of coöperative thinking and reciprocal criticism, in which true philosophizing chiefly consists—is, after all, something of a scandal. One possible cause of some part of this effect defective is made apparent in the present book. Professor Münsterberg has a philosophy—an interesting, impressive, and highly edifying philosophy—and he must, therefore, be supposed at some time to have philosophized; though the marks of those ancient fires are not conspicuous in the smooth and highly finished product which the book puts before us—a body of doctrine in which there are no hesitancies, no doubts, no hint of any feeling for the reasons why anybody should ever have disagreed, no suggestion of problems awaiting solution. But Professor Münsterberg, at all events, has not philosophized with the philosophizing of his time; nor does his book make a very serviceable contribution to that coöperative enterprise. It attempts, indeed, to recall contemporary German and American philosophy to what the author believes to be unduly neglected verities in the thought of Kant and Fichte and Hegel. There may be real utility in such a call; but it is likely to be effective only if made by one who shows a genuine sensitiveness, if not necessarily to the doctrines, at least to the problems, the issues, the difficulties, and the directions of outreach, of the characteristic reflection of the present time. But Professor Münsterberg, though, doubtless, the most *actuel* of psychologists, seems to have been little touched by any philosophical problems or impulsions arising since 1831. Because of this, his book is likely to be estimated very differently by philosophical inquirers, and by that considerable public which reads philosophy as it reads a poem or hears a symphony, for the sake of the moods—pleasant or exciting or morally invigorating—which the performance awakens.

To the latter public, indeed—a public which has its rights—"The Eternal Values" will appeal forcibly, except for the fact that the English version is by no means invariably expressed in English idiom. Some rather German qualities of the mental idiom—its unction and fervor, and the author's disposition to pause somewhat frequently, in order to pat his doctrine upon the back and congratulate it on its high moral tone—will not be unfavorable to the book's vogue. The system of ideas set forth has an admirable clearness, and a certain impressive massiveness, of general outline; and the confidence and directness of the author's constructive methods are elements of literary effectiveness. Above all, Professor Münsterberg has apparently strongly felt, and he has rather tellingly conveyed, the appeal, to certain normal chords in human nature, of two or three broad and somewhat vague metaphysical concepts. He plays chiefly upon three elements of what may be called philosophic pathos. There is, first, the Platonistic pathos: the effect upon the mind of the idea of the eternity, impersonality, transcendency of "truth as such." It is the pathos of Clough's lines:

> It fortifies my soul to know
> That though I perish, Truth is so.

Professor Münsterberg also is very sure both that truth is "so," and that it makes no great difference how many mere "masses of psychological content" perish. While he does not make clear to

us what truth is like, when it is "so," or why its being "so" is worth while, the emotional effect of emphasis upon it is undoubtedly fortifying to the soul. Again, there is the voluntaristic pathos, appearing here in a Fichtean form: we make the universe real by freely and resolutely willing it, "the world is a deed," not a mere given object; the object exists only that the will may exercise itself upon it. Finally, there is the mystical pathos, the ecstatic effect of the notion of the ultimate deliquescence of all separateness and multiplicity. Professor Münsterberg's doctrine, at the end, turns out to be a sort of *Identitätssystem:* "the I, the fellow-I, and the not-I are in the over-I one and the same"; "in the deed, past and future are one," etc.

With these three kinds of pathos united in one philosophy, liberal provision is assuredly made for the satisfaction of certain cravings of the imagination and the emotions. But how the reason fares in the compounding is not so clear. For over three-quarters of a century philosophical criticism has been asking some searching questions and developing some drastic doubts about the sort of philosophy that Professor Münsterberg has now restored from Fichtean and Hegelian sources. Can all three of those doctrinal motives be, without contradiction, harmonized in a single system? Can the notion of a timeless being, embracing temporal experience as its content, be really conceived? Can we regard as anything more than a myth that game of ontological hide-and-seek in which the "over-self," while eternally remaining "unbroken," yet, "as an I detaches itself from the whole and thus creates the numberless selves and the space-time world," which must then be painfully annulled again and merged into the unity from which they were never truly separated? How, if all is one in "the over-self," can human personalities have significance or value or even genuine "reality"? Does not the concept of "truth" require a good deal of explication, especially in the light of an analysis of the human and temporal situations in which the quest for truth arises? To these and many other such questions, Professor Münsterberg gives small consideration, and no serious answers. It is for that reason that his book, though an interesting piece of contemporary philosophy, is without relevancy to contemporary philosophizing.

The Life of Major-General Sir Charles William Wilson, Royal Engineers, K.C.B., K.C.M.G., F.R.S., D.C.L., LL.D., M.E. By Col. Sir Charles M. Watson, K.C.M.G., C.B., M.A., Late Royal Engineers. With portrait, maps, and illustrations. New York: E. P. Dutton & Co. $5 net.

This officer was essentially a topographer and as such conducted extensive and illuminating explorations and surveys of Palestine and Sinai, besides being engaged in, and finally becoming the head of, the Ordnance Survey of Great Britain. Under the curious exchange of duties which the British military establishment permits, he was the Consul-General of Anatolia, 1879-82, with a group of military vice-consuls, one of whom was the subsequently greatly-distinguished Viscount Kitchener of Khartum. The great survey of Palestine had been completed in 1878 under Lieut. Kitchener, R.E., whose experience is another illustration that successful generals have frequently, not invariably, received a fundamental education in practical field work of that sort. A great general must visualize the *terrain* which he has not yet seen, and wide topographical service admirably develops such power. These consuls had no executive authority, but were confidential intelligence officers for the British Ambassador to the Sublime Porte and advisers whose admonitions might not be safely disregarded by the Turkish officials on the spot. Their essential duty was to observe how the reforms promised by the Treaty of Berlin were really carried out. The autumn of 1878 Wilson had spent in the delimitation of the new Servian-Turkish boundary, and during his service in Asia Minor he was detached upon a special investigation in Eastern Rumelia, while in his own territory he also made extensive tours of observation. It is not astonishing, therefore, that, when the Egyptian troubles due to the politico-military operations of Arabi began, his peculiar qualifications led to his detail as British Commissioner with the Ottoman contingent that was expected to go to Egypt, and that, when it was not sent, he was charged with a special mission concerning the trial of Arabi and the pacification of the country.

In April, 1883, Wilson resumed duty as the head of the Irish Ordnance Survey, but in September, 1884, on account of his familiarity with Eastern life and thought, he was made Chief of the Intelligence Department of Lord Wolseley's Nile expedition for the relief of Gordon. The singular course of the British Ministry of the day, marked by misapprehension and marred by indecision, may not be rehearsed here. The final embarrassment was deficient transportation on both desert and river, and when at last a column, imperfectly supplied, started, Wilson was sent with it as an Intelligence Officer, under orders to cut loose at Metammeh and notify Gordon, four days distant by water, that troops would reinforce him six weeks later! But with the commanding officer (Stewart) mortally wounded, and Burnaby, designated for command at Metammeh, killed in the combats about Abu Klea, Wilson was transformed from a staff officer into one with command, and as such was obliged to open the remaining way to the Nile and to establish the troops at Gubat. He then forced his personal way up the river with two rickety boats and Sudanese crews, running dangerous batteries at Halfiyeh and Omdurman, and reached Khartum January 28, only to find it fallen and Gordon killed on the 26th. Naturally, there was earnest inquiry in England whether the loss of those two days had been necessary. Yet even if he had arrived earlier, this officer could not, single-handed, have raised the siege, nor, with means of escape present, would Gordon have deserted his command. Wilson rejoined Wolseley at Korti and reported in detail February 9; but on March 23 that general called for and received an additional report as to Wilson's reasons for not going up the river sooner. This Lord Wolseley forwarded three weeks later with a disingenuous letter of transmittal, declining to add remarks of his own, and saying that "the reasons given by Sir Charles Wilson must speak for themselves." He must have recognized that what delay there had been was not procrastination, and that in the end it did not affect the issue; and, as the commanding general, he should have taken on his own shoulders his subordinate's reputation, or, believing him derelict, should have frankly said to. As it was, however, Wilson reverted to his topographical duties and became in succession director-general of the Ordnance Survey, a major-general in the army, and the director-general of military education. The deserving recipient of many scientific honors, including a Fellow's seat in the Royal Society and the D.C.L. of Oxford, in 1894 he was retired from active service.

This memoir has a special concern for American readers. Wilson himself escaped being an American only through his grandfather's return to England from this country, after marrying here. Wilson's uncle, Thomas, who died in Philadelphia in 1865, was a lifelong resident of that place, a liberal supporter of its Academy of Natural Sciences, and the founder of its Entomological Society. The father of Sir Charles, although resident in England, made many contributions to the scientific work of his American brother, whose tastes he shared. And, quite apart from the detailed story of the Gordon relief expedition which did not relieve, one finds here a clear account of the conditions in Asia Minor in 1879-81, which, nearly thirty years later, culminated in the massacres about Adana, where missionaries from the United States lost their lives. The crop then under cultivation bore that fruit.

Slavische Volkforschungen: Abhandlungen über Glauben, Gewohnheitsrechte, Sitten, Bräuche, und die Guslarenlieder der Südslaven, vorwiegend auf Grund eigener Erhebungen. Von Dr. Friedrich S. Krauss. Leipzig: Wilhelm Heims.

The latest work of Dr. Krauss in the field of Slavic research deals with the beliefs, myths, customs, and ceremonials, and the peculiar guslar songs, of Servia, Bosnia, and the adjacent regions upon which we depend for our Balkan question. Our author frankly states that very little of this folklore material is representative of the genuine ancient Slavic cult, most of it being the result of Byzantine acculturation, through the Greek church influence, modified and enlarged by Arabic and Turkish additions since the fall of Constantinople. The loosely organized and illiterate Balkan tribes were as little able to resist intellectual as military conquest. The product is a mass of folk belief and custom essentially Oriental and Asiatic, with here and there outcroppings of the rude primitive Slavic cult. The heroic period of Slav tradition and guslar song dates from the wars of the Turkish invasion, in which the mountain tribes upheld the throne of the emperor.

The first part of the work deals with witches, vilas, pest spirits, returned souls, the vampire, the werewolf, the nightmare spirit, cannibalistic practices and love charms, each section, with ample illustration of proverb and folk tale. The second part treats of the characteristic guslar songs, with which the author has already made us familiar, chanted to the accompaniment of the *gusla*, a sort of primitive violin. These songs are in great vogue among the people, and, in the opinion of the author, as of other investigators, constitute the real treasury of Balkan tradition. Sixteen specimens are given at length in both languages, with historical introduction and explanatory notes. Twenty-five pages of index make every reference readily available.

Many of the folklore beliefs and customs are more or less general throughout Europe, while others seem to be peculiar to the region and are built up with an elaboration of detail not often found elsewhere. Special witch nights are those dedicated to St. John and St. George, when wreaths are hung upon the horns of the cattle to make them secure from evil charms—flowers and branches being the homes of kindly plant spirits. A curious belief exists as to the danger that threatens the twelfth son of a family on St. John's night from the attacks of evil spirits armed with snags and stumps from the fields. To guard against this the peasants go over the fields in the autumn and remove every stump or half-rotted post. When the wind blows strong, the *vilas* (fairies or forest sprites) love to dance in those places where travellers halt for rest; but whoso rests where their sweat has fallen will lose speech or power of motion or be stricken by consumption. It is easy to know such places, however, by the tracks of the dancers in the dust, for they have only four toes on a foot. Then there are child-eating witches that devour their own children, and heart-eating witches that fasten upon a man while he sleeps, so that he afterwards withers and dies. The great amulet against witchcraft is a clove of garlic from seed planted and grown in the severed head of the first snake seen in the spring, the head, with the seed in it, having been buried in the garden.

Pestilence is the work of a horrible female spirit, with veiled face and hooved feet. She has no power for evil until in her wanderings she meets a sinner who for twenty years has concealed a mortal sin. Him she attacks, and, tearing out his heart and changing it to dust, she scatters this to the four winds. He who inhales this dust dies in agony. Such is the germ theory in primitive Servia. The plague spirit was once barred from entering a village by a brother and sister, who went out naked upon a pitch-dark night and plowed a furrow around the village with a plow drawn by two black oxen from the same cow. The folklorist will readily recognize the elements of the formula.

The vampire belief seems to have reached its highest development among the Slavic nations. A Servian precaution to prevent the return of a ghost as a vampire deserves notice for its suggestion of primitive paganism. On the eve of the funeral the old women go to the grave and build around it a circle of tow, to which they set fire. When the fire has burned down, a knife is driven into the earth above the breast of the corpse, and a hawthorn thorn above the place of each hand and foot, in order to pin down the ghost should it try to escape from the grave as a vampire. It should be noted that this is done only when the deceased was under suspicion in life. Those who die in youth or in grace do not become vampires. Among the Moslems the fire is sometimes actually built in the grave of the suspected one, and a hawthorn stake, burned to a sharp point, driven through the body.

In Three Legations. By Madame Charles de Bunsen. New York: Chas. Scribner's Sons. $3.50.

These memoirs contain the contemporary impressions of the wife of a Prussian diplomat at Turin, Florence, and The Hague a generation ago. Madame de Bunsen was the sister of W. H. Waddington, afterwards French Prime Minister, and French Ambassador in London. English by stock, French by bringing up, and Prussian by marriage, she had the cosmopolitan point of view and contacts which well fitted her to be a diplomat's wife. Add to those charms a quick and receptive intellect, and simplicity of character proof against the artificiality of courts and social conventions, and you have an unusual personality. Madame de Bunsen was at Turin from 1858 to 1862, during the years when the Piedmontese capital became the storm-centre of Europe. Her impressions of men and events are vivid—nothing so good has been published since Marchioness d'Azeglio's letters. The historian will be repaid by dipping into them, for they give day-by-day notes of the war of 1859. Her description of the scene between Garibaldi and Cavour in the Chamber of Deputies is the most vivid that any foreign eye-witness has written.

When the seat of the new kingdom of Italy was removed to Florence, the Bunsens moved with it. Madame de Bunsen's letters still abound in political memoranda, but social and official news predominates. We have many charming glimpses of Princess Margherita of Savoy, of Crown Prince Frederick, who came down after Sadowa and was lionized, and of celebrities whose fame was more local. In 1868, M. de Bunsen was transferred to The Hague; but on the way thither he spent some time in Berlin, and his wife "snaps" for us life at the Prussian capital on the eve of the war with France. The almost incredible stiffness and punctilio at court remind one of Spain in the seventeenth century. "If any one wishes to know their exact social value," she says, "I advise them to come to Berlin. After being waved on by Kammerherren to the particular room where you belong, and the particular table where you can have your supper, there being other rooms and other tables to which you must by no means go, and, after having to get out of the way of 'Excellenzen' and your 'Vorgesetzten' [superiors] generally, not to speak of the 'Hohe Herrschaften,' at the end of the season you are not likely to retain many illusions respecting yourself, whatever you may have indulged in before" (p. 297). Still, Madame de Bunsen's sense of humor and her cheerful temper served her not less in Berlin than elsewhere, and she never grumbles. She shows us the present Kaiser as "such a little duck" of ten; Virchow, who at an afternoon reception offered to give her a history of herring fishery since the twelfth century; Bismarck, Keudell, Mommsen, Benedetti, and many more who made history in those years. Not least interesting is her account of life in Holland; and when she comes to the year 1870 she sheds sidelights on the war. A large number of half-tones from contempo-

rary photographs add to the value of this pithy volume. Unfortunately, the proofreader has passed by many blunders in the foreign phrases.

Notes.

William Vaughn Moody's remarkable play, "The Faith Healer," is to be issued in book form by the Macmillans.

Mary Hallock Foote's novel, "The Royal Americans," a story of Revolutionary times, in which Ethan Allen and the Schuyler family appear as characters, is promised for March by the Houghton Mifflin Company.

Books on religious subjects about to be published by the Macmillans include "Studies in Religion and Theology," by Dr. Andrew M. Fairbairn; the "Ethics of Jesus," by Henry C. King, president of Oberlin College; and "The Gospel and the Modern Man," by Dr. Shailer Mathews.

The attraction of "Th Poems of Matthew Arnold," issued by Henry Frowde in the Oxford Edition, lies in the brief but happily turned introduction contributed to the volume by A. T. Quiller-Couch. He takes his text from Arnold's own words on Joubert and from Arnold's distinction between the Homers, Dantes, Shakespeares, who are "the great abiding fountains of truth," and the lesser spirits whose strength is in their fineness and reflection. Mr. Quiller-Couch's development of that text will make pleasant reading for those who have been, or still are, devoted Arnoldians. One point we question. Like so many other critics he speaks of Arnold as a poet who never has been and never can be popular. In one sense, if we compare Arnold with Tennyson or Longfellow, that is no doubt true; Arnold's readers have been chiefly in academic circles and among the thoughtful, but, after all, barring temporary fads, that is equally true of most other poets, and we suspect that the actual reading of Arnold will stand high in any quantitative test.

Henry Frowde had already brought out, in the Oxford Library of Prose and Verse, an exact reprint of Keats's "Poems Published in 1820"; he now issues another such reprint, furnished in the present case with an introduction and notes by M. Robertson. The body of the text contains the "Lamia," "Isabella," "Eve of St. Agnes," "Hyperion," and the great Odes, reproduced line for line as they appeared in the publication of 1820, without change except that for convenience of reference line-numbers have been added. As the two great sonnets, "Chapman's Homer" and "Bright Star," are given in the introduction and the ballad of "La Belle Dame" in the notes, we have here virtually all the work on which Keats's immortality depends; the miracle of its beauty and the reader's pleasure are enhanced, we think, by this separation from the earlier and later work which are marred respectively by unripeness and—alas, that it must be said!—overripeness. Mr. Robertson's notes are partly helpful but in much larger part useless or worse. Keats wrote in "The Eve of St. Agnes": "At length burst in the argent revelry"; Mr. Robertson comments: "*Argent*, silver. They were all glittering with rich robes and arms." He tells us that "shrive" means "confess," that Boccaccio was "an Italian writer of the fourteenth century," etc. Such notes are an impertinence; readers who need that kind of information had better be directed to Mother Goose than to Keats. Fortunately, the notes are placed at the end of the book, where they do not obtrude on the sight.

Bulletin No. 1 of the Keats-Shelley Memorial, Rome (Macmillan), is a handsome quarto of nearly 200 pages. It is edited by Sir Rennell Rodd, the British ambassador at Rome, and by H. Nelson Gay, the American historian, who, as a resident of Rome, was chiefly instrumental in negotiating for the purchase of the building and in fitting up Keats's apartment. R. U. Johnson, of the *Century Magazine*, first suggested the memorial and had charge of raising the American fund. The *Bulletin* contains a history of the enterprise, a report of the opening ceremonies at which the King was present, a list of documents and souvenirs, and a catalogue of the first thousand books installed in the library. There are several views and facsimiles. The volume will be prized by all collectors of Keats and Shelley material. The purchase of the house by the joint contributions of Americans and English, with the good will of the Romans, is an international event of unalloyed satisfaction.

Seven years after the appearance of the first volume, we receive the twentieth and last volume of the sixth edition of "Meyers Grosses Konversations-Lexikon." There is to be a supplementary volume, taking account of the changes in the main work necessitated by the lapse of almost a decade. By the time the supplementary volume is off the press, the publishers will undoubtedly be at work on the preliminaries of the seventh edition. It is this systematic and continuous process of revision that gives the standard German cyclopædias their high reputation for reliability, conciseness, scope, and proportion. It is a standard which we are measurably approaching in this country. The leading article in the present volume, to our own patriotic view, is the one on the United States (*Vereinigte Staaten*). The text is closely condensed, but comprehensive. The maps are plentiful. On the much vexed question of the strength of the German element in the United States, the estimate here runs to eleven million souls. Meyers is distinguished from its great rival, Brockhaus, by a stronger predilection for what newspapers call the human interest side. Of the typical American we learn that his mind, "ceaselessly bent upon the acquisition of property," is practical, penetrating, and untiring. He is tall, slim, and with strongly marked features. He develops early both in mind and body, but shows little inclination for the arts or poetry. "The women possess exceptional charm and grace, and a freedom of bearing that is both well-mannered and attractive." (Imported by Lemcke & Buechner.)

It is not strange that Dr. George A. Gordon's "Religion and Miracle" (Houghton Mifflin Co.) has assembled a swarm of protestants about him, and made him feel the *rabies theologorum*, which Melancthon said it would be one of the delights of heaven to escape. It is not so much that Dr. Gordon denies any particular miracle, or that he declares supernatural occurrences to be impossible. On the contrary he maintains that miracles are logically possible, and says that he has no interest in the destruction of the belief in miracle. It is just that lack of interest in the subject of the miraculous that makes Dr. Gordon's attitude so tantalizing to the orthodox. If he had declared that a large number of the Biblical miracles had come to be incredible to him, and had set forth with reverence and regret the reasons why he could no longer hold them, he would have found objectors, but he would have stirred less feeling. Instead of stating what miracles he does not believe, and his reasons therefor, he expresses surprise that thinking people should still be troubled about the supernatural, confesses that the subject of miracle has hardly entered his mind for many years, and proceeds to exhibit how well Christian piety, including belief in God and discipleship of Christ, can thrive without any article respecting miracle in its creed. It is this indifference and suggestion of superiority which occasion anger at his position. It may be suggested that the defenders of the orthodox view have really the deeper insight. The concept of miracle is a very old one, and has played an important part in the life of all men of religious genius. The doctrine may need restatement, and it might have been better for Dr. Gordon to attempt its reconstruction than to set it aside as so easily negligible.

The "Historical Guide to the City of New York" (Frederick A. Stokes Company), compiled by Frank Bergen Kelley, with the co-operation of the City History Club of New York, is a handsome guide-book of above 400 pages, literally crammed with instruction, interest, and amusement of an exceptional kind. It will please the antiquarian by its minuteness and authority, and the ordinary citizen by the aspect of age and tone it lends to the drab and raucous city he lives in. For instance, there is seemingly no romance connected with living on One Hundred and Sixty-sixth Street, east of Third Avenue, in the Bronx. Yet, just south of One Hundred and Sixty-sixth Street was once "Pudding Rock," a gigantic, "glacial boulder," where the Indians held their corn feasts, unmindful of subway schedules and office-bours. The entire territory of the greater city is examined for every historic spot, every old building, every tablet, and every milestone the ground can be made to yield. The material is presented in the form of sixty pilgrimages, illustrated with more than that number of maps. A delightful volume to muse over.

The peculiar merits of "The Minnesinger, Vol. I, Translations" (Longmans, Green & Co.), by Jethro Bithell, lecturer in German at the University of Manchester, are strength and originality, rather than smoothness and melody. Indeed, there is hardly a piece in the volume that does not suffer from a deficiency of these latter qualities. Nevertheless, the translator has genuine lyrical feeling and his command of language shows such a wide range, such vigor and raciness, that his renderings stand quite above the level of the uninspired and perfunctory work which we usu-

ally associate with the idea of translation. Apart from folk songs, we have hero selections from sixty-nine Minnesinger. Moreover, nearly all are represented by several pieces, so that the book reflects quite fairly the variety of their production, from the lovely dawn-songs (compare especially the one by Sir Dietmar von Aist, the translation of which, however, is unfortunately marred by bad punctuation) to humorous poems like that which describes the reception given an impudent would-be lover by the girl who is threshing flax. Happily chosen mottoes, from classical and other sources, enhance the interest of the pieces; and the same may be said of the notes, which evince a remarkable familiarity with the lyrical literature of different ages and countries. Altogether, we hope that the production of this very charming volume will not have the disastrous consequences for the author's professional career with regard to which he expresses a humorous fear in his preface. The philologists are really not so bad as they are painted. The second volume, which is still to appear, will consist of a commentary on the whole body of the Minnesinger poetry.

The efforts of the French to develop the resources and industries of that part of their western African possessions known as the Middle Niger are described in the *Annales de Géographie* for January. The river is now connected by a railway, 344 miles long, with the head of navigation on the Senegal; and representatives of many French business houses are scattered throughout the region. The imports are chiefly cotton and sugar; the exports are wool, skins, rice, and a few years ago large quantities of egret feathers. The slaughter of these birds was so great as to threaten their extinction, and the Lieutenant-Governor of the colony in August, 1907, prohibited the killing of them for two years. At the end of the close period, however, the birds had not reappeared. With this number comes the eighteenth annual bibliography of the geographical literature of 1908, consisting of 336 pages and 1,105 entries. It is a most valuable list of the principal works in various languages, as well as the publications of the scientific societies and the government departments, with explanatory notes by experts. In this as in previous years the public documents of this country have received the most attention.

The January number of the *American Journal of International Law* opens with an elaborate comparative study, by Lester H. Woolsey, of the South African Constitution; the international significance of which lies in the fact that Great Britain, in a recent treaty of general arbitration, has reserved the right, before concluding a special agreement in any matter affecting the interest of a self-governing dominion of the empire, to obtain consent of the government of that dominion. The author also presents a study of new governmental conditions in South Africa, whose system of jurisprudence, for example, he finds to be national in character, rather than provincial as are the systems of Australia and Canada. This may profitably be compared with an earlier discussion by Mr. Bryce of the constitutions of the Orange Free State and the Transvaal. The second article, "Compulsory Arbitration at the Second Hague Conference," is by Dr. Heinrich Lammasch of Vienna, who is umpire in the arbitration, by the United States and Great Britain, of the Atlantic Coast fisheries question. He describes the reception given at the Hague Conference (1907) to the proposal of the United States that all the Powers represented should pledge themselves to refer to the so-called Permanent Court of Arbitration all differences of a legal nature or such as relate to the interpretation of international treaties, provided those differences cannot be settled diplomatically, or do not affect the vital interests, the independence or the honor of the parties, or the interests of third nations. He also discusses the opposition to this principle by the German delegates, Baron von Marschall and Dr. Kriege, on the ground that it amounted to a sham because of its broad exceptions. To this Dr. Lammasch replies that the principle has not only moral significance, but, as pointed out by Von Mery, Austro-Hungarian delegate, an extensive legal bearing. A compromise resolution, chiefly drafted by Tornielli, was passed, which recognizes the principle of compulsory arbitration, and declares that certain differences, especially those relating to the interpretation and application of international treaty stipulations, may suitably be made subject to compulsory arbitration without any restriction.

There are two carefully considered papers on the law of the airship, or aerial law; one by Arthur H. Kuhn, the other by Simeon E. Baldwin, chief justice of the Connecticut Supreme Court. As Justice Baldwin says, "to harmonize the aeronaut's rights with those of other men of foreign lands over which he may take his course, demands not only adequate local legislation, but adequate international agreements." A French publicist, Paul Faucille, receives credit for having introduced this subject in 1900, at an annual conference of the Institute of International Law; Justice Baldwin quotes a quaint suggestion by one authority, that the air be considered as divided into a lower zone, in which there are rights of property, and an upper one, in which there are only spheres of influence! He thought that at any rate the ancient legal aphorism, *cujus est solum ejus est usque ad cœlum*, as old as Coke on Littleton, would have to be much modified; that no land proprietor could be heard to complain of any use of the air above his land by which no injury could result. But equally clearly, damage might be done him by an aerial navigator, and the difficult problem would be to define the remedy and secure its application.

We wonder whether the time will ever come when librarians will tell us why they reject certain books. It is our belief—in the present state of library affairs, with a plethora of select reading lists—that this would be a most beneficial method; for with the continual publication of positive recommendations, the librarians are deluding the public into the belief that there are no negative books. "A Children's Catalog," based on twenty-four special library lists, has just been issued by the H. W. Wilson Company. Part one contains 3,000 books indexed under author, title, and subject. Such a digest, based on authorities and with selected annotations, should supplant the majority of library bulletins and bibliographies dealing with children's reading; the one technical omission is the name of the publisher under each title, together with some indication of the best edition. In this respect, the "Catalogue of Books in the Children's Department of the Carnegie Library of Pittsburgh" is more serviceable. Part two consists of an index to *St. Nicholas*, volumes twenty-eight to thirty-six, the titles entered under author and subject, together with an analytical subject reference to about five hundred books catalogued in part one. Such is the scope of this very extensive compilation, prepared under the guidance of Marion E. Potter.

The catalogue stands fairly well the test of catholicity, popularity, and democratic averages of taste. But it is not over-solicitous about the care of older readers who are on the borderland between the children's room and the adult department of the library. In proving this fact, we have noted some curious omissions. If Blackmore's "Lorna Doone," and Fouqué's "Undine," why not Aldrich's "Marjorie Daw" and Howell's "Lady of the Aroostook?" Is this a case of oversight or of doctors disagreeing? In later editions it might be wise to give consideration to this point, as well as to drop much matter of a supplementary school character. The subject index suggests a moral. Under biography it is weak, under poetry strong; under Shakespeare, the plays are recommended in retold form, save where the school requirements intervene, while Scott is curiously graded; under songs, the music is sparse, and under plays, there is the same paucity. We should like to see a full cross reference under fiction and under biography.

The total number of scholars in residence at Oxford under the Rhodes Bequest during the academic year of 1908-9 was 179. Of these, 78 were from the colonies of Great Britain, 90 were from the United States, and 11 were from Germany. The total number of scholars and ex-scholars at the beginning of the academic year of 1909-10 was 178. The wide range of study pursued by the scholars is shown by the following classification: Honor schools for the B.A. degree: Jurisprudence, 39; history, 23; natural science, 20; literæ humaniores, 16; theology and English literature, 10 each; mathematics, modern languages, and engineering, 3 each; honor moderations classical and mathematical, 1 each. Of fifteen appointments during the year, eight were obtained by Americans, as follows: C. F. T. Brooke of West Virginia, instructor in the department of English at Yale; P. Nixon of Connecticut, assistant professor at Bowdoin; J. J. Tigert of Tennessee, president of Kentucky Wesleyan College, Winchester, Ky.; J. A. Brown of New Hampshire, professor at the Syrian Protestant College at Beirût; S. K. Hornbeck of Colorado, instructor at Che-Kiang Provincial College, Hangchow, Che-Kiang, China; B. E. Schmitt of Tennessee, assistant professor at the University of Wisconsin; J. N. Schaeffer of Pennsylvania, preceptor at Princeton, and C. H. Foster of Idaho, instructor at the United States Naval Academy. The following hold fellowships in the United States: B. B. Wallace of Minnesota, at the University of Wisconsin, and E. R. Lloyd of West Virginia, at the University of Chicago. Of 83 scholars from the United States who have

completed their course at Oxford. 82 have returned to their own country and one has taken up work in England. The qualifying examinations for candidates for the scholarships of 1910 were held in October, 1909. Of the 196 candidates who presented themselves, 67 passed in all subjects, 34 passed in all subjects except Greek, and 95 failed. No candidates presented themselves from four of the United States, and from seven States no candidates passed; but from many of these States there are eligible candidates from past years. The next qualifying examination for the scholarships of 1911 will be held about the middle of October, 1910. Circulars giving detailed information in reference to the award of scholarships may be obtained on application to The Rhodes Trust, Seymour House, Waterloo Place, London, S. W.

The Rev. Dr. Edward Lord Clark died in Boston on Saturday, at the age of seventy-two years. He was born at Nashua, N. H., and graduated at Brown in 1858, and at Andover Theological Seminary in 1863. Ordained to the Congregational ministry in 1861, he was pastor of churches in North Bridgewater, Mass., New Haven, New York, and Boston between 1863 and 1902. He had published "Daleth-Egypt Illustrated" and "Israel in Egypt."

Mrs. Jessie Van Zile Belden died in New York on February 2, aged fifty-three years. She was born in Troy, N. Y., was educated at Troy Female Seminary, and at St. Agnes's School, Albany, and had served as New York State regent of the Daughters of the American Revolution (1898-99). She had published several works of fiction, including "Fate at the Door," "The King's Ward," and "Antonia."

Science.

The Relation of Medicine to Philosophy. By R. O. Moon, M.A., M.D. (Oxon), F.R.C.P. New York: Longmans, Green, & Co.

In his preface the author of this work states that he wishes to show, in considering various important epochs in history, how closely medicine is bound up with current thought. Speaking generally, he says medicine has advanced during the period of great intellectual activity and has stood still in times of intellectual torpor. This fact seems quite patent, and is as true of other professions and sciences. One can scarcely find at first glance any great need for a book, then, to prove the point; especially as this book is, of necessity, an epitome or abstract of the various histories of medicine which have been written and which cover the ground more exhaustively. And certainly ground enough is covered—or skimmed. Beginning with the early Greek philosophy, the author traces its relationship to primitive Greek medicine, following down through the post-Hippocratic school, the school of Galen, Arabic philosophy and medicine, the influence of the Middle Ages, the school of Paracelsus—through the seventeenth, eighteenth, and nineteenth centuries to the present day.

Finally, Dr. Moon notes that the progress of medical science has enormously reduced the death-rate, and that the alleged increase in the number of diseases is an absurdity, because what formerly was considered one disease—fever, for example—has been differentiated into many. As for the slowness with which medical science has advanced to its present state, he says:

> Looking back through the vista of the ages, it seems to us hardly credible that medicine should have been taught and practised from the time of Galen till early in the sixteenth century, without any serious attempt having been made to study anatomy, so essential does an adequate knowledge of the structure of the human body seem to be.

The answer is simple enough: the mediæval mind knew no science of medicine, and even if it had known, the dissection of the body would have been held sacrilegious. Disease, death, and poverty were dispensations of Providence, and any attempt to study them at close range with the idea of their prevention would have seemed like questioning the omnipotence of God and His divine right to chastise.

Concerning the progress of medicine in the nineteenth century, Dr. Moon states that the system of homœopathy was not a new one, for it was known to Hippocrates. The old legend of the spear of Achilles which healed the wounds it inflicted shows the belief in the doctrine of similars. Hahnemann, he says, was the lineal successor of Paracelsus. He thought of spiritual powers existing in drugs themselves; medicine was not a dead substance, but dynamical and spiritual. Hence there is revealed that element of mysticism which is at once the strength and weakness of homœopathy. As to the greater progress made in medicine in the century just past, as compared even with all those that preceded, for this there are three sufficient reasons: first, the systematic study of pathology, or the origin, growth, and nature of disease; secondly, the foundation of physical diagnosis, the employment of percussion and auscultation and the use of the clinical thermometer; thirdly, the great advances made in biology, chemistry, and in bacteriology, through the discoveries of Pasteur. Of course, it is obvious that medicine simply shares the universal tendency to specialism in every department of human endeavor. In the past, the great obstacle to this had been the utter absence of systematized facts; but the time is now at hand when medicine, by and large, can be brought to a focus with the sister sciences, and thus serve, in a higher degree than ever, the purposes of a sane and rational life.

This volume, although it contains little that is original, may serve as a short history of medicine for those who have not the time or inclination for a more exhaustive study of the subject.

"Notes on New England Birds," collected from the fourteen volumes of Henry D. Thoreau's "Journal" by Francis H. Allen, is to be published in the spring by the Houghton Mifflin Company.

Among the numerous recent books within the field of aeronautics, one of more than usual interest is "Aerial Navigation of To-day," by Charles C. Turner (Seeley & Co.). Not only has the writer had considerable practical experience in ballooning, but he has also carried on extensive researches into the technical sciences connected with aerial navigation. His purpose in writing the present volume was to give in a compendious form the results of his labor, so as to enable "those who are interested in the subject, but have neither time nor opportunity for prolonged study, to gain a fair idea of the progress that has been made in the conquest of the air." Starting with the preliminary stages in the evolution of aeronautics, when men first conceived the idea of conquering the air, he discusses, among others, such topics as the history and principles of ballooning and of mechanical flight, military and naval aeronautics, aerial law, the new industry of aeroplane-manufacture, the social significance of the conquest of the air, and the main points of difference between the various types of flying apparatus, whether they be lighter or heavier than air. The reading of the book is rendered easy even to the layman by the fact that a carefully selected glossary is appended; while, for the benefit of those who desire to read more widely, an aeronautical bibliography of selected works has been furnished. The volume is the latest addition of the publishers to their "The Science of To-day Series."

R. C. Punnett, who has made a special study of the doctrines of Mendel, has been appointed to the Cambridge professorship of biology, recently resigned by William Bateson.

William Page May, the English neurologist, died last month. He had written much on nervous diseases, and had also published "Helouan and the Egyptian Desert."

Dr. Jakob Volhard, professor of chemistry in the University of Halle, died in that town last month. He was born at Darmstadt in 1834. He was first associated with Liebig at Munich, and was afterwards professor at the University of Erlangen. He had published two works on the early history of chemistry, and at the time of his death was at the head of the Hygienic Institute of Halle University.

Friedrich Kohlrausch, the German physicist, died last month at Marburg. He was born at Rinteln, in 1840, was educated at Erlangen and Göttingen, and had been professor there and at Zürich, Strassburg, Würzburg, and Berlin. He had made special researches, and many important discoveries in the field of electrolysis, and had published a "Lehrbuch der praktischen Physik," which is considered an authoritative reference work. His other books include "Das Leitvermögen der Elektrolyte, insbesondere der Lösungen," "Kleiner Leitfaden der praktischen Physik," and "Die Energie oder Arbeit und die Anwendungen des elektrischen Stromes."

Drama.

Whatever may be thought of its philosophy, the fact remains that in "A Man's World," which was produced in the Comedy Theatre, on Tuesday evening, Miss Rachel Crothers has written one of the strongest, most interesting, logical, and dramatic pieces on the now dominant topic of the relations of the sexes, that has been seen in this city for years. The distinguishing merit of it is that it is founded upon a clear and definite thesis, discusses it with notable fairness from various points of view, and in the imaginary case selected for illustration, faces the legitimate consequences of the premises without hesitation or faltering. For once sense has not been sacrificed to sentiment, or the desire for a happy ending. The argument is that men would be less lax in their lives, if good women were not so ready to ignore or condone their offences. The heroine has moulded her life in accordance with this principle. She is a successful writer, a spinster, living in a Bohemian apartment house, with an adopted child, the illegitimate orphan of a deceived and abandoned young woman whom she had encountered abroad. Naturally she is the object of scandal, and she revolts against the injustice that imposes all the shame and the sorrow upon the feebler partner. Fearing the weakness of her sex, she resolves to keep strict guard over her affections, but soon falls in love, in spite of herself, with a masterful young journalist, who bluntly refuses to be converted to her opinion that both sexes should be subject to the same law of morality, or to speak of it patiently. Nevertheless, she is supremely happy, until she discovers, by chance, that he is actually the father of her ward, and the man whom for years she has regarded as the epitome of all that is contemptible and vile. In a series of well-devised and strongly passionate scenes he strives to vanquish her prejudices by appeals to her reason and her affection, but, although broken hearted, she stands by her conviction unflinchingly, dismisses him for good, and again takes up the burden of life alone. There is more of dramatic point, perhaps, than of human nature in her inflexibility, and there are important phases of the question, which Miss Crothers does not touch, but she has written a striking drama, full of vital characterization, and uncommonly well made. The impersonation of the heroine by Miss Mannering contains some of the best work this actress has ever done, and the general performance is excellent.

H. B. Irving is negotiating with Hall Caine for a drama on the subject of the Flying Dutchman. It is to be called "The Demon Lover."

A new Shylock is to be seen in London soon. This is Arthur Phillips, a young actor, who was recently in the company of Lena Ashwell. He has been playing the part in the provinces to the Portia of Ellen Terry. His London experiment will be made at the Court Theatre.

Advices from Australia report the great success in that country of Oscar Asche and Lily Brayton, who have arranged to extend their tour for a further term of six months. Consequently they will not reach England until October next, when they will produce Stanley Weyman's play, "Count Hannibal."

Edmond Rostand's much discussed "Chantecler" was produced for the first time last Sunday evening, before a large and evidently very friendly audience at the Porte Saint Martin Theatre, in Paris. Rostand has been quoted as saying that he first conceived the idea of the piece in 1901, upon observing the inhabitants of an ordinary farmyard, which he happened to pass during a stroll; the central idea being suggested by the dominance of the cock, who appeared to be lording it over the fowls and other animals within his domain. Just what the playwright proposed to make of this idea, has been the subject of much speculation; it seemed curious enough that the creator of Cyrano should lend his genius to the poetic and dramatic treatment of such a notion.

This curiosity was heightened when the great comedian, Benoît Constant Coquelin, who, it had soon become known, was to play the central character, the cock, began to recite in public portions of the lines of the play; in fact, within two or three years many of Rostand's friends seemed to have become fairly familiar with much of the text of the piece. In January, 1909, Coquelin began to arrange for rehearsals of the play in Paris, under the immediate direction of Rostand, but these preparations had hardly taken definite form when Coquelin died (on January 27). It was no easy matter to find his successor, but Lucien Guitry was finally selected, and the rehearsals were continued. During the year, several dates were tentatively or conjecturally mentioned for the first presentation of the piece, but there were as many postponements for reasons not always made clear, though it now appears that, after the actors had become fairly familiar with their parts, the last scenes were considerably changed, both as to lines and action.

The central idea of the play is Chantecler's notion of his own importance, and his belief, shared by the other fowls and animals, that the sun appears and the day begins at his command. This notion is dispelled from his own mind, when he finds that the sun has risen and the day has fully dawned while he has been listening, in a wood, to the love-making of a hen pheasant with whom he had become infatuated. But the pheasant is caught in a snare, and upon the advice of the dog, who is his friend, Chantecler retreats to the farmyard crowing, and the other fowls are kept in ignorance of his disillusion.

Henry Bataille has two new plays about to appear in Paris. At the Gymnase will be produced "La Vierge folle," a play of action and ideas, in four acts, one of which passes at the Savoy Hotel, London, and another at Greenwich. The principal part will be taken by Mlle. Berthe Bady. His other new play promises to be novel. Besides being a dramatist, M. Bataille is a lyric poet, and "Le Songe d'un soir d'amour," to be seen at the Français, is a one-act play in *vers libres*. The scene is modern, but in the production certain effects of stage lighting will help to bring out a fantastic or "fairy" element in the poem. Mme. Bartet is to play the chief part.

Music.

Piano Questions Answered by Josef Hofmann. New York: Doubleday, Page & Co., 75 cents net.

Piano Compositions by Ludwig van Beethoven. Edited by Eugen D'Albert. Oliver Ditson Co. Vol. I. $1.50.

Hundreds of students in this country have asked Josef Hofmann: "What is the quickest way to become a great piano-player?" He admits that there are cases of artists suddenly acquiring a wide renown; but, in such cases, there was not a leap into greatness, but into the public's recognition of it. The greatness itself was acquired slowly, by a combination of talent with hard work, under proper guidance. To provide such guidance for those to whom access is denied to the best teachers, Mr. Hofmann wrote a book, a year or two ago, entitled "Piano Playing," the substance of which had been published in the *Ladies' Home Journal*. It called forth a number of questions for further information on a variety of topics, and the answers to these constitute the new (doubly indexed) volume, which may be cordially commended to all students who aspire to rise above mediocrity.

Under the head of technique, the author discusses such points as touch, position, staccato, legato, fingering, glissando, octaves. Other topics are: the pedals, phrasing, rubato, memory, sight-reading, accompanying, transposing, bad music, the student's age, etc. As regards the sustaining pedal, while recognizing its great value as a means of coloring the music, he declares, "from sad experience," that it is far more important to know when *not* to use it than when to use it. The ear must be the guide. It is well-known that Beethoven himself used the pedal much more freely than is indicated in his printed music. In Bach, the pedal must be employed with caution, lest the fine texture of his polyphony be blurred; but often it is very important, because "it accumulates harmonic tones, holds the fundamental tone, and thus produces effects not dissimilar to the organ." These words are of value at a time when most teachers make their pupils, when playing Bach, follow the letter instead of the spirit. Mr. Hofmann also throws a stone at those who hold—as most still do—that in tempo rubato, the left hand must keep strict time. This, he declares, "can find application only in a very few isolated cases; only inside of one short phrase, and then hardly satisfactorily." The perfect rubato, he adds, "must be the result of momentary impulse." Would it not be wise to abandon the misleading expression "rubato" altogether and speak of fluctuating tempo?

Of practical advice, there is plenty.

The question what salary an accompanist might expect is thus answered:

An experienced and very clever accompanist may possibly earn as much as fifty dollars a week if associated with a vocal, violin, or 'cello artist of great renown.

For good accompanying, women are in demand. But the pupil should not start out with the idea of becoming an accompanist, because "it seems like going to a commercial school to study to be an 'assistant' bookkeeper." In the preface, there is a fling at the superstition that music can be studied abroad better than here. Mr. Hofmann knows personally five American teachers who struggled at home and who now in European cities have studios thronged with American pupils.

One of the most amusing things about musicians is their attitude toward Beethoven—an attitude of unqualified worship, on bent knees, of everything he wrote. How could Josef Hofmann have the temerity to intimate that Beethoven's sonatas "are not all on precisely the same high plane of thought"? No such heretic is Eugen D'Albert, who declares that "the genius of Beethoven is so great that any attempt to explain his works seems almost a profanation"! However, when the Oliver Ditson Company explained why they wanted him to edit a volume containing selections from that composer's pianoforte works, he overcame his "holy awe" (*heilige Scheu*) and accepted the offer—fortunately, for no one better qualified for this task could have been found. He is not one of the academic pianists who believe that Beethoven's pieces must be played in a dry, impassive manner.

"How can they fail to realize that Beethoven's works are pulsating with warm life and fairly clamor for a free, vigorous, and temperamental performance?" It is from this emotional point of view that the editor's comments are made in the eight columns of introductory notes. Beside these, there are a large number of footnotes to the 125 pages of music, and these notes are of particular interest and value. Some of them concern technical matters, but most of them supplement the expression marks or explain and justify D'Albert's own interpretation of disputed passages. Like Bülow, he believes in applying to Beethoven here and there the Lisztian method of giving a quasi-orchestral tone-color; for instance, on page 67: "Imagine the first half of this measure played on muffled drums and the second half on the trumpets and trombones." The sonatas included in this collection are opus 2, No. 13; opus 13 ("Pathétique"); opus 26; opus 27, No. 2 ("Moonlight"); opus 31, No. 3; and these are followed by Seven Bagatelles, opus 33. Other volumes are to come.

Inasmuch as Richard Wagner was sixty-five years old before Italy, France, and England paid any attention to his operas, Alfred Bruneau might think himself lucky to get a hearing for one of his operas in remote America at the age of fifty-three. But the operatic world moves much faster than it used to move, and it is strange that "L'Attaque du Moulin" should have had to wait till this week before being produced in what is now the operatic centre of the world. That opera was first given in Paris seventeen years ago, with a cast including Mme. Delna and M. Clément. Both of these singers are at present members of the Metropolitan Opera Company, and to this circumstance doubtless is due the production of "L'Attaque du Moulin," at the New Theatre on Tuesday evening. The opera is based on a tale by Zola, who subsequently became Bruneau's regular collaborator, one of his tenets (attacked by Saint-Saëns and others), being that librettos should be in prose. The story is concerned with a mill, held by the French against an attack by the Germans during the war of 1870. There is a considerable amount of firing in the first and last acts, and the music, too, with its bugle calls and orchestral turmoil, reflects the war spirit. There is, of course, a love story interwoven with the militarism, and calling for appropriate music. Bruneau's score proves him to be a thorough musician, and one who knew how to write dramatically for the voice as well as the orchestra. He knows how to create moods, and had he but possessed the divine gift of writing melodies of individual aspect he might have become as successful an opera composer as his teacher, Massenet.

It is customary among musicians in these days of Debussy, Strauss, and D'Indy to sneer at operas which, like Flotow's "Martha," owe their vogue entirely to the simple melodies strung through them. That the public generally is not in the same mood was shown at the Metropolitan last Friday, when a large audience witnessed and applauded a performance of "Stradella," a once very popular work by the composer of "Martha." It had not been sung in this city for about a quarter of a century, and was therefore a genuine novelty to the majority of those who heard it on this occasion; yet everybody recognized most of the pretty tunes as "familiar quotations," and many were surprised and said to themselves, "I didn't know that was from 'Stradella.'" Few melodies in the whole range of opera are more inspired and expressive than the Hymn to the Virgin, the singing of which by the hero disarms the bravoes who are about to assassinate him and makes them fall on their knees. The singing of this hymn by Leo Slezak did much to increase the popularity that has made him a serious rival of Caruso. The cast included also another singer, Alma Gluck, whose lovely voice and leap into fame are among the talked-of things of the season, and the two amusing comedians, Goritz and Reiss, whose equals it would be difficult to find in any theatre. With such a cast, "Stradella" is likely to become again a regular feature of the Metropolitan repertory.

Sir Edward Elgar is reported to have completed the second movement of a violin concerto.

One of the most popular German writers on music is La Mara (Marie Lipsius). Among her works is a collection, in four volumes, of brief biographies of the composers of all countries. A fifth volume is devoted to twenty-four women who became famous as singers or players. Breitkopf & Härtel are now the publishers of all these volumes. The third has been considerably changed, the biographies of some composers who are no longer in vogue being replaced by sketches of Hans von Bülow and Grieg.

Dr. George B. Gardiner, the English musician, who had collected much unpublished folk-music, especially from Hampshire, died on January 19.

Art.

Art in Great Britain and Ireland. By Sir Walter Armstrong. New York: Charles Scribner's Sons. 4 color plates and numerous text illustrations. $1.50 net.

This is the first-comer of a much-heralded General History of Art, which is to be published simultaneously in English, French, German, Italian, and Spanish. The little volume is light enough to carry in the pocket. It contains, besides a handful of color-plates and half-tones, numerous tiny inset illustrations, select bibliographies at the end of the main divisions, and an adequate index. It follows, obviously, the typographical form of Salomon Reinach's useful "Apollo."

To write the broken history of British art these allied publishers could hardly have found a better contributor than Sir Walter Armstrong. He shows himself fully aware of the difficulty of his task, and in a constant vivacity offers a kind of compensation for the necessarily disconnected character of his book. This manual is not merely a chronicle, but a critique. It is as easy to read consecutively as to consult casually. In its general disposition, the volume is less a unit than a series of detached essays. After a general chapter on Anglo-Saxon art, each branch—architecture, the minor arts, painting, and sculpture—is dispatched once for all. This naturally involves some long steps between chapters. One settles the modern painters, only to begin over again with the miniaturists; whereupon another retreat to find the pioneer water-color men. Perhaps the fragmentary nature of all the material, saving only architecture, made this parallel arrangement the lesser evil. We think, however, a general division into mediæval, transitional, and modern art would have been preferable. As it is, only a rather alert reader will manage to keep clearly in mind the chronological relations of workers in the various arts.

Architecture properly has the lion's share of the space—more than a third. The essential originality and worth of English Gothic are stoutly maintained,

though the suspicion that the best of these plumes are often borrowings is not fully met. Of the architecture of the century just past Sir Walter is a pungent critic, and this is, perhaps, the most interesting portion of the book. The sound English tradition, he makes no doubt, is the modified Palladianism of Inigo Jones and Wren. The neo-Greek building of a century and more ago he condemns unqualifiedly. The Gothic revival he regards as at best a magnificent aberration. Back to the fathers is his watchword, and all the younger men who have quarried out of Sir Christopher or his sources are warmly commended. The topic is too large to be discussed in a review. We may note only that a similar tendency, if somewhat more Hellenistic in temper, is strong in France and America.

One will look with highest expectations to the chapters on painting, in which the author is an authority; and, in fact, these sections are always vivacious. But here intrudes also a capricious, or perhaps merely a British, element which occasionally produces untoward results. Gainsborough is estimated in the most perfunctory spirit. From the bare notice of him no one would gain a notion of his unique spiritual elegance. Romney seems overrated, and Hoppner, in many opinions, hardly earns the large title of "genius." Turner again is merely noted, and the isolated position of Watts is only faintly suggested. In the earlier field the statement that Van Dyke's so-called English manner is based on the miniatures of Samuel Cooper, is too disputable to put in a handbook. The likelihood is that both followed pretty faithfully the modish type of the Stuart court. Among the few living painters included, Clausen might well have had a place. In the chapter on etching Cotman and Turner should have been mentioned, while among draughtsmen Charles Keene surely deserved something more than bare registration. Unaccountable omissions, unless the index is defective, are George Cruikshank and Samuel Rowlandson.

These are minor and inevitable blemishes in a generally well proportioned and stimulating book, which, aside from its budget of facts, abounds in fine incidental criticisms. On pp. 102 and 197 are false references to cuts which should be set right in the next printing.

From F. Gutekunst of Philadelphia we have received photographs of the late Richard Watson Gilder and Bishop Goodsell. They measure about 14 by 16 inches, and are suitable for framing.

We receive from the Government Printing Office, at Washington, "The National Gallery of Art; Department of Fine Arts of the National Museum," by Richard Rathbun, assistant secretary of the Smithsonian Institution, in charge of the United States National Museum. This document contains a complete history of the gradual upbuilding of a department of fine arts under the auspices of the Smithsonian Institution. Of late years the movement has been quickened by such notable donations as those of Harriet Lane Johnston, Charles L. Freer, and William T. Evans. Through these gifts the museum possesses, in hand or in prospect, important paintings of the early English school, representative examples of modern American painting, with an unexampled selection from the work of Whistler and of the ancient painters of China and Japan. The inventories of these gifts, with the accompanying illustrations, will, to a layman, be the most interesting feature of the volume. One must regret that the far Eastern paintings of the Freer collection, in many opinions the most valuable portion, are merely mentioned and not catalogued. As yet there is no building devoted to the national collections. The Evans pictures, for example, are temporarily housed in the Corcoran Gallery. Sooner or later Congress must make dignified provision for collections already rich, and likely to be substantially increased as soon as a proper installation of gifts can be assured.

"Concrete Pottery and Garden Furniture," by Ralph C. Davison (Munn & Co.), is a compact manual, fully illustrated by diagrams. It tells clearly the methods of making vases, fences, seats, tables, etc., out of cement, giving specific directions for the making of modelling templates, and moulds in plaster or in glue, for coloring the plaster, etc. The directions are so full and simple that with their guidance a diligent amateur might safely undertake this art, but in most cases the book might better be passed over to an open-minded plasterer. Whether cement compositions are quite as durable in this climate as their advocates think remains to be proved. But the material lends itself readily to many beautiful uses, as may be seen in Italy, where the mason's trade still retains its finer traditions. American gardens would certainly be the more sightly for the substantial forms illustrated in this book. One may hope that forms adapted to our conditions may supersede those exotic objects of more or less dubious antiquity with which the gardens of the rich are being overcrowded.

Twenty paintings and one pastel drawing, forming the unsold portion of the collection of the late H. S. Henry of Philadelphia, were sold in Mendelssohn Hall, New York, last Friday. The lot fetched $225,750, the highest single price, $53,100, being paid for Millet's Going to Work—Dawn of Day. The other pictures sold, and their prices, were as follows: Troyon, La Charette de Foin, $28,800; Daubigny, La Saulaie, $23,600; Corot, Lake Nerni, $23,100; Corot, Le Vieux Pont de Briques, $22,200; Daubigny, The River Marne, $14,600; Jacque, The Shepherdess, $13,300; Decamps, Le Frondeur, $12,100; Schreyer, The Bursting Shell, $7,200; Millet, The Weary Wayfarers (pastel), $7,100; Dupré, Le Vieux Chêne, $7,100; Diaz, The Glade in the Woods, $6,900; Corot, Environs de Sèvres, $6,100; Corot, Lisière Boisée d'un Etang, $5,500; Dupré, Vaches se Désaltérant dans une Mare, $5,200; Daubigny, The Pond, $4,300; Corot, Paysanne Gardant sa Vache en Lisière de Bois, $4,150; Diaz, The Sultan's Daughter, $3,600; Dupré, Silvery Moonlight, $3,300; Diaz, The Bathers, $2,900; Jacque, Miniature Landscape, $1,600.

Finance.

THE COLLAPSE IN STOCKS.

It is by this time generally admitted that the break in Stock Exchange prices, since the beginning of the year, has been severe and prolonged beyond the majority of modern instances. Within a month, Amalgamated Copper shares have fallen 20½ points, American Smelting 28¾, Reading 16¼, Southern Pacific 18⅜, Union Pacific 26½, and United States Steel 16. The fall in "Steel common" especially has been sensational, because it has followed the declaration, a fortnight ago, of the largest disbursement ever made at one time to the shareholders. It is reasonable enough to argue, as many people do, that the prodigious inflation of values last year, under the auspices of our most powerful capitalists and in the face of a manifest strain on money, foreshadowed inevitably a great relapse, such as has occurred this week. But in this, as in other similar cases, the aspects of automatic reaction and readjustment are curiously mixed with what may be called the personal aspects of the movement.

The present break in prices has already, in point of time, long outlasted the Stock Exchange decline of February, 1909, or of December, 1904, or of May, 1901. For persistency and duration, the "rich men's liquidation" of 1903, which began at the close of April and continued, with intermissions marked by little else than dulness, into August, provides the nearest parallel. The most recent very prolonged decline, that of 1907, which began long before the October panic of that year, is now well understood to have been a consequence, not primarily of prudent capitalists withdrawing their funds from investment markets, but of compulsory liquidation by some of the richest men in the United States, entangled in their own imprudent speculations. The prolonged liquidation which beat down prices in 1903 was exactly similar in character. Where the captains of finance in 1907 had been trapped in the ill-fated "Harriman speculation" of the preceding autumn, the victims of 1903 had tied themselves up by underwriting the huge promoting schemes of 1901 and 1902.

Perhaps the most interesting aspect of the present market is that no one in Wall Street hints at a duplication of those conditions. There were times, during the speculation for the rise in 1909, when a situation of the sort witnessed in 1903 seemed a probable sequel. Had it not been for the fact that previous liquidation, in both finance and trade,

had been thoroughgoing, as it certainly had not been on the eve of 1906 or 1902, results this year might have been similar. But Wall Street believes that they were not—that the banks, whose own position was precarious in 1903 and 1907, were strong enough in 1909 to allow the strain on their resources to continue until the powerful manipulators of values should have liquidated.

It is commonly assumed, in other words, that the authors of the stock speculation of 1909 were able to extricate themselves from the market during November or December, when the New York banks, with the assistance of other domestic lenders, were bearing the heavy load of credit obligations. Now a somewhat similar situation existed at the conclusion of the prolonged "bull speculation" of 1904—an undertaking ascribed by Wall Street gossip of the day to the so-called "Standard Oil group." As in 1909, so in 1904, the manipulation for the rise in stocks lasted from June to the end of the year.

It was then believed, and apparently with reason, that the clique of capitalists conducting the movement realized their own profits in November and December, when the speculating outside public, as it happened, had been drawn into the market on a considerably more substantial scale than it was in 1909. Having thus extricated themselves, the ring-leaders of the "bull movement" of 1904 withdrew all their artificial support, matched orders, and manipulation from the market. Whether or not because of authoritative information of that fact, a group of "bear speculators," introducing their campaign with a series of wild advertising screeds by Lawson, assailed the market with manifest confidence that no one would interfere with their activities, and broke prices 10 to 20 points.

Something very similar appears to have happened on the present occasion; indeed, the phenomena of early profit-taking for their own account by the wealthy ring-leaders, abrupt pulling-out of the artificial supporting pegs, and setting-loose of professional bears, whose audacity could hardly be based on anything but assurance of immunity from interference, have been so exactly duplicated as to suggest how little originality there is, after all, in the methods of high finance.

Only in two or three respects has the attack on stocks, at the conclusion of the "bull campaign" of 1909, differed from that which followed the campaign of 1904. Banks did not, in the earlier episode, lend by wholesale at top prices on overvalued or worthless stocks, and then suddenly call the loans when prices had already been brought down. Nobody threatened financial panic, then, as one of the counsel for the great combinations of capital did this week. Nor did the parties interested in the speculation of 1904, having pulled out the pins and left the structure to collapse, circulate broadcast information that the government at Washington was responsible for the fall in prices. But this is merely tantamount to saying that the present episode has been a more than usually discreditable affair.

BOOKS OF THE WEEK.

Addresses delivered at the twenty-seventh annual meeting of the Indian Rights Association, December 17, 1909. Philadelphia: Indian Rights Association.

Financial.

Farm Land the Basis of Value

In making investments the first consideration should always be the character of the security. Every investor to whom income is important should learn the facts about Irrigation bonds. They form, in our estimation, the safest way to earn 6 per cent.

Secured by a Thousand Farms

Irrigation bonds are secured by first liens on good farm land—sometimes a thousand farms. The farms are worth usually at least four times the loan.

The farms are exceedingly fertile, and are not subject to crop failures. Any one season's earnings are generally sufficient to repay the whole loan.

The bonds are additionally secured by a first mortgage on an irrigation system, in which the investment is often twice the bond issue.

Some Irrigation bonds are municipal securities, which form—as do School bonds—a tax lien on the district. Some are issued under the "Carey Act," where the State supervises the project.

They are issued in denominations of $100, $500, and $1,000, so one may invest either little or much. All are serial bonds, part of which are paid annually so one may make long-time or short-time investments.

78 Issues Sold

In the past 16 years we have sold 78 separate issues of Reclamation bonds, all based on farm liens. Not a dollar of loss has resulted to any investor.

Our dominant place now gives us the pick of these projects. They are passed on by our own engineers and attorneys. And an officer of our Company constantly resides in the irrigated sections, watching the projects we finance.

We have issued a book based on all this experience—a book which every investor should read. Please cut out this coupon as a reminder to send for it. (16)

Ready This Week.

The Elizabethan People

By Henry Thew Stephenson,

Assistant Professor of English Literature in Indiana University, author of "Shakespeare's London," already in its third edition. Over 70 illustrations, largely from old prints. $2.00 net.

A vivid account of Shakespeare's fellow-citizens by an authority in this field. The contents include: "The Elizabethan Character"; "Country Life and Character"; "Life in the Capital"; "Amusements in General"; "Rural Sports"; "Celebration of the Calendar"; "The Love of Spectacles"; "Popular Superstitions"; "Birth, Baptism, Marriage, Death"; "Ghosts, Fairies, Witches"; "Domestic Life."

Allison's Lad and Other Martial Interludes

By Beulah Marie Dix,

Co-author of the play, "The Road to Yesterday," and author of "The Making of Christopher Ferringham." $1.35 net.

Allison's Lad, The Hundredth Trick, The Weakest Link, The Snare and the Fowler, The Captain of the Gate, The Dark of the Dawn.

These one-act plays depict six stirring war episodes. Five of them occur at night, and most of them in the dread pause before some mighty conflict. The author has most ingeniously managed to give the feeling of big events, though employing but few players. The emotional grip is strong, even tragic.

Shell-fish Industries

By James L. Kellogg,

Professor of Biology in Williams College. ("American Nature Series"; Working with Nature.) Illustrated by half-tones and original drawings. $1.75 net.

For the person who eats oysters, clams or scallops, there is information on their structure, life histories and habits. A chapter is devoted to shell-fish as collectors and carriers of disease organisms.

The oyster culturist will find the life history of bivalves from the egg period to the time when they reach the market, a comparison of various culture methods, and a description of oyster fields in various parts of the world.

Several facts concerning the habits of bivalves, here presented for the first time, will be of interest to naturalists

Henry Holt and Company 34 W. 33 St. New York

BOOKS OF PERMANENT VALUE.

A History of Architecture
By RUSSELL STURGIS
Volume II (now ready, Volume I already published) covers the later Romanesque, Asiatic architecture, and Moslem architecture. These fields are illustrated by a wealth of half-tones, line cuts, and handsome photogravures—400 in all. Imperial 8vo. 480 pages. Cloth. $5.00 net per volume. Carriage extra.

Medieval Architecture
By ARTHUR KINGSLEY PORTER
Presenting the early history of architecture, with special relation to the Gothic. Two vols. Quarto. 289 illustrations. Per set $15.00 net.

Modern Artists
By CHRISTIAN BRINTON
A brilliant study of recent art, biographic and critical. Imperial 8vo. 270 pages. 60 illustrations. Net, $6.00.

Retrospections of an Active Life
By JOHN BIGELOW
A record of long and arduous public service in historic setting on two continents. A piece of the history of the past fifty years. 8vo. Three vols. 48 illustrations. Net $12.00. Carriage extra.
Portrait catalogue, in preparation, on application.

NOW READY.

The Biographical Story of the Constitution

A Study of the Growth of the American Union.

By EDWARD ELLIOTT, Professor of Politics, Princeton University.

8vo. 400 *pages.* $2.00 *net.*

Prof. Elliott's work does not seek to deal with the finely elaborated doctrines of the courts, but rather with the larger questions of constitutional interpretation, many of which lay beyond the jurisdiction of any court. These questions have been fought out between men, and this "Biographical Story of the Constitution" attempts to picture, through the lives of some of the more conspicuous of these contestants, the struggle and its result.

Important New Macmillan Books

Mrs. Atherton's *new novel* **Tower of Ivory**

The points of life's triangle in this novel are: two young American women, one a singer in the royal opera of music-loving, mad King Ludwig of Bavaria, the other an heiress in London, and an Englishman with a future in the diplomatic service. *By the author of "The Conqueror." Cloth, $1.50.*

Francis L. Wellman's Day in Court

The Subtle Arts of Great Advocates is the subtitle which the author of "The Art of Cross-Examination" gives his new book. Mr. Wellman has an inexhaustible supply of capital stories and uses each to point a hint which should be invaluable to any young lawyer and many older ones—and incomparably entertaining to jurymen or witnesses. *Cloth, 8vo, $2.00 net, postpaid $2.18.*

William Lyon Phelps's Essays on Modern Novelists

"A volume that bids fair to form a distinct and permanent landmark in the history of fiction," says *The Boston Transcript*, adding that these twelve essays "are as vital considerations of literary problems as have been brought to the eye of the thinking public in many a long day."

Cloth, $1.50 net, postpaid $1.61.

George E. Woodberry's The Inspiration of Poetry

There has been no other critic in recent years with quite Mr. Woodberry's skill in interpreting the deeper meanings of literature and the subtle beauties of poetry. In his new book, as in *Makers of Modern Literature* and *Heart of Man*, he shows an instinct for what is the inspiration at the heart of the work of one writer and another, and describes it with warm sympathy.

Cloth, 12mo, $1.25 net, postpaid $1.35.

Dr. Henry van Dyke's *new book* **The Spirit of America**

French audiences made no attempt to disguise the hearty sympathy with which they received the lectures which, as now issued in book form, will prove scarcely less enlightening to Dr. Henry Van Dyke's own countrymen. He has no axe to grind, no political theory to prove; he writes quite simply of the spirit which determines American character as he sees it in life and in literature.

Cloth, $1.50 net, postpaid $1.62

Dr. Andrew M. Fairbairn's *new book*
Studies in Religion and Theology

Dr. Fairbairn's "The Philosophy of the Christian Religion" was greeted as a master work, easily placing him at the head of modern theologians writing in English, and the inquiries for this new book since it was first announced indicate the deep interest with which it has been awaited. Taken together the "Studies" are a significant work on the Church in Idea and in History.

Cloth, 8vo, $3.50 net, postpaid, $3.68.

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave. N. Y.

The University of Chicago

Summer 1910

The scope and methods of instruction during the Summer Quarter rank in every respect with the other quarters of the academic year, and are widely taken advantage of by college professors, teachers in normal schools, secondary and elementary schools, clergymen, lawyers, physicians, and members of other professions.

1st Term June 20 to July 27
2d Term July 28 to Sept. 2

Detailed announcement, ready early in March, will be sent on request.

Spring quarter opens March 28.

The University of Chicago, Chicago, Illinois

ALBANY TEACHERS' AGENCY
Supplies schools of all grades with competent teachers. Vacancies occurring throughout the year. Send for bulletin.
HARLAN P. FRENCH, 81 Chapel St., Albany, N.Y.

Instruction.

A GRADUATE OF THE MASS. INSTITUTE OF TECHNOLOGY, and Ph.D. of the Johns Hopkins University, desires to hear of a position for teaching. At present engaged, and for the past ten years an instructor in chemistry in two prominent Eastern medical schools. During the entire time, has taught physiological and clinical chemistry, and for most of the time general, analytical and organic chemistry and toxicology. During four years has acted as substitute for the professor in the class work and had charge of the laboratory courses. Has had also wide experience in sanitary chemistry, especially in positions of responsibility in chemical and biological examination of water supplies, and for the past five years has given a course in sanitary chemistry and analysis as part of the course in hygiene. Address S. F., care the Nation.

JUST PUBLISHED
Handbook of Parliamentary Law
By Fred Marion Gregg
Associate Professor of Psychology and Teacher of Parliamentary Law, Nebraska State Normal School.
50 cents
A complete, systematic and concise manual covering all possible forms, rules and regulations employed in modern parliamentary practice.
It can be used either as a textbook in courses on parliamentary law or as a reference book for club use or for general information.
GINN AND COMPANY

Introduction to Economics
By Alvin S. Johnson, Ph.D.,
Professor in University of Texas and Lecturer in University of Chicago.
Balances theory with practice; full of contemporary interest and value; for student and citizen. 416 pages. $1.50.

Letters and Memorials
OF
Wendell Phillips Garrison
Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait. It likewise preserves the notable letter of appreciation addressed to Mr. Garrison by more than two hundred contributors to the *Nation* on the completion of his fortieth year of service, and his acknowledgment thereof.

The Most Readable Book of the Season

THE TOP OF THE MORNING

By JULIET WILBOR TOMPKINS, Author of "Dr. Ellen" and "Open House"

Of this book JAMES L. FORD says in the New York *Herald* of February 5th: "It would not surprise me were 'The Top of the Morning' to prove, if not a best seller, a remarkably good one."

". . . and yet it is that very chapter that is going to give the book its sale, for it describes a society that exists in thousands of eager, imaginative brains, a society that in point of brilliancy and epigram and artistic feeling and mad abandon is infinitely better than the real thing"

Says the reviewer in the Philadelphia *North American:* "Delightful people, one and all. A minor comedy of manners, in which there is not a dull moment nor a meaningless character."

12mo. Frontispiece in Color. $1.50

Retrospections of an Active Life

By JOHN BIGELOW

From a two-page review in *The Nation* of January 27, 1910: "Nowhere else, probably, has there been brought together in one book so much material indispensable to the historian of our relations with France—perhaps one might even say, our relations with Europe—during and immediately following the Civil War. . . . We have wished more Americans might read it and gather, from the cheerfulness that pervades it and from the long patriotism it reveals, fresh zeal and fresh hope for their country, as well as for mankind."

3 Vols. Imperial 8vo. 40 portraits. $12.00 net

A History of Architecture

By RUSSELL STURGIS

VOLS. I and II now ready; VOL. II (just published) treats of the architecture of India, China, Japan, and Persia, the early Christian monuments, the Byzantine and Moslem architecture, and concludes with an exhaustive treatment of the Developed or Later Romanesque.

Three vols. (VOL. III in preparation), each volume contains 500 pages and 400 illustrations. Cloth, net, per vol., $5.00. Half morocco, net, per vol., $7.50; carriage extra.

"No history of architecture has ever before appeared in the English language that can even be compared to it."—*The Architectural Record.*

LIBRARY RESEARCH

Topics of all kinds and in any language looked up in the Boston and Harvard libraries for scholars, writers, and others. Abstracts, copies, translations, and bibliographies made. Proof-reading and revision of manuscript. Highest university and library references.

MISS M. H. BUCKINGHAM,
96 Chestnut Street, Boston, Mass.

LONGMANS, GREEN, & CO.'S LIST

THE STRENGTH OF ENGLAND: A Politico-Economic History of England from Saxon Times to the Reign of Charles the First.

By J. W. WELSFORD, M.A., formerly Fellow of Gonville and Caius College, Cambridge; Author of "The Strength of Nations," &c. With a Preface by W. CUNNINGHAM, D.D. F.B.A. Archdeacon of Ely. Crown 8vo, pp. xvi—362. $1.75 *net.*

This contribution to the economic interpretation of English political history should command the attention of serious students of present-day political issues.

MODERN CONSTITUTIONS IN OUTLINE: An Introductory Study in Political Science.

By LEONARD ALSTON, M.A., Director of Non-Collegiate Students in Economics and History, Cambridge. *New Edition, Revised.* Crown 8vo, pp. viii+79. $0.90.

THE INDIVIDUAL AND REALITY: An Essay Touching the First Principles of Metaphysics.

By EDWARD DOUGLAS FAWCETT. Medium 8vo, pp. xxiv+450. $4.25 *net.*

This book, which may be regarded as a reply to the Absolutist idealism of Mr. F. H. Bradley's "Appearance and Reality," seeks to show that a satisfactory metaphysics flows naturally from "radical empiricism."

RECENT ADVANCES IN PHYSICAL AND INORGANIC CHEMISTRY.

By A. W. STEWART, D.Sc., Lecturer on Organic Chemistry in the University of Belfast; Author of "Recent Advances in Organic Chemistry," etc. With an Introduction by Sir WILLIAM RAMSAY, K.C.B., F.R.S. 8vo, pp. xii+268. $2.50 *net.*

PRINCIPLES OF POLITICAL ECONOMY: With some of their Applications to Social Philosophy.

By JOHN STUART MILL. Edited with an Introduction by W. J. ASHLEY, M.A., M.Com., Professor of Commerce in the University of Birmingham, sometime Fellow of Lincoln College, Oxford. Crown 8vo, pp. liv+1014. $1.50 *net.*

It is seldom realized how considerable were the changes and additions made by Mill himself in the six editions of his Treatise which appeared in his life-time after the first in 1848. It is a main purpose of Professor Ashley's edition to indicate, with their dates, all those changes in the text which show any variation or development in Mill's opinions.

HUMAN ECONOMICS. Books I. and II.: Natural Economy, and Cosmopolitan Economy.

By A. H. GIBSON, F.C.A. 8vo, pp. viii+406. $3.50 *net.*

The professional experience of the author has brought him into close connection with the actualities of human economics. In this work he investigates the laws, both natural and human, controlling production and consumption, and, to that end, lays down new divisions of the Science of Economics, viz.: (1) Natural Economy, (2) Cosmopolitan Economy, (3) Communital Economy, (4) Individual Economy.

THE INDUSTRIAL SYSTEM: An Enquiry into Earned and Unearned Income.

By J. A. HOBSON, Author of "The Evolution of Modern Capitalism," etc. 8vo, pp. xx+328. $2.50 *net.*

CHARLES DARWIN AND THE ORIGIN OF SPECIES. Addresses, etc., in America and England in the Year of the two Anniversaries.

By EDWARD BAGNALL POULTON, D.Sc., M.A., F.R.S., Hope Professor of Zoölogy in the University of Oxford, Author of "Essays on Evolution," etc. 8vo, pp. xvi+302. $3.00.

CHICAGO

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps, $5.00 *net.* Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle.*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 17, 1910.

The Week.

Few members or ex-members of the United States Senate would command more attention on a great Constitutional question than ex-Senator Spooner, and his emphatic assertion that the proposed Federal corporation law would be a radical violation of the Constitution has, therefore, unusual interest. The great scope of the Federal Government in the domain of interstate commerce is unchallenged, but to create manufacturing corporations, operating in the several States, would be, according to Senator Spooner, an extension of Federal power which finds no warrant in the Constitution, and whose consequences would be subversive of the State system under which we have lived. In the Knight case, which has played so important a part in the history of the Sherman Anti-Trust law, the Supreme Court made a sharp distinction between the regulation of manufactures to which interstate commerce was incidental and the regulation of interstate commerce itself; and now, in this broader question of Federal corporations, Senator Spooner invokes the same distinction. It was, by the way, with a view to avoiding this kind of difficulty that the idea of a Federal license, instead of Federal incorporation, was brought forward; a system under which the corporation would not be a creature of the Federal Government, but would have to comply with certain conditions in order to be permitted to participate in interstate commerce. Whatever may be the merits of this proposition, it is certainly not open to the most serious part of the attack made by Mr. Spooner upon the project of Federal incorporation.

President Taft, in his speech of last Saturday, referred, to the sudden expression of acute misgiving, principally in Wall Street circles, over the so-called "corporation policies" of the Administration and the courts. Yet there never was a stock market more susceptible of ready explanation than that of the past five weeks. Last year, the financial community was only emerging from the after-effects of a very disastrous financial and commercial panic. The country's trade had recovered, but it had not reached the level of its former prosperity. As a result of these trade conditions, idle money was piled up in the banks, and it was this idle money which the Stock Exchange speculators borrowed to promote their own undertakings on the market. Prices of stocks, which had already made very large advances during 1908, were bid up 20 or 30 per cent. more in 1909, many of them reaching higher figures than were attained even in the great speculations before the panic. Based, as these stock speculations were, on cheap and abundant money at New York, their successful continuance required either continued easy money, or purchase of the stocks from the speculators by the investing public, or the raising of capital abroad to support the high New York prices. None of these expectations was fulfilled. The demands for stock speculation brought the New York money market into a period of stringency and depleted bank reserves; the home investing public refused to buy at the high prices; while as for Europe, the French authorities blockaded a scheme to "list" the Steel shares on the Paris Bourse, and the Bank of England, in October, took strong measures to prevent recourse to Lombard Street by speculative New York borrowers. It was surely not strange that the topheavy structure of speculation should have fallen to earth.

So far, the affair is in no respect different from a hundred other similar Stock Exchange occurrences. The present case is singular only from the obstinate insistence, even in respectable Wall Street circles, on the theory that the Government's "corporation policies" were the cause for the break in stocks, and, inferentially, that stocks would not have broken but for those policies. Now, we shall not pause to indicate how completely such a theory ignores the facts which we have recited, or to suggest the rather obvious inconsistency of supposing that the market will rise violently (as it did last September) on the President's public announcement of those policies, and then break violently because of his repetition of the same announcement, four months later. We base our disbelief in any such fundamental influence by the "Washington policies" on the nature of those policies themselves. Some of the comments on the matter, in and out of Wall Street, are so extraordinary as to lead us charitably to suppose that their authors must be ignorant of the facts.

President Taft's speech on Saturday night was amazingly frank in its references to the party situation and outlook. He said, almost in so many words, that his Administration was unpopular; that many Republican newspapers were outspoken in criticism; that the party at Washington and throughout the country was torn by factions; and that the general expectation was that the Democrats would carry the Congressional elections, this year, and would win in Ohio and New York. For a parallel to such astonishing bluntness in a public address by a party leader to his followers, we think the records of Presidential oratory would be searched in vain. The ordinary way is to allude to such doubts and fears as inventions of the enemy, and to affirm with a confidence not really felt that the glorious old party will rally and smite its opponents hip and thigh. But what other men reserve for private conversation or for their self-communings in a diary, Mr. Taft blurts out in a speech. He referred to the trials which Lincoln had to go through. It is true that in the dark days of 1864 Lincoln wrote in his diary that it seemed to be certain that he would be defeated. Yet it would be impossible to imagine him saying so publicly. Mr. Taft, however, apparently would have done it! His honesty and downrightness are so great that he keeps nothing back. Does this argue a kind of simplicity or even innocence in him, or is it consistent with a settled view of wise policy? We shall have to wait for time to give us the answer.

Not content with showing that the Payne-Aldrich law cut down the average rate on dutiable imports by 12 per cent. and enlarged the proportion of goods coming in free by about the same percentage, President Taft went on to

say that "for the production of revenue the Payne law is even more an improvement on the Dingley bill." This he proceeded to demonstrate by pointing out that during the six months that the present tariff had been in force (from August 5 to February 5) customs receipts amounted to $166,000,000, while "the semi-annual average" under the Dingley tariff was $130,000,000. But this thought must inevitably suggest itself: if the rate on dutiable imports has been materially cut down and the percentage of imports coming in free has also been considerably enlarged, the only possible way in which the revenue can have been increased is by a very great increase in the total of importations. And yet we all know that (leaving out of account the panic year) no such great increase has taken place. What, then, is the explanation of the President's figures? Several factors conspire to account for them. The Dingley act was passed a long time ago, and our foreign trade has been growing enormously in the interval; to compare the six months just past with the semi-annual average for the preceding dozen years is not very instructive. Secondly, we are now in a time of high prices, and especially of high American prices, a double reason for increasing customs receipts. And thirdly, the first six months of the tariff are a very unreliable indication of its normal working, since imports may have been held back for its enactment.

Spitzer, the convicted dock superintendent of the Sugar Trust, persists in asserting his innocence to the last. As he started on his journey to the Atlanta penitentiary, he declared that he was not responsible, directly or indirectly, for any weighing frauds that may have been committed. From the artistic standpoint, we should be inclined to say that he overdoes the thing a little when he not only insists on his own innocence and ignorance, but is careful to refer to the now famous apparatus of the frauds as "the steel springs and holes alleged to have been found in the scales." Such careful guarding of a case goes beyond the limits of reasonable caution, and thus tends to defeat its own object. In justice to the Sugar Trust, however, it must be admitted that the failure of Spitzer and the four convicted weighers to incriminate anybody "higher up" is disappointing. There is no room for reasonable doubt of the Trust's guilt, but the consistent silence of its subordinate agents is a mystery. On the other hand, the case of Heike, the secretary of the Trust, who has been indicted in connection with the same frauds and whose plea of immunity is now denied, presented a very sinister aspect. Whatever might be the effect of that plea in the eye of the criminal law, it could have but one meaning in the forum of public opinion. It must necessarily be regarded, under all the circumstances, as equivalent on its face to a confession of guilt. There are situations in which such a plea could be made without any such implication, but this was not one of them. In the first place, the offence charged was fraud of the simplest and most unmistakable kind; there was nothing doubtful, subtle, or intricate about the nature of it—nothing that might make it bear one aspect in the mind of the person committing it and another in the view of the law. Secondly, the immunity plea was extremely far-fetched; the testimony given by Heike before the Federal grand jury had reference to violation of the anti-Trust law, and had nothing to do with the weighing frauds. In deciding against the Sugar Trust secretary's plea for immunity and ordering him to trial with other employees of the company on the charges formulated by the grand jury, Judge Martin of the United States Circuit Court has done a notable service to the cause of justice and of popular regard for the law. The "immunity bath" has become almost as notorious a feature of our criminal law procedure as the insanity plea.

The United States Treasury has long boasted that it was "thief-proof," but recently its authorities had to confess that a small sum of currency had been stolen from them. Some bold and ingenious rogue had broken through their system of checking off and certifying and registering and guarding. This, however, was somewhat of the nature of a feat, which must be of rare occurrence. Compared with it, the long-continued embezzlements of the treasurer of the Big Four Railroad seem startling and inexplicable. That such an official could have a "shortage" of several hundred thousand dollars, and the company none the wiser, appears to be a terrible indictment of its business methods. And the guilty man's explanation of how he was able to steal the money undetected does not help matters. He simply abstracted certain sums from the receipts of station agents, and although the latter sent in duplicate returns to the auditor, the latter did not take the trouble to compare them with the treasurer's books.

The progress of the nation-wide campaign against race-track gambling is summarized in the report of a hearing held last December before a sub-committee of the United States Senate's Judiciary Committee on Senator Burkett's bill, "to prevent the nullification of State anti-gambling laws by international or interstate transmission of race-gambling bets or of racing odds." The great bulk of expert testimony was presented by Mr. Henry Brolaski, who has listened to the lure of the real estate business after twenty-one years as "a gambler, poolroom proprietor, bookmaker upon race-tracks, and hand-book maker." In New York our specialist estimates that there are now fifty poolrooms and 500 handbooks in operation, with a clientèle of 100,000 players. The percentage against a player in these handbooks is from 5 to 15 per cent., and "common sense will tell you that from 5 per cent. up will eat up any man's capital if taken out six times a day." The number of race-tracks destroyed by recent legislation is given as fifty-eight, although by "destroyed" is evidently meant crippled for betting purposes. There are still in operation twelve tracks, of which two, in Florida, are to be suppressed at the end of the present year. The tracks in active being are situated in Kentucky (3), Oklahoma (2), Nevada (2), Maryland, Virginia, and Montana.

The decision by the Princeton trustees last week seems to have met the question immediately at issue in a way both happy and just. Few details are as yet published, but the main points are clear. Two gifts for the endowment of a graduate college had been offered, one apparently conditioned upon a site on or near the campus, the other contemplating a location at a distance from it. There were also questions about the control of the new institution by the academic governing body of the university. Because it was found impossible

to unite the two foundations, or otherwise to reconcile the differences about administration, the larger gift was withdrawn. While regretting this, and hoping that an adjustment may yet be found, the trustees distinctly uphold President Wilson. He was right, they decide, in insisting upon a proper university control of the proposed graduate college, and upon its being absorbed into the common academic life at Princeton.

President Wilson has left his attitude in no doubt. He is for the freest and fullest play of the democratic spirit in colleges, and as a means of securing it at Princeton urged a system of dormitories in which all the students should live. This involved the abolition of the expensive and exclusive clubs which have been so marked a feature of life at Princeton. But though the faculty approved a proposal which many considered revolutionary, the trustees have thus far declined to give their assent to it. This is clearly the question about which the "dissensions" have sprung up, involving, as is known, a great deal of bitter feeling with rumors that President Wilson would be forced to resign. Now, if this were an affair that concerned Princeton alone, it would be important, but not nearly so important as it appears when we reflect that the same question is troubling college authorities all over the country. How to resist the invasion, not of luxury, but of the spirit of caste that so insidiously attaches itself to luxury, and how to preserve that democratic mingling of young men which many still think of as the best thing that college life has to give them—these are problems vexing professors and presidents from East to West.

Commander Peary's prompt turning over of the $10,000 presented to him to the fund for South Polar exploration will disarm those who have accused him of mercenary motives. Nor can there be any question of trespassing upon a British preserve. As the National Geographic Society explains, the expedition of Capt. R. F. Scott of the English navy will be making observations on "the other side of the Antarctic area," while the American party would proceed by way of Coats Land. Assurances from British explorers, including Shackleton, make it plain that there would be only a spirit of friendly rivalry. Peary, as Gov. Hughes said last night, has come late into the full measure of the acclaim due him, but there is no lack of heartiness in it now. Congress should not delay in taking, as President Taft suggests, some "substantial notice"—such as a vote of thanks and a medal—of an achievement which has heightened our national fame.

There is little reason to doubt that the budget will be the first measure brought in by Mr. Asquith, and that, with certain modifications to please the Irish, it will pass the Commons and be approved by the Lords. The budget must be made law before the end of March if the country is to be spared a condition approximating financial chaos. Mr. Redmond's speech before the executive committee of the Nationalist Party may lend itself at first reading to the interpretation that the Irish will insist on Home Rule before everything else. "For the Government to pass the budget and postpone the veto question was a policy that Ireland could not and would not approve." But that, as the context shows, can be taken to mean only that the veto question and Home Rule must be taken up in the very near future, and possibly after the budget, but certainly not before. If the financial bill were to pass with the aid of Irish votes, and Mr. Asquith should then ignore his pledge to the Irish, the latter could, of course, inflict instant punishment by turning the Government out. The Parliamentary prospect, therefore, is for a speedy disposal of the financial question, to be followed by a long and uncertain struggle over the mending or the ending of the Lords.

The Government of India lives up to the traditional British practice of blending clemency with firmness. It announces an amnesty for native prisoners deported last year on the charge of sedition, and at the same time puts into effect a severe press censorship law. Newspaper publishers and printers are required to deposit sufficient funds to guarantee the payments of any fine that may be imposed for the publication of seditious matter. Any amount declared forfeit on the stated charge must be made good against a recurrence of the offence. The penalty for a third violation is complete suppression. If, as the Viceroy declared, it is true that the anti-British movement has now degenerated into mere anarchism, and the Government has nothing to fear from the more responsible Indian leaders with whom it has dealt in the past, it is hard to see why there should be any need of a muzzle for the Indian press. The rabid anarchist will run his course, press or no press, or, if anything, will only profit by the suppression of freedom of speech. It is probably true that terrorism has struck no deep roots in India. But the way to eradicate it is obviously not by a policy which may drive calm spirits into the arms of the extremists.

The Prussian Government is guilty of almost incredible short-sightedness in its new franchise bill which fails to remove the chief objection to the present suffrage system that Bismarck denounced as the worst conceivable. The Prussian masses are thirsting for more democracy, primarily for equality at the ballot-box. They have made their wishes known in orderly mass meetings and by disorderly rioting. The educated classes have spoken through their press and in numerous ways. Yet the franchise bill proposed by the new Chancellor retains the three-class system, by which electors are divided according to the taxes they pay, and even increases the first and second classes. Direct voting instead of indirect seems about the only real concession in the bill. To make matters worse, the Chancellor decried government by Parliament and said that "one of the results of the democratization of parliaments in all countries was to render the political sense of a people coarse, superficial, and a hindrance to progress." The Government, he declared, would oppose the democratization of Prussia and the German Empire. All of this means two things: that Von Bethmann-Hollweg is not the man for the place he holds, and that, in opposing the desire of the people, he is ready to play with fire. It may be reassuring to the complacency of the Government that Socialist demonstrations in Berlin should be kept so firmly in hand by the military and police. But it is not so reassuring to think that those demonstrations should continue, and with increased enthusiasm, in spite of the military and police.

THE COUNTRY AND THE TRUSTS.

The President's declaration, in his speech last Saturday, that if "the present methods of carrying on business" are in violation of the law, "they must be changed to conform to the law" has evoked from the organs of the Trusts the arrogant and supercilious criticism which any such assertion always has to expect in those quarters. It is treated as the talk of an ignoramus or a demagogue; of a man unable to measure the significance of his own utterances. On the same principle, we are told, the President might have stood by a law that brought business to an absolute standstill; if you are going to stand by a law just because it was once enacted, and never look to consequences, you may as well, say these critics, let the country go to the dogs altogether.

Well, Mr. Taft is not quite so reckless as all that; moreover, brief as was his reference to the enforcement of the Anti-Trust law, it was long enough to show explicitly that he is not so simple as all that. He is standing by the law not merely because it *is* the law, but because he emphatically approves of the law, or at least of its general purpose. He does not say merely that business must conform to the law because the law is on the statute books; he says it must conform to the law because the country demands that either that law, or some law more effective for the same purpose, shall remain on the statute books. This is what the President said:

> If the enforcement of the law is not consistent with the present methods of carrying on business, then it does not speak well for the present methods of conducting business, and they must be changed to conform to the law. There was no promise on the part of the Republican party to change the anti-Trust law except to strengthen it, or to authorize monopoly and a suppression of competition and the control of prices.

That is the nub of the matter. What the President says of the Republican party is, of course, still more true of the Opposition; it is true of the nation as a whole, and it is true of the most sober thinkers of the nation, that they have no desire or intention "to authorize monopoly and a suppression of competition and the control of prices." The important thing about the President's statement is not so much his declaration that the law will be enforced, as his assertion that the law ought to be what it is, or stronger; and those Trust magnates will show themselves wisest who admit that in this assertion he represents the people of the United States, and who govern their conduct accordingly. Instead of threatening blue ruin in case the country does not bow to their wishes, they will do well so to arrange their affairs as to avoid the disastrous consequences, to themselves as well as to the rest of us, of a policy of obstinate resistance.

The jaunty assumption of superior wisdom so often exhibited by the champions of the Trust is closely connected with their addiction to a body of doctrine that has many of the earmarks of superstition. We use the word, to be sure, in a rather loose and broad way; what we mean is a belief, real or pretended, that disposes of a large and complex subject by a simple dogma, and then sees all facts in the light of that dogma. No sooner had the tendency to gigantic combinations become a marked feature of the economic situation than there sprang up a great number of writers and speakers who read not only into the future but into the past of the industrial and commercial development of the world the character necessary to sustain their dogma of manifest destiny. All attempts to preserve competition as a really important element in great economic activities were absurd; any one who could not see the handwriting on the wall wrote himself down a back number. Competition had been a good enough thing in its day, but its day was evidently over; now let us welcome the new order, since it was vain to strive against its coming. But, confident as these prophets were, and ready as was their acclaim by that considerable class of persons who fear, of all things, to be counted among the "back numbers," something more was needed to bolster up the Trust position. To make their predicted future acceptable, it was necessary to show their beneficence or their indispensableness in the present and the past.

But the present and the past are somewhat more refractory material than the future; and it is perhaps to this circumstance more than to any other that the failure of the Trust propaganda to make greater headway is to be ascribed. It requires something of an effort of memory to recall the time—though it is not many years ago—when the plea that was most conspicuously made in behalf of the Trusts was that of the enormous cheapening of production which they brought about. That something might justly be claimed in this direction no one could dispute, but there were, all along, two criticisms of the Trust contention: first, that the degree of economy of production was grossly exaggerated, and second, that there was no guarantee of the economy inuring to the benefit of consumers. In the early days, to hear the Trust advocates, one would have thought there had been no such thing as cheapening of manufactured goods, from the days of Arkwright and Watt, until the advent of Rockefeller and Morgan; but the claim was so riddled to pieces in the course of a few years that it has almost dropped out of sight. In its place, however, has come the pretension that "the present methods of doing business"—that is, the monopolistic methods of law-breaking Trusts—are the only methods on which business can be carried on in our time. The pretension is absurd, and rests, like the other, on an ignoring of the facts of business history. It is as baseless as the preposterous claim that the prodigious cheapening of production that had taken place in a hundred years of unprecedented industrial progress without monopoly was a matter of no consequence alongside the wonderful gains achieved by the financial consolidations of our Trust magnates.

THE VALUE OF DEBATE.

The tendency to underestimate Congressional debate has been growing in recent years. Various and obvious causes have contributed to it. There has been, for example, the weariness with long "set speeches," either purely for buncombe or for time-killing. Then people have come to have an increasing impatience with deliberation in matters of legislation about which they have made up their minds. The famous maxim of the corporation manager: "Vote first and do your discussing afterwards," has insensibly crept into our view of the way to dispatch public business. Furthermore, the chief dependence seems to be placed upon those who draft bills, instead of those who debate them. When able lawyers and skilled public men and Administration officials put their heads together and frame a measure to accomplish a given end, the im-

pulse is to take their *cachet* as final, and to dismiss all inquiry or criticism as captious. After Rome has spoken, who are you to raise your voice?

Now, it is not necessary to appeal to our past or to general theories of government by public discussion in order to show the folly of this undervaluing of keen and full debate in Congress. We have under our eyes, in the Senate argument about the postal savings bill, which is going on from day to day, an excellent and conclusive example of the great importance of subjecting legislative proposals to the closest scrutiny. These Senate debates have not been, unfortunately, reported in the press with anything like adequacy, but no one who will follow them in the *Congressional Record* can fail to be impressed by their utility and fruitfulness. The postal savings bill was reported with a fine air of completeness. The people wanted it; it was "sure to pass"; obstructionists were to be swept out of the way. Senator Carter, who was in charge of the matter, pressed for an instant vote. But full debate was insisted upon, and it has been of the greatest use. Besides the attacks on the constitutionality of the bill, made by Senators Rayner, Bailey, Bacon, and others, the text of the measure itself has been mercilessly analyzed and such defects brought out that Senator Carter himself was forced to admit the necessity of many amendments and much recasting. It appeared that such vital points as the method of withdrawals by depositors, the liability of funds held in one State being drawn upon to meet demands in another, the whole question of the reserve which banks must hold against deposits of postal savings, had been entirely forgotten or slurred over by those who drafted the bill. Holes were knocked in it by one Senator after another, and the final form of the measure will be very different from what it would have been but for this most enlightening debate. It was a striking instance of the way in which the truth is brought out and the public interest served by free argument and the impact of mind on mind.

Not only is the worth of Congressional debate held too cheap by the general public, but the capacity of Representatives and Senators is grievously underestimated. Of course, there are windbags and dunderheads among them. It is often exasperatingly difficult to get to the real points at issue. But when large matters are up and free play is given to intellect, there is as much of it available in Congress as in any place we know. It naturally takes a measure which is not made one of party to bring out the full force of the reasoning powers which Congressmen can apply to it. This is the case with the postal savings bill. Registering the decree of no caucus, it has to take its chances with the acute criticism which unfettered minds may pour upon it. Any one who studies its full report in the *Record* will get a new idea of the intellectual resources of the Senate, and of the enormous advantage to the public of having such men as Congress possesses to sift and try important bills.

It is inconceivable that the Administration should expect that its darling measures can be exempted from this wholesome searching in the course of their passage through Congress. The Federal Incorporation bill, for example, appears to have been drawn with great care and skill. Beyond question, able lawyers, skilled in corporation affairs, have got their minds together in its construction. But there is nothing like the cross-fire of debate for revealing unsuspected weaknesses or oversights. The most capable draftsmen cannot think of everything. We are not contending for any abuse of the privilege of debate. There must some time come an end of argument, and the vote be taken. But within reasonable limits, the freedom of debate should be cherished and exalted, because only by such public examination of public measures, such attack and defence, such sharpening of iron upon iron, can the people in a democracy be made certain either that the end sought in a given law is one that should be sought, or that the proper means to attain it have been selected.

A NEW ACADEMIC CAREER.

The selection on Monday of Mr. Frederick P. Keppel as dean of Columbia College has called forth many congratulations for the university. The new dean's ability and fine personal qualities are widely recognized. At thirty-five, he succeeds a man double his age, who has long carried the authority of years popularly associated with the high office of dean. Mr. Keppel's connection with the university dates from 1902, since which time he has been secretary. By virtue of that office, he was in charge of publicity work and other administrative details, with a success to which his promotion now testifies. Unlike Dean Van Amringe, for years professor of mathematics, Mr. Keppel has never been a member of the teaching staff, but has confined himself exclusively to executive work.

It is this fact in connection with Dean Keppel which will, we fancy, attract the widest attention in academic circles. True, Columbia has another dean—Goetze of the School of Science—who is not a teacher; he was promoted from the superintendency of grounds and buildings. But Mr. Keppel's position bulks larger in the college world, and his appointment seems a deliberate affirmation of this new policy of choosing deans solely for their executive experience and talents. Since time immemorial the college dean has been thought of not only as a disciplinarian but as a teacher and as shepherd of the faculty. However his duties may have varied from time to time, or in this or that place, the ideal of the dean as a man of deep learning and a teacher of the youth over whose conduct he watches parentally, has usually prevailed. At Harvard to-day Dean Hurlburt is professor of English, though his actual teaching is limited. His predecessor, Dean Briggs, was also in the English Department. At Princeton, Dean Fine teaches mathematics, and at New Haven Dean Wright gives courses in Latin; and such professorial activity of deans is the rule in practically all the colleges. Plainly, therefore, Mr. Keppel's selection is a marked break with tradition.

Indubitably, the vast increase in the size of a college like Harvard or Columbia carries with it such an enlargement of the duties and responsibilities of a dean as to have long ago foreshadowed their total absorption of the time of any one man. Even with the creation of special deans for the various graduate and undergraduate schools, the work has grown apace. But more important than this is a marked tendency the country over to create solely executive positions in colleges and universities. It is a new academic career which is drawing into the college life men who may or may not have ability to

teach, but are primarily interested in executive work—men like Anson Phelps Stokes, jr., of Yale, and of Jerome D. Greene, secretary to the president of Harvard. Mr. Greene's record in this position gained him a vote for the presidency of the university when Mr. Lowell was the successful candidate before the Board of Overseers. If men of Mr. Stokes's type, men of means and social position, were to devote themselves to this new career instead of leading empty lives or spending themselves in the pursuit of riches, the country would be far better off. Be this as it may, at Harvard there are now two or three men besides Mr. Greene who are devoting themselves exclusively to executive work of a weighty character. Treasurers, bursars, and secretaries who were business men there have long been; but the man who performs executive duties alone, yet ranks with the instructors and sits with the faculty, is distinctly a modern development.

From the point of view of the teacher there can be no complaint about this new academic reinforcement. Many professors are overburdened with executive work; they must run their department organizations, sit in faculty committees of every sort, and perform administrative duties that never end. Some, of course, enjoy this as an offset to the routine of teaching. For others with a distaste for business and fully absorbed in the dreams of the scholar or the research of the scientist, the coming of the practical man of affairs is certain to be a cause of satisfaction. To hitch a genius to a plough is ever an act of folly—how great the collegiate world recognized when Columbia University lost George E. Woodberry and could not use the talents of MacDowell. Men of this type are too precious to be wasted in the routine of administration; a college could well afford to hire others to do the kind of work from which the teacher who lives in his books and in his classes shrinks.

At the same time, it would be a misfortune if too many of a college's teaching staff should be freed from all touch with the business side of college life. The scientist who devotes himself exclusively to research and abandons all teaching, handicaps his own development. But if teaching reveals to a man the extent and solidity of his own knowledge as nothing else can, a certain amount of executive work, the give-and-take of the faculty debate and committee discussion, the facing of practical problems, the coming into contact with the undergraduate from another point of view than that of the classroom—all these have their great benefit for the average professor. Where to draw the line is the question. At Harvard President Lowell's programme looks to relieving men of promise both as regards their teaching and administrative cares, in order that they may have time not only for research, but for creative writing. Dr. Lowell is probably not unaware of the criticism that few telling books are now coming from the Harvard faculty, when one considers its acknowledged ability; and what is true at Harvard is true elsewhere. If the new academic executive can help to lift the burdens from the men who have a message to convey or genuine knowledge to set forth, he will speedily appear in all our college communities.

THE FAME OF "CHANTECLER"

That part of the world which points an accusing finger at M. Edmond Rostand and calls him a consummate self-advertiser, can scarcely be blamed. The history of "Chantecler" carries about it all the earmarks of the press-agent's art as it was elaborated more than a hundred years ago by Mr. Puff in Richard Brinsley Sheridan's "Critic." Rostand's latest play has profited by the puff direct, the puff preliminary, the puff collateral, the puff collusive, and all the other forms of stimulating a sluggish public interest that the long experience of mankind has developed. Years before the play was staged the elder Coquelin went about reciting entire half-pages from the text. From the Gascon village where Rostand was at work came stories of heroic effort and heroic despair that prepared the world for the birth of a masterpiece. Rumor spoke of incidents reminiscent of Virgil's throwing his "Æneid" into the fire. The later developments are a matter of contemporary and universal fame—Coquelin's death, the search for a substitute, the painful and palpitating series of rehearsals and postponements. There was not even wanting a great national calamity to serve as a sombre background for the great national play. Parisians must have turned towards "Chantecler" with all the more gusto because it offered relief from the horrors they had just escaped.

Yet it would be quite wrong to speak of the new play or its author as if they would only profit by the enormous notoriety they have come in for. The money returns will undoubtedly be great. Given the *réclame* that "Chantecler" has enjoyed, and it is useless, from the manager's point of view, to attempt to discuss the play on its merits. London and New York and Milwaukee would accept it even if it were entirely lacking in dramatic action, in human interest, and in poetic appeal. London and New York and Milwaukee would accept it even if it were the greatest dramatic poem in all literature. But the perils of swollen publicity are as heavy as its financial rewards. Unavoidably, it creates among the better class of readers and theatre-goers a prejudice against the much-acclaimed masterpiece which it will find hard to live down. Publicity is a beast that turns upon its own children and rends them. The newspapers reduce all subjects to an apparently common plane of turbid puffery. If the newspapers the world over go mad over "The Merry Widow" and go mad over "Chantecler," the natural result is to reduce Edmond Rostand's play to the level of Franz Lehar's. The grosser attributes of fame will be the portion of both men, just as they were the portion of the author of "Trilby." There will be "Chantecler" hats and storm shoes and neckbands. There may even be a "Chantecler" cocktail for gentlemen who are not accustomed to go home until morning.

It may be argued, however, that such temporary and tinselled fame cannot harm a real work of art. When the shouting of the multitudes dies, the quieter spirits will come out of their hiding place and render their verdict. If "Cyrano de Bergerac" was a great work of art, it was none the less a work of art because it swept around the world like wildfire. We may go further. We may assert that no amount of advertising can create the tremendous enthusiasm with which Cyrano was received, and that such enormous vogue is in itself proof of exceptional merit in a play or a book. All this may be conceded, and yet the difference pointed out that "Cyrano de Bergerac" made its own

way, while "Chantecler" will make its way, so far as the multitude is concerned, because it is by a famous author who spent seven years in writing the play. By all accounts, "Chantecler" has nothing of the melodramatic swing, the romance, the sentiment, or the boisterous humor that brought the world to Cyrano's feet. When the new play was written, Rostand, who is credited with a shrewd insight into practical things, must have known that it might daze the crowds but could scarcely win them. He wrote for his own Parisian audience and for the select few the world over. It was the higher taste of his age that he aimed at. If, on the way, there was an honest penny to be picked up, where was the harm?

But it would be unjust to take it for granted that M. Rostand reasoned after such a mercantile fashion. How much of the *réclame* that surrounds "Chantecler" is due to the poet's efforts and how much to the efforts of his business agents? We can assign the latter their full share without holding the author blameless. It is absurd, on the one hand, to imagine that the years' delay in the production of "Chantecler" was a mere device to tickle the public palate; if Rostand's motives were mercenary, he would have made the greatest haste to reap the profits that were his in any case. On the other hand, there is no denying that the writing of the new play was carried on to the accompaniment of an extraordinary number of cymbals and lutes, of sackbuts and psalteries. Did Rostand bare his heart to the world for commercial reasons? We need not go so far. We find an adequate reason in the traditional conceit and vanity of the man of genius. Whose head should have been turned by success if not Rostand's? To leap from comparative obscurity into fame, wealth, a seat in the Academy, and the acknowledged successorship to Victor Hugo was enough to make any man accept himself as a favorite of the gods. If henceforth he assumed that the world must be interested in his daily progress, the ailment was a very human one. But whereas formerly the excesses of genius were a natural and commonplace thing, to-day they are seized upon by the genius of publicity and turned to gain.

SHELLEY.—II.

V.

I am aware that my criticism of Shelley may seem harsh and prosaic, yet I am really saying nothing which cannot be confirmed by the words of Mr. Clutton-Brock, and even by the opinions, less openly avowed perhaps, of the more whole-hearted Shelleyans. It is scarcely doing violence to draw such support even from a critical work like Arthur Symons's "Romantic Movement," which is written with the avowed purpose of exalting the work of Blake and Coleridge and Shelley as the final criterion of poetry. Mr. Symons does indeed look upon Shelley as an enchanter who "never mistakes the images which he calls up for realities," but, with that extraordinary contradiction which dogs all such critics, he adds immediately that "Prometheus" is "a cloudy procession of phantoms, seen in a divine *hallucination*." Even more significant is that strangely-fated essay on Shelley by the late Francis Thompson. Dithyrambic praise has never poured itself out in more intoxicated language than in some of these paragraphs:

> It ["Prometheus Unbound"] is unquestionably the greatest and most prodigal exhibition of Shelley's powers, this amazing lyric world, where immortal clarities sigh past in the perfumes of the blossoms, populate the breathings of the breeze, throng and twinkle in the leaves that twirl upon the bough; where the very grass is all a-rustle with lovely spirit-things, and a weeping mist of music fills the air. The final scenes especially are such a Bacchic reel and rout and revelry of beauty as leaves one staggered and giddy; poetry is spilt like wine, music runs to drunken waste. The choruses sweep down the wind, tirelessly, flight after flight, till the breathless soul almost cries for respite from the unrolling splendors.

Yet these closing scenes are "nevertheless the artistic error of the poem"; yet Shelley wrote "with some misdirected view to truth"; yet in religion and morals "his methods were perniciously mistaken"; yet "his theory was repulsive but comprehensible"; and "the spell on which depend such necromantic castles is some spirit of pain charm-poisoned at their base." That charm-poisoned spirit was nothing less than the peculiar romantic illusion of the Revolution which ignored the native impulse of evil, ever lurking in the heart of man, ready to leap forth when its chains are shaken, and which valued the emotions in accordance with their mere spontaneity and intensity.

If, notwithstanding these admissions, the true Shelleyan still cherishes the "Prometheus" and "The Revolt of Islam" as great and beautiful powers in the intellectual world, the issue becomes a matter of emphasis, or, rather, of exclusions in taste. What really appeals to the romantic idealist in the spirit of these poems, in their total effect, is a kind of elusive, yet rapturous, emanation of hope devoid of specific content. The poet may look upon the world of living men with perverted gaze, but his truth is faith in the future; he is "a being prophetic of some higher state to which mankind shall attain"; and from the intoxication of this sheer hope the destinies of mankind become like the vision of the chariots of the Hours:

> In each there stands
> A wild-eyed charioteer urging their flight.
> Some look behind, as fiends pursued them there,
> And yet I see no shapes but the keen stars:
> Others, with burning eyes, lean forth, and drink
> With eager lips the wind of their own speed,
> As if the thing they loved fled on before,
> And now, even now, they clasped it. Their bright locks
> Stream like a comet's flashing hair: they all
> Sweep onward.

There is at least something in this that seems dynamic, a power to make man

> . . . hope till Hope creates
> From its own wreck the thing it contemplates.

And indeed it is on this power, without account of its direction, that Mr. Clutton-Brock bases his admiration; to him Shelley "in his worst errors . . . was far more admirable and less mischievous than those who persuade us to submit to the mere mechanism of life by their own comfortable submission to it." Shall we, then, end here? The right comparison, I maintain, is not with those sunk in the comfortable mechanism of life, but rather with those strong poets of the true romance, who can hope and still maintain the balance of common-sense. I am bold to assert that this surrender to hope without thought of the thing it contemplates is possible only to a mind which has, in a sense, been debauched by false ideas and vain reading; that a mind deeply nourished on the true poets may for a time and by a sort of self-violence suffer itself to become inflated with this wind of vanity, but cannot long forget the actual outcome of that spirit in the poet's own life and its sterility or falseness in dealing with the actual motives of mankind. It is no sufficient answer to say that the veritable content of Shelley's hope is love, for the scope of this emotion is left equally vague, if not morbid, as the other. It is a long hope to build on the power which "makes the reptile equal to the God"; nor will that power convey much satisfaction to the heart that has sustained itself on the *amor* of Catullus in this world or on that of Dante in the visionary spheres. Love without a true understanding of evil is meaningless.

VI.

Or it may be that your Shelleyan

eschews philosophy and ideas altogether, caring only for the poet's musical evocation of beauty. To such a one, as to Francis Thompson, the "Prometheus" is like a magical incantation, under the spell of which forms of fleeting iridescent loveliness float before his dream-open eyes:

Dim twilight-lawns, and stream-illumined caves,
And wind-enchanted shapes of wandering mist.

That is an innocent and blissful kind of inebriation, very desirable, no doubt, in a world too much given to seeking its escape from prose in quite other and baser ways; but he who indulges therein should beware of speaking of this phantom realm as if it were peopled with ideas. There is a beauty of dreaming and a beauty of waking; they are sisters both and daughters of the gods, but only one is acknowledged on Olympus. If you desire to know them apart, read in "Prometheus" of the voices that emanate from those wind-enchanted shapes:

Canst thou imagine where those spirits live
Which make such delicate music in the woods?
. . . . . .
'Tis hard to tell:
I have heard those more skilled in spirits say,
The bubbles, which the enchantment of the sun
Sucks from the pale faint water-flowers that pave
The oozy bottom of clear lakes and pools,
Are the pavilions where such dwell and float
Under the green and golden atmosphere
Which noon-tide kindles thro' the woven leaves;
And when these burst, and the thin fiery air,
The which they breathed within those lucent domes,
Ascends to flow like meteors thro' the night,
They ride on them, and rein their headlong speed,
And bow their burning crests, and glide in fire
Under the waters of the earth again.

Read that and then recall Adam's account to Eve of the music that haunted the woods of Paradise:

. . . How often from the steep
Of echoing hill or thicket have we heard
Celestial voices to the midnight air. . .

The change is a transition from dreaming to the sober certainty of waking bliss; from a bubble-blown phantasmagoria to the ecstasy of intellectual beauty.

The fact is that if you press the meaning from all but the very few unreasoning worshippers of Shelley, you will find that they regard his long poems, organically conceived, as of a kind which the world would willingly let die, and that they really cherish him for the strains of lyric ecstasy caught up in the amorphous mass. That is fair criticism, and a man may pass over much in the waiting expectation for those scattered strains of music,

Clear, silver, icy, keen, awakening tones
Which pierce the sense and live within the soul.

Of Shelley, taken merely as the author of a group of lyrics, brief in compass but exquisite in melody and feeling, quite another account might be given than this I am writing. Here, whether in independent songs or in short strains that can be detached from their context without any mark of incompleteness, here, when he expresses a purely personal joy or sorrow, love or regret, his genius suffers no let or thwarting; it is even strengthened by that romantic acceptance of the emotions. That is the Shelley of the young man's and the maiden's passionate admiration:

Music, when soft voices die,
Vibrates in the memory—
Odors, when sweet violets sicken,
Live within the sense they quicken.

Rose leaves, when the rose is dead,
Are heap'd for the beloved's bed;
And so thy thoughts, when Thou art gone,
Love itself shall slumber on.

VII.

But it is necessary to add that even this wonderful lyric vein is subject at times to a kind of defeat from excess of the very power that produced it. "Adonais" is commonly reckoned, and no doubt is, the most perfect of his longer lyrics; yet the best stanzas of that poem, those that contain lines which have sung themselves into the memory of the world, are almost always marred by lapses into the vague and inane. There is no greater stanza in the elegy than the forty-fifth:

The inheritors of unfulfilled renown
Rose from their thrones, built beyond mortal thought,
Far in the Unapparent. Chatterton
Rose pale, his solemn agony had not
Yet faded from him; Sidney, as he fought
And as he fell and as he lived and loved
Sublimely mild, a Spirit without spot,
Arose; and Lucan, by his death approved:
Oblivion as they rose shrank like a thing reproved.

The literary inspiration of those lines (and in pointing to this I mean no disparagement of Shelley's originality) is clearly born from a kind of mystical blending of Virgil's

Heu, miserande puer! si qua fata aspera rumpas,
Tu Marcellus eris—

and of Milton's

So were I equal'd with them in renown.

There are lines in Shelley's stanza—the first and the eighth, particularly—which are in no wise diminished by this association with two of the most celebrated passages in literature; yet a comparison of the stanza as a whole with the full parts of the "Æneid" and "Paradise Lost" shows quite as clearly the weakness of Shelley. It is inconceivable that Virgil or Milton should have held so loose a rein on his genius as to sink from "The inheritors of unfulfilled renown" to the vapid "Far in the Unapparent," or should have dropped immediately from the magnificent directness of Shelley's eighth verse (which rings like Lucan himself when most Roman) to the vague allegory of Oblivion shrinking reproved.

It would not be difficult to extend this kind of criticism to a considerable number of Shelley's most admired lyrics—to show, for instance, that the throbbing and tumultuous music of the great "Ode to the West Wind" straggles here and there to unmelodious conclusions, chiefly because the poet—like all his English compeers—disdained the inherent laws of the *terza rima* as these are exemplified in the works of Dante and the lesser Italian masters of the measure. There is no other metre in which it is so imperative to mould the thought to the pauses of the rhythm, under penalty of letting the rhymes hang as an impertinence instead of a support; but this lesson none of the English poets learned, and least of all was Shelley capable of such wise docility.

Nevertheless, granted that "Adonais" may occasionally descend into bathos, if it contains also images of pure and radiant beauty, why not give ourselves to these, and pass the errors by? Doubtless that is the part of wisdom, so far as it is feasible; but here again we are blocked by certain insurmountable exclusions of taste. There is a pleasure, the highest critical joy, in the perfection and harmonious unity of such work as Milton's "Lycidas," and he who has trained his mind to respond to that joy has by the very process rendered himself sensitive to false and obtrusive notes. He simply cannot read the stanza quoted from "Adonais" without suffering from the spirit of perversity engaged within it. It is true, no doubt, that there are blemishes—occasional awkwardnesses of execution, failures of the imagination, even lapses of taste of a kind—which may not affect essentially our attitude toward an extensive work of art; but they are not the faults which throw a suspicion of obliquity or vanity upon the very sources of the artist's inspiration.

These, I say, are the inevitable exclusions of taste. If a man avers that the thorough appreciation of "Lycidas" does not exclude for him an unmarred pleasure in "Adonais," I can only suspect that he has never felt the full force of the former. This is by no means to say that the enjoyment of Milton deadens a man to all lower forms of literature. The commonplace or the small may in its own sphere be commendable and may afford a true relish to the finest palate; and, indeed, one of the functions of criticism is to set forth and so

far as possible rescue from oblivion the inexhaustible entertainment of the lesser writers. But the humble is another thing than the false, the false is noxious just in proportion to the elevation of the genius to which it adheres. There is nothing mutually exclusive in the complete enjoyment of both Milton and Crabbe; it is at least questionable whether the same man can heartily admire both Milton and Shelley. P. E. M.

Correspondence.

AN UNPUBLISHED BROWNING LETTER.

To the Editor of The Nation:

Sir: Not long ago, while hunting for something else in a heap of old letters, I happened to find a letter from Robert Browning which, I think, I had not seen for twenty years or more. It is dated at "19 Warwick Crescent, London, April 8th, 1887," and is a reply to one of mine in which I had asked him about certain apparent misprints in "Colombe's Birthday," and had criticised his use of "demean" in the sense of "degrade" or "debase," where Bertbold says of the chamberlain:

> He'd hesitate
> A doubt his lady could demean herself
> So low as to accept me.

One of the misprints was "crowding" in the phrase "crowding attestation," as printed in the English "library" edition of 1888 (Act i, line 175). I had no doubt that it should be "crowning," as in the first edition (1844), and printed it so, with the approval of Miss Hersey, in our edition of the play, published just before I wrote the letter to Browning. I also called the attention of Mr. Scudder to it, as he was then at work on the "Riverside" edition of Browning; but he declared that "crowding" must be the poet's own alteration, and insisted on retaining it in the first issue of his edition. If the reader will look at the context in tbe play, he will see that there was a certain plausibility in the editor's opinion.

The other misprint to which Browning alludes is "conjecture" for "conjuncture" (Act. v, line 189: "For each conjuncture was she great enough"); but there could be no doubt about that.

Now for the letter, which reads thus:

Dear Mr. Rolfe: "Crowding" and "conjecture" are two vile misprints in the stereotype English edition—full of such. They come of the printer's laziness, who, if the type gets misplaced, prefers to replace it as he best can, without troubling the "Reader" [that is, the proofreader], who may not be at hand. The "grey, smooth chamberlain" is rightly given, however.

[This, by the way, which occurs in the line preceding "demean," *was* right in the stereotype edition, but *not* in the *first* edition, which misprints "grew" for "grey." I was sure that it was a misprint, though somebody had suggested that it might be equivalent to "grewsome."]

I take "demean herself" in the sense of the familiar French word whence it is derived—"se démener"—to behave in an unusual manner—"se. démener comme un possédé"; and qualify it accordingly by the adverb "low," not "much," as would be proper if the word "demean" could explain itself sufficiently.

I had occasion only yesterday to point out to a correspondent the particular misfortune to which *verse*—rather than *prose*—is subject. A stop drops from the end of a line, which thus is suffered to run into the following one, making nonsense enough. There are dozens of instances of this in my own poems, and I never remember one which was corrected by a critic. In my own case, there has been no carelessness in proof-correcting; but after the author's best is done, the printer's worst may indulge itself. In my last poem the word "palette" is given once correctly, and a second time as "palate."

Believe me, Dear Sir, yours very sincerely, Robert Browning.

Browning's "last poem," mentioned in his letter, was probably the "Parleyings," where—in the "Furini"—the word "palette" occurs twice; but it is printed correctly in all the editions I have. That book was published in 1887, apparently before he wrote to me.

So far as I am aware, Browning was the only man on eartb who ever attempted to justify the misuse of "demean" when his attention was called to its origin and the related noun "demeanor"; and his defence of it is very lame. It is derived, as he says, from the French *démener;* but that word has not, and never did have, the sense of "degrade" or "debase." I do not know where he found his definition, "to behave in an unusual manner"; but that is not necessarily a bad or disgraceful manner. Tbe word does sometimes mean to be "agitated" or "excited," but, whether that is "unusual" or not, it does not in itself imply anything base or degrading.

But, if we look into the history of the French word, we find that originally it meant to "lead," "conduct," or "guide," thence, to "drive" (animals or vehicles), and reflexively to conduct or behave one's self—coming to refer to "bebavior," just as "conduct" (with the similar original meaning) has done. Etymologists have sometimes been puzzled to explain its connection with the early Latin *minare* (classical *minari*), from which it is clearly derived, but which came to mean "threaten." But that word originally meant to "lead," "conduct," and the like; but being specifically used with reference to the driving of cattle, which involves threatening cries or ejaculations, it came to have the idea of threatening associated with it. This is the only explanation that seems to have been suggested by Latin, French, Italian, and English lexicographers, including the editors of the New English or Oxford Dictionary.

As to the misuse of "demean," the English etymologists all now agree that it arose from the erroneous supposition that the word was derived from "mean." As long ago as 1847 Sullivan pointed this out in his dictionary: but tbe revised quarto Webster, about forty-five years ago (in 1864?), gave "debase," "degrade," as one sense of "demean"; quoting Sbakespeare for it in "The Comedy of Errors" (iv, 3,83), where Luciana says:

> Antipholus is mad,
> Else would be never so demean himself,

tbat is, behave himself, as it means in every instance in which the dramatist uses it. If the dictionary editors had turned to "3 Henry VI" (i, 4, 7), they would have found this passage:

> But this I know, they have demean'd themselves
> Like men born to *renown*, by life or death.

I called tbeir attention to this, among other errors, and it was corrected in their next revision.

Another bad slip of Browning's was his assumption, in a note to "Paracelsus," that the modern word "bombast" had its origin in the turgid style of tbe lectures of Paracelsus. It was actually suggested by the original meaning of the word, namely, cotton, or "cotton wool" (from the Latin *bombyx*). The earliest instance of "bombast," or "bumbast," cited by the Oxford Dictionary, is in 1568; and in 1572 it is mentioned as used for stuffing doublets, the old padded coats for men. It soon came to be used figuratively of inflated or turgid language; as in "Love's Labour's Lost" (v. 2, 791):

> pleasant jest and comedy,
> As bombast and as lining to the time;

Where "lining" is expressive, as "stuffed" is in "Othello" (i, 1, 13):

> A bombast circumstance,
> Horribly stuff'd with epithets of war.

Sundry other etymological slips of Browning could be cited, if space permitted; the worst one, the monumental one, we might call it, being his use of *twat*, in "Pippa Passes." W. J. Rolfe.

Cambridge, January 18.

THE ENGLISH ELECTIONS.

To the Editor of The Nation:

Sir: The general impression seems to be that the Parliamentary elections in England have resulted in a drawn battle between the Liberals and their Conservative opponents. This view overlooks some significant facts. It should be remembered, first, that this was no ordinary battle, but a distinct fight against hereditary privilege and for radical economic changes, which were universally recognized as striking at the very root of the special advantages enjoyed by the great landowners of Great Britain. On this issue the Liberal party was undeniably the second choice of virtually all who voted for tbe Labor candidates. While the policy of the Irish Nationalists subordinates all other issues to Home Rule, no person acquainted with the history of landlordism in Ireland can doubt that on the Budget as a separate issue the Irish sympathies are with the reforms of Lloyd-George. On the face of the returns, therefore, the voters have declared unequivocally for the principles on which the Liberal party has appealed to them.

To realize the full force of the Liberal victory, however, it is necessary to go behind the returns. In a conflict between the privileged and the disinherited classes, it should be emphasized that privilege must profit largely by the limitations imposed on the franchise in the British Isles. Where property, and not manhood, is the basis of suffrage, conservatism bas an unfair advantage. It is alleged, in palliation of the British property qualification, that a very low limit is imposed, amounting to about fifty dollars a year as rent for householders, occupiers, and lodgers. The system of registration, however, requires a continuous residence of eighteen months in one place for this class, failing which the vote is lost. This strikes a deadly blow at the immense body of me-

chanics belonging to the more migratory trades, and disfranchises hundreds of thousands of them at each election. Domestic servants and bachelors living at home are further specifically denied their rights as citizens. It has been statistically shown that where manhood suffrage prevails, the proportion of voters at a general election is about one in four. In Great Britain, however, the average is about one in six. At the last general election, in 1906, the number of voters was 7,266,708. Under full manhood suffrage, the number would have been more than 10,000,000. It can scarcely be seriously contended that any considerable proportion of the disfranchised 3,000,000 would be favorably disposed to the class which is the cause of their deprivation of citizen rights.

The great landholders are also favored by the system of plural voting. A man owning property or nominal residence in two or more boroughs may vote in each of them. The law is thus made to favor wealth, at the expense of misrepresenting the real sentiment of the people. The exact number of plural voters is not easy to determine; but it is sufficient to play an important part in a close election. In a campaign having the taxation of land values as its central issue, hardly one of these plural land-votes would be cast otherwise than on the side of the landholders.

Another most serious factor is found in the immense number of tenant farmers throughout England. While it is true that the old "rotten boroughs" have been largely reformed out of existence, the opportunities for indirect but none the less effective coercion of votes by the great landlords remain enormous. The intimidatory proclamation of the Duke of Sutherland to his tenants is but a single illustration of the degree to which an unprincipled landlord is able to interfere with the principle of free and impartial suffrage. How many tens of thousands of votes were won to the Conservatives by this unscrupulous method, can never be known; but it can certainly not be negligible.

Other elements of the situation might be brought to attention, such as the natural hesitation of the English people in the face of novel propositions of taxation, the dread of Socialism so cleverly though dishonestly played on by the spokesmen for the Lords, the war scare, and the mistakes of the Liberal party on minor issues. Under such a combination of adverse influences, the actual success of the Liberals at the polls must be taken to represent the real desire of an overwhelming majority of the British people. If the Budget, involving the taxation of land values, is deliberately ratified at the polls by the majority of an electorate confined to property-owners and those of the working population most favorably situated and having least cause for complaint at the existence of special privilege, a full, honest, and unintimidated vote of the people of Great Britain would assuredly have buried the Conservative party and the House of Lords so deep as to destroy all hope of resurrection.

BOLTON HALL.

New York, February 11.

AN AMERICAN POETESS OF 1759.

To the Editor of The Nation:

Sir: In a fragment of the *Universal Magazine* for March, 1759, I find this early fruit of the American muse:

The R A K E.
By a Lady in New England.

——— Video meliora proboque,
Deteriora sequor. HOR.

An open heart, a gen'rous mind,
But Passion's slave, and wild as wind:
In theory a judge of right,
Though banish'd from its practice quite;
So loose, so prostitute of soul,
His nobler wit becomes the tool
Of ev'ry importuning fool:
A thousand virtues misapply'd,
While Reason floats on Passion's tide.
The ruin of the chaste and fair;
The parent's curse, the virgin's snare;
Whose false example leads astray
The young, the thoughtless, and the gay:
Yet, left alone to cooler thought,
He knows, he sees, he feels his fault;
He knows his fault, he feels, he views,
Detesting what he most pursues:
His judgment tells him, all his gains
For fleeting joys are lasting pains:
Reason with Appetite contending;
Repenting still, and still offending:
Abuser of the gifts of Nature;
A wretched, self-condemning creature;
He passes o'er Life's ill-trod stage,
And dies, in youth, the prey of age!—
The scorn, the pity of the wise
Who love, lament him—and despise!

Perhaps some American antiquary may be able to identify this apt quoter of Horace. WILLIAM E. A. AXON.

Southport, England, December 11.

THE CARNEGIE FOUNDATION.

To the Editor of The Nation:

Sir: The Carnegie Foundation for the Advancement of Teaching has issued some new regulations for the awarding of pensions (see *Science*, January 14, 1910). These regulations differ from the preceding ones mainly in the omission of the service pension. At present, a teacher in an accredited university cannot retire on a pension until he reaches the advanced age of sixty-five—unless, to be sure, he retires under the disability clause, of which it is needless to relate here.

Prof. Arthur O. Lovejoy has discussed these changes in the *Nation* for February 3. It is not the purpose of this letter to comment on any of the statements advanced by him, but to draw attention to at least one other aspect of this important matter.

Judging from conversations with professors and from letters, the new regulations strike the teachers themselves with discouragement, if not with dismay. The opinion prevails that the Foundation will have accomplished at least one kind of *advancement*—that of the age of full professors who are still in the harness. In other words, if these regulations remain in effect, it is thought that the faculties of the future will be filled with aging and aged men, who are clinging to their jobs in an endurance test against time. It appears that this purpose is nearing accomplishment.

In view of the wide difference of opinion evident between the directors of the Foundation, on the one hand, and the teachers on the other, we may well believe that the new regulations would not have been adopted had there been an abundance of funds at the disposal of the Foundation. If this be the fact, it is to be hoped that some authoritative statement to this effect will be issued by the Foundation, in order that close and sympathetic relations may continue to exist between the Carnegie Foundation and its beneficiaries.

Let me add, in conclusion, that I have heard nothing but praise of the widow's clause in the new regulations.

RAYMOND WEEKS.

Columbia University, February 10.

EDOUARD ROD'S PATRIOTISM.

To the Editor of The Nation:

Sir: The name of Edouard Rod has been so identified with France and French letters that all except the Swiss are inclined to forget his Vaudois origin and certain things in his life and character, which bound him to his native land. His refusal to seek a place among the Forty, notwithstanding the advice of Comte d'Haussonville, was inspired by patriotic sentiment. M. Charles Burnier says:

> One day when I spoke of the Academy to Rod, and asked him rather indiscreetly whether he had no legitimate ambition to enter it, he answered—it was at the time of the "Lys rouge": "No, because I should be obliged to have myself naturalized as a Frenchman, and I consider that *inélégant*."

This attachment to his country was shown also by his custom of always spending the summers in Switzerland, where he had residences in Valais and Vaud. "The most beautiful object in the world," he said, "is Lake Leman, between Rolle and Geneva." A. A.

Neuchâtel, Switzerland, February 1.

ROSTAND AND TOM D'URFEY.

To the Editor of The Nation:

Sir: The production of M. Rostand's "Chantecler" gives additional piquancy to a notice, in the Dictionary of National Biography, of a somewhat similar venture on the English stage two hundred years ago. In the account of Tom D'Urfey we find:

> In his burlesque, "Wonders in the Sun; or, the Kingdom of the Birds," a comic opera, . . . he brought on the stage actors dressed as parrots, crows, etc., and the business was farcical in the extreme. This justified the remark of Dryden, that "You don't know my friend Tom as well as I do. I'll answer for it he will write worse yet!"

JOHN M. CLAPP.

SVEN HEDIN'S EXPLORATIONS IN TIBET.

Trans-Himalaya: Discoveries and Adventures in Tibet. By Sven Hedin. With 388 illustrations and 10 maps. New York: The Macmillan Co. $7.50 net.

In these two volumes which describe his latest journeys in Tibet, Dr. Sven Hedin carries us into a different region from that traversed in his previous explorations: a region almost as little

known as were Eastern Turkestan and North Central Tibet before those explorations, and not less remarkable in its physical character. Starting from Kashmir, he reached Ladakh, and, organizing his party there, turned northward across the great Karakoram range of the Himalaya and travelled first northeastward, then eastward, then southeastward over the lofty plateau which lies at the back of the Himalayas, and is studded with small lakes, most of which have no outlet to any ocean. Far down to the east he reached the great river Tsanpo, or upper part of the Brahmaputra, and the famous Buddhist shrine of Shigatse. Thence he turned back west, up the Brahmaputra till he reached its source. Near it lie the sacred Mansarowar lakes, where he spent some time thoroughly exploring their neighborhood. Thence turning north and determining the head stream and very springs of the Indus where they issue from the ground, he turned west, and after almost reaching Ladakh, started back again on a second journey to the north and east, in which he crossed his former route, traversing valleys and crossing ranges hitherto unvisited, till at last he again reached the borders of British India and descended upon Simla, its summer capital. To describe these wanderings in detail would be useless, because the names of the mountains, lakes, and rivers he passed are nearly all of them new, even to the scientific geographer, and the tracks followed could not be made intelligible without a map. Suffice it to say that Dr. Hedin traversed, along routes previously unknown to any but the scanty native population, and sometimes running through pathless wildernesses, a region some six hundred miles long and fully three hundred broad, concerning nearly the whole of which scarce anything was previously known. This is a real service to geography, which well deserve the honors paid in Europe to this courageous and resourceful explorer.

If we say that Dr. Hedin is a better traveller than a writer, we do not mean to disparage his narrative style, which is simple, clear, and straightforward. He describes the incidents of each day's march in a plain, unvarnished way which gives the reader a sense of what the actual conditions of travel are in a wild, lonely, dreary country, where the hardships of cold, dirt, and other forms of physical discomfort find compensation in the grandeur of snowy peaks, of vast prospects, and of brilliant atmospheric effects. His occasional bursts of sentiment, which have the genuine naïveté of the Scandinavian spirit, as we know it in writers like Björnson and Jonas Lie, are altogether winning. But he has not the gift (or if he has, he does not use it) of presenting any general view of the phenomena he has observed. Two or three chapters, summarizing the general results of his expeditions and describing in a broad way the features of the country and the life of the people, would have been both helpful and interesting, for they would have put those features in a form which the reader would have found it more easy to comprehend and to remember. We must, however, recognize a difficulty which Dr. Hedin himself mentions. His publishers imposed on him limits of space which obliged him to omit parts of his narrative, so that here and there we skip over long stretches of country. The book was becoming already so large that the publishers were probably well advised but the work might certainly have been better planned as a whole.

To the reader who is not primarily a geographer, eager to comprehend the mountain structure of this extraordinary country, the most interesting parts of the book are those which describe the life, and especially the religious life, of the Tibetans. These people are almost as unlike the rest of mankind as their dwelling-place is unlike other countries. Sir J. D. Hooker, who ranks with Darwin as the most vivid and instructive of scientific travellers, long ago, in his "Himalayan Journals," described Tibet as "the highest, coldest, driest, barrenest, windiest region on earth"; and the extraordinary isolation in which the Tibetans have lived for many centuries, cut off by deserts on the East, North, and West, and separated from India on the south by the gigantic barrier of the Himalaya, has favored the development of a peculiar type of semi-civilization, and of a still more peculiar ecclesiastical system. The church of Tibet and the monasticism of Tibet offer strange, even grotesque, parallels, to some of the forms which Christianity took in the early centuries and in the Middle Ages. But, even apart from this parallelism of their phenomena, they are in themselves well worthy of study.

Dr. Hedin does not treat them systematically, but he gives us some interesting lights on the external aspects of the Tibetan religion, in which Buddhism is curiously intermixed with spirit worship and other forms of primitive superstition.

The centre and metropolis of the Tibetan church, is, of course, Lhasa, the preëminently sacred city, in which the Dalai Lama resides, and which, down till the recent British expedition, had been visited by no European, save the French Abbé Huc (in disguise) some seventy years ago. Now, however, the books written by Englishmen who formed part of that expedition, have made it so well known, that curiosity began to fix itself upon another city of scarcely inferior sanctity, Shigatse, with the famous monastery of Tashi Lunpo, where dwells the Tashi Lama, or Panchen Rinpoche (holy teacher), second in dignity only to him of Lhasa. At the time of Dr. Hedin's journey, the Dalai Lama, who had fled at the approach of the British forces, was still far away in the North, so the Tashi Lama was virtually head of the church for the time being, and to see him was an extraordinary privilege. Dr. Hedin achieved it and his description of this Buddhist Pope is worth quoting:

> We go higher up smooth, steep staircases to open landings, up more steps, higher and higher, to the Holiest of Holies, in the Monastery of Tashi Lunpo. The conversation is carried on in lower, more subdued tones. . . .
>
> We enter, not without feeling solemn. I make a deep bow at the door, and two more before I stand before him. The Tashi Lama is sitting on a bench in a window recess, and has in front of him a table with a small teacup, a telescope, and some printed sheets. He is dressed as simply as an ordinary monk, wears a cerise costume of the usual style, coat, waistcoat, and vest, and the long scarf which is thrown over the shoulder and wound round the body like a toga. Between its folds peeps out a yellow under-vest, with gold embroidery. Both arms are bare, and the head uncovered. His complexion is fair, slightly inclining to yellow. He is somewhat below the middle height, is well proportioned, looks healthy, and, having lately completed his twenty-fifth year, has every prospect of attaining a good old age. His short-cropped hair is black, and there is scarcely any down on his upper lip. The lips are not thick and full like those of other Tibetans, but thin and gracefully formed; his eyes of a chestnut brown color. . . . There is not a single idol, no wall painting, or any other decoration, scarce any furniture, not a thread of carpet, only the bare stone floor, and through the window his melancholy and dreamy, but clear and open, glances wander over the golden temple roofs, over the town below them, with its dirt and sin, over the dreary mountains which bound his earthly horizon, and away through the azure blue sky to a Nirvana invisible to us, where his spirit will one day find rest. But all the time he preserved a wonderful calmness, a refined, amiable politeness and dignity, and spoke in a charmingly soft and subdued voice, modest, almost shy. . . . We talked about all kinds of things in heaven and earth, beginning from his own religion, in the Pantheon of which he takes the highest rank among living prelates. He displayed an alertness, an interest in everything, and an intelligence that surprised me in a Tibetan at least." (Vol. I, pp. 319, 320.)

Nowhere perhaps in the world does religion, in the form of external symbols and observances, bulk so largely in the eyes and minds of a people as Buddhism does in Tibet. Monasteries are in sight everywhere: a large part of the population dwell in them. The church is, or was till the recent war gave the Chinese an opportunity for re-asserting and making real their almost vanished suzerainty, the ruling power in the country. The tombs of saints and divers shrines stand everywhere

along the tracks. Prayer flags and pennants float from poles on and around every building. Prayer mills are turned by the water of every stream, each flag, each mill, bearing the sacred formula, "Om Mani Padme Hum" (Oh, the jewel in the lotus flower), so that every waving of the flag, every revolution of the mill, repeats a prayer for the benefit in its future course of the soul of him who fixed the flag or the mill in its place. Nearly everybody carries in his hand a little machine with a wheel which he turns round and round as he sits and talks, and which in each turning repeats again the mystic phrase. Nowhere, not even by the anchorites of the Thebaid in the fourth and fifth centuries of Christianity, or by the Celtic hermits who placed themselves on isolated wave-washed rocks along the coasts of Ireland and Scotland in the sixth and seventh centuries, were the austerities of a life of solitude and privation carried so far as they are to-day by these Tibetan lamas who immure themselves in a cave or small stone building which is thereupon walled up, leaving only one small aperture—a sort of tiny tunnel—through which food barely enough to support life is thrust in by some one from the nearest monastery. The solitary inmate, living in unbroken darkness, utters no word and hears none. It would be a deadly sin for the lama who brings his food to speak to him, and were he to speak, all the merit he has acquired by his mortification and seclusion would be thrown away. Dr. Hedin saw the outside of such a hermitage, erected with very thick walls over a spring, the interior perfectly dark. Within it dwelt an anchorite who had already lived in silence for three years, and had vowed himself to perpetual seclusion. Should he not draw in the daily bowl of food, the lama who brings it might guess that he was ill, but would not interfere. Only if six days elapse without the bowl being touched do the monks conclude that the inmate is dead, whereupon they break open the enclosing wall, and bury him. Dr. Hedin was told of a lama who had died fifteen years before, having entered this hermitage at the age of twenty, and spent forty years in it. A still more remarkable case was that of a devotee who had lived immured in the darkness of such a hermitage for sixty-nine years. It is hard to believe that the human frame can retain life for so long a period in a climate intensely cold in winter, with a supply of daily food extremely scanty, and always the same kind of food, and without a single ray of sunlight. One must suppose that the hermit, occupied solely in meditation and in the repetition of the magic Om Mani, passes into a sort of stupor, in which not only day and night and summer and winter pass unnoted, but all sense of time itself is lost, and the Nirvana which he seeks is practically attained by a loss of individual consciousness itself as well as of all human desires and passions.

Intensely religious as the Tibetans are, after their fashion, and bent as they are on keeping all European strangers out of their country, they do not seem to be intolerant. Muslims come up and move freely about among them, as well as Hindus; one of their most sacred spots is, indeed, an object of equal veneration to Hindu pilgrims coming from the plains of India and to the Buddhist natives of the plateau. This is the Manasarowar Lake, called by the Tibetans Tso Mavang, a beautiful sheet of water, about sixteen miles wide, which lies between the source of the Brahmaputra to the southeast, and the source of the Indus to the north, at a height of 15,098 feet above sea level, three thousand feet higher than Lake Titicaca in Bolivia, and higher than the highest summit in the Rocky Mountains or the Sierra Nevada. Dr. Hedin, who prudently carried a small boat about with him, putting its pieces together when he had to use it, explored the lake to ascertain its depth, and had a perilous adventure on it in a storm, for this lofty plateau is a land of tempests. Indeed, his aquatic adventures on the lakes are the most thrilling in the book. North of the lake is the sacred mountain, which the Hindus call Kailas, and the Tibetans Kang Rinpoche. It rises from the plateau, here 15,000 to 16,000 feet in elevation, to a height of 21,818 feet, and may owe its especial sanctity not only to the proximity of the sacred lake, but to the peculiar form of its topmost peak, which resembles the Tibetan shrine tomb consecrated to a saint. Immense numbers of pilgrims come from India, as well as Tibet, to make the circuit of it. That circuit is twenty-eight miles long, and the path is in many places steep and rocky, but the worshipper will sometimes make it thirteen times in succession. The greatest merit is earned when the mountain is compassed by a series of prostrations in which the devotee measures his own length along the ground all the way. Such a pilgrim body-circuit is equivalent in soul value to thirteen circuits made on foot. Whether the top of the mountain is accessible we are not told. Dr. Hedin does not seem to have ever climbed any summits (as a regular Alpinist would have done), or to care about them; he tells us only about passes. Perhaps the peak is deemed inaccessible; perhaps the spirits that dwell on it would repel a daring intruder. Anyhow, it is, as Dr. Hedin observes, the most holy of all holy mountains; holier than Sinai or Ararat or Fuji Yama; holier than any of the sacred heights of Europe, such as Monserrate in Spain or Croagh Patrick in Ireland.

We have not space to dwell upon the endless difficulties which our traveller encountered in the constant efforts of the Tibetan authorities to turn him back. He evaded some of these by various stratagems and devices, but sometimes was forced to yield and abandon routes he had hoped to take. It is all the more creditable to his temper and feeling that, in spite of these frequent struggles with the Tibetan officials, he speaks warmly of the courtesy and kindliness of the people as a whole; observing with truth that it is far easier to succeed among semi-civilized or barbarous people by good humor and gentleness of manner than by threats or violence.

The name Trans-Himalaya, which he proposes to give to the long line of mountains separating the Upper Brahmaputra Valley from the isolated lake basins of northern Tibet, seems highly inappropriate. It suggests a region, not a mountain range, and his arguments in its favor leave us unconvinced. That is a matter for the scientific world to settle. Meantime, we congratulate him on a journey which reflects the greatest credit on his courage, his tact, and his endurance, and which has immensely increased our knowledge of this strange land and its people.

CURRENT FICTION.

The Journal of a Recluse. Translated from the original French. New York: Thomas Y. Crowell & Co.

The reading of this book leaves it easy to believe that the purported translation is one of the tricks of the trade of authorship used to give a stronger appearance of actuality to its origin. It is the story of a Scotchman born in humble life who, having shown himself of the stuff that meets emergencies, was privileged to receive an education on an equal footing with the young lord his master, and to share his travels and experiences so long as Lord Eliot lived. At his patron's early death he emigrated to America and presently, under the influence of Thoreau's writings, turned recluse on the Pacific Coast in the forest lands of the State of Washington. Two thwarted love affairs strongly influenced his life; one an undeclared affection for the sister of his young master; the other, a mutual passion between himself and his niece, who first meets him when she is grown to woman's estate. This temptation successfully withstood, the hero turns his attention to education, agriculture, and to keeping a journal in French. There are few topics on which he does not discourse, bringing to bear on all a mixture of conservatism and free thought which would perhaps naturally result from the immersion of a Scotch brain

in advanced ideas. Himself a man of simplicity and integrity, he has an intellectual passion of curiosity which leads him to give ear to every doctrine that comes his way, with a philosopher's indulgence to most things—unless it be the American system of education. To this he gives some eloquently hostile pages.

Other chapters of his journal are devoted to creeds and causes, to nature and civilization, to man and woman. Now he is as practical as Franklin, now as introspective as Amiel. He is old-fashioned enough to know "from observation that there is nothing so futile as these so-called *reasonings* between children and adults. They are taught to argue expertly on their own side, and the argument finishes usually by the yielding of the adult, because he has no longer the capacity for blind persistence that is a trait of youth." He is enough of a free lance to say, "For me . . . religion is nothing but poetry petrified into dogma." Throughout he is ready to take pains in behalf of such of his kind as he has sifted out and found deserving. A pricker of the bubbles of pretence, instability, and cowardice, he reveals himself as a materialist with a diligent working sense of honor.

Old Harbor. By William John Hopkins. Boston: Houghton Mifflin Co.

A year or two ago, with "The Clammer," Mr. Hopkins captured a pleased audience. Its plot was nothing; but its very insignificance gave a charm to a delicate and fanciful treatment. There was, to be sure, a touch of self-consciousness about it, and "Old Harbor" confirms one's suspicion that the earlier story was the *tour de force* of an amateur—if there be such a person separable from the motley rout of our "fictionists." "Old Harbor" attempts a thing which has repeatedly been done with more or less success. Our New England coast villages with a past have been pretty thoroughly exploited by dealers in local color. It is an interesting type for America—the little old port, once active in shipping, and now, with its stately mansions and rotting wharves, but a monument of the past. Mellow decay is a phenomenon to be cherished on this side of the water. But Mr. Hopkins has little or nothing fresh to offer in his interpretation. He has provided a sufficiently varied assortment of characters—but he has provided them. They have not made themselves alive through him. Consequently, the best we can say for them, one and all, is that they are suggestive of familiar types. Eben, the prodigal brother, who is in a way the most striking person in the story, is a figure of some pathos. His sister Harriet is the New England spinster of tradition. "Clanky Beg" is one of the most artful idiots ever seen off any stage, quite the god from the machine from start to finish of the action. Dr. Olcott, with his property nag, is the gruff and kindly country doctor of tradition—what rustic tale can get on without him? And so on. There are a drunken ne'er-do-weel, a stately gentleman of the old school, two proud and poverty-stricken gentlewomen, a young artist, and a young coquette—who is reformed. For broad comedy, you have an Irish "Yarb" woman, and a Scotch apothecary, who occasionally exchange dialects without ceremony. Altogether, it is the kind of book that if you know rural New England, will remind you of people and things you have seen. But it is artificial—a series of reminders rather than a veritable interpretation.

Sailors' Knots. By W. W. Jacobs. New York: Charles Scribner's Sons.

The constant reader of Mr. Jacobs looks, nor looks in vain, for a renewal of entertainment with each new volume of his salt coast sketches. His originality in inventing situations seems without limit. His wharves where night-watchmen sit and remember are the scenes of a wit that loses not its savor. And his tidy cottages in clean little streets, his cosey interiors and deft housekeeping, offset the antics of his characters in such wise as to make his work seem like Howarth illustrations in type. His drollery is so gladdening that cheerful forgiveness may be accorded an occasional lapse into seriousness. The introduction, for example, of a real haunted house as background for one of his stories, "The Toll-House," quickly passes out of mind on the reading of "Double Dealing," a quite perfect specimen of the author's art.

Great Possessions. By Mrs. Wilfrid Ward. New York: G. P. Putnam's Sons.

A noted general, Sir David Bright, has been killed in the Boer war, and his young widow, Lady Rose, is horrified by the discovery that the will left with his solicitor insults both her and his own memory by leaving a mere pittance to her and the bulk of his enormous fortune to a Madame Danterre, of whose existence she has hitherto been ignorant. An enigmatic message forwarded from the front by one of Sir David's comrades adds to Rose's bewilderment. Madame Danterre, who has been blackmailing Sir David for years by alleging that he married her while he was delirious with fever, many years before his marriage to Rose, dies and leaves to her daughter, Molly Dexter, Sir David's fortune and a distressing temptation in the form of the will executed just before his death, reversing the provisions of the former document. Our old friend, the device of the mis-sent letters, comes valiantly to the front at this point. Of course, Molly suppresses the will for a time, and revels in her ill-gotten wealth, only to find it apples of Sodom: equally, of course, her conscience is ultimately too strong for her, and she departs to a life of expiatory service and sacrifice, leaving Lady Rose—a true British type of blond and fragile loveliness, and a compendium of all the virtues—to the enjoyment of her rights, and a somewhat tardy appreciation of the merits of the high-minded and self-effacing hero, who has been her lover since her childhood.

GARIBALDI.

Garibaldi and the Thousand. By George Macaulay Trevelyan. With maps and numerous illustrations. New York: Longmans, Green, & Co. $2.25 net.

Garibaldi is most fortunate in having found at last a biographer who is enthusiastic but not uncritical. The life of the hero of the Defence of Rome and of the Sicilian Expedition must be told with all possible glow and color in order to reproduce for readers to-day some of the romance which held his contemporaries spellbound. He is, indeed, the theme for a young historian. Mr. Trevelyan, though young, has already had wide experience in historical writing, and this experience enables him to keep his balance throughout. Without being himself beglamoured, he causes us to feel the glamour of Garibaldi's person and exploits.

His first work on Garibaldi ("Garibaldi's Defence of the Roman Republic," 1907) left his hero in exile after the astonishing retreat from Rome; this volume begins with a description of him making candles in Meucci's factory on Staten Island. Then follows a rapid sketch of his wanderings, and of the progress of the Italian movement until Cavour, having won the support of Napoleon III, forced Austria to declare war in 1859. In that campaign Garibaldi carried on a brief but brilliant guerrilla warfare along the Lakes. Next he appeared in the autumn as a general in the army of the Central Italian League; but just at the moment when he seemed about to precipitate an untimely invasion of Umbria, he listened to Victor Emanuel's advice, threw up his command, and retired like a reluctant eagle to his island crag. Mr. Trevelyan, having now reached his central subject, narrates in greater detail the preliminary agitations in Sicily, the assembling of the Thousand, their departure from Genoa and landing at Marsala, their amazing march to Palermo and its capture. This logically concludes the first part of their marvellous enterprise. In a second volume the author promises to complete the story of the Thousand.

Such is the substance of the book. What are its qualities? In the first

place, it is written in a brisk and sinuous style; next, its perspective is well kept; thirdly, it is judicial; and, finally, it is based on acquaintance with all the principal printed sources, and also unpublished documents and reminiscences. Mr. Trevelyan excels, as readers of his earlier volume will recall, in describing military operations, especially if they be of the irregular kind in which Garibaldi often showed himself a master. But, both for strategy and conducting an engagement, he rates Garibaldi higher than a partisan leader; we incline to think, however, that Garibaldi belongs with the wonderful Boer commanders, or with a raider like Morgan, rather than with the Stonewall Jacksons and the Shermans of large operations. Still, we have yet to see Mr. Trevelyan's account of the battle of the Volturno, and we must not forget that, whether he be classed as a glorified guerrilla or not, Garibaldi's achievement in 1860 produced results which few modern generals have equalled.

Among the questions concerning the Expedition, none has been more acrimoniously debated than that of Cavour's attitude toward its organization. The tendency of the Garibaldians has been to deny that he helped, and they have cited this or that incident to prove his opposition; the Cavourians, on the other hand, have asserted that, although the Prime Minister would have preferred that there should be no expedition at that time controlled by the Party of Action, he saw that it was safer to let them start than to risk an upheaval at home; and that, having taken this position, he actually gave them as much aid as he could without bringing all the cabinets of Europe down on Piedmont. Mr. Trevelyan in general accepts the latter view, and traces with much discernment the swiftly changing phases of the affair. This may serve as an example of his care to establish the proper relations between the political and the active forces in the episode.

Another point to be remarked upon, because it is representative, is his accurate study of topography. He traces the course of the Thousand from Marsala to Palermo with the minuteness of a map-maker; indeed, he has been over the route himself, and having an eye for the picturesque, he relieves what might otherwise be a painstaking description of a military march by charming bits of local color. Yet in spite of this gift, he never indulges in fine writing for its own sake. The throbbing passages come quite naturally and are not pressed.

In construction, the work is well planned; one topic leads to the next, and unless it be in the account of the approach of the various detachments to Palermo, there is never a lack of clearness. Mr. Trevelyan writes to be read, and those readers who believe that historical writers of the highest class must be full of human interest, will rejoice that he, who is equally a scholar, has proved that this can be accomplished. We await eagerly his concluding work on Garibaldi and Cavour: for his sense of the significance of the Risorgimento is constantly expanding, and it will have a worthy theme in the final conflict between the great statesman and the modern paladin.

The Earliest Cosmologies. By William Fairfield Warren. New York: Eaton & Mains. $1.50 net.

Dr. Warren holds that the ideas of the Hebrews, Egyptians, Greeks, Iranians, and Indo-Aryans concerning the form of the universe were derived from Babylonia, and he finds in the ancient texts the following data for the reconstruction of the Babylonian universe: (1) The earth occupied the central place; (2) the northern half of the earth was viewed as the upper, the southern as the under; (3) the northern half was regarded as having the form of a seven-staged pyramid; (4) the under half was held to consist in like manner of seven stages; (5) the earth was four-cornered; (6) there were seven heavens and seven hells; (7) above the seventh heaven was the "highest heaven," that of the fixed stars; (8) this eighth heaven was divided by the Zodiac into two portions, an upper or Arctic, and an under or Antarctic, and at the pole of the former was Anu's palace; (9) the north pole of the heavens was regarded as the zenith of the cosmic system, and consequently the sun and moon were supposed to move in a horizontal plane; (10) the order of the planets, proceeding from the earth, was: Moon, Sun, Mercury, Venus, Mars, Jupiter, Saturn; (11) to pass from the upper half of the earth to its under half, that is, from the abode of living men to the abode of the dead, it was necessary to cross a body of water; (12) according to Diodorus Siculus (ii, 31) the Babylonians believed that twelve designated stars south of the Zodiac stood in the same relation to the dead as do the twelve corresponding stars north of the Zodiac to the living. Dr. Warren's conclusion is that the Babylonians conceived of the earth (the upperworld and the underworld) as composed of two seven-staged pyramids separated by a body of water; around it seven homocentric globes (the planetary spheres), and beyond these another sphere, the heaven of the fixed stars; and the other ancient cosmologies he holds to be of the same character.

The difficulty in Dr. Warren's learned and well-conducted discussion is that he constructs a symmetrical scheme from data too varied and too vague to admit of such a formulation. It is true that the Babylonians conceived of the earth as a mountain, and it is possible that the sacred staged structure, called *zikkurat*, was an imitation of this form (though another explanation is possible); but the number of stages in a *zikkurat* was not necessarily seven, and there is no proof that the earth-mountain was supposed to have just seven stages. Proof is similarly lacking for the assumption of this pyramidal form for the underworld. In support of his contention Dr. Warren (p. 35) quotes Jensen's statement ("Kosmologie," p. 175): "The seven *tupukati* of the underworld are a facsimile of the seven *tupukati* of the overworld"; now, Jensen defines this term as meaning "earth-zones," not "stages," and understands the seven gates through which Ishtar, in her descent to the underworld, has to pass as indicating simply seven regions or divisions. For the assertion (quoted by Dr. Warren from Winckler) that in the Babylonian system there were seven heavens and seven hells, no proof is offered. There is no support in the Old Testament for a seven-staged pyramidal underworld—*Sheol* (Ezek. xxxii, etc.) is a single underground region where all the dead dwell together; and, it may be added, the word "hell," if it be taken in its later sense, is a misrepresentation of the Babylonian and Hebrew nether worlds, neither of which is a place of torment. Seven heavens there are in late Jewish works, such as the Slavonic "Enoch" (dating from near the beginning of our era), and there is a suggestion of such a scheme in the New Testament (2 Cor. xii, 2); but this is a late application of a sacred number to the structure of the celestial world, not an old cosmological conception. Some of the data in Dr. Warren's list are commonplaces of early thought and have no serious cosmological significance: the earth is necessarily taken as the centre of the universe, and might naturally be taken as quadrilateral, though this latter point is not certain. The belief that to reach the otherworld it was necessary to cross water is found among low tribes—this is one of the many lines of travel to the beyond imagined by the ancients. Hades sometimes lay far off in the west, or in some other direction, and one had to traverse deserts to reach it; sometimes it was placed in the bowels of the earth, and a ghost, like Samuel, came up, or a living pilgrim, like Æneas, went down. In Egypt particularly the conception of the locus of the otherworld was vague and fluctuating; in Babylonia and Canaan it seems to have been always a subterranean region. It is probable that the Babylonian astronomy passed into India and Greece, but in none of these countries do the current astronomical beliefs support Dr. Warren's specific thesis. If the northern half of the earth was regarded as the upper and

the southern as the under part (and a northern people could not think otherwise), and if the sun and the moon were supposed to move in a horizontal plane, this tells us nothing of a seven-staged pyramidal earth. Dr. Warren is of opinion that Homer regarded the earth as a sphere—the relation between this spherical earth and the pyramidal earth is not clear. We cannot here follow our author into his delineation of the voyage of Odysseus and other matters discussed by him; his conclusions all rest on his theory of the earliest cosmologies.

Sailing Ships: The Story of Their Development from the Earliest Time to the Present Day. By E. Keble Chatterton. Philadelphia: J. B. Lippincott Co. $3.75 net.

This is a heartfelt book, the author's affection for his subject being manifest on every page. Since it embodies the results of painstaking and thorough research into records extending back to the era of the pyramids, and of consulting well-nigh all available sources of information, it will long hold first place as an authoritative work. It is very readable in spite of its encyclopædic character. Its parts are made to hang together by the author's endeavor to explain the causes for the invention of each type of craft and rig and to make clear the influence exerted upon nautical design by the early voyages between the Mediterranean and the North Sea, each locality profiting by the experience of the other. The former lively interest in sailing vessels has largely disappeared, except in the case of yachts, and is now historical rather than actual; but Englishmen, who owe so much to maritime adventure, cannot fail to appreciate this endeavor to trace the origin, development, and decline of the sailing ship.

With us, the subject ceased to be of primary importance when we turned our backs on the ocean and began the conquest of the lands lying west of the Alleghanies and the Mississippi; but we played a gallant rôle once upon a time, of which we have good reasons to be proud. Written for his own people, Mr. Chatterton's book gives but scant space to our California clippers and their marvellous voyages. It is to be hoped that some lover of American ships and sailors will do for our builders and navigators what Mr. Chatterton has done for their European colleagues, and will tell us of the Forbes rig and his invention of the double topsail among other kindred matters.

We note in Mr. Chatterton's volume the absence of reference to the famous British East Indiaman Heather Bell, which in the 70's averaged 300 miles a day from just south of the line to the longitude of the Cape of Good Hope, a wonderful record. Although Mr. Chatterton pronounces the sailing ship's valedictory, he seems to believe that commerce will have to revert to its ancient practice when coal and oil become prohibitory in price.

The bibliography is otherwise quite complete, but it is hard to understand how the author failed to consult Nicolaes Witsen's splendid work on shipbuilding, written in Dutch and published in Amsterdam in 1671. The index is exasperatingly inadequate. To ascertain when the square spritsail gave place to the jib and when vessels became weatherly enough to make their way against the wind through "beating" or "tacking," one must run through the text itself; yet these are really critical episodes in the sailor's art. The letterpress and the illustrations from authentic documents leave little to be desired either in scope or accuracy.

Francesco Petrarca: Poet and Humanist. By Maud F. Jerrold. New York: E. P. Dutton & Co. $4 net.

Here is a painstaking labor of love. The author has not merely read widely in the enormous mass of Petrarch literature, but has thoroughly familiarized herself with the original texts, including Latin works usually neglected, and generally has provided her own translations. She has shown tact in arrangement, and has chosen a form of expression at once sufficiently enthusiastic and self-effacing. It seems to us the best single work on the humanist poet in English, and not likely soon to be superseded.

Naturally there are slips, and occasionally points where deeper study would have modified her opinions. The view taken of the poetry of the Troubadours seems to us far too favorable, based rather upon the old romantic criticism of Fauriel and Renouard than upon intimate acquaintance with the texts. Koeppel's various studies on Petrarchism in England would have been of assistance in preparing the chapter on the imitators of Petrarch. Since the right dates of Chaucer's first Italian journey were established a dozen years ago in *Modern Language Notes*, XI, 210—and more briefly in the *Nation* in the autumn of 1896—it is disheartening to note once more the venerable error that the poet was in Italy the greater part of the year 1373. His absence from London was less than four months, from December 1 to April 28; his sojourn in Italy must have been rather less than two, and the chance that he had time to make the legendary visit to Petrarch is a very remote one. Had he seen the Laureate he could hardly have failed to be better informed concerning Boccaccio, whom he imitated so freely. The two charming impersonations of Music and Rhetoric which are reproduced as works of Melozzo da Forlì have been assigned by competent authority to Justus of Ghent. Fifteenth-century prints of the Triumphs are useful illustrations. Evidently no portrait of the poet has seemed worthy of presentation, which seems a pity, for Guariento's repainted fresco at Padua is not without merit, while many of the early portraits are characteristic enough to inspire confidence.

We would gladly dwell upon this excellent book, but its subject is too large to be compassed in brief notice. Instead let us present a passage which will give a fair idea of the author's manner. It is on love of nature, in which all the world knows Petrarch was a forerunner:

> Love of nature, as of all things else, can be of many kinds. There is the love of the artist, who seizes an effect and constructs a picture; there is intellectual love which is impressed by brightness, or sombreness, or savageness, by mystery or simplicity, according to the cast of mind; there is the love of association which marks out certain scenes and places from all others, not because of what they are, but for what they suggest and embody; and then there is the spontaneous love of nature for her own self, the only love which is entirely worthy of the name, which is all-embracing, which does not look for sympathy, but imparts it, which does not ask to be understood, but understands. None of these loves was foreign to the soul of Petrarca, but the last was preëminently his, and in this he was a pioneer.

In spite of Vaucluse, Italy was always the darling land of the poet. He was the first to express many modern feelings, and he first uttered the longing that thousands of enthusiasts have felt long before Du Bellay, Goethe, Byron, and Browning gave to a universal nostalgia classic sanction. "One should call every one an exile who is condemned to live out of Italy," writes Petrarch once for all. The epigram is worth perhaps most of the subsequent poetic variations on the theme.

Notes.

The Revells will soon publish the autobiography of the Rev. Dr. Henry H Jessup, under the title, "Fifty-three Years in Syria." Dr. Jessup became a missionary of the Presbyterian church to Syria in 1860.

Dr. S. Weir Mitchell celebrated his eightieth birthday, on February 15, by publishing a new book of verse, "The Comfort of the Hills," which includes besides the title poem the "Ode on a Lycian Tomb," "An Ode to Battles," "The Song of the Captured Confederate Battle-flags," "The Birthday of Washington," and "In Memory of William Henry Drummond."

To the Tudor and Stuart Library has been added a reprint of the first authentic edition (1643) of Sir Thomas Browne's

"Religio Medici," together with "Observations upon Religio Medici, occasionally written by Sir Kenelome Digby, Knight 1643." Editions of the "Religio Medici" are abundant, but none of them, to our knowledge, can compare with this beautiful reproduction from type made from dies of the seventeenth century. We have here, too, the assurance of accuracy that goes with the work of the Clarendon Press. The interest of Sir Kenelm Digby's "Observations" is more curious than intrinsic, but it was a good idea to bind it up with the "Religio." One day in December, 1642, Digby, then lying a prisoner in Winchester House, received from the Earl of Dorset a letter recommending the "Religio," which had appeared in a pirated edition. Digby immediately sent out his servant to obtain a copy of the book, and on the same night, the 22d ("I thinke I may say the 23., for I am sure it is morning, and I thinke it is day"), sent his "Observations" on the work to Lord Dorset. Just how Digby found time to write his long review in one night, as it appears he did, Digby's present reviewer would give a good deal to know. His praise of the book is well known:

> This good natur'd creature I could easily perswade to bee my Bedfellow, and to wake with mee as long as I had any edge to entertaine my selfe with the delights I sucked from so noble a conversation.

"Town Planning; Past, Present, and Possible," by H. Inigo Triggs (Imported by Charles Scribner's Sons), is a beautiful literary expression of the civic spirit now abroad in England, a legal manifestation of which was the Housing and Town-Planning bill of 1908. After considering ancient and modern types of the town, Mr. Triggs discusses in a practical way the subject of town planning for the health, convenience, and beauty of urban life. The book contains 173 illustrations, making an impressive exhibition of what can be done when the public business is well managed and public resources are ably administered. To an American reader the work may suggest sad regret that we do not possess institutions of government able to perform such noble functions of public service.

"Readings in American Government and Politics," by Prof. Charles A. Beard (Macmillan), is a source book of the kind now increasingly employed by political science in establishing itself on an inductive basis. It is a record of events and proceedings illustrative of the actual characteristics of American government, national, State, and municipal. The pathology of our politics receives due attention and such morbid traits as log-rolling, "Senatorial courtesy," corporation benevolences to party managers, Tammany junkets, etc., receive appropriate exemplification in the records presented. The work is well-planned and well-executed.

In the intellectual movement which it has become usual to call the twelfth-century renaissance John of Salisbury is one of the central figures. An Englishman by birth, he spent many years with the great teachers of Paris and Chartres, in the leisurely days when there were neither courses of study nor degrees and men were free to study as they would; made no less than ten journeys to Italy, where he saw much of the papal court and came into contact with the new translations of Aristotle; served as secretary to three successive archbishops of Canterbury, including Becket; and died bishop of Chartres. No writer, of his own age, or, indeed, of the whole mediæval period, shows so broad and accurate a knowledge of the Latin classics, and nowhere is the cause of classical learning defended against the rising tide of the scholastic logic more warmly than in his "Metalogicus." His other principal work, the "Policraticus," or "Statesman's Book," is a discursive treatment of a variety of political and philosophical themes, enriched by a wealth of ancient examples, but not devoid of references to the author's own times, as, for instance, to the itinerant justices of Henry II, who are here first mentioned by that name. A critical edition of this interesting cyclopædia has just been published in two volumes by Clement C. I. Webb (Frowde). The text is based on the manuscript of Corpus Christi College, Cambridge, which is almost certainly the original presentation copy given by the author to Archbishop Becket. The annotation is judicious, and the effort to identify the sources of John's citations has taken his editor on long excursions into the civil and canon law and the ecclesiastical writers of the Middle Ages, as well as over a wide range of ancient literature.

"Virginia's Attitude toward Slavery and Secession," by Beverley B. Munford (Longmans), is an attempt to show that the secession of Virginia was due, not to devotion to slavery and a desire to perpetuate it, and least of all to hostility to the Union, but to the adoption by the Federal government of a policy of coercion. This violated the compact theory which, in Virginia as in the other cotton States, had always been regarded as constitutionally sound; because it would compel those States to remain in the Union after they had decided to withdraw from it. In support of this contention, Mr. Munford examines in considerable detail, and with much fresh and suggestive array of evidence, the history of slavery in Virginia, dwelling particularly on the comparatively small number of slave-owners, the injurious effect of slavery on the economic development of the State, the pronounced anti-slavery sentiment among all classes, and the humane treatment of the slaves themselves. Even the fact that every proposed scheme of emancipation seemed beset with insurmountable obstacles, and that pro-slavery opinion grew markedly after 1833, did not prevent Virginians from freeing their slaves in large numbers down almost to the outbreak of the civil war. Mr. Munford's temper is so admirable, and his method so direct, as to make adverse criticism seem ungracious. We cannot but think, however, that he has somewhat confused the cause of secession with its occasion. Granted that war was entered upon, as Lincoln said it was, not to abolish slavery, but to preserve the Union, it is, nevertheless, hardly credible that resistance would have been so prompt or determined had there been a very deep or widespread desire to escape from a social system of which slavery was one of the chief bulwarks. If, as Mr. Munford insists, Virginia seceded simply because the Federal government resorted to coercion, the conclusion is unavoidable that the State preferred to continue on a low social plane under its own guidance rather than to attain an admittedly higher one by Federal aid. That such was the fact, not in Virginia alone, but throughout the cotton States, is, we believe, the true explanation of secession; but we are not clear that Mr. Munford expects such an inference to be drawn.

Maurice de Saxe, adventurer, soldier of fortune, royal bastard, avowed lover of Adrienne Lecouvreur and many others, is one of the shining figures of the wonderful eighteenth century. Having been brought into the world in total disregard of the ordinary observances in regard to marriage, he continued to go through life with a similar disregard for conventionalities. Although, perhaps, not equal to his father, Augustus the Strong, reputed by scandal and Carlyle to have been the father of three hundred and fifty-four bastards, Maurice still lived a life not devoid of affairs of the heart. As he left no memoirs, W. R. H. Trowbridge has undertaken to provide him with some, under the title "A Beau Sabreur, Maurice de Saxe, Marshal of France: His Loves, His Laurels, and His Times, 1696-1750" (Brentano's). This supposititious autobiography, based on some historical study, is rather cleverly done. It is easier to recreate the eighteenth century atmosphere and to give a proper idea of Maurice's remarkable career by letting him tell his own story, much as in an historical novel, than would be possible in a more serious biography written in the third person. So he describes his extraordinary ancestors, his acts of bravado, his life in Paris, and his conquests over the fair sex. Incidentally, he repudiates the usually accepted statement that he persecuted Justine Favart with a *lettre de cachet*. Maurice was also a good deal of a soldier. Frederick the Great had the highest idea of his abilities. But with this side of his life—with his long campaigns and with the facts of political history—Mr. Trowbridge does not allow him to weary posterity.

It is doubtful if a more vexatious colonial problem confronts British statesmen to-day than that involved in the question of Asiatic immigration into the colonies. In recent years a widespread anti-Asiatic agitation has arisen, showing itself most clearly in the Transvaal; the opposition to Indian immigrants in British Columbia; the dispute between Japan and the United States concerning school regulation in San Francisco; the drastic anti-Asiatic legislation introduced in the Natal House of Assembly; the outcry in Jamaica against Chinese shopkeepers; and the hostility shown by Australia and New Zealand toward immigrants from China. An attempt is made to present a fair and impartial summary of the question by L. E. Neame in his small book entitled, "The Asiatic Danger in the Colonies" (London: Routledge & Sons). For Great Britain, the status of the Asiatic is an empire problem, according to Mr. Neame, because of the political changes of the last half-dozen years. It is rendered the more complicated by Britain's alliance with an Asiatic Power and by the fact "that millions of the Eastern races are British subjects and claim the privileges which the empire boasts it confers." The author maintains that the colonial attitude toward Asiatic immigration is in no way

due to a lack of appreciation of Asiatic virtues, but is rather a testimonial to Asiatic capacity for attaining success. He aims to justify the policy adopted.

The German public must long ago have mastered the elementary data in Baedeker's United States, if it is educated up to a handbook on New York which devotes itself almost exclusively to the city's history and an interpretation of the city's life. The volume which Mrs. A. von Ende has contributed to the *Kunst* series, imported by Lemcke & Buechner of New York, is an admirable bit of work. We have nothing just like it in English. Within 130 small pages Mrs. von Ende has brought together an extraordinary amount of information, and presented it with more than common charm and lucidity. The point of view is that of the sympathetic and philosophic foreigner. That will explain a certain distribution of light and shade which a native writer would hardly fall into. There is, for instance, the strong emphasis on Poe and Whitman, whose appeal to the European mind is traditional. In similar tone is the specific reference to our present school of radical publicists—single-taxers and Socialists—whom Europeans are apt to take as a more important factor in our politics than we regard them, and possibly with greater insight than we display. But as a matter of fact, all through her little book, Mrs. von Ende has laid stress on the social development of New York as affected by the appearance of new classes and new ethnic elements. As part of a series devoted to *Kunst* the present volume goes to proper pains to gather up all that can be said for our literature, our art, and our music since early colonial days.

Some of the information heretofore available chiefly to German students respecting the influence of Babylonian and Persian religions on the early development of Christianity is presented in popular form by Dr. Paul Carus in "The Pleroma: An Essay on the Origin of Christianity" (The Open Court Publishing Co.). The book is a sketch of the growth of the principal doctrines and usages of Christianity from the point of view of those who hold that the influence of Hebrew thought and usages upon Christianity has been grossly exaggerated, and that religious ideas current in the pagan world in the first centuries had far more to do with determining the character of the Christian faith than has been popularly imagined. Dr. Carus holds that Judaism "did not bear or bring forth Christianity, but that Christianity is, so to speak, a grandchild of ancient paganism, and the motherhood of Judaism is by adoption merely." He maintains that Paul was the founder of the Gentile church, and that he "took his building materials, not from the storehouses of the faith of his fathers, but from the wreckage of the destroyed temples of the Gentiles." Like Delitzsch, Winckler, Jeremias, and Gunkel, among the Germans, Dr. Carus calls attention to neglected factors in the origin of Christianity, but writers of this school are inclined to do less than justice to the continuity in moral spirit and religious attitude between the faith of the Hebrew prophets and that of the Christian apostles, and to forget the disparity between the religion of Paul and of Augustine, and the pagan cults, whose vocabularies and forms they undoubtedly employed to a greater extent than is commonly allowed.

Neither excellent paper nor handsome type has been spared in the making of Edward J. House's ornate volume, "A Hunter's Camp-Fires" (Harper & Bros.). It is a collection of hunting adventures in North America and Africa by a well-known sportsman, who goes about his task in an unpretentious, straightforward way. The extent of Mr. House's experience is seen by the fact that he describes the killing of nearly every important game animal from the walrus of Whale Sound to the equatorial elephant of Meru. If there be any particular charge to bring against the book, it is that all such issues as the scenic, the ethnographical, and the geographical are almost entirely subordinated to that of the chase itself, and that hence the volume contains an inordinate amount of killing. The charge will no doubt rest lightly on Mr. House's conscience, for he affirms that "the legitimate and sportsmanlike pursuit of big game has never required any apologies," and declares that he has found an element of excitement in hunting with a rifle that he has always missed when using the camera. And these records of his adventures bear sufficient witness to an habitual state of palpitation of the heart, for in at least three separate chapters he relates that, at the crucial moment, he had forgotten to throw a cartridge into his rifle-breech. This may be regarded more in the light of extreme frankness on the part of Mr. House than any especial carelessness, for few hunters of temperament in the course of so extensive a career would have defaulted less. Mr. House makes no pretence to elegance of diction, and perhaps no very exalted standard of literary criticism should be applied to books of this kind; but it may, nevertheless, be permitted to the reviewer even of a record of slaughter to regret a lack of feeling for the meaning and value of words. The book is well illustrated by eighty photographs made by the author. There is no index.

The work of issuing the Weimar edition of Goethe's "Werke" (Weimar: Hermann Böhlaus Nachfolger), is fast nearing completion. The three new volumes that have just appeared, XLIV, XLVII, and XLVIII of the "Briefe," edited by Max Hecker, Carl Schüddekopf, and Hans Gerhard Gräf, respectively, under the supervision of the editor-in-chief, Bernhard Suphan, complete the publication of the poet's letters down to the end of June, 1831. Vol. XLIX, edited by Hecker, and containing Goethe's last letters, is in press and will appear shortly. Schüddekopf is now working on Volume L, which is to comprise "Nachträge," and the final index. This concluding volume of the series is promised for the current year. Vol. V2 of the "Gedichte," so long awaited, is now in press and is to be issued at Easter. Julius Wahle, the editor, has finished this work, begun over twenty-two years ago by Gustav von Loeper, the earlier volumes of the poems having appeared in 1887, 1888, 1890, 1891, and 1893, respectively. The publication of these three remaining volumes will complete the monumental edition, with the exception of the index to the "Tagebücher," which students of Goethe will be glad to hear is now also well under way. The edition, when complete, will form a "stately row" of one hundred and thirty-six volumes. The three volumes just published contain 739 letters, of which 373 are for the most part new, as they have either never before been printed at all or only in part. In the critical apparatus are included forty-five more letters and notes, in the writing of which Goethe had some part, and thirty-three of these are now for the first time made accessible. Many of the new letters are, to be sure, of a purely business character, but a goodly number shed added light on matters of importance to the student of the poet's life and work. The total number of letters thus far published in this edition, including those in the "Lesarten," is 13,193, which will be increased by a few hundred when the last two volumes appear.

Instead of the volume of "Publications" issued annually by the Goethe Society of Weimar, as a quasi-Christmas gift, there was sent to each member last December a set of the so-called "Volksausgabe" of Goethe's works, edited by Erich Schmidt, with brief introductory notes, commentaries, and glossaries. The ruling spirits of the society have for some time been planning such an edition, in the hope that Goethe's popularity might not always be confined to the better educated and the rich. In order to achieve this end a liberal subsidy was paid to the Insel-Verlag of Leipzig to publish the popular edition and deliver complimentary sets to the society's members. Besides the 3,000 and more necessary for this purpose, an edition of 20,000 sets was put on the market at the low price of six marks for the six volumes, bound, and, to the happy surprise of those who fathered the plan, the edition was soon exhausted. The editor's introduction of twenty-eight pages gives an outline of the poet's life, not a simple, popular narrative, as might, perhaps, have been expected, but a succinct statement of the salient facts, liberally interspersed with bits of authoritative advice intended to keep the neophytes from being led astray by skeptics and scandal-mongers.

Prof. George T. Flom has contributed an historical and bibliographical introduction and notes, to a new school edition of Esaias Tegnér's "Frithiofs Saga" (Chicago: Engberg-Holmberg Publishing Co.). The list of translations of the poem is based on the bibliography by Elof Tegnér in Vol. VII of the large 1885 edition of Tegnér's "Samlade skrifter," and Mr. Flom has added the titles of those that have appeared since. The text is accompanied by illustrations reproduced from August Malmström's and Knut Ekvall's originals. The former are excellent in historical and archæological details as well as artistically; the latter might well have been omitted.

In the Semitic Study Series, edited by Professors Gottheil of Columbia University and Jastrow of the University of Pennsylvania, two new numbers, xi and xii, have appeared (G. E. Stechert & Co.): the "Mishnah Treatise Sanhedrin," edited, with introduction, notes, and glossary, by Prof. Samuel Krauss of the Israelite Theological School of Vienna, and "Selections from the Arabic Writings of Maimonides," edited, with introduction and notes, by Prof. Israel Friedländer of the Jewish Theological Seminary of America, New York.

These numbers maintain the excellent standard of their predecessors, and, like them, will be very serviceable to college students and others who are unable to get access to larger works or need guidance in the study of peculiar idioms. The selections are judicious. "Sanhedrin" is an important legal and ethical tract, and, though the Arabic writings of Maimonides have been translated into Hebrew, the student should know the original; for the guidance of the beginner a table of the Hebrew letters used in writing Arabic is given, and there is a list of the differences between classic Arabic and the Arabic of Maimonides, which, as Dr. Friedländer points out, was not a distinctively Jewish form, but the common dialect of the time (the twelfth century), the *koinē*, employed some times, though rarely, by good Arabic authors. The two editors of these numbers are authorities in their respective subjects and have done their work carefully. The proofreading is remarkably good, considering the fact that the editors were at great distances from the place of printing (Leiden).

Arthur Munby, an English poet, whose "Dorothy: a Country Story," in elegiac verse, was republished in this country soon after its appearance in England in 1881, died last month at the age of eighty-one. He had also published "Vulgar Verses," intended to be verses of common life, under the pseudonym of "Jones Brown"; "Susan," "Ann Morgan's Love," "Poems, Chiefly Lyric and Elegiac," and, last year, "Relicta." He was one of the competitors for the prize offered in 1859 by the Crystal Palace Company for a poem on the Burns centenary, and his contribution was considered one of the best offered.

The Right Rev. John Dowden, Bishop of Edinburgh, died January 29, at the age of sixty-nine years. He was the eldest brother of Prof. Edward Dowden, and had served as Donnellan lecturer and select preacher at Dublin University, and as Pantonian professor of theology at Edinburgh University. He had edited "Correspondence of the Louderdale Family, with Archbishop Sharp," and had published "History of the Celtic Church in Scotland," and "History of the Theological Literature of the Church of England."

Franz Rittweger, the German author and journalist, died recently at Frankfort, at the age of eighty-one. He at one time edited a paper in New York, and thereafter was on the staff of the Frankfurter *Zeitung*. His publications include "Aktenstücke zur neusten Geschichte Frankfurts," and "Frankfurt am Main im Jahre, 1848."

Science.

A History of Botany, 1860-1900 By J. Reynolds Green, F.R.S. New York: Henry Frowde. $3.15.

This "History of Botany" is a continuation of the work by Professor Sachs, which covered the period from 1530 to 1860. It is interesting to note that the two volumes are of approximately the same size, although one treats of a period of above three hundred years, and the other one of only forty. But that is the ratio which prevails in many other fields of scientific activity, and indicates the rapidity of progress in the latter half of the nineteenth century.

Professor Green has wisely followed the method pursued by Sachs in grouping the special subjects involved in botanical advance under separate headings: as Morphology, the Anatomy of Plants, and their Physiology. As to the general introduction, it is a masterly presentation of a difficult matter. To give in forty pages an impartial account of the main features which characterize the steady progress of the science demands the exercise of a judicial mind familiar with all the evidence. It is not easy to apportion the credit due to this investigation and to that, especially when the investigators belong to different nations. The author justly assigns to Sachs and to Darwin the honor of having by their own stimulating work and by that of their immediate followers, caused the greater part of the marked progress during the forty years under consideration.

Some of the chief matters which are emphasized in the main body of the book are the following: (1) The great impulse given to morphology in its widest sense by the theory of descent and by a more scientific study of fossil forms; (2) the replacement of certain convenient dogmas by a statement of actual conditions in development; (3) the vast advance in all branches of plant physiology. It is not likely that any botanist will agree with all that Professor Green has stated in regard to these subjects, but it must be confessed by all that in general he has been impartial. Professor Green refers to Campbell, Farlow, Ganong, Jeffrey, and Webber, noting the substantial contributions which each one of these American botanists has made to the science. Points which will strike the reader most forcibly when comparing this volume with its predecessor are these: (1) The great increase in botanical activity in England, during the period treated of, and (2) the comparative silence with which important work in systematic botany is passed over. And, furthermore, œcology, which is practically physiology in a wide sense applied to systematic and geographical botany, as explanatory of adaptations, does not receive quite its due. But, on the whole, the treatise can be heartily recommended as well-balanced and trustworthy.

The "Text-Book of Anatomy and Physiology for Nurses" (Macmillan) is the third edition of the book compiled by Diana C. Kimber and first published fifteen years ago. This edition professes to have been completely revised by Carolyn E. Gray of the New York City Training School for Nurses. The revision might well have been carried much further, for many fundamental facts of physiological interest are neglected or quite inadequately stated. Completely neglected, for example, are foods and diet, although the digestive processes are perhaps sufficiently described. On the anatomical side, there is almost too abundant, although uneven, material with very numerous illustrations well reproduced from good sources. The book seems to assume that all nurses are women and nurse only their own sex. There is a liberal glossary, which contains many surprises.

We have often wondered what use color-blind lovers of flowers can make of the numerous handy little guides to plant names in which the species are arranged according to the solar spectrum. For those with normal vision the scheme works well, and to such persons the handy little book, with the amazing title, "Who's Who Among the Wild Flowers" (Moffat, Yard), will prove useful and interesting. The author, W. I. Beecroft, has given sketches of almost two hundred common plants of the Eastern United States, and short descriptions of many more. Here and there, blank pages or parts of pages are left for notes to be made on the spot when one is collecting the plants, and this hint as to the utility of fresh notes ought to be taken by every user of the book. Descriptive notes, carefully made at the time of collecting plants, have much value, especially in these days when more attention than ever before is paid to slight differences of form and surface. The volumes of contemporary biography entitled "Who's Who" are compiled largely from material furnished by the people written about. The present volume, on the contrary, gives its sketches without much assistance from the subjects described. It is strongly to be hoped that the amateurs who use this convenient manual will try to see what the plants described have to say for themselves. The author has shown excellent judgment in the selection of non-technical terms; the book is, even for the merest beginner, very easy reading, and the author has wisely chosen a conventional and international, and not a provincial, system of nomenclature for the scientific names of the species.

Mrs. Fanny Bullock Workman and her husband describe, in the *Geographical Journal* for February, their sixth expedition to the Himalayas. This was to explore the Hispar glacier, which in extent, complexity, and grandeur exceeded every other ice expanse they had seen. Especially interesting were the snow columns, called *nieve penitentes*, of which pictures are given as well as of a camp at an altitude of 19,100 feet, and a peak 21,350 feet high with Mrs. Workman on the summit. This number also contains the paper on the "Cycle of Mountain Glaciation" read by Prof. W. H. Hobbs of the University of Michigan at the last meeting of the British Association, with maps and reproductions of photographs.

The second volume of the "Missions au Sahara" (Paris: Librairie A. Colin), by R. Chudeau, treats of the region between the Niger and Lake Chad, the physical conditions, fauna, flora, the life of the natives, and the commerce of all the Sahara. The investigations seem to show that the old idea that the desert was encroaching on the fertile land is incorrect. There are extensive districts which were formerly sand wastes but are now covered with vegetation.

The little volume, "A History of the Oxford Museum" (Henry Frowde), by H. M. Vernon and K. Dorothea Vernon, is more than its name implies, being a brief history of the fates of natural science at the most conservative of universities. For the century and a half after Bacon Oxford kept her theological skirts clean by the simple expedient of appointing, when possible, to the chairs of science incumbents who had none of the dangerous qualifications. As late as Acland's time, in the middle of the last century, the lectures were closely censored. Dr. Kidd, "after examining some delicate morphological preparation", declared, first, "that he did not believe it, and, secondly, that if it were true he did not think God meant us to know it." The demonstrations were ordered stopped on the ground that the professorship called only for lectures. At last the Museum rose under the patronage of Ruskin, being the finest Gothic design of the talented Woodward. Here a lover of symbolism might like to see an architectural expression of that keen idealism which for two centuries had maintained the feeble spark of science in chilling surroundings. The description of the building of the Museum is very interesting, and there are precious anecdotes of the eccentric stone-cutter, O'Shea, to whom some of the best decoration is due. When this fine structure was nearly up the university seriously proposed that, in order to save expense, the curator should be of the grade of a college butler. The tide may be said to have turned at the university in 1860, when Huxley, in the Museum library, made his monumental retort to Wilberforce's burlesque of the evolutionary theory.

The liberal spirit of the present régime in Turkey is shown by the interest in archæological research. The first thorough exploration of the famous church of St. John of the Studium is being made by the Russian Archæological Society, which is bringing to light the remains of ancient buildings, one of which is thought to be a temple of classical times, as well as sculptured stones, bas-reliefs, and ancient tombs. An English archæologist is investigating the church of St. Irene, hitherto so difficult of access, and the remains of the Byzantine palaces on the Marmora are also to be submitted to his research. This modern spirit is shown, too, by the magnificent recent additions to the Museum galleries and the care with which its treasures are guarded.

John Ferry, an ornithologist connected with the Field Museum at Chicago, died in that city on February 11. He was born in 1877, graduated at Yale in 1901, and had served on the United States Biological Survey and as a collector for the Smithsonian Institution.

Sir Charles Todd, who had been government astronomer for South Australia for more than thirty years, died last month at Adelaide. He was born in 1826, and had served at the Royal University and the Cambridge University. Since 1861 he had been in charge of the Adelaide Observatory, where he had made many valuable astronomical observations.

William Hillhouse, until recently professor of botany at Birmingham University, died recently at the age of fifty-five. He was a co-founder of the Bedford Natural History Society, and of the *Cambridge Review*, and had published (with Strassburger) a "Practical Botany."

Prof. August Meitzen, the German statistician and economist, died recently in Berlin at the age of eighty-six. He became professor of political economy in Berlin University in 1875, and had published "Geschichte, Theorie, und Technik der Statistik," "Internationale land-und forstwirtschaftliche Statistik," and "Siedelung und Agrarwesen der Westgermanen und Ostgermanen, der Kelten, Römer, Finen und Seawen."

Drama.

IBSEN'S LITERARY REMAINS.

The literary remains of Henrik Ibsen have appeared simultaneously at Copenhagen and Berlin, making three bulky volumes in the original language and four slightly smaller ones in the German version. The total number of pages in the Norwegian-Danish edition runs up to 1553, and yet this represents only a part of the voluminous deposit of notes, drafts, corrected manuscripts, and parallel versions, now owned by the Christiania University. The editing has been done with laudable discernment by Dr. Halvdan Koht of Christiania and Dr. Julius Elias of Berlin, both of whom are already well known to Ibsen lovers through their editing of his letters. Their personal contribution to the present work includes an excellent analysis of Ibsen's working methods and a series of biographical and bibliographical notes that must prove highly valuable to all future students of the Norwegian dramatist's work and life. Besides the 122 pages of preface and introduction, the first volume contains about ninety poems, most of which made their first—and hitherto only—appearance in Scandinavian newspapers during the fifties and sixties; a considerable number also of articles, reviews, speeches, prose sketches, notes, and aphorisms; two separate versions of his early play, "Olaf Liljekrans," one of which was meant to serve as liberetto for an opera; the fragment of a prose version of "Love's Comedy," already known under the name of "Svanhild"; a couple of chapters of a novel that was never finished, and one complete, hitherto unpublished, play, "St. John's Eve." The second volume opens with the so-called "Epic Brand," previously published in a separate volume under the editorship of Karl Larsen. The rest of this volume and the third contain extensive notes, sketches, variants, corrections, and "working manuscripts," for all the later plays, from "Peer Gynt" to "When We Dead Awaken."

The bulk and scope of the material thus given to the world make it very hard to form any exact estimate of its quality. Even at a glance, however, it seems evident that these volumes fail to offer a great deal that can be of interest to the general reading public. Throughout, their value is psychological rather than literary. As documents revealing the workings of a master-mind they hold a high position; but the actual novelties which they bring are little more than literary curiosities. This applies, for instance, to "St. John's Eve." This romantic prose comedy in three acts, written in 1852 for the Bergen Theatre and performed there twice, is strikingly characteristic of that period, just after the production of his firstling, "Catiline," when the young Ibsen had neither found a form for himself nor discovered his own particular genius. In other words, the play is as little Ibsenesque as it could possibly be. Its sole interest lies in the fact that it shows Ibsen striving to write in prose at a much earlier time than we heretofore suspected. What has just been said of this play applies also to all but a very few of the poems. They are youthful, immature, and lacking in everything but a certain facility of language that always belonged to Ibsen when he expressed himself in verse. A conspicuous exception is formed by some verses written as late as 1871 and entitled "Judas." They may be translated as follows:

Among the disciples he stood apart—
Might surely be called twelfth wheel on the cart.

The motive is unknown, that prompted his act,
For history nothing records but the fact.

We know that, with conscience nodding, he went
And kissed the Saviour—as it was meant.

Both for heaven and hell thus his mission was filled,
But what if Judas had otherwise willed?

Here we have the germ of that mighty double drama, "Emperor and Galilean," which Ibsen to the very last proclaimed his greatest work. And here we have, too, a laconic summary of the problem that overshadowed all others in his mind during the entire first half of his fifty years of playwrighting: the problem concerning the relation of the individual human will to that world-will which Ibsen found manifest in every phase and form of existence. And among the notes for "Emperor and Galilean" we find this one: "When the world spirit can find no more souls to tempt and lead astray—then the judgment day has arrived." It is, of course, impossible to look through these volumes without being deeply impressed with the painstaking way in which Ibsen worked, the careful attention he gave to the minutest details, and his habit of trying out the same idea over and over again until, at last, he succeeded in getting at its innermost essence.

Except for the opportunities which it af-

fords Madame Kalich, the reasons for the production of "The Witch" at the New Theatre are somewhat obscure. The piece has no particular merit as literature or drama, is not valuable as historical reminiscence or illustration, is unpleasant in subject and depressing as entertainment. It is an adaptation by Hermann Hagedorn from a play by H. Wiers-Jenssen, a Scandinavian dramatist, and the scene is transferred from Denmark to Salem, Mass., the action and personages, it is said, being as appropriate to one country as the other. This can readily be believed, as, with one exception, the incidents and characters are entirely conventional. The real dramatic interest centres around the progress of an illicit love story, to which the witchcraft episodes are largely subservient. Joan, the heroine, a girl of Portuguese descent, has been married for nearly a decade to Absalom Hathorne, an old minister—an ex-witch-hunter—who neglects her. She is sullenly eating her heart out, when her stepson, Gabriel, a youth of her own age, returns home. For him she conceives an overmastering passion, and soon—having heard that her mother was a witch—begins to test her own abnormal powers, practising on her lover and her husband. Having become Gabriel's mistress, she confesses her infidelity to Absalom, in a moment of reckless exultation, and tells him that she wishes he were dead. Whereupon, stricken with heart disease, he expires at her feet. She and Gabriel plan to hush the matter up, but the dead man's mother denounces Joan, proclaiming her a witch and murderess, and demanding that she be tried by the ordeal of touch. In the presence of her husband's corpse the wretched woman collapses, and, in a state of semi-stupefaction, confesses to the truth of everything alleged against her. The implication is that she will be hanged in due course. The whole story is melodrama, without much originality or any distinction, except in the case of Joan, who, in the hands of Bertha Kalich, becomes a significant and tragic, if often unintelligible, figure. Her psychology is incomprehensible. It is impossible to decide whether the author meant her to be regarded as actually possessed, the victim of hysterical or insane delusion, or simply conscienceless and lewd. But the theatrical opportunities in her are large, and Madame Kalich makes very full—possibly, too full—use of them. The ignoble passions—hate, suspicion, abject fear, and low desire—have seldom been depicted more vividly. But her Joan is a thing apart from the play itself, which maintains a very low level when she is off the stage.

Edmund Gosse, in a letter to the London *Times*, says: "As all the biographies repeat, Henrik Ibsen lived in an apothecary's house at Grimstad from 1844 to 1850, from his sixteenth to his twenty-second year. . . . A national movement is now being made in Norway to purchase it, and to fill it with memorials and biographical objects—to make an Ibsen House, in fact, which shall be to Norwegians all that the Goethe House in Frankfort is to Germans."

There is said to be a possibility that Miss Anglin may abandon—temporarily, at any rate—the emotional drama with which she has been associated for so long.

The annual Shakespeare Festival at Stratford-on-Avon will this year occupy nearly four weeks. For the twenty-second time the performances will be under the direction of F. R. Benson. The festival will be opened by Sir Herbert Tree, with a performance of "Hamlet," given in curtains. Among other artists taking part in the festival will be Miss Geneviève Ward, who will appear as Volumnia and Queen Margaret. Arthur Bourchier and Miss Violet Vanbrugh have promised to appear as Benedick and Beatrice, Otho Stuart as Clarence and Bassanio, Henry Ainley as Marc Antony, Lewis Waller and Miss Winifred Emery as Benedick and Beatrice, James Carew and Miss Ellen Terry as Shylock and Portia.

The reported failure in London of "The Strong People," C. M. S. McLellan's latest play, may be accounted for in more than one way. Apparently it is a vigorous and serious piece of work, but the improbability of the plot and the fact that the scenes and the conditions depicted are American may have had a good deal to do with the cool reception.

It seems pretty plain from the criticisms in the London press that Comyns Carr, in his dramatization of Stevenson's "Dr. Jekyl and Mr. Hyde," has missed the point of it as completely—and vulgarized it as remorselessly—as any of the preceding adapters. It is pretty plain, also, that H. B. Irving, in his dual embodiment, has paid more attention to the clumsier melodramatic possibilities than the finer spiritual significance of the story.

Music.

Musicology. By Maurice S. Logan. New York: Hinds, Noble & Eldredge.

The Nature of Music. By Julius Klauser. Boston: Houghton Mifflin Co.

"Musicology" is a word coined by Mr. Logan to designate the science of music. His book is accompanied by a circular which contains the statement that "until now no one has produced a book teaching solely the science of music." As a matter of fact, there are dozens of books on the theory and philosophy of this art. Mr. Logan's, however, is more comprehensive than most of the others. It deals with rhythm, expression, keys, intervals, chords, progressions, modulations, counterpoint, acoustics, sources of musical sound, the ancient Greek modes, temperament, etc. Expression, the most important of all the aspects of the art, is treated much too briefly, although the author includes under that head embellishments, which are usually the negation of expression. As a convenient compendium for advanced students his book may be commended. It is rather Utopian on his part, however, to expect it to be used in schools. He holds that music should be studied as a science wherever instruction is given; that every child should be taught its fundamental principles, whether or not he is to be a singer or a player; and that as a means of developing the mind, and rounding out education, musicology is as much entitled to a place as any other "ology." This may be true, but school children are already overburdened with subjects, and the little time given to music in the public schools should be devoted to it as an art, with just enough of the science to make it understandable.

Music as a science is also the subject of Julius Klauser's book, but he treats of a few aspects only, and presents some startlingly novel theories and views. As the aim of contemporary musicians like Debussy and Strauss seems to be to subvert all the established laws of composition, so Mr. Klauser starts out by contradicting the fundamental tenets of the musical historians—particularly the tenet that melody antedates harmony by unknown ages, and that harmony was discovered and introduced only a few centuries ago. On the contrary, it is here maintained that "harmony is and from the beginning always has been an element of melody." The author denies that the chord is, as everybody believes, the original form of musical harmony. To the establishment of these theses he devotes nearly three hundred pages. Whether he succeeds in proving them, we are unable to say, the reasoning being often too deep for our comprehension. Had Mr. Klauser lived to revise these chapters, it might have been otherwise. As it is, it seems likely that the chief value of the volume will remain the appendix, which notates the songs of eighty-six different birds.

Organists will be interested in the arrangement for their instrument of the dirge from MacDowell's Indian Suite, just published by Breitkopf & Härtel. It was made by W. H. Humiston.

The manuscript of three songs of Walter von der Vogelweide, has recently been discovered in the archives of Münster. The music is being reduced to modern notation.

A Munich bookseller is offering for sale the manuscript of Wagner's early and unfinished opera, "Die Hochzeit." The price asked is $5,000. The manuscript is inscribed, "fragment of an unfinished opera, 'Die Hochzeit,' by Richard Wagner. Dedicated to the Musical Society of Würzburg." It is dated "Würzburg, 1st March, 1833."

Since Sir Edward Elgar's symphony was first heard at Manchester, on December 3, 1908, under the direction of Dr. Hans Richter, no fewer than eighty-four performances of the work have been given. Seventeen of these were in London and suburbs, ten in America, and eight on the Continent—Berlin, Vienna, Munich, St. Petersburg, Leipzig, Budapest, Bonn, and Rome. The symphony has also been heard in Canada, at Toronto, and in Australia, at Sydney and Adelaide.

Last summer Prof. Fritz Stein of the University of Jena unearthed from its archives what he believes to be an unknown early symphony by Beethoven. It was in the form of manuscript parts for strings, flute, two oboes, two bassoons, two horns, two trumpets, and drum. The find-

er's attention was first directed to it by noticing that the score for the second fiddles was inscribed "Louis van Beethoven," and that for the 'cellos "Symphony by Bethoven" (*sic*).

Art.

The Chicago Art Institute announces an endowment by Mrs. Potter Palmer, from which will be awarded annually a prize of $1,000 for the most acceptable work in sculpture or painting executed by an American.

Professor Garstang, who is excavating in Egypt, has discovered on the site of the ancient Meroe a sun temple by Egamenes, mentioned by Diodorus. The structure is of great interest, and shows Greek influence. The building, which also includes a sanctuary lined with enamelled tiles, contains sculptures representing King Egamenes's victories and a triumphal procession. A list of the tribes in the districts of the southern Sudan is also given. Further excavations were made on the site of the temple of Ammon at Meroe which show that the building was restored by Neteg Ammon. Many inscriptions and statues were found.

The trustees of the Metropolitan Museum have decided to reserve the large central room, used during the recent Hudson-Fulton exhibition, for temporary exhibitions, chiefly of loans. These exhibitions will begin with one of Whistler's works, which is to open about March 15. Only Whistler's oil paintings and pastels will be shown; neither blacks and whites nor water-colors will be admitted. On this account, the exhibition will not be so large as that held some years ago in Boston, or as the London memorial exhibition, but it will be larger than any collection of the artist's works ever brought together in this city. Charles L. Freer of Detroit has promised to lend his collection of Whistler's work, the largest in existence, all the paintings that the museum will need to fill up the room after it has collected from other sources—a most generous and public-spirited offer. Richard Canfield will lend Count Robert de Montesquiou, the Parisian poet, the Rosa Corder, the Ocean, La Napolitaiue, and the seven pastels that make up the celebrated Venetian series. Frank J. Hecker of Detroit will contribute the famous Music Room; Mrs. Samuel Untermyer, the Falling Rocket, which brought about the quarrel and law suit with Ruskin; J. H. Whittemore, L'Andalusicnue and the White Girl; John G. Johnson of Philadelphia, Lange Leizen; the Boston Museum, Little Rose of Lyme Regis and the Master Smith of Lyme Regis, and the Brooklyn Museum, the portrait of Florence Leyland. Miss Birnie-Philips, the executrix of Whistler, has also promised to send two pictures from London. On Monday, February 21, the museum will celebrate the fortieth anniversary of its incorporation by holding the annual meeting of the corporation at four o'clock in the afternoon in the Bishop Jade room. Joseph H. Choate, the last surviving member of the original board of trustees, will address the meeting, to which the public will be admitted.

A great improvement has been made in the room where are the Boscoreale frescoes, which were acquired in 1903. A small extension has been built out of the gallery, just large enough to hold the frescoes of the cubiculum which used to occupy the centre of the gallery. Care was taken to copy as near as possible the original room, of which photographs were taken before the frescoes were removed. An exquisite little flying Eros in bronze, belonging to J. Pierpont Morgan, also found at Boscoreale, has been placed on a table, discovered at the same place, in the centre of the cubiculum. The larger frescoes from Boscoreale are now seen to much better advantage in the gallery. The glass has been removed from them, and they have been cleaned. It is proposed, now that the cubiculum has been removed, to devote the whole floor space to Greek sculpture, and some remarkable specimens, recently acquired, have been placed there. One is a crouching Venus, a fine version of the type of which the statue in the Louvre is the most famous copy. A Greek lion, similar to the Nereid lion in the British Museum; a fragmentary statue of a seated Philosopher, remarkably fine in the treatment of the drapery, and signed with the name of the sculptor, Zeuxis; a charming female torso, and a Roman portrait bust of a young man, in an almost perfect state of preservation, are among the acquisitions in statuary. A very interesting addition to the museum's treasures is a large water jar, with plates, cups, and jugs of terra-cotta, covered with a black glaze, probably a dinner service, belonging to the third century B. C., which were found together in a grave. One of the most important of the more modern accessions is a Virgin and child in polychrome, the work of Verrocchio. It has its original coloring, and from its style must be dated before 1470—an exquisite work. A fine bronze of Hercules slaying a lion, ascribed to Bertoldo, and a Paduan inkstand with bird caryatids also deserve notice. Edward G. Kennedy has presented the museum with a small portrait study of himself by Whistler, and in memory of William Mackay Laffan, who rendered so much service to the museum, when he was one of its trustees, Thomas F. Ryan has given it a group of Pygmalion and Galatea, by Rodin.

To open his new galleries at No. 550 Fifth Avenue, Mr. Montross has arranged an exhibition chiefly retrospective and, since all the pictures are lent, devoid of commercial implication. It is reassuring, of course, to meet those tried and favorite champions of establishment, Dewing and Tryon, in pictures which one already knows—pictures many of which are in their degree famous. All but three of this group, which come from the collection of Col. Frank J. Hecker, form part of that notable collection which Mr. Charles W. Freer has dedicated to the nation. Both Dewing and Tryon have in an unusual measure the sense of tone and arrangement. Tryon at times commands a rare poetic sentiment, and Dewing has a lovely quality of paint. These merits, being pretty rare to-day, have brought their possessers critical and even popular acclaim, and it becomes a species of blasphemy to scrutinize their work with the usual critical caution. If that bold attitude were to be taken it would possibly appear that these two painters have rather more than a due portion of the defects of their qualities. Both are inclined to sacrifice significant structure to special iridescence or stylistic partipris. Mr. Tryon's gift is more robust, and his work more open-hearted, but his tendency, possibly because his admirers have hailed his least substantial work, is, for the sake of tone and mood, to go into a kind of structural liquidation. The three Whistlers shown here, one the famous Variations in Pink and Gray, Chelsea, and two sketches—all representing him quite in his most rarefied mood—have amazing steadiness. One can move about in them. They are painted in a kind of divine prose which makes about half the Tryons suggest a psuedo-poetry.

Abbott Thayer is too rarely seen in New York. Maybe he is alien to it, and holds aloof from a sense of fitness. In any case there is a refreshing absence of the stereotyped about him. He plays his own game. Monadnock in Winter is, or ought to be, a very famous picture. It is amazing how so large and finely-balanced a thing can be done so simply. It seems as if a house-painter could have painted it, if he could have seen it. There, of course, lies the art. Just a strip of keen pale blue, white mamelons, seen loftily over the tops of tall evergreens, which imprison the deeper sapphire emanation of a snow that is aquamarine in the foreground—that's all there is of it; but that's enough to convey the majesty of the forest, and the mountain, and a sense of cerulean depths beyond. It is rendered in big symbolic strokes, quite as a child or a giant might, have done it. Beside it hang two portraits which look as if our child-giant had been deprived of honest paint and supplied with putty and refractory brushes. The mystery of Thayer is in this group of three pictures —his occasional triumphs, his frequent inadequacies. To account for him will puzzle the future critic.

The most notable article in the *Burlington Magazine* for January is Sidney Colvin's report on an album of sketches by Tintoretto recently acquired by the British Museum. There are nearly one hundred designs, mostly executed with the brush in the freest manner. This find quite contradicts the tradition that Tintoretto painted his great compositions without previous study. These drawings are of the highest artistic importance, and it is good news that the album is to be reproduced. The frontispiece of this number is the profile portrait of a lad in the Gustave Dreyfus collection, which, after figuring as a Lorenzo di Credi and Alvise Vivarini, is now shown by Claude Phillips to be by Jacopo Bellini. It is the only portrait we have from his hand, and it is hoped that its identification may lead to the discovery of other portraits which are recorded but gone astray. R. L. Hobson's valuable articles on "Wares of the Sung and Yuan Dynasties" reach the sixth instalment. Of timely note is an article on Cézanne by Maurice Denis, the first of a series. Kenyon Cox continues his survey of the pictures of the Hudson-Fulton exhibition with appreciations of the Halses and Vermeers. In our opinion, he does not quite do justice to the exquisiteness of that early picture, A Girl Sleeping. It seems to us not inferior to the later works, but merely different, being more traditional

and Rembrandtesque. Mr. Cox's observations on the chronology of Vermeer are interesting and doubtless will be provocative of discussion.

We have received a "Guide to the Celtic Antiquities of the Christian Period preserved in the National Museum, Dublin," by George Coffey, keeper in the museum and curator of the Royal Irish Academy Collection. This little handbook, with its 18 plates and 94 smaller cuts, is more than its title implies. Together with its descriptive list of objects, including such extraordinary pieces of metal work as the Tara Brooch, the Ardagh Chalice, and the Shrine for St. Patrick's Bell, it presents a general discussion of the disputed question of Celtic ornament. Mr. Coffey arrives at the conclusion that both the simpler ornament of the La Tène style and the interlacing bands of the finest period are drawn from Eastern sources, but promptly developed in directions essentially Celtic. In fact, the persisting glamour of the Empire, meaning Byzantium, is accountable for pretty much all the early approaches to civilization made by the Northern Celts and Teutons. But these Barbarians borrowed in the spirit of conquerors. As for the interlacing band ornament, the cuts in Mr. Coffey's guide have sent your reviewer to a small Coptic diptych of ancient but uncertain date in which the painted cover design is in elaborateness if not in fineness a true counterpart of the panels in the Book of Kells. Byzantium imposed herself everywhere. Whence she herself drew her forms is a larger matter, and at this point irrelevant. The indigenous Celtic art was that of enamelling, of which we have abundant traces but few complete examples. Apparently this beautiful art was transmitted to the Romans, only to perish among its originators. The later mediæval objects in the Dublin Museum are the product of Limoges furnaces. What Mr. Coffey says about the general qualities of fine Celtic design is excellent and calculated to enlighten those who see only its complex ingenuity. He writes:

> The swing and life of the curves, and the perfection of their quickening as they approach completion or run to a spiral, give them a feeling of life comparable to skating, coupled with a fineness and sureness of line which endow them with a rare perfection.

We wish these words might be nailed up in a hundred shops where "Celtic ornament" is being listlessly produced. This little book, of which we have merely suggested the interest, is published by Hodges, Figgis & Co. of Dublin, and Williams & Norgate of London, at the small price of one shilling and sixpence.

"Venice and Her Treasures," by Hugh A. Douglas (Scribner), is a pocket guide which is distinguished from its predecessors merely by the number and sharpness of its cuts and by Maud Crutwell's notes on the pictures. Otherwise it is much what such a work has to be. Its chief defect is in failing to emphasize the best of the later paintings. For example, the remarkable drawings by Tiepolo in the Correr Museum are not mentioned, while the School of the Carmine is recorded as an excellent barock structure with no hint that it contains some of the finest Tiepolos. It should seem that a special guide should be at least as comprehensive as Baedeker. In the list of painters the dates of Antonello da Messina are erroneously given as 1444-1493. For several years it has been known that the right dates are 1430-1479. More justifiably no hint is given that the year of Titian's birth is disputed. The average tourist needs to be told that the bronze Descent from the Cross in the Carmine is of the fifteenth century. The great Last Judgment, a mosaic, in the Cathedral of Torcello, is described as a "fresco." While the lists of artists, doges, saints and their symbols are convenient, on the whole the *raison d'être* of such a book seems to be that there are so many tourists that some will certainly buy it. At a dollar and a half they will get a fair money's worth.

Unusual qualities of concreteness, sympathy, and sobriety are shown in G. Hermine Marius's "Dutch Painting in the Nineteenth Century" (London: Alexander Moring, Ltd.). The rather dreary stretch before the appearance of Jongkind is enlivened by the discovery of survivals from the old tradition. Indeed, though varying greatly in quality, the painting of Holland has been singularly consistent in themes and ideals. The various classicisms and romanticisms have hardly affected its serene and sometimes stolid course. The chapters on the painters of a half-century and more ago, while reviving in the Bilderses and others a few interesting personalities, are on the whole, of local interest. A. G. Bilderses, as is proved by a fine observation quoted on p. 84, was in theory far in advance of his times. For most of us the appeal of the book begins with Bosboom, the master of lofty interiors, Josef Israels and the Marises. It is not to be expected that a Hollander should treat Israels with reservations. To many foreigners the sentimental substratum of much of his art will cause misgivings. With the Marises—the superb construction and arrangement of Jacob, the silvery luminosity of Willem, the mysterious fairy land of Matthys—we are on firm ground. Everything that is said about them is admirable. One misses only some brief account of the peculiarities of Dutch watercolor painting, which has greatly influenced modern practice. Except for the impassioned symbolist Van Gogh, the ultra-modern movement in Holland seems rather a pale reflection of French eccentricities. The etcher, Gravesande, in spite of his inequalities, deserves something more than casual mention. It is premature to express an opinion concerning the Dutch revival. Some of the stronger men are still living and developing. In general the movement seems to run along rather narrow traditional lines, and here perhaps may lie its strength. We cordially recommend this genial and informing book. It has 131 good illustrations. The translation by Alexander Texeira de Mattos reads like an original. On p. 114 is an ugly misprint of the name Swinburne, otherwise the proofreading is worthy of the good typography.

From Jacques Reich of this city we have received an etched portrait of John Marshall in the same style as the other portraits in his series of Famous Americans. The painting followed is that by Chester Harding, and represents Marshall as a younger man than he appears in the better-known painting by Innes. It is an excellent presentment of the great Chief Justice, and well worthy of framing.

A revised and enlarged edition of "Windows: A Book about Stained and Painted Glass," by Lewis F. Day, is imported by the Scribners. Like the two earlier editions, the scope of this handbook is technical and historical. It abounds in diagrams, detail drawings, and photographic cuts of famous windows, and the writer incidentally sets forth principles on the laws of the craft. In what he says of the glass of the best periods a criticism of much modern designing is implied. We think it would have been useful to make that criticism quite explicit, and in particular to weigh in the balance the much admired archæistic glass of the Holliday firm. What is said of John La Farge's glass is inadequate, and suggests that Mr. Day has not seen many good examples. It is quite beside the mark to find in the accidental nodosities of ancient glass the precedent for the purposeful manipulation of American pot metal. Whatever may or may not be the merits of La Farge's procedures, their essential originality will be evident to any one who will give them fair scrutiny. Mr. Day's manner is easy and picturesque, and his general ideas about design eminently sound. This new edition of a book that has already proved its usefulness is welcome.

Alfred Charles Whitman, for many years departmental clerk and superintendent in the students' room in the department of prints at the British Museum, died on February 2, at the age of forty-nine. He had published "Masters of Mezzotint," "Valentine Green, Engraver," "S. W. Reynolds, Engraver,'" "Samuel Cousins, Engraver," "Charles Turner, Engraver," 1907.

The death is announced of Eugène Thirion, a popular French painter, at the age of seventy. He studied under Picot, Fromentin, and Cabanel. His Les Nuits de Musset is at the Luxembourg, and his Le Lévite d'Epraïm Moudissant la Ville de Gaabe at Perpignan. He also supplied a panel, L'Histoire, for the Hôtel de Ville, in Paris.

Finance.

ILLUSIONS OF THE DAY.

The sharp recovery in prices this week —running to 5⅜ points in Union Pacific, as compared with the week's lowest, to 7½ in Reading, to 4½ in Steel common, and to 6⅞ in Amalgamated Copper—was nothing very surprising, when the violence of the preceding decline was kept in mind. Nevertheless, to those of the simple outside public who had been led to believe that the "attitude of Washington" was at the bottom of the break in prices, the fact of a favorable turn in the market may possibly have seemed curious. But the one thing which Wall Street does not expect to have asked from it is consistency. There are times when Wall Street embraces a fixed idea, and accepts it as the explanation of everything that happens in a market; but it is perfectly capable of rejecting the same idea overnight, and

of laughing, next day, at any one who revives it. The great majority of thinking people, in the financial community, are perfectly well aware of the absurdity of the "Washington argument" as a primary explanation of the break in stocks. Nevertheless, they point to somebody —often a personage of importance or of seemingly unbiassed attitude—who holds that idea, and therefore has been selling stocks.

But how do they know that this was the reason why the man in question sold his stocks? The man himself said so, we are told, and believed it. This would be convincing, anywhere but in Wall Street; but in Wall Street, strange as the statement may appear, it is not convincing at all. The experiences of many years bear witness that, when sagacious investors have realized through their subtle and usually correct instinct that prices were too high, or have bought because prices impressed them as low, they will, later on, attribute their action to events which occurred after their decision, and which subsequent history proved to have no real bearing on the market. The "election boom" of November, 1908, illustrated this. It is doubtful if any sensible financier bought stocks because Taft had been elected; indeed, his election was a certainty months before the voting. The market situation was ripe for an advance in any case; but there are people, even now, who will honestly say that they bought in 1908 because of the election returns.

It is only when illusions of this sort have a larger scope that they may become really dangerous. There are times when, by force of mutual suggestion, a whole financial community accepts as its basis of action facts which are incorrect and reasoning which is preposterous. In the case of the great financial manias of history—the South Sea Bubble, the Dutch tulip speculation, and the Mississippi craze are instances in point —the record is absolutely explicit that the illusion was not limited to the simple man in the street, but worked equally upon powerful capitalists and great banking houses. Perhaps the most conspicuous modern instance was the illusion which possessed the Wall Street community in April, 1901, taking the shape of an absolute belief that the law and precedent of political economy had been superseded by new forces in American finance and industry. No one who did not happen to visit Wall Street at that time can have any proper conception of the readiness which serious financiers turned upside down the reasoning processes of their whole preceding life.

In a very much less degree, the curious "Sunshine movement" of 1908, when conventions were held and lodges organized to preach the doctrine that if we thought ourselves prosperous we would be prosperous, was another case in point. It is rather early, as yet, to classify 1909; yet it is difficult not to believe that the "Steel speculation," at its climax, was an illusion of this sort. The argument, in its extreme form, was based on premises which all of the company's previous experience contradicted, and on assumption of facts and figures which last year's own official statements of the company repeatedly discredited. Yet there were bankers who talked of "200 for Steel common," of 6 per cent. dividends, and of bond issues to fund all back expenditures for improvements. In that case, as in other similar, there is a possibility that some of the victims of the illusion began by trying to convince other people that such things were true, and ended by convincing themselves.

One sometimes wonders whether there is not considerable illusion about the matter of "holding companies." The holding company device, in its present form, is a little more than ten years old. Very few of such companies appear to have exerted the influence, predicted in the early days of "Trusts," towards introducing such sweeping economies as should lower cost of production while improving the quality of goods; in some of them, exactly the opposite result may be shown to have been achieved. As an institution, the holding company may have increased the stability of trade, or it may not. Some holding companies have accomplished this—the Steel Corporation seems to have done so. Others, however, like the Amalgamated Copper, have been engines of overproduction and demoralization. The forced dissolution of the Northern Securities holding company, in 1904, was dreaded as a calamity—this, in spite of the fact that nine-tenths of our prosperous railways had nothing to do with holding companies. Yet it was Mr. Hill himself, once president of that holding company, who calmly asked, a couple of weeks ago, "What is the difference whether the owners have one green certificate to represent their interest, or two red ones?"

Farm Land the Basis of Value

In making investments the first consideration should always be the character of the security. Every investor to whom income is important should learn the facts about Irrigation bonds. They form, in our estimation, the safest way to earn 6 per cent.

Secured by a Thousand Farms

Irrigation bonds are secured by first liens on good farm land—sometimes a thousand farms. The farms are worth usually at least four times the loan.

The farms are exceedingly fertile, and are not subject to crop failures. Any one season's earnings are generally sufficient to repay the whole loan.

The bonds are additionally secured by a first mortgage on an irrigation system, in which the investment is often twice the bond issue.

Some Irrigation bonds are municipal securities, which form—as do School bonds—a tax lien on the district. Some are issued under the "Carey Act," where the State supervises the project.

They are issued in denominations of $100, $500, and $1,000, so one may invest either little or much. All are serial bonds, part of which are paid annually, so one may make long-time or short-time investments.

78 Issues Sold

In the past 16 years we have sold 78 separate issues of Reclamation bonds, all based on farm liens. Not a dollar of loss has resulted to any investor.

Our dominant place now gives us the pick of these projects. They are passed on by our own engineers and attorneys. And an officer of our Company constantly resides in the irrigated sections, watching the projects we finance.

We have issued a book based on all this experience—a book which every investor should read. Please cut out this coupon as a reminder to send for it. (16)

The Biographical Story of the Constitution

A Study of the Growth of the American Union.

By EDWARD ELLIOTT, Professor of Politics, Princeton University.

8vo. 400 *pages.* $2.00 *net.*

Prof. Elliott's work does not seek to deal with the finely elaborated doctrines of the courts, but rather with the larger questions of constitutional interpretation, many of which lay beyond the jurisdiction of any court. These questions have been fought out between men, and this "Biographical Story of the Constitution" attempts to picture, through the lives of some of the more conspicuous of these contestants, the struggle and its result.

NEW AND VALUABLE BOOKS

A Superb New, Single-Volume Encyclopaedia of Scripture Lands and Peoples

The Temple Bible Dictionary

Editors { The Rev. W. EWING
The Rev. Dr. J. E. H. THOMSON

Assisted by a corps of Eminent Scientists, Theologians and Orientalists.

Cloth, quarto. Pp. 1072. Over 500 Illustrations, 8 maps. Price, $4.00 net

The use of a large number of sensible contractions in the text allows a close packing of fact.
All irrelevant and out-of-date matter is omitted.
Edited by clergymen who have themselves been missionaries in Palestine, who know the people and the land at first hand, and who realize what the practical preacher and teacher needs in a Bible Dictionary.

Orders and Unity

By the Rt. Rev. CHARLES GORE, D.D., Bishop of Birmingham. 12mo. Pp. VIII+234. Net, $1.35.

Dr. Gore's new book on the minimum of dogma and organization necessary for the constitution of a branch of the Christian Church is based on a series of lectures given in Birmingham Cathedral. It will be found to be a clear, logical, plainly-reasoned and broad-minded plea.

BISHOP GORE'S PREVIOUS BOOK

The New Theology and the Old Religion

12mo. Pp. XII+311. Net, $2.00.

"His aim is constructive, and the book is marked by breadth of feeling and a fine spirituality."—*The Living Age.*

"The case is presented ably, the facts are marshalled completely, and the bishop preserves the high-minded sincerity and seriousness that give such personal drawing power to all he writes."—*The Churchman.*

"As timely in its appearance as it is masterly in its arguments, and should be found on the study table of every clergyman."—*The Living Church.*

Body and Soul

An Inquiry into the Effect of Religion upon Health, with a Description of Christian Works of Healing from the New Testament to the Present Day. By PERCY DEARMER, M.A. 12mo. Pp. X+426. Net, $1.50.

"The reasonableness, the sanity and the broad perspective of Mr. Dearmer's contribution to the study of the effect of religion upon health give it a place by itself in the mass of contemporary literature devoted to various forms of mental healing."—*The Churchman.*

The Kingdom of Heaven: What It Is and How We Enter It

By the Rev. G. H. S. WALPOLE, D.D. 12mo. Pp. XXXII+187. Net, $1.00.

"This timely and valuable contribution to current theological thought is full of ideas presented with much freshness as well as scholarship and sanctified common sense."—*Guardian.*

London at Prayer

By CHARLES MORLEY. With 17 Illustrations. 8vo. Pp. X+341. Net, $2.50.

"A series of extraordinarily varied sketches which will be recognized as sincere and truthful by members of every denomination visited. . . . The book is a most impressive revelation of the piety which has survived generations of change."—*Pall Mall Gazette.*

"The volume is one to be grateful for, and one cannot lay it aside after a perusal of its pages without having developed a warmer feeling for the great family commonly referred to as the human race."—*Dublin Daily Express.*

The Mystical Element of Religion as Studied in St. Catherine of Genoa and Her Friends

By BARON FRIEDRICH VON HUGEL. With 2 portraits. 2 vols. Pp. XXIV+466 and VI+422. Net. $6.00.

"The work of Baron von Hügel has been to disentangle the real life and character of St. Catherine of Genoa from the accretions of tradition and indiscriminate adulation which have overlaid them, and at the same time to exhibit the deep and abiding significance of her teaching and example."—*The Independent.*

Instruction.

A GRADUATE OF THE MASS. INSTITUTE OF TECHNOLOGY, and Ph.D. of the Johns Hopkins University, desires to hear of a position for teaching. At present engaged, and for the past ten years an instructor in chemistry in two prominent Eastern medical schools. During the entire time, has taught physiological and clinical chemistry, and for most of the time general, analytical, and organic chemistry and toxicology. During four years has acted as substitute for the professor in the class work and had charge of the laboratory courses. Has had also wide experience in sanitary chemistry, especially in positions of responsibility in chemical and biological examination of water supplies, and for the past five years has given a course in sanitary chemistry and analysis a part of the course in hygiene. Address S. F., care the Nation.

Economic Prizes

SEVENTH YEAR

In order to arouse an interest in the study of topics relating to commerce and industry, and to stimulate those who have a college training to consider the problems of a business career, a committee composed of

Professor J. Laurence Laughlin, University of Chicago, chairman;
Professor J. B. Clark, Columbia University;
Professor Henry C. Adams, University of Michigan;
Horace White, Esq., New York City, and
Professor Edwin F. Gay, Harvard University,

has been enabled, through the generosity of Messrs. Hart, Schaffner & Marx of Chicago, to offer in 1911 four prizes for the best studies in the economic field.

In addition to the subjects printed below, a list of available subjects proposed in past years can be had on application. Attention is expressly called to the rule that a competitor is not confined to topics proposed in the announcements of this committee; but any other subject chosen must first be approved by it.

1. The history of the rate of interest in the United States.
2. The value of protectionism to American workingmen.
3. The economic reasons for or against building a deep waterway from the Lakes to the Gulf.
4. German experience in taxing the unearned increment from land.
5. The valuation of railways.
6. An examination of government wages statistics.
7. The effects of modern immigration in the United States.
8. The value of organized speculation.

Class B includes only those who, at the time the papers are sent in, are undergraduates of any American college. Class A includes any other Americans without restriction; the possession of a degree is not required of any contestant in this class nor is any age limit set.

A First Prize of One Thousand Dollars, and
A Second Prize of Five Hundred Dollars

are offered to contestants in Class A.

A First Prize of Three Hundred Dollars, and
A Second Prize of Two Hundred Dollars

are offered to contestants in Class B. The committee reserves to itself the right to award the two prizes of $1,000 and $500 of Class A to undergraduates in Class B, if the merits of the papers demand it.

The ownership of the copyright of successful studies will vest in the donors and it is expected that, without precluding the use of these papers as theses for higher degrees, they will cause them to be issued in some permanent form.

Competitors are advised that the studies should be thorough, expressed in good English, and although not limited as to length, they should not be needlessly expanded. They should be inscribed with an assumed name, the class in which they are presented, and accompanied by a sealed envelope giving the real name and address of the competitor. If the competitor is in CLASS B, the sealed envelope should contain the name of the institution in which he is studying. The papers should be sent on or before June 1, 1911, to

The University of Chicago
Chicago, Illinois

Interesting New Macmillan Books

READY THIS DAY. FOR SALE BY ALL BOOKSELLERS

Gertrude Atherton's *new novel*

TOWER OF IVORY

By the Author of "The Conqueror," etc. *Cloth, 12mo, Price $1.50*

Mrs. Voynich's *new novel*
An Interrupted Friendship
needs no introduction beyond a reminder that it is by the creator of that poignantly impressive "The Gadfly," who, by the way, is one of the actors in this independent story.
Ready this day. Cloth, $1.50

Dr. Andrew M. Fairbairn's
Studies in Religion and Theology
Dr. Fairbairn stands easily at the head of the theologians writing in English. His "Philosophy of the Christian Religion" is justly a standard for its power of expressing deep truths in attractively clear and simple terms.
Cloth, $3.50 net; postpaid $3.69

Dr. Henry C. King's *new book*
The Ethics of Jesus
Nothing could better help in the effort to reach consistent thinking on life, its end, motives, and spirit, than such a study as this of the attitude of Jesus toward man's power to choose the life of love or the life of selfishness.
Cloth, 12mo, $1.50 net; by mail $1.61

Dr. Robert F. Horton's Great Issues
The author has that rare blending of the vision of the critic and the mystic which especially appeals to men who wish a modern point of view, yet are chilled by the prevalent materialism.
Cloth, 12mo, $1.50 net; postpaid $1.62

Dr. Irving King's *new book*
The Development of Religion
A study in Anthropology and the Social Psychology of Primitive Religion, showing how the religious attitude has been built up gradually through activities in the main social. *Cloth, 8vo, $1.75 net; postpaid $1.88*

The Religions of Eastern Asia
By Horace G. Underwood
An important study of the ideas of deity among the Chinese, Japanese and Koreans.
Cloth, $1.50 net; postpaid $1.62

William Lyon Phelps's
Essays on Modern Novelists
"A volume that bids fair to form a distinct and permanent landmark in the history of fiction," says *The Boston Transcript*, adding that these twelve essays "are as vital considerations of literary problems as have been brought to the eye of the thinking public in many a long day." *Cloth, $1.50 net; postpaid $1.61*

Charles G. D. Roberts' *new book*
Kings in Exile
Remarkably keen studies of animal life in captivity, along decidedly novel lines. A book that will interest any animal lover. *Illustrated, cloth, $1.50*

Frederic Paxson's
The Last American Frontier
The story of the conquest of the "Great American Desert," of the last stand of hostile Indians against such men as Miles and Custer, of the brief golden day of the forty-niner, the pony express and the cowboy.
In the Series of *Stories from American History. Cloth, illustrated, $1.50 net*

Social and Industrial Conditions in the North During the Civil War
By Emerson David Fite, Ph.D.
Dr. Fite, who is assistant professor of history at Yale University, interestingly corrects the very general impression of this generation that the whole activity of the Nation from '61 to '65 was absorbed in the Civil War.
Cloth, 8vo. Ready this week. $2.00 net; postpaid $2.15

Francis L. Wellman's Day in Court
The Subtle Arts of Great Advocates. A book full of interest to any man who is liable ever to figure in either witness stand or jury box.
By the Author of The Art of Cross-Examination. $2.00 net; postpaid $2.14

George E. Woodberry's
The Inspiration of Poetry
No critic has keener insight into the springs of poetic energy, or expresses with warmer sympathy each man's effort to follow the gleam, than Mr. Woodberry, himself a poet of distinction. *Cloth, 12mo, $1.25 net; postpaid $1.35*

Prof. Winchester's
A Group of English Essayists
in the Early Nineteenth Century. A pleasant return to the associations of the men who first taught us the charm of the intimate self-revealing art of the essayist.
Cloth, $1.50; postpaid $1.60

Dr. Samuel G. Smith's
Religion in the Making
A Study in Biblical Sociology, revealing the wealth of material for sociologial study which the Bible affords, and the value of interpreting it by modern methods.
Cloth, $1.25 net; postpaid $1.35

Dr. Henry van Dyke's *new book* The Spirit of America

For its lucid analysis of the springs of American character, the charm of its tone, and its attractive play of wit, Dr. van Dyke's new book will be warmly received on both sides of the world. *Cloth, 12mo, $1.50 net, postpaid $1.61*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 24, 1910.

The Week.

A far-reaching investigation into legislative corruption at Albany has been forced by the exposures first published in the *Evening Post*. Already the matter has gone beyond the trial of Senator Allds, which is still pending, and a resolution is before the Legislature for a joint committee to inquire into "any fund or funds . . . for the purpose of corruptly or otherwise influencing the action of the members of the Legislature upon *any* subject during the year in question, or in *prior* or *succeeding* years." The scope of the investigation is to be further enlarged by a direction to ascertain "whether any such funds *now* exist, or have been *recently* contributed or employed for any such purpose."

Plainly, New York is on the eve of a breaking up of the great deep of public corruption. We are going to get much new light upon the sinister influences which have so often thwarted the will of the people, and made representative government at Albany a farce. Upon the subject of legislation as a matter of barter on the part of political committees and party bosses as well as individual Assemblymen and Senators, we shall have a great deal of fresh material. It is objected, we know, that the inquiry will be futile, in the sense that no criminals will be brought to justice. Some who are implicated may be saved by the statute of limitations, while others who are morally proven guilty it may not be possible to convict in the courts. But this is, after all, only a small part of it. The people can sit in judgment as well as judges. They will mark the evidence as it comes out, and will visit a swift and inexorable punishment upon those whom it involves. If the investigation is as honest and thorough as is now promised, and as it ought to be, many a New York statesman will retire to private life, many a party manager will disappear. Yet if the disclosure of the truth ruins reputations and shows corruption clinging in unsuspected places, so that the people drive this worst kind of treason from public life, who shall say that the judgment is not true and righteous altogether?

It is not surprising that Congress is represented as experiencing a feeling of great relief in consequence of the announcement that the President's legislative programme for the present session is cut down to four bills. With the long extra session behind them, and the Congressional elections before them, Congressmen have naturally not been happy at a prospect which made a session going far into the summer look like a possibility. The four measures on which it is stated that the Administration will insist are a revision of the interstate commerce laws, an act relating to the admission of Arizona and New Mexico to Statehood, an act to regulate the issue of injunctions by Federal courts, and an act to give the President definite and adequate power for the withdrawal of public lands for entry for purposes indicated by the public interest. The principle involved in the last-named proposal is clear and simple. It is not proposed to bestow upon the President any arbitrary power or to permit him to make irrevocable decisions; but merely that it shall be within his absolute discretion to order withdrawals whenever, in his judgment, the public interest requires it, and that such order shall stand until rescinded either by his own action or by the action of Congress. It is only in this way that the public domain can be effectively safeguarded.

It appears that the publicity feature of the Federal corporation tax is to be eliminated automatically. This is the part of the law which has provoked greatest protest, and bills are pending in Congress to repeal that clause of the act which provides for making a public record of the returns of the various corporations. But now it comes out that there is a legal and administrative snag in the way of the execution of that clause. Congress voted $100,000 for the expenses of collecting the corporation tax, but forgot that an old statute of 1882 forbids the paying of money to employees in the District of Columbia without express authorization. So the Secretary of the Treasury is at a standstill as regards making public the records of the corporation tax. Congress might still clothe him with power, but is not at all likely to do so, especially with the Constitutionality of the whole law challenged and soon to be passed upon by the Supreme Court. President Taft's letter to Mr. MacVeagh does indeed suggest that the Secretary might go to the House and ask a specific appropriation of $50,000, but it is clear that the Administration will not be heart-broken if the House refuses.

Philadelphia is once more plunged into a condition of uncivilized warfare. Since the violences of Chicago's famous teamster strike, Philadelphia has held the proud record of being our only city of the first rank in which relations between a great public service corporation and its employees are those of chronic enmity, varied by periodical recurrences to riot, arson, and assault. If the latest strike of the street railway workers has come unexpectedly, it is not for want of repeated warnings to which the powers that rule in the city of brotherly love have given little heed. It is asserted by the employees that they have been forced into the strike by the deliberate policy of the traction company. The agreement concluded last year between the company and its men expires on the first day of June. In the course of negotiations looking towards a renewal of the agreement, so the representatives of the union maintain, the company officials have not only refused to meet the men half-way, but have done their best to bring on trouble. This, it is said, they have done by organizing a rival to the Amalgamated Union, under the name of the United Carmen's Association, and by discharging without cause prominent members of the former union. Last October, and again at Christmas-time, and again about a month ago, the men maintain, the company did its utmost to force a strike. It has succeeded at last. The present strike was brought about by the discharge of nearly 200 union conductors and motormen last Saturday "for the good of the service." This, the union men contend, was virtually a lockout. To such direct and specific charges

the company has not yet made a clear and convincing reply.

In all conflicts between a great corporation and its employees, we have come to insist that some regard shall be paid to the rights of the public. In Philadelphia it is not merely a question of the public's right not to have its business life paralyzed, but actually a question of the public's right not to be maimed and killed by the policeman's revolver or the rioter's club. At the same time we feel that the people of Philadelphia, in the present crisis, are not altogether guiltless. If they have rights in the matter they have also duties, and these they have sadly neglected. For the situation would clearly seem to be that a very large section of the people of Philadelphia are in sympathy with the strikers' demands. Else we cannot understand the systematic wrecking and burning of cars, carried on with the precision of a sappers' and miners' brigade. Last year the people's sympathies were almost wholly on the side of the strikers. The unholy alliance between the traction company and the powers that rule the city was brought into the light of day. It was made apparent that the men had been driven to strike because a corporation that had watered its stock to buy the politicians could not afford to pay a decent wage. But if the sympathies of the people of Philadelphia do incline so strongly to the side of the strikers, why has nothing been done to prevent a repetition of last year's civil warfare? Why has not public sentiment forced some reasonable and permanent form of agreement between the company and its men? Why have the politicians remained in touch with the company's cash-box? The responsibility for riot and murder comes more clearly back to the people of Philadelphia than they may like to think. But the imperative duty of the moment is to restore order and preserve public safety, whatever it may cost.

The history of three-cent traction in the city of Cleveland proves completely that the voice of the law is not the only thing that can be drowned in the clash of arms. Let the battle rage long enough and men will forget their original motives and their original positions and the claims of consistency, and, in general, what they have been fighting for or why they have been fighting so long. Last week the people of Cleveland, by the largest majority ever given to a public measure, adopted the Tayler traction plan establishing a three-cent fare on the street cars with a cent charge for transfers. There is to be an eight months' test to determine whether the operating company can earn 6 per cent. on its capital. In any case, four cents is to be the maximum fare. Thus after a campaign of years ending in his defeat at the polls, Tom L. Johnson is in a fair way of seeing his favorite issue brought to a triumph. The Cleveland *Leader* has fought Johnson bitterly. But it says: "Now is the time to make sure of three-cent fares everywhere for nearly a year at the least, and for the future three-cent fare, *or lower*, if such a thing is possible."

CAIRO, Ill., February 18.—Thomas Halliday killed and three men wounded was the outcome of an attack on the jail here last night, made by a mob which tried to lynch two negroes who had been arrested for snatching purses from women.

That is what the lynching spirit comes to in a community that takes to it in good earnest. This region about Cairo is doing an incalculable injury to the good name of the whole country by these recurring exhibitions of besotted brutality. Within the country, however, the disgrace attaches to the State of Illinois, and it behooves the decent citizens of that State to awaken to the necessity of putting an end to it. Defending the jail and shooting the rioters is very good as far as it goes, and Sheriff Nellis deserves the commendation of good citizens, the country over, for his unflinching performance of his duty; but to stamp out the evil nothing less than determined prosecution and relentless punishment of lynchers and would-be lynchers will suffice.

The Western Union Telegraph Company has done a most rational and excellent thing in determining on the introduction of a "night letter service," in which the cost of telegrams filed before midnight and transmitted at the company's convenience in the course of the night shall be at the same rate for fifty words as day telegrams command for ten words. Just what the success of this plan may be remains to be seen; but it is evidently based on business principles and at the same time calculated to supply a public convenience. With this departure fresh in mind, it ought to be possible for the company's managers to give attention to an obvious desideratum as to the regular telegraph rates, which is as plainly indicated. The regular rates are thoroughly irrational in regard to dispatches of more than ten words. Take the standard case of the thirty-cent dispatch, with two cents for each additional word. Since, in this country, the words of the address and signature are not counted, the ten-word dispatch means the telegraphing of probably twenty words on an average, so that what actually happens is that we pay about one and a half cents a word for a ten-word dispatch, and two cents a word for additional words. On the other hand, if it pays the company to send the ten-word (*i. e.*, really a twenty-word) dispatch at one and a half cents a word, it would certainly pay to send additional words at much less than one cent a word. For it must be remembered that the cost to the company of messenger service is wholly involved in the minimum dispatch, and that the same is true of the time of the operator in answering questions, making change, making the connection, filing, etc. The correct principle for telegrams is an initial charge of a certain amount and an additional charge of so much a word. Thus, instead of the rate of thirty cents for ten words and two cents for additional words, we should have an initial charge of twenty cents, and then a cent a word for any number of words; or perhaps twenty-five cents and half a cent a word.

Judge Hand's temporary injunction in favor of the Wright brothers against the French aviator, Louis Paulhan, pending the decision of their suit to establish their patent rights, is sweeping in scope. The ethics of the question are not so easy to decide. It is natural enough for the Wrights to try to reap the full fruits of their long years of labor. At the same time the world cannot help feeling that to create a monopoly in the aeroplane at the present stage of its development is not for the best interests of the public or of the cause which must be so close to the Wrights themselves. Experimentation with air machines must be going on in a thousand corners of the United States, and it would be a pity if any obstacle

should be put in the way. Even where aviators originate no ideas of their own, they do their part by supplementing and perfecting the ideas of others. Every man who goes up in the air adds something to our comparatively slight knowledge of winds and currents. In any case, it should be possible to make a distinction between the aviator who gives public exhibitions for money and the scientific experimenter.

M. Velain, professor of physical geography at the Sorbonne, is said to express the unanimous opinion of French scientists in declaring that unusual rainfall would not alone account for the floods. The clearing of the watersheds of the upper Seine, the Yonne, and the Marne rendered them incapable of holding the water, which was sluiced off into the Seine as if from a steep roof. The general council of the department of the Marne had previously ascribed the flood chiefly to deforestation, and demanded the enactment of laws to check further clearing. The situation is much like our own in the Southern Appalachian region where the baring of steep hillsides has greatly accelerated the run-off and done enormous damage. France has, however, this advantage: the lands from which she has cut away the forests are true agricultural lands, whereas much if not most of the clearing on the higher slopes of the Southern Appalachians has taken place on lands too poor and steep to yield permanent profit under the plough. There is another point of resemblance between our case and that of France. There, too, ill-advised taxation is cited as the reason for which the protective forest was stripped away. The legislation asked in Marne includes reduction of forest taxation and exemption of taxes on planted timber until it is mature enough to market. The forest destruction caused by an unwise system of taxation in the United States has repeatedly been ranked by experts as second only to the appalling destruction caused by fire.

It did not need Björnstjerne Björnson's recent severe illness to call forth admiring tributes from his fellow-countrymen. He has long been thought of and talked of with enthusiasm by Norwegians. A traveller in Norway gives an account of an incident which took place not long ago at the time of the summer manœuvres of the army. As the soldiers were on their way back to Christiania, their route took them past Björnson's house, and the general in command sent an adjutant ahead to ask if a demonstration by the men would be acceptable. When the troops came up:

> With his family and guests assembled about him on the veranda, the monumental figure stood with bared head to receive the military greeting. As each regiment passed in review below, presenting arms as to their chieftain, there went up a deafening shout of personal salutation from each of the soldiers, who then joined in singing the national hymn, to whose author they were thus offering this spontaneous salute. There was the unique spectacle of a man in private life being accorded a military spontaneous demonstration by the nation's army which a king might envy.

Mr. Asquith's position is undoubtedly difficult and even dangerous, and for this he himself is partly responsible. He is now confronted, like many another Prime Minister, with the awkwardness of having to make good in Parliament words uttered on the hustings. In his Albert Hall speech he declared in the roundest way that the Liberal Government would no longer submit to having its measures emasculated by the Lords, and he went on to say that he and his colleagues would refuse to take office without "guarantees" against such a process in the future. The natural inference from this sort of language, and the inference, indeed, which was almost universally drawn from it, was that the King, if necessary, would be asked to create peers. This interpretation Mr. Asquith now repudiates. He truly says that the Constitutional position is not to invoke the royal prerogative except upon some particular bill which the Lords may have rejected after it has passed the Commons. But this seems very cold and lawyer-like after the heated words of campaign orators, and the Prime Minister will inevitably suffer from the reaction of sentiment.

A week of rioting and of conflicts between citizens and the police is, to say the least, a startling development for well-disciplined, well-governed Prussia. From the capital the disturbances have spread to Schleswig and the Rhine. Be it that the demonstrations are the result of a carefully laid Socialist plot, or the spontaneous outburst of popular discontent, the implications, so far as the Government is concerned, are serious enough. If the Social-Democrats, with a voting strength of nearly four millions, shall at length decide to adopt sharper tactics than the scrupulously peaceful demonstrations they have hitherto contented themselves with, the chiefs of reaction may find that it will not be so easy to "ride down" one-third of the German nation. In the nature of things, it cannot go on forever that three or four million citizens shall allow themselves to be kept in the state of political impotence to which the masses in Prussia are reduced. It is all very well to speak of the army as the sole and ultimate prop of the throne, but it will be an evil day for Germany if that splendid army in which her pride and hopes so largely centre shall be turned to the purpose of repressing domestic sedition.

The severe press law enacted by the Viceroy of India in Council and commented upon in these columns at the time was the first piece of important legislation put into being since the reconstitution of the Viceroy's Council, in accordance with Secretary Morley's scheme of reforms. The maximum number of official members is thirty-six, while the number of elective non-official members is thirty-two. This is an enlargement of the former restricted council to the size almost of a little parliament. A parliamentary system, however, it is not. Members of the council may bring forward questions and resolutions, but questions are to be framed in good faith as requests for information and not for an expression of opinion or the solution of an hypothetical problem. Resolutions must not contain "arguments, inferences, ironical expressions or defamatory statements." No questions or resolutions are permitted in the field of foreign relations or on any matter under adjudication in any British court. Extensive discretion is vested in the president of the council, with regard to the manner in which questions shall be presented, debated, and voted upon. Finally, it is prescribed that every resolution shall have effect only as a recommendation to the Governor-General in council, and further, that the president may, for sufficient reasons, dispense with any of the rules of procedure. We understand now why such a moderate organ as the *Hindustan Review* suggests that a good deal granted in the Reforms has been taken away in the Regulations.

THE BRIBE-GIVING CORPORATION.

The testimony at Albany on Thursday of last week brought out more sharply than before the part which corporations had played in the corruption of the Legislature. In Senator Conger's description we see the exact process. The bridge companies began by paying small sums to prevent what they regarded as hostile legislation. They bought individual Assemblymen, and also the Republican State Committee, through its chairman, Col. Dunn. But every year the thing had to be done over again. The word got round that the bridge-building law was "a fine thing." Legislative strikers multiplied and became more audacious. By 1905 the demand had mounted to $10,000, whereupon the bridge companies resolved to become virtuous, since bribery was proving so expensive, and would raise no further corruption funds.

Now, various indefinite statements have been made regarding the loss of business which the bridge companies suffered in consequence of the final passage of the bill of which they had bought the suppression year after year. But even conceding the accuracy of the figures, we venture to say that the profits on the lost business would have been less than what it cost, and was threatening to cost, the companies in bribe money. That, of course, was the real reason why they refused longer to be bled. It was not a spasm of virtue which seized them: it was simply a pain in their purse. They found that they had been fools to bribe at all, and that they should be bigger fools if they kept on. And this is precisely the point which experience has repeatedly established in all this history of "strike" bills and corporations. It is actually cheaper to make an open fight than to enter upon a course of secret payments. We believe that this could be demonstrated in the case of any corporation that has ever been dishonestly attacked by blackmailing legislation or denied rights to which it is entitled both legally and in the public interest. For less money than is spent in wicked surrender, an honorable victory could be won.

The clearest illustration of this which we have had in recent years is the attitude of the Pennsylvania Railroad in regard to securing franchises for its new terminal in New York city. The matter was held up in the Board of Aldermen, and the intimation was almost publicly given that the Pennsylvania would have to bribe its way through. But it refused to pay a cent, made a public fight against the Aldermen, and finally succeeded in getting the power to grant franchises taken away from them entirely. The cost to the company in the way of necessary and lawful expenses, but more through delay in beginning to secure a return on its investment, was undoubtedly heavy. Yet it was indubitably less than would have been involved in letting every blackmailer thrust his dirty hands into its treasury, and the officials of the road had also the satisfaction of knowing that they had saved their honor.

In line with this is the statement of the manager of a large public-service corporation who is quoted in the Binghamton *Republican* as saying, three years ago: "It is getting so that it costs so much to buy off legislators that it is difficult for a company like ours to continue in business." That fact was advanced as a reason for assenting to Gov. Hughes's plan of a Public Service Commission. However distasteful that system of State control, it would at least give a certain protection against "strike" bills. But the chief point is that this man had found out that the process of submitting to blackmail was ruinously expensive. It is cheaper to fight than to pay. That ought to be posted up as a motto, in red letters, in the directors' room of every large—and honest—corporation.

It will be said, however, and said with perfect truth, that bribe-giving corporations not only resist unjust attacks but go out to purchase privileges to which they have no title. Here the question of economy has to give way to that of honesty. In the same issue of the Binghamton *Republican* from which we quoted above, we find a telephone manager giving the true explanation why the telegraph and telephone companies had not been put under the Public Service Commission. It was "less than ten days ago" that he made the reply, when told that his concerns would be brought under the law this winter: "Don't you believe it. We've got too much money to spend for them to get us under that law as easily as you may think."

This is the most hideous aspect of the whole matter. That we should have conscienceless and corrupt legislators is bad enough, but what are we to think of the eminently respectable men, leaders in society, pillars in the church, who through the corporations which they control fatten upon legislative corruption while they intensify it? That is the thing which must never be lost sight of in all this wretched Allds scandal, and in what may follow. Bribery requires the scoundrel who pays as well as the scoundrel who receives. Corruption means the conspiring of thieves outside the Legislature with those inside. And in our indignation at the detected and ruined betrayers of a public trust, let us not forget to reserve a double portion of wrath for the even more guilty corporation managers who ought also to be detected and ruined. It may be that the criminal law cannot reach them, but public contempt and personal odium can be made to fall upon them in overwhelming volume. And we can but hope that the searching of the dark corners of the Capitol at Albany will produce in the offices of corporations, too, a shivering dread of exposure; and that the more wholesome atmosphere which is certain to follow in the political world may also invade the world of corporate management, where it is fully as necessary if bribery is really to be punished and stamped out.

THE INDIAN WAREHOUSES.

We may expect a war in Congress over the proposed abolition of the warehouses for Indian supplies. Five such establishments are now maintained under a law which prescribes not only their number but their places. Under the last Administration steps were taken looking to their abandonment. Their personnel, including superintendents, was put in the classified service; their clerical force was reduced to the minimum; outside purchases were oftener made, and other features eliminated which had placed the control of the warehouses in the schedule of political spoils. Further efforts were blocked by a combination between members of Congress who realized that the closing of any one warehouse would soon demonstrate the uselessness of all.

They were originally established as convenient points for the delivery of the hardware, clothing, dry goods, foodstuffs, drugs, furniture, and the like, which the Government buys under contract for the equipment of the Indian

agencies and schools and for distribution among the Indians. The assembling of the goods made possible their inspection in bulk before shipment, but the social and commercial changes which have come over the frontier West have tended steadily to diminish the importance of this plan. The farming country has filled with settlers who have had their own needs to supply, and as a consequence there have sprung up thrifty villages and towns where all sorts of goods can be bought at short notice and transported to the agencies and schools by a wagon haul no longer than that required to bring in freight from the railway. Meanwhile, one after another of the old treaties has expired, under which the Government had bound itself to furnish the Indians annually with certain necessaries; and the gratuities in food and clothing and farming utensils which in early days it was the custom to give to the most backward tribes have year by year become less in amount and more limited in area of distribution. To-day the schools are substantially the only recipients of gratuities; and the one excuse for continuing the purchase of supplies for adult Indians is that they may be encouraged to self-support by the privilege of buying tools, machinery, and a few other things from the official commissary at cost price.

In his annual report for 1909, the Secretary of the Interior urged the discontinuing of all five warehouses as soon as practicable; the Commissioner of Indian Affairs is a little less radical, expressing the opinion that only one is needed. Both officers regard the existing system as unjustifiably cumbersome and expensive. This does not mean that purchases for the Indian Service are to cease, or that retail prices are to be paid to local dealers, but only that, instead of awarding contracts for the delivery of about two million dollars' worth of merchandise at warehouses from five hundred to three thousand miles distant and paying the additional cost of transportation, the Government will authorize its field representatives to call for bids from the nearest and most convenient market. For all the heavier wares, like agricultural machinery, the manufacturers now maintain local agencies all over the West, and as favorable terms can be got as from the factories direct. A standard binder which costs, bought in Chicago and shipped to Harlem, Mont., $138.65, can be bought through competitive bids in Harlem for $116. Sisal binding twine shows a difference of $1.24 a hundredweight in favor of the local as against the distant market, and a yet larger saving can be made on stirring ploughs. These items illustrate the general rule that a decided economy may be effected by local buying in certain lines of merchandise.

Of course, it would be impossible to apply to such piecemeal purchases the same wholesale system of inspection as is now employed. The inspecting would have to be done by the Government officer in charge of each agency or school. This, however, is in the long run about as satisfactory as the old method, and in some respects an improvement; for the man on the spot, who has to handle the utensils, dispense the medicines, or prepare and give out the food, can hardly fail to know best what is suited to the special needs of his field.

The fight in Congress to prevent the abolition of the warehouses will draw its main inspiration from the unwillingness of members interested in New York, Chicago, St. Louis, Omaha, or San Francisco to let go of anything governmental which is now planted in those cities. The consideration of administrative economy will not appeal to them half so strongly as the need to explain to their constituents next autumn how it all happened. Whether the Administration carries its point will depend, therefore, on how seriously the lawmakers concerned take their own repeated declarations in favor of cutting unnecessary public expenditures to the quick. The saving involved in the change has been variously estimated at from twenty-five to fifty thousand dollars a year. It will probably be nearer the higher than the lower figure; for a system of this sort includes a multitude of incidentals which, though too petty to enter into a detailed estimate, go to swell the total cost.

For the citizen whose chief interest in Indian affairs is on the human side the contemplated reform will mark another forward step in the process of unification which offers the one practical solution of the Indian question. The tortuous road which the Government has trod is strewn with the wreckage of artificial devices for civilizing the Indian, as if the problem had been one in mechanics or physics instead of in human flesh and blood and brain. These failures have tended to fix more firmly in men's minds the idea of the segregation of the Indian as one apart, and destined to remain apart, from the main body of our population. The extinction of all visible monuments of that long-persistent theory would follow logically the establishment of his freedom to become a citizen, to own land and other property in his individual right, to trade with whom he pleases, and to go and come at will. Doubtless the Great Father at Washington will long act in some respects as his guardian and be a voluntary purveyor to his needs, though not on just the same terms as of yore; but as reminders of his period of helplessness, it will be better for his self-respect that the warehouses should be wiped off the map.

AN ECONOMIST TO THE RESCUE.

In the whirlwind of talk evoked by the high-price cry, it would be well for all of us to clear our minds of cant. But the injunction applies with especial force to the political economist. From him, if any one, is to be expected a firm resolve to keep his mind clear in the midst of the hubbub, and, if he can do nothing to explain or illuminate the situation, he should at least not add to the confusion by irrelevant discussion or by misty imaginings.

Such, however, does not seem to be the conception of Dr. Simon N. Patten, professor of political economy in the University of Pennsylvania. His contribution, in the current *Independent*, to a series of articles on the increased cost of living is a paper entitled "The Crisis in American Home Life." Some of his opinions on fundamental questions pertaining to home and society are sound enough, and, taken in themselves, would call for praise, not censure; but to empty his farrago of notions about a score of matters—matters of morality, matters of fact, matters of taste, and what not—in an ill-assorted jumble of uncritical dicta, and pretend that it has any real relation to the present condition of prices, is to discredit, as far as in him lies, the profession that he represents. It is no defence against this accusation to assert that the general charges

made by Professor Patten against the existing condition of society—some or all of them—are true. That the demand of the middle classes for comforts and luxuries is constantly increasing; that the servant question is becoming more and more difficult to deal with; that the hold of religion on the lives of the people has relaxed—these and kindred things it required no political economist to tell us. Nor are they new phenomena; and yet in not a single place in Professor Patten's article does he indicate that all these tendencies have been in full force for at least a generation, whereas the complaint of high prices is only a few years old. Even in the wayfaring man it would show discreditable carelessness to overlook the fact that it is hardly a dozen years since the great cry of the economic wailers, the world over, was for the abnormal lowness of prices; in an economist such want of thought is disgraceful.

Professor Patten commands a forcible style, and no one can deny to him freshness of thought. His originality is, indeed, his undoing; one can hardly, perhaps, apply to a man with whom great new ideas spring up spontaneous every morning in the year such standards of responsibility as are binding on more matter-of-fact people. The assurance, however, with which he dismisses the views of sober economists, and the confidence with which he "hopes to show" that his own succeed where all others fail, are a little less easy to excuse. Whether he is justified in this estimate of the value of his own lucubrations as compared with the results of the thought of the rest of the world, we cannot attempt to indicate by a detailed examination of his article; but some specimen bricks may enable our readers to judge for themselves.

Two little examples may suffice: one serving to illustrate Professor Patten's irresponsible handling of facts, the other his general laxity of thought. Speaking of Philadelphia, he has this to say of "the salaried class and the small proprietors whose incomes range from $1,000 to $3,000"—of this class as a whole, be it understood:

> They have suffered not only from the rapid rise in the cost of living, but also in many cases from an actual decrease in income. Years ago they were the well-housed class of whom the city was justly proud. The rows of three-story houses in the older part of the city attest to how they lived, and as to what was their standard. To-day these three-story houses are largely boarding or apartment houses, and the families who formerly lived in comfort, having sold or stored their household goods and treasures, live in single rooms of their former houses.

No indication is given of any investigation upon which this astonishing statement is based. Again:

> A fourth cause for the present crisis lies in the new status of women. Forty years ago a man could live comfortably on $1,000 a year. Under the magic of the wife's hand this $1,000 became $1,500 or $2,000. The wife created more value by industry in the home than her husband did out of it. In her hands cloth became clothes, flour bread, and fresh fruits the winter's preserves. Now all things are done outside the home and must be purchased with the $1,000 income.

The scientific accuracy of this estimate of the value of the wife's magic saving—in dollars and cents, we mean, of course—is somewhat open to question; but waiving that, what has "forty years ago" to do with the question? The thing to be explained is the rise of prices since 1898; just before that time they were lower than they were "forty years ago." But that makes no difference to a sociological economist running amuck.

In larger matters, there is the same looseness of treatment. The broadest theses are laid down as to stoppage in the growth of capital, stoppage of saving among the middle classes, and other large subjects, without the least indication of proof; the position of John Stuart Mill on the question of capital and population is stated with crude inaccuracy, and, even as so stated, is refuted only by assuming that to be an established fact which is in reality but the offhand conclusion of Mr. Patten himself in regard to the cessation of saving. Take it all in all, the article, as related to the discussion of the high-price question, has only one merit; it should serve as a warning of the depths to which a man of ability may descend if, in a matter demanding cool and responsible analysis, instead of following the light of reason and respecting the canons of scientific thinking, he is bent only on pursuing his own crotchets and exploiting his own nostrums. That Mr. Patten's views on various matters concerning social arrangements and their betterment have merit, we do not deny; but to see the phenomena of a five-year-old era of high prices in the light of his all-embracing notions of social improvement is only to darken counsel.

THE OPENING OF PARLIAMENT.

Kinglake once took a fling at "the qualifying words which correct the imprudences and derange the grammatical structure of a Queen's speech." In the King's speech of Monday, however, the ordinary vaguenesses and ambiguities would have been sadly out of place. The Parliament which now begins its work meets under conditions that demand a simple and direct announcement of the legislative programme. It is not the case of a new Government coming into power, with extensive schemes of law-making to sketch out. The former Prime Minister returns, after a political crisis and an electoral struggle, with his Cabinet virtually unchanged, and with a very definite labor immediately at hand. Finance is the first and pressing question before the new Parliament, and we have only to think of the very passion of Englishmen for orderly and well-settled governmental finance to understand what a driving force Mr. Asquith has behind him when he appeals for the speedy enactment of the nation's tax laws. With little more than a month remaining before the expiration of the fiscal year, the collection of taxes has not yet been validated by Parliament, Treasury borrowings in vast sums have to be provided for, and the whole financial system of the country saved from falling into chaos. Now, Englishmen may occasionally show tolerance for chaotic conditions in other affairs of government, but they want to think of the year's budget as something fixed and certain. What they have to pay, what the government can spend, what is the exact condition of the national Exchequer—if the Briton is at sea in regard to these things, he feels that he has lost both headlands and compass. It is this deeply rooted instinct for the good order and dignity of British finance which Mr. Asquith can securely count upon as an aid to him in making the nation's books balance.

Before the powerful pressure along this line it is virtually certain that all merely party considerations will be forced to give way. There has been a good deal of talk among Mr. Asquith's Labor and Irish allies of refusing to vote for the budget unless he shall first stand and deliver pledges concerning subsequent legislation, of the kind that they desire. In the House, Mr. Redmond made threats. But the budget sim-

ply must be passed at an early date. This is so strongly felt to be the first inevitable duty of Parliament that Conservative votes are even confidently predicted in support of Mr. Asquith, if needed. But there is no good reason to suppose that they will be needed. The Irish leader has to do a certain amount of loud talking in order to keep his followers up to concert pitch, and to make head against the little mutiny in his own ranks, but it is inconceivable that either he or the Labor members should be found trying to upset the Government in haste.

Indeed, that part of the King's speech which refers to the House of Lords marks out a line of procedure on which it should be easy for all parties to the coalition to agree. As soon as may be, Parliament is to take steps to secure to the Commons undivided and undisputed control of all financial measures, and in general legislation "predominance." This looks to the absolute doing away of the Lords' veto on finance bills, and to a serious modification both of the personnel and the functions of the upper chamber. For the fight to bring about those reforms, both the Irish and the Labor party would seem bound to enlist. If they bolt, they hurt themselves first. The legislation which they desire can be brought within sight of attainment only by first battering down the obstacles which the previous claims of the Lords have presented in almost insuperable form. Time enough to talk about another appeal to the country after this great struggle has been fought through in the Commons.

One serious difficulty in the present situation of the English political world is that neither side to the controversy, not one of the four political parties, has really a statesman of the first-class. There is no one to appeal to the democratic ideals of the people as could Gladstone; no Conservative with the hold upon his party and the authority with the nation which Lord Salisbury had; and the Irish have no Parnell. If the world is, as Napoleon said, governed by the imagination, it must seem a pity that at this juncture there is no great English orator, no inspired political leader, to fuse differing opinions in the glow and fire of his genius, and to work out a solution of the problem amid the acclaim and with the support of the large body of his countrymen.

LOSING OUR STANDARDS.

Hard on the heels of the stir created by the placing of Gen. Lee's statue in Statuary Hall at Washington comes the news of a brisk discussion at Harvard of the desirability of recording in Memorial Hall the names of the graduates of Harvard who served in the Confederate army. It was the genial Harvard *Bulletin* which made this suggestion as a result of some glowing eulogies of Harvard soldiers in the civil war, and apropos of the invitation to Major B. M. Harrod of the Confederate army to address the undergraduates on Memorial Day in Memorial Hall. There was a prompt protest from Col. Norwood P. Hallowell of Boston, a gallant officer of one of the Massachusetts colored regiments. Memorial Hall, he averred, was erected in honor of the men who died for freedom, not for slavery, and to preserve the Union. Any recognition of the gallantry of the Harvard men who went South ought, he thought, to be made elsewhere. To Col. Hallowell, it would be a sacrilege to put into Memorial Hall the names of the Harvard men who fought for an unrighteous cause and sought to destroy the government.

This has, of course, led to the charge that Col. Hallowell has waved the "bloody shirt"; that he is as much an anachronism in Boston as Senator Heyburn of Idaho is in the Senate. In the *Bulletin* the battle wages merrily. Into it we do not care to enter save to say that if Harvard wishes to honor her Confederate dead she may properly do so, but not in Memorial Hall. The funds for erecting this building were raised for the distinct purpose of honoring the soldiers of the Union. To that, it was solemnly dedicated. To state this uncontested fact is neither to harbor old antagonisms nor to wave the "bloody shirt." Beyond this one comment on the Cambridge situation we do wish, however, to point out that the Lee and Harvard episodes are merely symptoms of a kind of intellectual haziness altogether too prevalent. In this era of good feeling we are not only ready to kiss and make up with former enemies, but we actually seem to be taking the position that there really never were any points of difference between the North and South, no question of right or wrong, no question of human liberty or serfdom. At most, some academic Constitutional questions were settled by the terrible loss of life in the war between the States!

Nor is it in the matter of the civil war only that we seem to have lost every standard of judgment. We meet the same lack of clear-cut thought in many a contemporary political matter. There is a successful order of journalism in which everything is for the best. Honest indignation at any wrong, or in behalf of any principle, is strictly bad form. The other fellows have their good points. Is there a miscarriage of justice? Then remember that there were miscarriages of justice in the Holy Land. Does a President abuse his appointing power? Well, so have all his predecessors. Why should we worry about that? Are upheavals threatening? Well, be sure that somehow all will be for the best. Whoever wins in any election or on any issue, it marks a triumph for optimism. The best policy is not to ruffle anybody's feelings.

At the hands of this school all history becomes foggy. In our admiration for the bravery of the men who fought on both sides in any contest we readily forget what it was all about. Cervera was a brave man; so was Sampson. The issue behind the struggle disappears. Who cares? A monument to Weyler may yet be proposed for the Battery. Jefferson Davis should have one in Central Park. As for the Mexican War, we should be glad to glorify it, did not the words of Ulysses S. Grant and of other outraged participants forbid. So we slur it all over or forget about it. We are rapidly getting to that point in regard to the Philippines. Who cares to inquire if there is any principle behind our occupation of that archipelago, any question of morality, of right or wrong? Probably fifty years hence some editors will be solemnly affirming that we took their country from the Filipinos because it was necessary for the Supreme Court to show that we had the right to hold subject colonies.

In the face of all this, one is tempted to ask of what use are standards of any kind. Why seek to have any, either private or public, if in a few years they will all dissolve in a flux of good feeling? If there ever was a war fought on behalf of democracy, of individual liberty, of substantial Christianity, it was the American civil war. Both sides cannot have been right; nor is it true that both were ready to spill blood

merely because of a Constitutional question. To insist now that there was no difference in the ideals and purposes of the two forces of 1861 is to reduce history to the plane of the moving-picture shows, to make light of the greatest sacrifices ever offered in this or any country for principle and patriotism. It is to decry the men who saved the Union if we declare that there was only a chance difference between their views and those of their opponents, or to assert that time has wiped out all the principles for which Lincoln and his followers stood. To take such a position is to say that there is nothing steady in our political firmament, that there are no fixed stars of morality by which human beings must steer.

POETRY AND COUNTRY LIFE.

The London *Times* has been giving a great deal of attention to the question in just what degree, and in just what sense, and with just what limitations, poets have "preferred and lived, of free choice, the simple country life." In the first place, the *Times* ventured to suggest that Wordsworth was the only poet who had done so. Then Mr. Alfred Austin, evidently regarding this as an aspersion upon his brotherhood, came forward with an indignant protest. His excited state of mind is shown by the circular character of his argument:

> One could fill a whole page of the *Times* with quotations giving conclusive evidence of Shakespeare's monomania, if you like, for the simple country life. Even in "Measure for Measure," what says the Duke?
>
> For I have ever loved the life removed,
>
> a line in which one seems to hear Shakespeare himself speaking.

One seems to hear! Exactly; but, of course, one does not "seem to hear' Shakespeare himself speaking unless one starts out with the idea that this was a proper sentiment for Shakespeare to have. In like manner we could testify to Shakespeare's monomania for complicated court life, his monomania for war, his monomania for peace, his monomania for eating and drinking and fasting, and so on *ad infinitum*. The *Times* kindly refrains from pressing this point, but answers Mr. Alfred Austin with a column dissertation on poets and their ways, maintaining, on evidence external and internal, that, except for Wordsworth, even those poets who have derived their chief inspiration from nature have not cared to live the simple country life.

This seems to us true enough. Poets in general have chosen Nature as a priestess, but not as a companion. And indeed, the appeal of poets to mankind at large is greatly dependent on this fact. They are constantly giving voice to the love of the country, but it is the townsman's love, not the countryman's. And it is the townsman who longs to find expression for his feeling. The countryman's love of the country is something so ingrained, so elemental, that it cannot be analyzed or written about. But the city man is constantly talking about the country in more or less rapturous language. He calls it nowadays, "God's out-of-doors"; can we wonder that he is glad when a poet enables him to dispense with that phrase? The poet, then, expresses his own feeling about the matter, which is merely that of the ordinary man, but raised to a higher power. He feels, like most of us who live in cities, that the simple country life is a very lovely thing to hark back to, that the thoughts of it, the memories of it, whether drawn from one's own experience or from that of one's parents or friends, have a great power to sweeten, to purify, to recreate, our complex city life. He may even think that a simple country life is in itself the most desirable kind of life, but he feels that the choice is no longer open to him. He may live in the country; but when once he has thoroughly belonged to the town, he cannot again lead the simple country life; for the deliberate pursuit of simplicity is one of the last refinements of the complex.

A more serious question, however, is confronting our modern world. How much longer will poets, how much longer will mankind, have any "simple country life" to fall back upon? One cannot live on memories of an indefinite antiquity, and the simple country life is already little more than a memory. The chief difference between the country and the city at present seems to be that the country has a lower grade of the same things. A small village has come to be very much like a large city with the best parts left out. Take its amusements, for example. It has not the theatre, but it has the moving-picture show; it has not the opera, but it has the phonograph; it has not books, but it has the Sunday supplement—and lives on it all the rest of the week.

The city, too, is doing its share to blunt the fine point of the contrast. It does not import the baser elements of the country, perhaps because it can't, but it does what is worse. It takes the most delicate things it can find and cheapens them by affixing high prices. It takes the flowers of the fields and the fruits of the trees and uses them as mere adjuncts of its own flaunting luxury—mere evidences of "conspicuous waste." Worst of all, it robs the seasons of their sentiment. How can a poet, or any one else, dissociate the thought of spring, when spring finally comes, from the picture of those poor little far-sought daffodils and tulips and strawberries that he has seen in the shop-windows in this chill February weather? The best he can do is to protest against the anomaly, as does Mrs. Gilman in her newly launched organ of protest, the *Forerunner*—

> I hear, in raw, unwelcome dawns
> The sordid sparrows sing,
> And in the florist's windows watch
> The forced and purchased spring.

NOTES ON GERMAN BOOKS.

There is no lack of books about America and Americans on the German book market, but none more sane and impartial in spirit than Ludwig Brinkmann's volume of essays and sketches, called "Eroberer," which is just published by Rütten & Loening of Frankfurt. The initial chapter of this remarkable book begins significantly with the question: "Has America been really discovered?" For whatever is known of a country is to the author of little value so long as its spiritual content has not been grasped. His own attitude is so modest as to command respect; he claims no merit for his papers except the earnest desire to show his readers what he himself has long known: "that there is a new land of which we know nothing, a world that we have yet to discover." He begins his reminiscences of American travel with Concord, which he calls the cradle of an iron race of conquerors; he is convinced that though the people now care little for philosophical musings and æsthetic triflings, the time will come when they will remember their true home and long from the clamor of combat for its classical quiet. Still it is the new America that impresses him most profoundly; of all the pictures that he has seen in the art galleries of the country a painting of Broad Street, New York, has struck him most forcibly: he sees in the skyscrapers the massive expression of an upward will and is ashamed to think

that his compatriots here and abroad belittle these attempts of a new race to create a style reflecting its character and responding to the requirements of its material life. Guarding like a fortress the entrance to the new world, New York is to him full of beauty, for "beauty is the lovely daughter of power." A year later, when he sees the new San Francisco rising upon the débris of the old, he is again struck with the expression of power in American architecture. The work of reconstruction reminds him of ants forever building and rebuilding their cities. "They must build, for that is their nature." So the American people must work, because it is their nature.

To the discerning eye of this critic, the story of the drowned mine of Cripple Creek illustrates many of the salient features of the people's character: "An American knows no limits; the expanse of his country makes his spirit of enterprise far-sighted; should he consider only the business close at hand, he would fear to spoil his eyes." There is a dramatic account of a solitary walk across the mountains from one mining-town to another, when he meets a woodcutter, and is shocked by the recklessness with which the devastation of our forests is going on. His record of a visit to Salt Lake City gives an intimate glimpse of the woman's side of Mormonism and leaves no doubt of the author's sympathies. Everywhere Herr Brinkmann seems to gain his impressions first hand. On reaching the plains, he plunges with zest into the life about him, and finds in "Cimarron Jack" a cowpuncher-philosopher who becomes a most interesting interpreter of America and Americans. A son of New England, transplanted by chance into the wilderness and the vastness of the plains and ever after under the spell of the unlimited horizon, the former Platonist demonstrates to him why we cannot be Heilenes and why the Americanism rising upon the ruins of Hellenism is a logical phase in the evolution of humanity. This chapter of campfire talk is teeming with ideas, and the song which Cimarron Jack sings, as he drives his cattle to shelter, whether authentic or an invention of the author, suggests the rugged beauty of the rhythms of Walt Whitman. The home life of an American mine-owner in Mexico gives the author opportunity to compare the drudging, careworn women of his country, driven by the sacred sense of marital or domestic duty, with the pleasure-loving, self-indulgent type of American women represented by Jane Dickinson. It is a pity that in his wanderings across our continent the author does not meet a single American woman belonging to those thousands that work harder, perhaps, than any European woman, but work from a love of work and a love of the freedom earned by that work. This chapter is the only one lacking the freshness and spontaneity which characterize the book as a whole.

As a severe but judicious critic of his nation and his time Karl Scheffler presents himself in the book of essays called "Idealisten" (Berlin: S. Fischer & Co.). Simply and forcibly he limns various types of the German nation. At times he assumes a tone of pessimism, but he ends with reflections on that which is alive; for there are things in the contemporary life of his country which convince him that the much-vaunted idealism of his people is after all, not dead. He perceives it still seeking realization in the hunger for truth, which manifests itself in religion and social life, in science and art, in literature, and in the divers phases of life itself. He admits that this idealism of truth is analytic rather than synthetic in its results, that it produces Eiffel Towers rather than Gothic cathedrals, that it explains the theory of tone vibrations, but does not create new music, that it tells us exactly what art can and should be, but does not make great artists. Yet the fruit of this passionate search for truth is maturing in a new reading of life. Knowledge of the world may have robbed our heavens of their deities, but to the imagination it has infinitely widened the horizon. In art this search for truth has broken the reign of academicism. He traces the effects of impressionism through all phenomena of life and sees in it not a decadence, but a beginning.

Meyer-Graefe's "Spanische Reise" (S. Fischer & Co.) is a unique book of travel. Whoever expects a carefully arranged and labelled accumulation of facts and impressions will be disappointed, unless the preface has been read, in which the author admits that during his trip he wrote only in the hours for which he had no better use. Thus prepared for his personal and unconventional point of view, you are at once captivated by the charming freshness of these sketches of landscape and people, and profoundly impressed by the excursions into art which is the author's special domain. Meyer-Graefe had evidently started on his journey to Spain and Portugal with the intention of studying Velasquez, but lost sight of his original purpose when he discovered El Greco. This artist, whose foreign descent and erratic development occupied no little space in the art gossip of the reign of Philip II, so forcibly takes hold of his German admirer that he seeks remote nooks and corners of the country for specimens of his work, and ends by seeing Spain through the eyes of Greco. Whether it be due to this subjective point of view, or to the admirable directness of his style, the author certainly makes his readers see Spain not as a decorative historical background, but as a living entity and present reality. No reader is likely to forget the chapter in which, with a whimsical frankness and an undernote of pathos, he tells how his interest suddenly was transferred from Velasquez to Greco. He writes to a friend that a world has crumbled within him. He desires to admire despite himself, but Velasquez can no longer rouse his enthusiasm, nor can even Goya. All this is so gracefully told that the book affords rare enjoyment to the reader untrammelled by preconceived notions of what a book should be which on its title-page is announced as a book of travel and is really a chapter in art history.

No member of that brave and rebellious little flock that Karl Henckell, himself one of them, appropriately called *Gründeutschland*, was better fitted to commemorate the life and work of Detlev von Liliencron than Otto Julius Bierbaum. Nor could the dedication of this book be addressed to one worthier of such distinction than Michael Georg Conrad. For both Liliencron and Conrad, their seniors by a decade or two, retained their youth longer than many of those young men that undertook to revolutionize the literature of their country. Liliencron, Bierbaum, and Conrad stand for the strongest and most vital features that characterize the modern German school, for a wholesome hedonism which offers a corrective for the sentimental bathos of a previous, and the sterile cynicism of their own, period. It seems appropriate, too, that in the volume by Bierbaum, simply called "Liliencron" (imported by G. E. Stechert & Co.), no attempt is made to present a systematically arranged memoir, but that it is compiled from papers written by the biographer in the course of the thirty-one years which elapsed from the time when he reviewed the first poems of Liliencron, until the day in 1909 when he was called to speak at the memorial service in Dresden.

The several papers that make up the book, while they deal with the work and cluster about the personality of the poet, are really a summary of contemporary German poetry. For the very firstlings of his pen, written when he was past thirty, bore evidence of such a rare and ripe individuality, that he at once became a power in the literary life of his generation. "Wherever in German poetry to-day there is life, one can trace the manner of Liliencron. No poet since Heine has had so profound an influence upon his contemporaries, and it is only since the advent of Liliencron that the power of Heine has been finally weakened." Liliencron's influence over his contemporaries was that of a healthy personality and a brave acceptance of life:

> Nietzsche excepted, it was Liliencron who most decisively determined the poetical creation of our time, and his influence will linger. It was not the influence of one who

had founded a school and from whom this or that could be learned, but something more than that: a sort of transference of power, an influx of courage and of joy. Artists of that stamp have a meaning far beyond the height of their personal art. They are life-givers, they increase the fresh force of the intellectual realm of their nation. For they are those that rouse strength in others.

By presenting so sympathetically limned a portrait of Liliencron and dispelling many mythical stories that have sprung up about his character and conduct, this book deserves a special place in the Liliencron literature which is fairly under way.

It is pathetic to see the book by Frau Ebner-Eschenbach, bearing the title "Altweibersommer" (Imported by G. E. Stechert & Co.). For this slim volume of sketches, tales, and fables offers to her readers the fruits of the aged author's experience—winged seeds that are borne along the autumn wind. The rich knowledge and the genial philosophy of life that made her novels an ethical factor in the fiction of her generation are in these stray leaves from her notebooks; and the language is ever the same, marked by a natural dignity and unstudied grace which are becoming more and more rare in modern German prose. Compared with this book of wisdom, the volume of humorous *causeries* by Otto Ernst, "Vom grüngoldnen Baum" (imported by G. E. Stechert & Co.), is of light weight, indeed. It seems as if the author of "Flachsmann als Erzieher" and the creator of Asmus Semper were here amusing himself with clever conceits and whimsical fancies while resting from the serious work of recent years. Yet his admirers will recognize in the book the wholesome spirit of the author and will enjoy the informal chat in which the man behind the author appears as a jolly good fellow.

Ludwig Ganghofer is so sympathetic a figure in German fiction that his "Lebenslauf eines Optimisten" (imported by G. E. Stechert & Co.) will be eagerly welcomed. The book covers the period of childhood and begins with those vague earliest recollections that need a mother's memory to be properly dated. There are charming bits of description; old houses, old streets in quaint old provincial towns pass before one's eyes, and even the optimist cannot suppress a little sigh that they are doomed to make way for things of the new time. But the essential note of the book is the tactful frankness and discretion of the author in handling certain difficult situations and incidents which would have given his ultra-naturalistic brethren an occasion for the manifestation of coarseness parading under the guise of truthfulness.

Among the numerous translations that have recently appeared are three new volumes of Lafcadio Hearn in the exquisite edition of his works, translated by Berta Franzos and illustrated by Emil Orlik, which bears the imprint of Rütten & Loening of Frankfurt. They are "Kwaidan," "Kyushu," and "Buddha." The same firm has just brought out a book by a Danish writer, Jurgen Jürgensen's story of the Congo, "Christian Svarres Kongofahrt," which in its handling of the colonial problem is compared to Multatuli's "Max Havelaar." Among the latest additions to the German edition of George Bernard Shaw are "John Bull's Other Island" and "Major Barbara," like the earlier volumes, translated by Siegfried Trebitsch, who is improving in his work; the publisher is S. Fischer of Berlin. The first of a series of interesting historical novels from the Swedish of Verner von Heidenstam, "Folke Filbyter," is published by Albert Langen of Munich.

CONCENTRATION AND DISTRIBUTION OF STUDIES IN THE SMALL COLLEGE.

To the Editor of The Nation:

Sir: The *Nation* recently characterized the new plan adopted at Harvard for concentration and distribution of studies as a radical and thoroughgoing modification of the elective system, one that "means much to thousands of individual young men whose choice of studies it will directly affect." Does not this make the new rules appear to be more severe restrictions on the elective system than they really are? As a matter of fact, only one-seventh of the men who have graduated with honor from the Harvard Law School during the past decade failed to meet the new concentration requirement. In respect to distribution, the courses of these men were elected very much in accord with the newly adopted principles. The electives of former classes, however, have not been sufficiently interpreted and published to permit such generalizations regarding the influence of the new rules as have appeared in numerous publications. In particular we cannot say to what extent the freedom of choice of the "Gold Coast" population will be restricted. From my preliminary studies, covering thousands of complete programmes, I am convinced that not half the men at Harvard will feel the effects of the new rules, except so far as their attention is called to the fact that a majority of the faculty believe in some degrees of concentration and distribution.

There can be no better way to consider the need of a small college for such rules as Harvard has adopted than to examine the actual programmes developed under free election. A study of the entire courses of all the graduates of Bowdoin College of the class of 1909 is therefore profitable. This class of fifty-four members took its entire course under an elective system which, for our present purposes, may be regarded as virtually unrestricted. It is true that a concentration requirement existed. Each student was obliged to complete before graduation either one major and two minor subjects or two major subjects. A major subject was one pursued for three consecutive years. A minor subject was one pursued for two years. A detailed study of all the electives of five classes, however, supplemented by personal inquiry in a hundred cases, revealed the fact that apparently not more than one or two students in any class were limited in their choice by the major and minor rules. Above 90 per cent. of all the students concentrated their work in excess of the prescribed amount. Finally, since every student took more hours in the language and literature group than the rules specified, and since he was at liberty entirely to ignore the other three groups (2. Natural Sciences; 3. History, Political and Social Sciences; 4. Philosophy and Mathematics), we can here discover to what extent the Harvard regulations, had they been operative, would have modified the fifty-four individual programmes, which were, in fact, under no such restrictions.

In the first place, the concentration requirement apparently would have had no calculable effect on the electives of this class. The obligation to choose six courses in one department or in one of the recognized fields for distinction, amounts at Harvard to a requirement of concentration in about 34 per cent. of a student's work. That is to say, each student must take one-third of his work in one department or in closely related departments. For purposes of this study, elementary courses are not counted, but advanced courses in the literatures of cognate languages are regarded as "closely related."

At Bowdoin, without compulsion, all but four of the class chose this degree of concentration. (The student who devoted the smallest proportion of his time to his major group gave 36 per cent. to Natural Sciences and 29 per cent. to Language and Literature.) Three of the four exceptions just noted were students who received honors from the faculty and whose electives would have been approved by any committee instructed "to make exceptions to the rules freely in the case of earnest men."

A significant comparison may be made between the degree of specialization twenty years ago, when the studies were mainly prescribed, and the degree of specialization to-day under free election. Ninety per cent. of the class of 1890 spent only 13 or 14 per cent. on their major subjects. Ninety-seven per cent. of the class of 1909 took above 18 per cent. of their work in their major subjects (not counting closely related subjects). The most highly specialized course under the old régime was more scattered than the most widely distributed course under the elective system. Evidently there was not the slightest ground at Bowdoin for the fear that the new freedom of choice would result in greater scattering of electives.

With reference to the Harvard rules for distribution among the three groups other than the student's major group, the electives of these fifty-four Bowdoin men exhibit the following results:

Four students fell one-half course short of the requirement in natural science.

Four students fell one course short, and one student fell one-half course short of the requirement in history, political and social sciences.

Three students fell one-half course short of the requirement in philosophy and mathematics.

No student failed to meet the requirement in language and literature.

To satisfy the complicated Harvard rule regarding the distribution of the six courses among the three groups, five students would have been obliged to substitute for a choice in literature a course in one of the other groups. Such are the few scattering cases that would have been slightly affected by the new Harvard rules, had these rules been operative, and had the committee not included these few cases within the excuse limits of their liberal instructions. I may add that each of these students could, in my judgment, have presented adequate reasons for his slight departure from the necessarily arbitrary scheme which its devisers agree should be administered with free allowanee for individual needs. Even without such allowance, less than 2 per cent. of the units in the total schedules of this class would have been changed by the Harvard rules.

If, therefore, the total experience of the class just graduated is any criterion by which to judge the future—and no better one is possible—the adoption by Bowdoin of the entire Harvard scheme would have only a negligible effect. Nearly, if not all, that the new plan for compulsory concentration and distribution of studies at Harvard aims to achieve is, in fact, already achieved under the much more restricted curriculum and the virtually unrestricted elective system of a typical small college. WILLIAM T. FOSTER.

Teachers College, Columbia University, February 14.

[The article above criticised had no reference to the particular form that the Harvard rules have taken; it appeared in the *Nation* of December 16, on the occasion of the action of the Overseers in pursuance of which the rules were afterwards adopted. What was welcomed as so important was the recognition by Harvard of the cardinal defects of the elective system as hitherto carried on at that university, and the declared purpose of the contemplated change.—ED. NATION.]

THE OLD LIBRARIAN'S ALMANACK.

TO THE EDITOR OF THE NATION:

SIR: In examining "The Old Librarian's Almanack" (the first issue in Dana and Kent's The Librarian's Series, printed at Mr. Dana's press in Woodstock, Vt.), several interesting points have come to my attention which are not presented in the brief but serious notices of the work in the *Nation* and elsewhere. The "Almanack" is copyrighted by Mr. E. L. Pearson, who has for several years conducted the "Librarian" column of the Boston *Transcript*. In his preface Mr. Pearson sets forth interesting bibliographical and biographical incidents regarding the Almanack and its composer—the worthy Jared Bean, some century and a half ago, "curator of the Connecticut Society of Antiquarians." These limn for us very neatly the figure of an old-time librarian, a book-lover and bookdelver, reminiscent of that other famous student, Dr. Dry-as-dust; and the characteristics thus outlined stand out more clearly in the pages of the Almanack itself, with their quaint counsels, distiehs. maxims, and verses. A little careful investigation into the "references" cited by Mr. Pearson brings further enlightenment. No mention of the sale of an imperfeet copy of the Almanack in 1896, as stated by him, is to be found in "Book Prlees Current"; "Mrs. Sarah Gilman Bigelow's 'Literary and Genealogical Annals of Connecticut' (N. Y., 1870)," which is the cited authority for the old librarian's biography, has no existence in trade or library catalogues, and is unknown to students of Connecticut genealogy; the Newburyport Antiquarian Society, in which this treasure is said to repose, is unknown among learned societies, and no trace of the valuable collection of the late "Nathaniel Cutter, Esq.," where Mr. Pearson says he "found" the Almanack, is known to collectors or dealers. To the careful reader of the Almanack these curious facts will come, not as a surprise, but as amusing confirmation of the internal evidence of the book itself.

Mr. Pearson, however, is in error in one statement concerning his bibliothecal hero. He states that Jared Bean "died a bachellor." This is a mistake. The old librarian was married clandestinely, and late in life, to a young English woman, who, finding his attitude toward her sex intolerable, left him within a year, and returned with her infant to her native shores. Matilda Bean, the only child of this ill-mated couple, though descending in the social scale, attained maturity and became well known to a later generation as Mrs. Harris, the familiar friend and confidante of that eminent female practitioner, Mrs. Sairey Gamp.

HELEN E. HAINES.

Pasadena, Cal., January 31.

THE CARNEGIE PENSIONS.

TO THE EDITOR OF THE NATION:

SIR: Referring to Professor Lovejoy's letter in relation to the service pension of the Carnegie Foundation, printed in the *Nation* of February 3, permit me to say:

The matters noted by Professor Lovejoy were covered in some degree by the following resolution adopted at the same meeting, but apparently not known to him:

It was also on motion, duly made and seconded, resolved that first, the executive committee be instructed to safeguard the interests of the following classes of cases: (a) those who have research work in view and have shown themselves unmistakably fit to pursue it; (b) those whose twenty-five years of service includes service as a college president; and (c) those in whose mind a definite expectation has been created by official action that they will be accorded the benefits of the Foundation within the year 1910; and that, secondly, the executive committee be authorized to formulate regulations in accordance with these instructions.

The retirement of men in good health to pursue their studies unhampered may be regarded as one of the most important functions of the Carnegie Foundation. It seemed, however, financially impossible for the Foundation to meet the demands of an unexpectedly large class of men, professors for twenty-five years, in good health, who have done no important scholarly work in the past, and are planning none for the future. DAVID STARR JORDAN.

Stanford University, Cal., February 11.

ST. PAUL AND MINNEAPOLIS.

TO THE EDITOR OF THE NATION:

SIR: Mr. A. T. H. Brown, in your issue of January 27, made the suggestion that St. Paul and Minneapolis should get together and adopt one name. His reason appears to be that the combination would form the seventh largest city in the United States, whereas at present there are two cities ranking sixteenth and twentieth in size. Minnesota now has two "pushing, thriving cities." If they combined, there would be but one. Which is the more desirable, two cities with a combined population of 500,000 persons, or one city with the same half million persons performing the same work, wearing the same clothes, eating the same food, with unehanged ambitions and sentiments? Will the combination produce more enterprising business men, more honest public officials, more beautiful homes, a higher degrees of culture, more brotherly love?

As far as the selfish purposes of the politicians is concerned, it seems to me there would be a greater danger in the combination. St. Anthony, as a combination of St. Paul and Minneapolis, could control State politics. The "country" would then always be in the minority or on the "city" side.

May we not call the spirit that keeps up the two city organizations local pride, rather than selfishness? Is there any harm in the little joke of the man from St. Paul who calls your attention to the fact that the railway companies quote rates only to St. Paul, because nobody wants to come to Minneapolis, anyway? I think we can even forgive the man from Minneapolis for the statement that he is willing to unite the cities under a combined name, calling the sum "Minnehaha," the "Minne" for Minneapolis and the "ha-ha" for St. Paul. E. W. HAUCK.

Sutter, Cal., February 15.

"THE LAST LEAF."

TO THE EDITOR OF THE NATION:

SIR: Your eorrespondent, "J. M.," who is puzzled by the "mutilation" of "The Last Leaf," apparently has never seen the poet's own explanation of the revision.

Appended to the illustrated edition of "The Last Leaf," Houghton, Mifflin & Co., Cambridge, 1886, is a history of the poem written by Dr. Holmes and dated Beverly Farms, July 9, 1885, in which appears the following:

The poem as first written had one of those false rhymes which produce a shudder in all educated persons, even in the poems of Keats and others, who ought to have known better than to admit them. The guilty verse ran thus:

> But now he walks the streets
> And he looks at all he meets
> *So forlorn,*
> And he shakes his feeble head
> That it seems as if he said
> "They are gone!"

A little more experience, to say nothing of the sneer of an American critic in an English periodical, showed me that this would never do. Here was what is called a "cockney rhyme"—one in which the sound of the letter *r* is neglected—maltreated as the letter *h* is insulted by the average Briton by leaving it out everywhere except where it should be silent. Such an ill-mated pair as "forlorn" and "gone" could not possibly pass current in good rhyming

society. But what to do about it was the question. I *must* keep

They are gone!

and I could not think of any rhyme which I could work in satisfactorily. In this perplexity my friend, Mrs. Folsom, wife of that excellent scholiar, Mr. Charles Folsom, then and for a long time the unsparing and infallible corrector of the press at Cambridge, suggested the line

Sad and wan,

which I thankfully adopted and have always retained.

JAMES H. PERSHING.

Denver, Col., February 13.

"IT'S ME."

TO THE EDITOR OF THE NATION:

SIR: The article on "It's me" in the *Nation* of February 10 sent me to my notes, where I find a good many examples from literature. The animadversions of your writer on linguistic principles in general are, in the main, sound, but they are irrelevant and inapplicable to the idiom in question. Professor Jesperson is accustomed to look facts of language in the face, and hence records this familiar locution. "It's me" is a fact of language, just as "c'est moi" is, though of quite independent development. That "It's me" is not "an innovation" is shown by its frequent use in Elizabethan literature, and that its use is not confined to "the small boy" or "the radical" is shown by the following illustrations from Emerson, Browning, Tennyson, Shelley, Byron, and Thackeray, to go no further.

In Emerson's "The Adirondacks" he writes: "So like the soul of me! What if 't were me?" Which recalls Shelley's line in his "Ode to the West Wind": "Be thou me, impetuous one!" And in his "Essays" Emerson writes: "I am not one thing and my expenditure another. My expenditure is me."

Other examples are: "How will He know it's me"—Tennyson; "Is it me thou fearest?"—Byron; "'Of course it's me,' answers the young man"—Thackeray; "'Twas me this day last year at Ravenstein You hurried"—Browning.

Nor is this "a question of temperament"; it is simply in accord with the democratic tendency of the language to use the objective after the verb, whatever the kind, just as the tendency is to use the nominative before the verb; as, "Who did you give it to?" "He was denied admittance," "He was given a dinner." Authors make authority, and when the grammar of grammarians stands in the way of an idiom of the people, grammar is going to get run over.

EDWARD A. ALLEN.

University of Missouri, Columbia, Mo., February 16.

[If authors make authority, certainly the great weight of authority, from Elizabethan days to the present, is for "It is I." Probably there are few idioms, generally regarded as undesirable and likely to remain so regarded, for which testimony could not be found equal to that for "It's me." "He saw you and I" is common in Elizabethan and later writers, but it is scarcely in the way to become good idiom. Perhaps this letter from a teacher of English explains in part the inability of so many college graduates to write correctly.—ED. NATION.]

Literature.

THE PSYCHOLOGY OF A PEOPLE.

The American People: A Study in National Psychology. By A. Maurice Low. Boston: Houghton Mifflin Co. $2.25 net.

The fruit of more than twenty years of residence and nine of study, this attempt to trace the formation of American nationality evidently deserves serious consideration. Mr. Low approaches his subject quite in the spirit of Taine. The human product emerges, he assumes, along a line which is a resultant between the stresses of inner character and outward circumstance. In this first part of a comprehensive study the formative process is followed to the eve of the Revolution. That America has produced a new race is the point of departure: "America is no longer England, or even a reflex of England. America is American; and if the character of the American people is to be understood and their civilization is to be correctly interpreted, they must be measured by their own standards, and not weighed in the scales of foreign make." Just what the American character is Mr. Low's enthusiastic rhetoric indicates only in broad and rather vague lines. We hear of the indomitableness of the democratic spirit, of the fluid condition of our social and public life, of a national vitality still too high to have reached "that stage when imagination makes a greater appeal than action." The sketchiness of the treatment is probably due to the fact that Mr. Low means to build up his picture *a posteriori*.

That the Puritan is at once a much-maligned type and the very heart of American nationality is the main contention of this book. That the Puritan was gloomy, hated the arts specifically, affected sombre colors, was fanatical beyond the wont of the age, Mr. Low brings abundant evidence to disprove. Many of the repressions which have passed for fanatical were directed against overt disorders or immoralities, or otherwise based on sound public policy. The Puritan, who must be carefully distinguished from the milder and relatively ineffectual Pilgrim, was a person of influence and education, a persistent rebel, but also a shrewd man of affairs. In a passion for knowledge he contained the dissolvent of the tyrannical theocracy he aspired to found. Practically our early history is one effort towards education, with intermittent rebellion against the pretensions of the crown, and frequent unopposed secessions of discontented or oppressed sectarians. Boston became another England, pushing off her best into the wilderness. By a sound practical sense, curiously opposed to his theoretic intolerance, the Puritan managed to live at peace with neighbors of liberal views. Thus the Rev. Thomas Hooker's settlement at Hartford managed to set up a real democracy, the harbinger of the liberation to come, between the stern theocrats of Boston and New Haven. Roger Williams's eccentric refuge at Providence Plantations was unmolested, and he, while admitting all innocuous vagaries among his fugitives held them strictly to decent conduct. In a word, the Puritan persecuted no one who was not under his nose or otherwise troublesome, and in this was far in advance of his age. Possibly, Mr. Low here credits too much to character what really was due to inaccessibility. The Bostoners were simply too busy to bother about the remote subversive Hookers and Williamses. But the general truth that the Puritan régime steadily made for self-government and individualism is incontestable. Mr. Low's conclusion is that the Puritan's virtues were largely his own and rapidly intensified by opportunity and necessity, while his faults were merely those of his age.

We cannot follow the details of the argument. It is always ingenious and usually sound. The assertion of the isolation and relative unimportance of the Mayflower compact and the Plymouth Colony will doubtless be unpopular, but we doubt if it can be shaken. Possibly the importance of the Hartford colony is exaggerated, though in view of the marked influence of the Connecticut system upon the constitutions of other colonies and that of the nation one must welcome the prominence given to Hooker's constitution. In dispelling certain discredited but stubborn misconceptions about the Puritans, Mr. Low has done good service. Most people probably still believe that the "sad" color worn by the colonists was funereal in effect. As a matter of fact, it included a wide range of those subdued shades which persons of taste still affect. "Liver colour, tawney, russet, French green, deere colour, orange colour" are called "sadd" in a contemporary list of dyes. Obviously a city thus habited would have presented no monotonous aspect. Of course, readers of Samuel Sewall's diary, or even of Mrs. Earle's pleasant books, knew all these things, but they have to be repeated. We are still in a stage where many intelligent persons believe our forefathers pronounced Ye (the) as they did the personal pronoun. On the value of what seem the portentous church hours, as intellectual recreation, and on the usefulness of the Sabbath rest, Mr. Low is amusing and persuasive. The Indian he treats almost as summarily as the colonists did. He was the "whetstone" on which wars

were sharpened, and we used him up in the process. *Voilà tout!*

What is especially novel in a study that necessarily moves on most familiar ground is the emphasis laid upon the Puritan as an incorrigible stickler for his rights. The Revolution was merely precipitated by the casual stupidity of English ministries. It was already written in the stars. Mr. Low hardly notes the rather interesting paradox of persisting social distinctions with increasing political equality—a process well exemplified in modern France. Well into the last century, college lists contained an especial category of "esquires," *i. e.*, gentlemen. A great-grandfather of your reviewer as a "gentleman" bought a tract of land from another ancestor who is written down officially a "yeoman."

The other colonies receive a less extended treatment, though Virginia is regarded as hardly second in importance to Massachusetts. As Charles I drove out the Puritans, so Cromwell made Virginia attractive to the Cavaliers. But the first had the enormous advantage of laying their own social foundations, while the second were superimposed upon a poor white class already produced by the deportation of criminals and ne'er-do-wells. King Tobacco, requiring *latifundia*, costly change of fields, and servile labor was already regnant, and under his patronage oligarchs throve rather at the expense of the commonwealth. Here were bred, however, amid generous social amenities those masterful men who were to direct the early republic. Here, we think, flowered a true sense of hospitality and communal responsibility which remain a valuable leaven in our tumultuous civilization. One likes to dream of what might have been could the South have grown merely as a greater Virginia. But, unlike Massachusetts, Virginia sent out pioneers in abundance, yet rarely colonies of her best. As the feeble stream of settlement trickled southward the pall of slavery, and corresponding ignorance grew heavier. The rebel spirit inherent in the colonial breast persisted, but the rationale of protest was obscured. The Mecklenburg resolution is, we think justly, regarded as a ripple without ulterior profit. Nor was there anything constructive to be had from Oglethorpe's ready-made colony of Georgia. To the end Virginia remained the ideal to which the South generally, while approximating, never fully attained.

Lord Baltimore's colony of Maryland, however, struck in the principle of religious toleration a prophetic note, which it was soon unhappily to disown. George Calvert is the single mysterious figure in our early annals. If we knew what he really was up to, a historical novel of the Henry James type might possibly be evoked. Mr. Low weighs the possible motives with a delicate hand, and comes to no conclusion, but is evidently doubtful of the common view that Calvert was a disinterested philanthropist. Whatever his aim, he kindled a spark that while America is herself can never die. More directly in the apostolic succcssion of religious liberty is Roger Williams, about the only unambiguous Protestant saint that colonial America produced. We can merely allude to the just and vivacious pages which reveal in Rhode Island that pullulation of rival tolerant sects which was to amaze Tocqueville some two centuries later, and was to be written down as the chief characteristic of new America.

Pennsylvania was, in a manner, a new Maryland, but steadied by proximity with the northern colonies and by an opportune influx of sturdy German immigrants. With the abundant literature of German immigration Mr. Low seems unfamiliar. It is a field that he will have to cultivate seriously in his later volumes. The Swedes of Delaware and the Dutch of New York simply came and went, contributing nothing to the commonwealth but their brawn. This is a hard judgment, but we think a fair one. The Puritan and Cavalier had the good fortune to derive from an England in intense intellectual and political fermentation. The Dutch colonists, urged merely by considerations of trade, had the ill-luck to leave a fatherland complacently diminishing its rather small stock of ideas. Thus they could contribute, and Mr. Low hardly concedes them so much, only their sturdy physique and some sedative leaven of common sense.

This book is almost exclusively analytical, and beyond saying that the analysis is scholarly, based on sources, and in the main persuasive, criticism can only take the form of exposition. The style is always alert and stimulating, though at times it seems to us overswollen in the manner of high-political journalism. We await expectantly the synthesis which the next volume must bring.

CURRENT FICTION.

Lord Loveland Discovers America. By C. N. and A. M. Williamson. New York: Doubleday, Page & Co.

A very good-humored, pleasant, wholesome, improbable story of a young peer, conceited and wife-hunting, who gets his deserts in America—and something over. Lord Loveland is the type, the commanding type in English fiction, of the hero in love and war who, by virtue of his old name and good looks, has but to put forth his finger to lay the world at his feet. He is complaisantly used, as a rule, by the British romancer: as, for example, by Mrs. Ward, in her recent study of international adventure and matrimony. This story, indeed, is a perfect obverse of "Marriage à la Mode." The situation at the outset is the same. Our young nobleman, who finds himself at the last extreme of (noble) poverty, is dispatched to America by his haughty mamma to get him a profitable wife. She assures him that there are plenty of American heiresses in the market, and that not one of them would dream of refusing him. That is his opinion, and he sets forth in full feather, prepared to see and to conquer. So far the two stories march side by side: here is a sharp parting of the ways. Mrs. Ward is in sympathy with her hero from start to finish. It seems to her quite natural that he should marry an American girl for her money, and she provides for the subsequent action by making the girl unworthy of him. The present writers hold a brief for the other side. They very much dislike the spirit of Lord Loveland's enterprise, and see to it that he pays in full. He carries letters of credit and of introduction to the States, but soon after his landing matters occur which make it impossible for him to use either. He is cast out of the Waldorf-Astoria, and thereafter, for a few weeks, has an educating experience as a penniless sojourner in a strange land. The upshot of it all is that he reforms, ceases to be conceited, begins to love his fellow-man, and is duly rewarded by the acquirement of an heiress (or rather a fabulously successful novelist and playwright), whom he has wooed as a poor girl. Of course, if my lord had recalled the existence of the British consulate, there would hardly have been a story. Fortunately, he did not, for the narrative is so lively, hearty, and soothing to American sensibilities as to commend itself strongly, even to the jaded reader.

Tower of Ivory. By Gertrude Atherton. New York: The Macmillan Co.

Mrs. Atherton's sharp and yet sweeping pen has gathered to her no inconsiderable band of admirers; few of them would have ventured to predict a story from her hand at once so modern in its waiver of the agreeably romantic, and so proud in its idealism. Its mere outline might be rendered sufficiently sordid in the telling. A young Englishman, heir-presumptive to a title, is in Munich, languidly preparing himself for a diplomatic career. At twenty-three, with the god-like beardless features of the British hero of romance, he is much spoiled by all women. His longed-for succession to the title hangs upon the death of an unmarried elder brother, which misogyny and drink seem to promise in the not distant future. Meanwhile young John Ordham, with nothing to live on and extravagant tastes, is deep in debt; and the inevitable marriage for money is urged upon him from all quarters. He meets a beautiful Amer-

ican girl, and is ardently coveted by her and her clever "Momma." He is attracted, but "Momma" sees that he will never really swallow the bare hook of a pretty little chatterbox, and whisks the girl off to London before the first attraction is exhausted. Ordham is left in Munich with only a pleasant and fading memory of the child.

Six months later, however, he is tricked into marriage with her, and after the deadly commonplace experience of calf-love, wakes to find himself cheated and bound to a silly woman. And he then realizes that before his marriage the best of him, his heart as well as his mind, has become the property of another woman. He has met Margarethe Styr after the little heiress's departure from Munich. Margarethe is his senior by a dozen years, and the intimacy which has sprung up between them has remained blameless. But the bond cannot be broken, and after Ordham's marriage it becomes clear to both that it is not a bond of friendship. "The Styr" is a great singer and actress, a protégé of the mad King of Bavaria. During the many years of her career as a singer she has lived upon a high plane intellectually, and her private life has been without reproach. But she admits to Ordham that the rumors are true which assign to her a low origin, and a shameless life for many years as a professional courtesan. She does not regret that life, since she believes that it has contributed to her powers as an artist, and even to her present strength of character. But he proposes to cast his career to the winds, and to join their lives at all cost. His wife dies, and his brother. He becomes almost in the same moment a peer, and a man free to marry the woman to whom he feels that fate has already joined him. But the Styr understands that this will mean ruin for them both, and finds the only way out.

The silly little wife, the pair of manœuvring dowagers, the brutal brothers, do not quite emerge from the convention of their rôles. But Ordham and Margarethe Styr are persons conceived and presented with extraordinary clearness and power. One does not doubt that the bond which unites them, and which is fated to suffer no tarnishing by failure of magnanimity on either side, is the supreme bond which has linked the great lovers of all time.

Rhoda of the Underground. By Florence F. Kelly. New York: Sturgis & Walton.

This story deals with the operations of the extensive system of assisting runaway slaves across the Canadian border, known in ante-bellum days as the Underground Railway. While written from an obviously partisan point of view, it shows fairness of judgment, and a sympathy with those individual slaveholders who tried so gallantly and so vainly by their personal kindness to redeem the institution of slavery from its inherent evils. The writer has embodied the two opposing sides in Rhoda of the Underground, and her lover, who is a determined adherent of the South. There is a fine victory of principle over personal feeling, and they part as war is declared—he to serve in the Confederate army, and she to nurse in the Union lines, leaving to the decision of Providence the vexed question of which is to yield, and agreeing to abide by the result of the war. It is one of those books the soul of which so far outweighs its body that one can readily overlook the mediocrity of the latter.

Cab No. 44. By R. F. Foster. New York: Frederick A. Stokes Co.

This writer, well known as an authority on bridge, plays out his story, mystification upon mystification, like a well-planned hand at no-trumps. The plot is ingenious, and though at times a little trite, it succeeds beyond the wont of detective stories in rewarding the reader with a final surprise. The chief interest lies in the movement of the story, for, in spite of much careful effort at characterization, the personages are no more than marionettes who go through the action of their pantomime at the will of their manipulator. The weakest link of Mr. Foster's chain is the effort to minister to that pathetic fallacy, the absolute necessity of the "love interest." The hero's affair of the heart is unconvincing to the point of being ludicrous. It is to be hoped that in the future the author will see fit to give us a detective story that makes no attempt to deal with anything but the keen analysis and unravelling of problems that are so well within his scope.

FRENCH MEMOIRS.

A Rose of Savoy. By H. Noel Williams. New York: Charles Scribner's Sons. $3.50 net.

Madame Du Barry. By H. Noel Williams. New York: Charles Scribner's Sons. $2 net.

Madame de Maintenon. By C. C. Dyson. New York: John Lane. $4 net.

The old régime in France is still the apparently inexhaustible storehouse of courtly romance. Indeed, for a good many people the old régime means little else than the court at Versailles or the gossipy salons of Paris. Few know the real eighteenth century: the great creative period which made the nineteenth possible, which saw the dawn of science, the emancipation of reason the rise of rationalism, the development of commercial and colonial politics, the beginnings of social and economic science. It stands in most minds for the stately formalism of an age of hollow morality, for a clogged classicism in literature—burst through, it is true, by the volcanic passion of Rousseau, and cleft by Voltaire's rapier thrusts; a stilted world in a stilted style.

The three books before us are all of a kind. They are biographies built up out of the results of the more recent French investigations. They are works of vulgarisation, not original contributions to historical knowledge. This is not said in condemnation. It merely means that they must not be judged as products of scientific research, but rather as literary compilations: efforts to convey a more or less correct impression of the results of such research on the part of others. The trouble is, however, that when one who is not a trained historian attempts to popularize the scientific achievements of historical research, he is as likely to mis-state the case as would a theologian writing a text-book on Darwin. History-writing seems so easy to the untrained mind. These books teach us, if anything, how difficult it really is.

Noel Williams has now written some ten volumes of biographies, all dealing with notabilities at Versailles. He is familiar with that world of intrigue in which French royalty moved, from the Fronde to the Revolution. He has gone to the works of the best of recent French investigators. His picture is drawn in the plainest lines, without a touch of rhetorical display, in homely and uninspired fashion. But a straightforward style does not always mean a straightforward story. Mr. Williams tries to be impartial, but because his interest is in his heroine and in her story rather than in mere truth for its own sake, he fails to meet the demands of the impartial reader. When two accounts conflict, the one dramatic, the other commonplace and sober, he cannot resist the temptation to choose the striking narrative for the body of his page, even when he shows his deference to the critic by referring to the other in his footnote. For example, take the account of the "Rose of Savoy" (p. 464), where we are told that when the Duke of Orleans (later the Regent) went to sprinkle holy water on the coffin of the Dauphin,

> he had to endure "the most atrocious insults from a people which believed it was showing clemency in not falling upon him and tearing him to pieces!" Similar scenes were witnessed in Paris, when he passed through it with the funeral cortège, in spite of the precautions taken by the police, and "for some minutes there was everything to fear."

This is straight from Saint-Simon, the duke's bitterest enemy. Mr. Williams feels obliged to tell us in a footnote that Sourches and the *Mercure* tell of the orderly conduct of the crowd. Yet he follows Saint-Simon without a qualification in the body of the text. Such use of the tools of historical scholarship

makes the scholar skeptical of the "vulgarizer." For whenever truth and fiction conflict, truth falls into footnotes and fiction has the page.

The "Rose of Savoy" was Marie Adelaide of Savoy, duchess of Burgundy, and mother of Louis XV. She was the light-headed, high-spirited little princess, who came to grace the court of Louis XIV, when it was already taking on that austere tone which Madame de Maintenon brought into it. There is something in the relation of this sprightly girl, fond of practical jokes, to her moping husband, which suggests that other royal visitor to Versailles, Marie Antoinette. Fortunately for herself—and for her husband—the duchess did not live to share the responsibilities of government. The woman who caused the fall of Vauban was about as well fitted to rule as the one who brought about Turgot's retirement. Their husbands were of an equal degree of ineptitude, though from different causes. The "Rose of Savoy" was not without a thorny side to her character, and that long inertia known as the era of Fleury might never have given its refreshment to exhausted France if this vivacious woman had been able to satisfy her caprice at the expense of the nation. Mr. Williams has, of course, not concerned himself with these broader aspects of the problem. He becomes interested in his heroine as a light-hearted girl, and tells her story as a friend. The details of what dresses they wore, how "Monsieur's waistcoat was entirely covered with diamonds, tied by strings formed of diamonds," the number of times the king kissed her when she first arrived at court, the amount of money Madame de Montespan lost at the gaming table—items like these fill up the pages of a biography which finds but little else to record. And yet we had already Sainte-Beuve's keen analysis of the Duchess.

As for Madame du Barry, here historians forget that the proudest ladies of France—the sister of the powerful Duc de Choiseul, for instance—envied her, and that her chief reproach was not that she was mistress of a king, but that she was low-born, and had been immoral outside of court circles. In this biography, however, Mr. Williams has been relatively successful. Not venturing to be too sympathetic, he has made a fairer use of sources. Here are many indications of conscientious study. Vatel is the main basis for the biography, but his exhaustive apology for the "joyous libertine" is duly tempered. The result is, we believe, a reproduction of du Barry as she really was: light-hearted, unconventional, unaffected, simple but vulgar in bearing, generous at heart, not malicious like Pompadour, not imperious like Montespan, absolutely unmoral rather than a conscious sinner—a jolly, giddy thing, retaining her healthy animal spirits in the unwholesome atmosphere of corrupt Versailles. One must not forget in judging her that she retained the affection of the king to his dying moments, and that Louis XV had tired of all the means of self-gratification ever offered to a man before she entered into his life. This is a genuine tribute to her charms. Madame du Barry has borne the blackest character among many of her class, but when one looks at the peculiar kind of achievement of her life, and then follows her generous impulses to her equally unmoral mother and to her neighbors, one feels little of that repulsion called out by the selfish, sordid lives of her titled rivals.

The life of Madame de Maintenon has recently been the subject of serious research, and something like a definitive biography is now possible. The work of the late De Boislisle has proved much to be legendary which formerly passed for history. The stories concerning her stay in the West Indies, the arrangement of her marriage to Scarron, and the way she was introduced at court, are now to be retold in more sober guise. The "Souvenirs de Madame de Maintenon," published by Hanotaux and d'Haussonville in 1902, furnish us with her last letters and the only authentic copy of the Journal of Madame de Maintenon's secretary, Mlle. d'Aumale. We are now in a position to know intimately what manner of woman it was who "converted" Louis XIV, turned him from a libertine into a Puritan, and still managed to retain her control over him absolutely, so long as he lived. Mr. Dyson's biography is an attempt to place this new knowledge before the English reader, along with the well-known history of which Maintenon was the centre. The political rôle of the King's wife had been exaggerated by earlier biographers. In these pages the point is well made that Louis was not the man to be led, too directly at least, into plans that were not his own. This tribute to his strength of character is also to be found in the latest full study of his reign, the masterful analysis by Lavisse. But if Madame de Maintenon was not responsible directly for the expulsion of the Huguenots, she induced an attitude of mind in the king which led indirectly to the same end. She was more than a colorless ornament, a kind of prude sitting by the royal fireside to grace his moments of leisure. She was a strong-willed woman, of infinite tact and indomitable perseverance, who never tired under the most exacting demands of that egoist whose ego was held to be a sort of divine symbol of the nation. Such a woman was no mere figure-head set over the king's household. But her influence was of that intangible type which leaves no record for the historian. Mr. Dyson's biography is a careful piece of work; albeit wanting in deep insight. Its chief merit, indeed, is in the elaborate use of the sources, of which there are many interesting citations. A little thin in itself, the narrative takes on color and gains in interest from these glimpses of parts of old letters and diaries, more eloquent than any comment: the very human stuff out of which the tale is made.

Homer and the Iliad: An Essay to Determine the Scope and Character of the Original Poem. By F. Melian Stawell. New York: E. P. Dutton & Co. $3 net.

Even after the recent works of Lang, Leaf, Seymour, Bréal, and Murray, the "Homer and the Iliad" of Miss Stawell cannot be pronounced wholly superfluous. Its main value, however, lies not in the demonstration of its thesis, but in the accompanying literary criticism and incidental appreciations of Homer's art. Miss Stawell's special theory of the origin and structure of the Iliad will go the way of all Homeric theories. Its distinctive feature is the rejection, with Grote, from the "original Iliad" of book ix, the Embassy to Achilles, and of book viii, which leads up to it; though she retains not only the general picture of the war contained in books ii to vii, but also books xxiii and xxiv, after the climax has been reached in the death of Hector. In the affirmative part of her argument, Miss Stawell follows and resumes Mr. Lang, with many interesting and subtle suggestions of her own. For example, she argues that if we retain book xxiv, the Ransom and Burial of Hector, then book xxiii, the Funeral Games in honor of Patroclus, is needed to prevent the immediate juxtaposition of the emotional climax at Hector's death with that which finds expression in the lamentations at his burial. She might have reinforced this point by a comparison with the structure of Plato's "Republic," where the interpolation of the digression on poetry in the first half of book x has the same effect and probably the same intention. In her rejection of book ix, she expounds and expands the arguments of Walter Leaf and other disintegrating critics. It would be idle to go over this ground again. We note merely that destructive criticism brings with it bad luck, as usual. To prove that book xix is incompatible with the embassy, Miss Stawell tells us that in xix, 134-6, Agamemnon even goes so far as to say that he had never been able to give up his anger. Agamemnon says nothing of the kind. Miss Stawell mistranslates οὐ δυνάμην λελαθέσθ' Ἄτης, ἥ πρῶτον ἀάσθην.

We have ourselves no theory of the Iliad, constructive or destructive, to maintain. But it is a curious fact that destructive arguments nearly always involve misinterpretation or false statis-

tics. One such argument, hitherto generally accepted, Miss Stawell successfully challenges. The late origin of books xxiii and xxiv has been affirmed on the ground of the Odyssean character of their diction and syntax. Contemporaneously and coincidently with Prof. John A. Scott's treatment of the same question in the January number of *Classical Philology*, Miss Stawell shows, in the tables of her appendix, that the alleged distinctions are illusory, and that these books are, if anything, rather less, not more Odyssean than the others. From this, she advances to what many will deem the extreme position of affirming a common authorship for both poems. The little differences in culture, mythology, and ethics which undergraduates are required to memorize vanish under closer scrutiny. Even the *Nekuia*, allowing for a few evident interpolations, is, she thinks, a consistent conception of the life after death, worthy of a great poet. The linguistic differences between the "Odyssey" and the "Iliad" are less than those between Milton's early poems and "Paradise Lost." There remains not the slightest tenable disproof of the traditional faith in a common authorship.

Space fails to do justice to the admirable literary criticism, which relieves these philological details and which makes the book worth reading even for those sensible students who have resolved to waste no more time on Homeric controversies. No one has shown more convincingly the inadequacy of the poem postulated by critics under the name "The Wrath of Achilles." They may cut away the parting of Hector and Andromache, but they cannot think it away. "Our sympathy with Hecuba's last appeal to Hector is infinitely more tender, if we have already known her as the mother who would always see in the warrior the little child at her breast. . . . We must still read xxii in the light of xxiv (as well as in the light of iii and vi and xii, or our loss will be incalculable). If Homer does not exist, we must just invent him for the sake of literature."

The chapter on Homer and the Icelandic sagas brings out many interesting analogies, and there are numerous other apt and illuminating illustrations from later literature. One parallel is too happy to be omitted. To show that the phrase ἀπὸ δρυὸς οὐδ' ἀπὸ πέτρης in Hector's last soliloquy may well be understood in the picturesque literal meaning of the words, and need not necessarily be taken in the conventional idiomatic sense, which they bear elsewhere, Miss Stawell quotes two passages of Browning:

> The water slips o'er stock and stone.
> ("By the Fireside"),

and,

> Why men! Men and not boys! Boys and not brutes!
> Brutes and not stocks and stones!
> ("The Ring and the Book").

The Rise of the Mediæval Church and its Influence on the Civilization of Western Europe from the First to the Thirteenth Century. By Alexander Clarence Flick. New York: G. P. Putnam's Sons. $3.50 net.

Professor Flick's purpose, as he himself states it, is to meet the demand for "a simple account of the evolution of the old Church minus all theological and dogmatic discussions." He lays down with great clearness the principles on which all writing of church history ought to proceed, emphasizing especially the importance of holding the treatment absolutely to the rules that govern all other kinds of historical study and writing. At the beginning of the book and at the close of every chapter, he gives extended bibliographies of original and secondary material. At the foot of every page are copious references to the passages of historians, theologians, or what not, from which his statements are taken. We are thus able to follow the author pretty closely in the process of his study. The title "Rise of the Mediæval Church" is misleading. In reality the book is a continuous narrative of the growth of the church during the first twelve centuries of its life, and quite as much weight is properly laid upon the early period as upon the mediæval.

If we were to use one word to characterize this book, it would be "academic." Dr. Flick has had good teachers and has handled the right books. He has examined evidence for and against the claims of the Church in its chief institutional crises. The student will find here a fairly useful and trustworthy guide to wider reading. He will not be misled by doctrinal or other prepossessions, and perhaps this is all the author desires. The book is, however, another illustration of how much harder it is to make a good brief general survey of a period than to write either an encyclopædia or a monograph. To be successful such a survey must first of all have style—not be stylish; Heaven forefend! —but have that subtle sense of form and proportion for which we have no name but style. And this style must come from such a complete command of the subject as cannot be gained by hearing lectures or working in "seminaries" or even by investigating in libraries. It must come from such penetration with the knowledge of great moments and the spirit of great men that its overflow will reach the comprehension of the untrained, but attentive reader.

Dr. Flick is best in his presentation of critical moments, as for instance, the Petrine question, or the causes of Roman persecution. He likes to enumerate, and every teacher knows that enumeration is always welcome to the pupil. But when these critical points are passed, the narrative drops into a rather wearisome monotone of facts, presented in short detached sentences that do not carry. It is well to know what writers an author is mainly following, but continual reference to his sources, early and late, becomes tedious and ineffective. We especially dislike the repeated references, chapter after chapter, to pages and sections of modern books. It is a demoralizing method for the teacher and cramps the space which the author should keep free for better things. The pupil who cannot find his way in a book without this aid is not worth helping.

Dr. Flick holds out the prospect that he may continue his work through the Reformation and the modern period. We hope he will; but we hope also that he will see his way to pruning off several of the weaker parts of his scheme and holding more firmly to the valuable plan that underlies it.

Anna van Schurman: Artist, Scholar, Saint. By Una Birch. New York: Longmans, Green, & Co. $2 net.

If the belief that learning, piety, and personal attraction in a woman are stepping-stones to fame, the case of Anna van Schurman, "artist, scholar, saint," is a sufficient disproof. Even the latest biographer of Anna van Schurman confesses that her name came to the writer's notice by accident. The result of the ensuing investigations is a readable exposition of this one-time celebrity's career—her life, her work, and her religious struggles. Incidentally, we have a glimpse into Dutch seventeenth-century life, and the general current of religious feeling in the Low Countries during that period. A little more than two centuries has elapsed since the Star of Utrecht, the Tenth Muse, stood preëminent among her countrywomen in the world of art and letters. Royalties and foreign men of letters corresponded with her. Queen Christina of Sweden travelled all the way from Brussels to Utrecht to visit her. The incomparable Anna became an object of cult among her own countrymen. She spoke or wrote with fluency several modern, ancient, and Oriental languages; had mastered every subject included in the higher education of her time; was an accomplished painter on glass and porcelain; a poet, musician, and dialectician. Yet she just reached that point in which general proficiency stops short of genius; and today her name is conspicuous by its absence from the encyclopædia or library of biographies.

The strong religious tendency which showed itself in Anna van Schurman's character from her infancy was partly the result of heredity, but largely of environment. The Spanish yoke had been thrown off; and the renaissance of national life that followed was marked by a corresponding activity of religious life. The Reformation had multiplied sects by giving greater scope to indi-

vidual opinion. The sense of reverence inherent in the Dutch character produced an atmosphere of religious discussion in which the individual conscience was the main factor. Anna met many lights of zeal and piety, and gradually drifted into that current of religious thought of which Labadie was the chief apostle. She put away earthly things—and, certainly, worldly *convenances*—after coming under the spell of the French evangelist; formed a "spiritual alliance" with that worthy, made common household with him, and shared his trials and persecutions in being driven from pillar to post. Her advanced middle-age at this turning point of her career could not shield her from the tongues of the ill-natured; posterity would judge her differently. Her character was that of a shrewd, talented, womanly woman, in whom the saint wrestles long with the sinner, and finally gains the mastery. Whether her life was a success is a question which the individual reader must decide. A woman who continually deplores the vanity of her talents and erudition, yet says in the same breath that they are noble as coming direct from God, and who is "delighted" when a French poet writes odes to her personal charms, is perhaps a riddle, but certainly very human. "Papa" Labadie and "Mamma" Van Schurman jogged together very pleasantly through the last years of life, finding peace in the spiritual communion which brought them together.

Tremendous Trifles. By G. K. Chesterton. New York: Dodd, Mead & Co. $1.20 net.

Composing romances, writing the lives of illustrious contemporaries, and interpreting Christianity to the English does not, of course, consume all the exuberant energy of Mr. Chesterton. In his playful moments, which must be tolerably frequent, he contributes to the columns of the *Daily News*. The thirty-nine articles which constitute this book—the number has doubtless a symbolical value—originally went straight from the author to the man in the street, and so preserve for us the first fine careless rapture of the journalistic fancy. They were written apropos of everything that happened to turn up—a piece of chalk, wind in the trees, a lost ticket—the more insignificant the better. But, as a good-natured blacksmith *in horis subsecivis* hammers odd scraps of iron into children's toys with the same big strokes and the same fierce shower of sparks that accompany the shoeing of a horse or the forging of a chain, so Mr. Chesterton wields his adventurous pen. "Let us be ocular athletes," he cries, "let us learn to write essays on a stray cat or a colored cloud." He does not pretend to conceal his delight in displaying his athletic power; he hastens to add, however: "Any one else may do it better, if any one else will only try." Characteristically magnanimous, he underrates his own accomplishment. The assurance is too bald and emphatic; in its present form, it threatens a dangerous rush of young men into journalism. At most, it means that if you have caught your hare, you may learn to cook it; if you have written a sermon, you may learn to put it into a stone or a brook or a piece of chalk—or even into a life of George Bernard Shaw. With a vigorous analogical mind, one can start from anything and get to almost anything else—in time. To start from Fleet Street and land in heaven, to start from anything and land infallibly after precisely three jumps in democracy, patriotism, or orthodoxy—*hoc opus, hic labor est.* This is Mr. Chesterton's feat—a few, whom just Jupiter loved, have done it. Without subscribing to all his thirty-nine articles, one may find genuine delight in at least a dozen of his philosophical parables.

The Commonwealth of Australia. By B. R. Wise. Boston: Little, Brown & Co. $3 net.

Mr. Wise, the author of this good book, is a native Australian, educated however in England at Rugby and Oxford, whence after attaining to much distinction as a scholar, and also as an athlete, he returned to his birthplace. Here he has reached eminence, serving long as attorney-general of New South Wales, and taking an important part in the federation of Australia. His broad mind, evident ability, and wide experience qualify him admirably for his task, and we have in his work a compact and illuminative account of his great country in all its phases—its physical characteristics, its development, sociological, economical, and political, and its condition at the present moment. Though a loyal subject of the Crown, and a devoted patriot, he shows no narrowness, and abstains from all buncombe. He recognizes candidly many faults in his people, and does not veil the mistakes they have made in their struggle. While the story throughout has great interest to serious students, we think Americans will find most valuable the statesman-like résumé of the framing of the Constitution through which Australia has become a new United States.

Though the Australians had the advantage of our precedents and experience and of those of Canada, and bore them in mind at every step as they proceeded, yet their conditions were none the less perplexing. A remote Anglo-Saxon outpost close at hand to a multitudinous and aggressive Orient, a collection of provinces whose interests often sharply conflicted, a determination to be thoroughly independent and yet a loyal portion of the British Empire—certainly the problems of the men of the South Pacific were scarcely less formidable than those of the men of 1787. How the happy result was obtained, and how the complicated mechanism works now in its initial stages, is calmly and lucidly set forth by one who fought in the debates and has had a hand in the administration.

Of the many points of interest to Americans, we will note only these: the Australians have determined that theirs shall be a white man's country. They stand to-day a remarkable homogeneous body of five millions, mostly English and Scotch. The colored races are not welcomed to citizenship; and as regards European stocks other than Anglo-Saxon, while there is no constitutional bar to admission, yet ingeniously devised immigration tests make entrance difficult to populations of low standard. The doctrine that the land shall be an "asylum for the oppressed of all nations" has no currency. The Australian frankly accepts this narrowness, maintaining that an Anglo-Saxon polity must be administered by an Anglo-Saxon people, and that in the end, it will be better, not only for his own commonwealth, but for the world, that there should be this exclusion. As to this point, he holds that the experience of the United States is a warning.

Again, as to a tariff, the Australian Constitution provides for high protection, as a convenient source of public revenue, as insuring a diversity of industries, and also as a safeguard to a high wage for the working classes. A high wage, they regard as essential to a proper standard of living; it is the workman's right; and here it is well worth while to note the intelligent and persistent effort to prevent the absorption of the advantage by greedy individuals and trusts.

These are particular points of interest, but, in every part, the Australian Constitution deserves to be pondered by thoughtful Americans. Mr. Wise does for Australia what President Lowell does for England and Mr. Bryce for the United States. It is the convenient handbook for an epoch-making political construction of English-speaking men.

Notes.

The Macmillan Co. announces the completion of the new edition of the "Dictionary of National Biography" in twenty-two volumes, which occupy only about one-third of the space required for the sixty-four volumes of the original edition.

The "Revised New Testament" is about to be issued by the University Presses of Oxford and Cambridge, with fuller references. The marginal references, begun by Dr. Scrivener and continued by Dr. Moulton, both of whom have died, have been completed

by Dr. Moulton's son, Dr. J. H. Moulton, and his old pupil, Dr. A. W. Greenup.

It is announced that the New York Public Library, at Fifth Avenue and Forty-second Street, which has been building for more than ten years, will be completed, except the approaches and furniture, on May 1.

The women students of Cornell University have fallen heir to the homestead of the late Charles Alfred Hasbrouck, about a mile from the campus, and the house is to be turned into a lodge for them.

Dr. Frederick J. Furnivall, the English Shakespearean scholar, celebrated his eighty-sixth birthday on February 4, and on the following Sunday sculled thirteen miles on the Thames. "It is quite a customary thing for me to do this spin every Sunday morning in the winter for a little exercise," he remarked.

Etienne Emile Marie Boutroux, the French philosopher, who expected to sail for this country this week, is to deliver a course of lectures at Harvard, and will also make four public addresses at Cambridge under the auspices of the Cercle Français upon the "Essence of Religion" and the "Movement of Contemporaneous Philosophy."

Prof. John M. Manly has recently arranged with the Oxford University Press for the publication in facsimile of the Caedmon manuscript in the Bodleian Library. The agreement is to issue a collotype to subscribers at five guineas net; only one hundred copies will be published. The plan was laid before the Modern Language Association of America at the Eastern meeting at Cornell University; and a resolution was unanimously passed commending the enterprise to American scholars and university libraries, and requesting the committee on the reproduction of early texts to make preliminary arrangements for publication. In accordance with this resolution, Prof. J. W. Cunliffe of the University of Wisconsin is issuing a circular with a form of subscription attached, which he will send to any one interested. Applications will be filed in the order in which they are received, and the subscription list will be closed as soon as one hundred names are registered. The manuscript consists of 260 large pages, and is of especial interest, not only on account of the importance of the text and the very remarkable illustrations, but because of the system of metrical points, which cannot be studied to advantage without exact reproduction.

"The Literary Profession in the Elizabethan Age" (Sherratt & Hughes, Manchester and London), by Phœbe Sheavyn, D.Lit., is an exceptionally solid and valuable monograph. Parts of the book have already appeared in the *Library*, and the first five chapters, which deal with the economic side of the subject, were presented as a thesis for the degree of doctor of literature in the University of London. The whole is now published as the first number in the English Series of the Publications of the University of Manchester. Miss Sheavyn has collected interesting data in regard to the personal relations of authors, their habits, social standing, etc., and she discusses also the tastes of Elizabethan readers, and the Puritanical opposition which poetry—especially the drama—had to contend with. Much the most important part of her work, however, is that which deals with the economic aspects of an author's life in the Elizabethan Age. To be sure, she offers no views of startling novelty with respect to these questions. Nevertheless, she has brought together a valuable mass of evidence on all the matters involved—patronage, the prices which the different forms of literature commanded, subsidiary means of support which were open to authors, and the rest. Dr. C. W. Wallace's Shakespearean discoveries were made public too late to be used in this book. The picture which Miss Sheavyn draws is one of terrible hardships. It is even darker than one might have imagined, before being confronted with the large body of evidence. The transition from the old system of patronage, exclusively, to the independence of later times, brought with it pains of both body and soul. On the question of copyright Miss Sheavyn adopts the current view that the Elizabethan "law regarded—or was popularly believed to regard—the mere possession of a manuscript, apart from any previous entry in the books of the Stationers' Company, as implying ownership, and consequently the right to dispose of it." Notwithstanding the evidence she cites in proof of this statement, we cannot believe that the practice was so general as is assumed. So high an authority as A. W. Pollard (in his recent "Shakespeare Folios and Quartos") argues that it was not.

William J. Harris, borough librarian of Bromley, England, has compiled a useful bibliography entitled "The First Printed Translations into English of the Great Foreign Classics" (Dutton), which marks, we hope, the commencement of an effort to render information concerning translations in general more accessible than has hitherto been the case. The present work, so far as it goes, seems to have been done with care—for one thing there is a satisfactory title-index; but we do not understand the principles of inclusion governing the main lists. Why, for example, should annotated editions of Old English texts be numbered among "first English translations"? Obviously, too, some of the translations here listed as the first have little interest beyond that which comes from priority of issue; intrinsically they may be worthless. If the editor's chief aim had been to provide "a supplement to text-books of English literature," he might in a first venture have restricted his field to that of translations of Greek and Latin classics, and yet have taken this field broadly enough to include the best and most significant as well as the earliest versions of classical authors. A bibliography that mentions Potter's translations of Euripides, and not Murray's, might do some immature student of English a considerable disservice.

The "Ten Great and Good Men" celebrated by Henry Montagu Butler, D.D. (Longmans), are all Englishmen, and, with a single exception, orators. These lectures, which were mostly delivered before school or college audiences, have a calculated simplicity, and, though they naturally savor of the platform, make good reading. On the subject of public lecturing the master of Trinity, Cambridge, has his views, which are communicated in a preface. He hopes that the book may encourage other speakers to youthful audiences to treat of national heroes in a simple and forceful spirit. For such addresses this book might indeed serve as a model. Burke, the second William Pitt, Canning, John Wesley, Wilberforce, Lord Shaftesbury, the philanthropist, John Bright, "Chinese" Gordon, Dr. Thomas Arnold, and Thomas Erskine are the ten worthies under discussion. All are treated sympathetically, none more so—and the fact illustrates Dr. Butler's ripe tolerance—than the dissenters Wesley and Erskine.

The English "Who's Who" (Macmillan) for 1910 comes to us with fifty more pages and about 500 more names than were included in last year's edition, bringing the number of sketches up to about 20,000. The usefulness and general accuracy of this book are now well established, and its scope is increased each year by the addition of names of Americans and Continentals. True, it is not easy for an American to see why certain of his countrymen are included and others are not; but, after all, it may be well enough that we do not see ourselves as others see us. Thus far, the volume's rate of growth has not prompted the publishers to adopt as a remedy the theory that with some persons distinction is chronic, while others recover from it—a treatment it has been found necessary to employ in other cases in order to check biographical *embonpoint*, and a sort of fatty degeneration of fame.

"New Hampshire as a Royal Province," by Dr. William H. Fry (Columbia University Press), adds another to the list of substantial monographs in the field of American history, for whose inception scholars have chiefly to thank Prof. Herbert L. Osgood. Dr. Fry's narrative has little claim to literary distinction, and its more than five hundred solid pages make serious reading; but as a contribution to the study of the American colonial period it has high importance. Like its predecessors in the series to which it belongs, the work is a detailed study of government and administration; such questions as the growth of population and the extension of the settled area, intercolonial relations, and general economic and social development being, for the most part, excluded. Thus, after an excellent introductory chapter on the history of New Hampshire to 1679, when the colony became a royal province, Dr. Fry proceeds at once to examine in detail the organization and powers of the executive, legislative, and judicial departments, the land and military systems, and the thorny maze of colonial finance. The Governor, though in reality exercising less ample powers than his commission would indicate, and dependent upon the Assembly for his salary, seems nevertheless to have been a difficult official to get rid of, as experience with Cranfield, Belcher, and the Wentworths shows. In the relations between the Governor and the Assembly, matters appear to have run about the same course in New Hampshire as elsewhere in America, the lower house of Assembly successfully asserting its right to control the colony purse and the treasury officials, and stubbornly refusing, not always with the best of reasons, to make permanent provision for the support of the government. The situation in regard to paper money

was peculiarly difficult in New Hampshire because of the exposed frontier and the frequent wars with the French and Indians; though the depreciation of the bills of credit seems not to have been greater than elsewhere, nor return to specie payment after the last war, more troublesome. The religious controversies which rent Massachusetts are happily absent from the early history of New Hampshire; nor did the Bay colony, when the New Hampshire settlements were incorporated with it, apply to them its own rigid ecclesiastical restriction of the franchise. Dr. Fry's long chapter on the land system is especially important as the first thorough-going examination of a really difficult topic. If the volume errs at all, it is in the direction of undue detail, together with the occasional description of governmental operations of the ordinary sort, in no way peculiar to New Hampshire; but these are minor blemishes in what must be praised as a sound piece of historical work.

Another selection from the addresses and fugitive writings of Henry D. Lloyd comes to us under the title of "Men, the Workers" (Doubleday, Page & Co.). Next to "Wealth Against Commonwealth," the present volume is perhaps the best exposition of Lloyd's attitude towards certain concrete aspects of the labor movement, particularly trade unions, strikes, child labor, and the eight-hour day. Speaking at the great meeting in the Chicago Auditorium, in 1903, called to celebrate the arbitration of the anthracite coal strike, Lloyd was able to draw some striking lessons from the progress of organized labor since 1895, when "dim and dingy Battery D," in the same city, held the meeting called to celebrate the release of Debs from Woodstock jail; and the papers in this volume have historical value as an indication of that progress.

In his "Source Book for Social Origins" (University of Chicago Press) William I. Thomas has brought together a large number of extracts from prominent writers on the relation of society to geographic and economic environment; mental life and education; invention and technology; sex and marriage; art, ornament, and decoration; magic, religion, myth; and social organization, morals, the state. The selections are judicious, and to each group are added a comment and a bibliography; there are also supplementary bibliographies on the various geographical divisions of the world. The volume furnishes useful material for students—the bibliographies are extensive and are accompanied by remarks on the value of the books mentioned. The work is dedicated to the memory of William Jones, the young Indian folklorist who was killed in Luzon not long ago by a hostile tribe.

Now that the ends of the earth have been explored, it is fitting that the energetic traveller should turn his steps to regions more accessible, but hitherto overlooked. Such a country is Corsica, which, though it lies within sight of the Riviera, and is passed by scores of steamers daily, remains, for the tourist at least, almost *terra incognita*. If Napoleon had not been born at Ajaccio, we may doubt whether the island would have emerged even yet from the mediæval penumbra in which it was hidden for centuries. George Renwick, in "Romantic Corsica" (Scribner), succeeds very well in showing the attractions of Corsica, and he tells how easily they may be visited. He himself covered more than 800 miles on a bicycle—sufficient evidence that the roads are good. He has something to say of the history of the place, where Paoli competes with Napoleon for local commemoration, much about the people and their customs, and still more about the scenery. T. G. Ouston contributes a chapter on mountain-climbing, and there is information as to hunting and shooting. A large number of excellent views really illustrate the volume.

A notable addition to the Aryan series of the Anecdota Oxoniensia has been published this year (Oxford: Clarendon Press), to wit, the Âitareya Âranyaka, edited by Arthur Berriedale Keith, already well known to Sanskrit scholars through his articles on religious and social problems. The text is supplemented by the parallel chapters of the Çânkhâyana Âranyaka, vii-xv, and eight very complete indices. This, however, is only half of Mr. Keith's work. The other half consists in a useful historical introduction (including a dissertation on style and grammar) and an English translation of the Âranyaka with copious notes, wherein the editor has "tried to extract as much as possible" from the text. And it is indeed remarkable how much modern scholarship can find in a philosophical manual of this sort, or, in other words, how much more we know than the writer knew. For example, the ancient author of this work, which the editor ascribes to the seventh or eighth century B. C., describes a "swing-ceremony"; but he does not really know why the swing is swung, although he attempts an explanation. Yet to modern science the ceremony is one easily pigeonholed under the heading of sun-charm and sympathetic magic. To his note on this point the editor might have added a reference to the charm still practised in India, not only in the Krishna cult, which he mentions, but in the rites of wild tribes, and, had he gone further afield, he might have shown also that this rite of the wild tribes had its parallel again in those of our American Indians. But this would perhaps be an overloading of a wagon already packed full of good things. Nor is the well-read editor often at fault to supply the deficiencies of the authorities to whom he refers. If Speijer (p. 177) "is unable to cite an example from Sanskrit" to illustrate the common Latin agreement in gender of a superlative with its own noun rather than with the gender of the partitive genitive (occasionally violated, as in Keith's example, *velocissimum animalium delphinus est*), the omission might easily have been supplied. There is a good case, for example, in the great Sanskrit epic: "Of streams (fem.) the best (masc.) is ocean (masc.); of quadrupeds (masc.) the best (fem.) is the cow (fem.); of lights (neut.) the best (masc.) is the sun (masc.); of mountains (fem.) the best (masc.) is Himavat (masc.); and of castes (fem.) the best (masc.) is the Brahman."

More important are other questions raised in the editor's extremely valuable notes. To touch only on one point, Mr. Keith rightly rejects Deussen's metaphysical explanation of the great word *brahman*, but does he himself go to the root of the matter when he says that the "original sense of *brahman* must clearly have been prayer or spell"? To the present reviewer, *brahman* appears to be indisputably derived from the root *barh*, which meant primarily strengthen, and *brahman* was first of all "the Power," corresponding to Polynesian *mana*. From this came both the meanings, spell and spiritual power, eventually the universal power, impersonal God. But these examples only show how rich a field the commentator of the Âitareya Âranyaka has traversed. If the text must be in the hands of every Sanskritist, it is none the less true that in the commentary the Latinist and the comparative religionist (if this word may stand without protest) will also find many facts known to them perhaps in their own fields, but here happily illustrated from a treatise much older than any prose work in classical literature.

A meeting in commemoration of the life and work of Richard Watson Gilder was held in Mendelssohn Hall, New York, last Sunday afternoon. Gov. Hughes, who presided, delivered a eulogy of Mr. Gilder's character and career, and other speakers were Robert Underwood Johnson, Talcott Williams, President Nicholas Murray Butler of Columbia, Johnston Forbes-Robertson, the English actor, Dr. Hamilton Wright Mabie, and Jacob Riis.

Mrs. Maria McIntosh Cox, an author and writer for newspapers, died at her home in New York last Monday at the age of seventy-seven years. She contributed to the *Evening Post* a number of sketches on the civil war, and also published in that paper a series of contributions under the captions "Household Thoughts" and "Home Thoughts." Her separate books include "Jack Brereton: or Three Months' Service," a war story, and "Raymond Kershaw."

Miss Mary Olivia Nutting, for more than thirty years librarian of Mount Holyoke College, died on February 13, at the age of eighty. She had travelled widely and had written several books, among them "Life of William the Silent, and the Netherland War," "Steps in the Upward Way," and "Our Summer at Hillside Farm." Her pseudonym was Mary Parrett.

Dr. William Everett, for many years head master of Adams Academy, in Quincy, Mass., died on February 16, at the age of seventy-one years. He graduated at Harvard in 1859, was awarded the B.A. degree by Trinity College, Cambridge, in 1863, and an M.A. by the same college in 1869, and from 1870 to 1877 was tutor and assistant professor of Latin at Harvard. From 1877 until 1893 he was master of the Adams Academy. He was for many years a contributor to the *Nation*.

Arthur Fraser Walter, a great-grandson of John Walter, the founder of the London *Times*, and its chief proprietor until last year, when, under a reorganization of the company he became chairman of the board of directors, and the controlling interest was secured by Lord Northcliffe (Sir Alfred Harmsworth), died on February 22, at his home, Bear Wood, Wokingham, at the age of sixty-three.

James Allanson Picton, the English nonconformist clergyman, Radical politician, and writer, died recently in London, at the age of seventy-seven years. His publica-

tions include "New Theories and the Old Faith," "Life of Oliver Cromwell," and "Lessons from the Rise and Fall of the English Commonwealth."

Science.

Trees and Shrubs of the British Isles. By C. S. Cooper and W. P. Westell. 2 vols. New York: E. P. Dutton & Co. $7 net.

These two handsome volumes contain sixteen full-page colored plates and seventy full-page black and white plates drawn from nature by C. F. Newall. The authors have succeeded in giving good popular accounts of the native species of shrubs, as well as trees, growing in the British Isles, and they have included in their list many of the more striking cultivated plants. As the type and size of page have been selected to suit the pictures, and a heavy paper used, it is evident that these ponderous quartos were not meant for handy use out of doors, but were designed for the libraries of those who are not particular in matters of study, but who like to have a general notion of plants. The authors are wisely conservative. They have adopted an old system of plant-arrangement and have, as a rule, taken only the best known specific names for the shrubs and trees described. They have given the common name first, and that is an excellent plan in a work of this kind, since it frees a good many readers from an unnecessary embarrassment. A large number of ardent lovers of trees and shrubs know the common names and do not care at all for the scientific ones. The descriptions are generally accurate and plain, and can be easily read by any beginner with the help of the excellent glossary prefixed. The treatise has a good deal to say about various enemies of plants, the fungi and injurious insects, and gives sound advice as to preventive and curative measures.

The drawings are singular in one respect, which will not merit general approval: the inequalities of surface of the leaves are very strongly emphasized, sometimes with an unpleasing result. One naturally compares these drawings with the work of the best of our own artists, such as Faxon and Mrs. Ames, and the comparison is not favorable. But the colored plates are much above mediocrity.

The work would be easier for amateurs to use if the authors had given keys to the groups. Nevertheless, if a beginner patiently and faithfully tries to match his specimens with these drawings and paintings, he will not be likely to go far astray. It will be necessary to caution the American reader that he must translate into his vernacular some of the terms employed in the insecticidal and fungicidal recipes: for instance, "paraffin" is our well known kerosene oil.

"Reptiles of the World," by Raymond L. Ditmars, curator of reptiles in the New York Zoölogical Park, and author of the excellent "Reptile Book," which is devoted to American reptiles, will soon be published by the Sturgis & Walton Co.

From Rome comes the first monthly bulletin of the International Institute of Agriculture, not nearly so complete as it will be, but at least a tangible beginning in the collective official report of crop supplies by the nations. This first bulletin is of eight pages, neatly arranged, setting forth the decisions of the general assembly, an outline of the statistical service proposed for this and next year, the system of distribution of countries into geographical zones, and other information. A table of winter wheat figures is fragmentary, those for the United States being the only complete returns. There is another table of winter rye statistics; also assurances that the German and British governments are now making inquiries with a view to supplying the reports requested, and that the Italian government will be ready to furnish monthly information after June 15 next. At a time when the world is concerning itself about high prices of food, the possibilities of the Institute's bulletin become of significant interest.

A tablet is to be placed in Sage Chapel, on the campus of Cornell University, in memory of Ross Gilmore Marvin, the member of the Cornell faculty, who was with Commander Peary during his recent Polar expedition, and was drowned in the Arctic Ocean on April 10, 1909.

Col. Charles Chaillé-Long was awarded a medal by the American Geographical Society on February 15, for work done in exploring the sources of the Nile, while serving on the staff of Gen. Gordon in 1874. Col. Chaillé-Long is a native of Maryland, where he was born in 1842.

The research expedition for the study of Alaskan glaciers sent out last summer by the National Geographic Society, under the leadership of Prof. R. S. Tarr of Cornell and L. Martin of the University of Wisconsin, is described by them in the *National Geographic Magazine* for January. These glaciers are hundreds in number, and the Malaspina, with a surface area of 1,500 square miles, is the largest in the world outside the Polar regions. Their changes are at times very great, as in 1905-06, for instance, one glacier moved forward a mile. The discovery of the cause of this remarkable motion was the foremost object of the expedition. The report is accompanied by fifty-four striking illustrations and maps. At the annual meeting it was announced that the total membership of the society was 53,333, the net increase for the year being 14,637.

In a "History of the Human Body" (Henry Holt & Co.), H. H. Wilder of Smith College seeks to put Anatomy in a popular form such as may be appreciated by the general reader and be particularly useful to the medical student. This is done by giving as many of the essential facts concerning the structures of the lower vertebrates as seem to throw light on those of man, together with brief chapters on the phylogenesis, ontogenesis, and ancestry of the vertebrates. The result is a handsome book of nearly six hundred pages, in which the author brings together a large mass of material, much of which is necessarily presented with such brevity as to make it doubtful if the average student will rightly apprehend what he reads. Much of the matter is pleasantly set forth, in a way to attract the general reader desiring to know something of the results of comparative anatomy and their bearing on the greater zoological problems. The illustrations are numerous, well selected, and for the most part well reproduced; a few are exceptionally fine.

At a meeting of the American Therapeutic Society, held last May at New Haven, the question of suggestion as a curative agent was considered in a series of papers by a number of physicians of much experience, including M. Prince, J. J. Putnam, F. H. Gerrish, E. W. Taylor, and B. Sidis. These papers, nine of them altogether, were printed in the *Journal of Abnormal Psychology*, and are now again published by the Gorham Press (R. G. Badger) in a little book of two hundred pages bearing the title "Psychotherapeutics, a Symposium." The discussion is an interesting presentation from the physician's point of view of the practical value of hypnotic or "hypnoidal" treatment in its various forms, and, necessarily rather briefly, of the theoretical considerations underlying them. Although the authors do not always agree, the book will be welcome to many to whom the journal in which they appeared is not readily accessible.

Edmund Wright, associate professor of mathematics in Bryn Mawr College, died on Sunday morning at the hospital of the University of Pennsylvania of heart disease, after an illness of four months. Professor Wright was an Englishman, and won distinguished honors at the University of Cambridge, being senior wrangler in 1900, first in the second part of the Mathematical Tripos, in 1901, and Smith's prizeman in 1902, and had been for the past seven years a Fellow of Trinity College, Cambridge. He was called to Bryn Mawr College, in 1903, to succeed Professor Harkness, now professor of mathematics in McGill University. He was the author of numerous papers in the field of higher mathematics. In 1908 his treatise on "Invariants of Quadratic Differential Forms" was published by the Cambridge University Press.

Edward A. Bowser, who was professor of mathematics and engineering at Rutgers College (his alma mater) from 1871 until 1904, died in Honolulu on February 22, at the age of sixty-four years. He was born in Sackville, New Brunswick. His publications include several mathematical text-books.

Dr. Martin Ekenberg, the Swedish scientist, who discovered a process for drying milk, and had been experimenting with a process for converting peat into fuel without air drying (on which subject he read a paper before the Iron and Steel Institute, in London, last May), died recently in Brixton prison, London, having been committed for extradition upon charges of attempting to murder four persons in Sweden by sending them bombs through the mail.

Drama.

Life and Art of Richard Mansfield, with Selections from His Letters. By William Winter. Two volumes. New York: Moffatt, Yard & Co. $6.

The most obvious comment, perhaps, upon this book is that it is a memorial worthy of a far greater man, and far greater actor, than Richard Mansfield. Into it Mr. Winter, one of the most eloquent and learned of dramatic commentators, has put some of his best analytical and descriptive work, rich in insight, apposite quotation, and felicitous epithet. It is the most notable addition to contemporaneous theatrical literature that has been made for a long time, fascinating as a bit of illuminative biography, complete and manifestly authoritative in its statements of fact, masterly in its criticism of plays and exposition of Shakespearean characters, sane and vigorous in its attitude toward modern stage tendencies, and continuously interesting as reminiscent narrative. Many readers will be unable to concede to Mansfield the intellectual and histrionic preëminence which Mr. Winter would confer upon him, but few will dispute the positive value of his achievements or the rare quality of the intelligence, the endurance, and the ambition that enabled him to triumph over the most formidable obstacles.

He was an uncommon personality and a striking example of hereditary influences and the effects of early training. Into the minor details of his childhood, of which not much is certainly known, it is not necessary to go. His mother, Erminia Rudersdorff, one of the noblest singers of her day, was a woman of eccentric character, imperious temper, and unaccountable moods. Her husband, Maurice Mansfield, who died young, was an accomplished violinist and musical critic, and her father was a conductor of eminence. From the first, therefore, Richard existed in a musical and artistic environment; but his family was migratory, and his life one of vicissitude. According to his own account he was subjected to negligent and sometimes cruel treatment by which his nature was warped and embittered. Referring in later life to these experiences he declared that there were times when he felt the world so antagonistic that if he could have overthrown the pillars of the universe he would have done it. His education was acquired in the intervals of European travel and at school in Derby, England, a place of which he always cherished tender recollections. He learned to speak French and German, to paint and draw a little, and to play the piano and sing excellently well. In the early seventies his mother brought him to this country and for four or five years he lived in the neighborhood of Boston, then an important theatrical centre, where he formed associations and developed tastes which led him irresistibly toward the stage. With his mother he was constantly at odds, and in 1877 he left her to seek his fortune in London. There he was often put to strange shifts to keep body and soul together, but his confidence in his star never wavered. His pluck and tenacity of purpose were admirable, and, at last, he established a reputation in operettas, for which he had special qualifications. His career, indeed, then seemed to lie in that direction, but, returning to New York, he ultimately joined the Union Square Theatre Company, and by a lucky chance obtained the part of Baron Chevrial, in "A Parisian Romance" (1883), which enabled him to put his foot upon the first rung of that dramatic ladder which he was to climb so successfully.

That night of victory still lives in the memory of all old playgoers. His performance, considering his youth and comparative inexperience, can only be called extraordinary. Diabolical egotism, remorseless cynicism, and loathsome senile depravity have rarely been depicted upon the stage more vividly, or with more consummate finish. In later years, this impersonation was much weakened by elaborated and exaggerated artifice, but it was always powerful, and no student of his career can fail to note that in tragedy or semi-tragedy all his later successes were won in the portrayal of passions proceeding from a malign or cankered will rather than the ruder, primary impulses of nature. His acting always suggested the calculation of intellectual design—not always realized—rather than the promptings of spontaneous feeling, and this is why, in deeply emotional characters, he seldom created illusion, though he often compelled admiration. He never mastered the language of the primeval emotions which are the foundation of all great tragedy. It may have been some dim perception of this fact, or instinct, that led him to select for his most serious efforts such characters as Hyde (a hideous perversion of Stevenson's ideal), Shylock, Richard III, Rodion, Humphrey Logan, Ivan the Terrible, Nero, and Napoleon. Intellectually, doubtless—for he was an exceedingly clever man—he could have comprehended Lear, Hamlet, Othello, or Macbeth, but he could never have expressed the essential humanity in them. Romeo, Orlando, or Hotspur would have been sealed books to him. The sympathetic human side of Henry V eluded him utterly, while of Brutus he discerned only the brains and the purpose, not the man.

It was in the lighter eccentric characters of his repertory, in which his natural manner (of which he could never divest himself), his airy, insolent, or mordant humor, his observation and his mimetic power came into play, that he was at his best as an actor. Among them may be mentioned his Prince Karl, Beaucaire, Brummell, Don Juan, Captain Bluntschli, and Dick Dudgeon. His Cyrano de Bergerac was chivalrous, authoritative, vivacious, devoted, and, at the last, pathetic, but lacking in variety of mood and romantic flavor. Here, too, he failed to strike the deepest note. But Cyrano could only be acted perfectly by an actor possessing the combined faculties of Fechter and Coquelin. In his skeletonized version of "Peer Gynt" he did little more, as Mr. Winter suggests, than illustrate his own moods, vagaries egotism, cynicism, and unconventionality. Doubtless that particular performance derived its chief interest from his dominant individuality, but this ever obtrusive "self" of his proved a sad stumbling-block in other impersonations. Mr. Winter argues that the potent individuality and brain of a great actor must inevitably reveal themselves in certain peculiarities of method and manner, and this is doubtless true of all actors, but not at all times. The mannerisms of Irving, for instance, were many and distressful, but he was a threefold personality in Matthias, Louis XI, and Malvolio. The late W. J. Florence could, on occasion, merge himself utterly in the assumed character. Phelps in versatility was almost a Proteus. There was nothing in the Conrad of Salvini—not even the stature—to recall that player's Othello. But certain peculiarities of gait, gesture, and facial and vocal expression were constant in Mansfield and became, indeed, the rigid and immovable boundaries of his artistic expression.

Whatever diversity of opinion there may be concerning his true rank as an actor, there can be no doubt that he was an extraordinary man, and it is the rare merit of this book, as biography, that by its full and affectionate revelation of his character it explains at once the failures and the triumphs of his career. The copious correspondence printed proves that, throughout his professional life, Mr. Winter was the actor's most intimate guide, mentor, and friend, advising and helping him in his choice and construction of plays (though the advice was not always taken), sympathizing with and encouraging him in his difficulties, and backing him with cordial critical appreciation. The service which he rendered was inestimable, and Mansfield's letters teem with fervent protestations of esteem and gratitude. They often show him in a new and very pleasing light and also reflect, as in a mirror, the strange complexities of his nature and disposition. His ambition was boundless, his self-esteem enormous, his temper alternately jovial and arrogant, his jealousy of a professional rival—Irving, for instance—fierce and unreasonable. Yet he could be capable of most generous appreciation. Sanguine in re-

verses, indefatigable in enterprise, reckless in expenditure, he could be as infirm of purpose and as childishly querulous as the veriest weakling. Exclusive, imperious, and irritable, he wondered at his unpopularity and went through life with the conviction that he was the victim of hostile conspiracies. A law to himself, he could profit little by the experience or example of others.

The intention of the management of the New Theatre to remodel the interior of the theatre and to discontinue the production of opera is on every account to be welcomed. In making the auditorium better adapted for dramatic purposes a much-needed improvement will be effected; but aside from this the devotion of the building, and of the enterprise, exclusively to the drama is in itself calculated to yield better results than the combination plan. The mission of the New Theatre should be, and should be known by everybody to be, the serious cultivation of dramatic merit. As yet, nothing more than a tentative and very imperfect beginning has been made by it in the carrying out of such a purpose. Opera in New York is cultivated on a grand scale and is amply appreciated; the dramatic stage, on the other hand, is in a very bad way, and the public taste for the drama is in an extremely backward condition. To make the New Theatre a real theatrical centre, a place where plays worth seeing are given by competent and highly-trained actors every night in the week, would be to do New York and the country an invaluable service.

Music.

American Primitive Music. By Frederick R. Burton. New York: Moffat, Yard & Co. $5 net.

Many readers of this valuable book will be surprised to hear that the first serious effort to learn and state the truth with regard to Indian music was made by a German student, not more than thirty years ago. Theodore Baker chose this subject as the thesis for his doctor's degree at Leipzig. He spent some time in the Seneca reservation and at the Carlisle government school, and his conclusions, published in a small German volume, gave evidence of skilful observation and ability to draw sound conclusions; but they attracted little attention. Some years later Miss Alice C. Fletcher of the Peabody Museum at Harvard began to publish the results of her studies of Omaha and other Indian music, aided, in part, by John C. Fillmore. Among others who provided material were Miss Natalie Curtis, Arthur Farwell, Benjamin Ives Gilman, and Franz Boas.

Mr. Burton, who died soon after completing the manuscript of this book, gives in its first chapter a brief history of the various attempts to understand and reproduce the music of North American Indians, and adds to this nine chapters giving the results of his own researches, chiefly among the Ojibways, in the region north of Lakes Huron and Superior. He was exceptionally well qualified for such work, being a musical scholar and a composer, as well as a student of science (for a time he was employed as musical expert in the ethnological departments of the American Museum of Natural History in New York). He displays critical acumen in combating the views of Mr. Gilman and others that the Indians use scales with quarter tones or even smaller intervals, for the registering of which Mr. Gilman constructed an ingenious device representing graphically deviations from diatonic intervals to the one-fourteenth part of a tone. In Mr. Burton's opinion, the Indians, instead of having scales of their own, are simply singing out of tune. There are plenty of white individuals and choruses of men and women whose singing shows deviations from the pitch that would keep busy that instrument for measuring deviations to the one-fourteenth of a tone. Among the Ojibways Mr. Burton found that those who missed the pitch were not a larger class than the palefaces who annoy chorus conductors by a tendency to flat; and their deviations from pitch were not consistent. He concluded, therefore, that the faulty intonation of the Ojibway is an individual error, and not a racial peculiarity.

With the same acumen the author demolishes the notions that the primitive red man has developed rhythm to a plane higher than that attained by civilization, and that he has a conception of rhythm wholly at variance with ours. On the contrary, Mr. Burton maintains that the puzzling phenomena of Indian rhythm indicate not the red man's superiority, but his inferiority; that his disturbing performances in so-called irregular and conflicting rhythms are but "manifestations of a helpless groping for the truth which, rhythmically speaking, is order and regularity, and simplicity." The twenty-three pages devoted to the proof of this assertion make an admirable chapter in musical æsthetics and give vivid glimpses of the red man's way of drumming and singing.

It was by no means easy to get at the facts in these cases. The Indians distrusted their visitor at first. The white man has taken away from us, they said, everything we possessed except our songs, "and now you come and would take away those, too." Finally, he persuaded them that even if he took them away, they would still have them; so they gave him their confidence. Observing their habits, he came to the conclusions that music enters more intimately into the lives of Indians than it does into the lives of any white nation, being to the red man a feature of daily, homely use and necessity; and that the Ojibways surpass all other Indians in their music. Personally he was particularly interested in this red music from the point of view of its availability by the white composers. MacDowell had written a suite based on Indian melodies, but had not repeated the experiment. If he was not satisfied with his venture, that may have been due to the fact that "the raw material available to him was far from being as suggestive and interesting as much that has been uncovered since."

Acknowledging what Farwell, Harvey Worthington Loomis, and others have done in the way of utilizing Indian themes, Mr. Burton urges American composers in general to follow this path; he believes that the foreign conductors who preside over our symphony orchestras would be more likely to accept compositions by Americans, if they had in them drops of the red man's blood—which may be doubted. He himself wrote half a dozen or more specimens of semi-Ojibway music for "Hiawatha," when that play was brought to our cities. One of the numbers, the finale, is printed in the present volume. It also includes the melodies of many Ojibway songs, together with the words and the story, or explanation of them. In addition to these, there are a number of songs here, as harmonized by Mr. Burton. He does not deny that, inasmuch as Indians have no harmony in their music, such a decking out of their melodies with the devices of civilization is a misrepresentation; but he argues that, since we whites cannot grasp the whole beauty of a melody unless we hear it with appropriate harmony, it is necessary to harmonize the Indian tunes to do them justice. Unless we do this, they will not be sung. "My Bark Canoe," for instance, simply as a melody would have interested a few students, whereas in its harmonized form it is now sung in thousands of homes and even in the public schools.

The American Music Society, founded last year under the presidency of Arthur Farwell, now numbers fourteen local centres, from New York to San Francisco. The New York centre, with 117 members, is at present the largest and most active.

Joseph Holbrooke is the English Richard Strauss. The orchestra he used at a recent London concert devoted to his own works included, beside the more usual instruments, five saxophones, oboo d'amore, corno di bassetto, flügel horns, eight concertinas, four harps, bass flutes, saxhorns, bass trumpets, and tubaphones.

At a recent auction sale in Florence a number of things that had belonged to Paganini were sold, among them two violin concertos and more than a hundred unpublished pieces which no one had ever been permitted to see. These brought $3,700. A Nicolò Amati violoncello of 1734, valued at $5,000, was knocked down for $1,160, and $80 was paid for a diminutive fiddle on which Paganini had begun his lessons.

Art.

THE PASSING OF THE NEW GALLERY.

LONDON, February 8.

The New Gallery closes this week and, with it, a most interesting chapter in the history of English art. It opened at a moment when art was at the height of its popularity in England and to go to picture galleries was in fashion; it reaped the harvest sown at the Grosvenor, profiting by the sequel to Pre-Raphaelitism when Burne-Jones and Watts enjoyed a vogue that has come to no English artist since; its winter exhibitions, illustrating certain historic periods, were the most important and complete of the kind ever organized in England, so that nobody who saw them can forget the Tudor, Stuart, or Guelf collections or the series representative of certain Italian schools; it sheltered the Arts and Crafts Society from the beginning, and the two have been so closely connected that it is impossible to think of one without the other; it became the headquarters where the International Society, the most vigorous of recent years, arranged not only its own but the Whistler Exhibition, the most successful in every way ever given there, and I might almost say in London. In a word, the New Gallery has been intimately associated with many of the most distinguished artists and almost all the principal movements of the last quarter of a century. And yet to-day, so indifferent is the public, and so slack the artists, that it has been impossible to save it from its fate, badly off as everybody knows London is for galleries. In most countries, in most cities, even in the provincial towns of England, the state or municipal authorities provide some sort of exhibition rooms for artists. But in London there is nothing of the kind—for the Guildhall Galleries are devoted to retrospective and special exhibitions only—and this is one reason why the Academy maintains its hold and remains all-powerful. The calmness with which the New Gallery is allowed to disappear would, under these circumstances, be the more astounding were it not that at the present moment art in this country seems to have returned to its early Victorian stagnation, before Pre-Raphaelitism succeeded in stirring it into some show of life.

As it happens, curiously, the last exhibition to be held in it is given by the Arts and Crafts Society, which began its career there, and which, like the Gallery, was a direct outcome of the Mid-Victorian activity. The Arts and Crafts is, to all appearances, still a flourishing society, and there is no sign of its coming to an end with the Gallery. But it can hardly be said to have escaped the depressing influences of the day. Its first exhibition was given in 1888. Pre-Raphaelitism had gone; the absurd "æsthetic" pose of the "seventies" was on the wane; and nothing was left to show for the Mid-Victorian revolt save the Arts and Crafts, with William Morris at its head. There was a good deal of affectation in the movement, a good deal of self-consciousness, a good deal of deliberate copying of old models that had no relation to the present and its needs—a good deal of what was then laughed at as neo-Gothicism. But there was also much that was genuine and sincere, much honest, good work. Decoration was still floundering in the Victorian abyss, when from William Morris, its champion, came an energy, an enthusiasm, that carried his followers away with him. His enthusiasm was his strength and made him the influence he unquestionably became in his generation. Whatever else the society might be, it was alive. Its exhibitions at the start were interesting, suggestive, provoking. They forced the critic in his turn into enthusiasm of praise or blame. And often earlier work also was included: the illustrations that made the "sixties" famous, the first paintings of the leaders of the whole movement, their first attempts in decoration, and their first designs for furniture. I look back to the press views then as events of importance, emotional occasions, even. Feeling ran high among the admirers of the neo-Gothic school, among its enemies, among the exhibitors themselves. I remember one craftsman being roused to such a pitch of excitement as to warn a critic that he was lying in wait, armed with a big stick. Foolish, it may be, but the folly was born of excess of interest, which is an admirable fault.

How much is left of this enthusiasm to-day for the ninth exhibition? The Arts and Crafts Society has less drain upon it than others, less reason to exhaust its resources. With a restraint that I wish all groups of artists might follow, it has held its exhibitions only once in every three years. There need be no haste, therefore, among its members, as among painters who are spurred on to overproduction by the necessity of being represented every year not only in one, but in several galleries. Craftsmen have the leisure to think, to carry out large schemes. They can choose from work done; they need show only their best. Hence it is but right to look to them for a higher level of conception and accomplishment. This year, however, it has been looked for in vain. I have not the old catalogues by me, but I am sure that the exhibitors and their exhibits have increased in number. There are many more to show, many more things shown. But this is the only advance, the only development, and throughout, the old enthusiasm is missing. Carpets are few, and the most important tapestry comes from the firm of Morris. Crétonnes and wallpapers seem little better than reëchoes, for the truth is that Morris, prophet of the school, carried pattern to such an extreme that there is a reaction against it, and simplicity is taking its place. People are finding out that white or simply tinted walls are more restful than great sprawling, or small diapered, designs spreading from floor to ceiling. Not much furniture has been sent; but at least the pieces to be seen may boast the negative merit of not attracting attention by eccentricity or grotesqueness. *L'art nouveau*, that had its roots in the Arts and Crafts, though never of such luxuriant growth here as on the Continent, has vanished. The cartoons for mural decoration and stained glass are not remarkable, the years not having brought assurance, or cunning, or distinction to the hand of the craftsman. I saw none that in so general a notice deserves special mention except two large cartoons for frescoes by Mary Sargent Florence. Her figures, in their pose and dress and type, have more than a touch of the primitiveness always encouraged by the Arts and Crafts; but then they are well and decoratively placed and grouped. She has the right respect for line, and she reveals true feeling for the value of simple spaces. Her designs would really decorate a wall, not merely overload it with intricate or tedious ornament. Good glass, fairly good pottery, excellent iron work, an assortment of laces and embroideries, all have a place. But it is in the sections of jewelry and book decoration that the exhibits are most numerous, probably because in no other branch of the decorative arts is it so easy, with such comparatively light work, to attain an effect of proficiency.

"Artistic" jewelry, as it is called, has become very much the fashion of late years, and has been so horribly overdone that I confess my prejudice against it disposes me to look upon every bit of enamel or mother of pearl dangling from a chain, or set into a buckle, as an offence. A few artists have done and still do fine work—Harry Wilson, Alexander Fisher, Paul Cooper, Mr. and Mrs. Nelson Dawson, and one or two besides. But no sooner had they prepared the way than a whole host of imitators or disciples, chiefly young women, as you may see by the catalogue, rushed in, and now case after case is filled with jewelry that is neither frankly barbaric, nor as exquisitely finished as the conditions of so delicate an art demand, once it has emancipated itself from barbarism. Much the same may be said of all the arts pertaining to the book. After Douglas Cockerell, Cobden-Sanderson, and Miss Prideaux, bookbinders have multiplied by the dozen; but, while they have learned their trade and cultivated a sense of appreciation and

adaptability, their originality is still far to seek—if, indeed, so limited an art allows of much originality. One new press after another is started to explain to the ignorant what printing should be, but I, at any rate, return with renewed pleasure to the work of such purely commercial firms as the Constables in Edinburgh, the Chiswick and Ballantyne Presses in London. Pissarro and other artists have produced charming books for the collector and the amateur, but they are hardly the legitimate development of the art for our own time and needs. William Morris, as a relaxation (for he seems never to have been happy when he was not working), played the scribe and illuminated MSS. Now scribes and illuminators of much technical accomplishment are cropping up on every side, though the crafts they practise belong to generations and to a phase of civilization long since dead. Walter Crane preached decorative illustration, and illustrators by the hundreds carry on the convention. There are exceptions, of course; and I could point to work worth mention and description were I criticising the exhibition in detail. But I am now concerned only with tendencies, and it seems to me that at the Arts and Crafts, as in too many exhibitions of the day, one is conscious of stagnation, of a want of originality, or of even a striving after it. The younger generation is content to copy what has won immediate and financial success. The swarms of artists and craftsmen turned out by the art schools all over the country must find some occupation, and perhaps it is because many would be so much more in place behind a counter, that their work has an air almost of amateurishness.

Walter Crane, president of the society, is evidently conscious that something is wrong. In his introduction to this year's catalogue he rather congratulates the society for having maintained its position, but he also suggests that only by the public's or the state's provision of a gallery for Arts and Crafts exhibitions will "a living tradition in design and craftsmanship" be restored. A gallery such as is supplied to artists in France and almost every European country would be a help no doubt. Artists in London are more than a little nervous about the future with only the Academy, the dealers' shops, one or two private societies' galleries, and the Grafton, which has had a chequered career, to show in. But the failure of the public to support so centrally situated, well-constructed and arranged a gallery as the New suggests that the evil goes deeper than simply the need of rooms to exhibit in. One William Morris accomplished far more than a country full of South Kensington schools, and the artist cannot shift all his responsibilities upon the public or the state. N. N.

A NEW WORK FOR MUSEUMS.

The Boston Museum of the Fine Arts has inaugurated a new service, that of registering all works of art in the locality, which might well be adopted by museums of all kinds. Like most new ideas, this is a simple and obvious extension of the usual duties of a museum. To keeping and showing objects it merely adds keeping and diffusing information about similar objects.

In a city like Boston such a service is peculiarly called for. It is historic ground. Libraries, hospitals, even commercial and financial directorates, are very likely to have accumulated portraits, some of quality, and other objects of art. Many old buildings of a certain architectural interest are demolished every year. A photographic record of these structures would be of evident value to the future historian of our culture and art. Increasingly our modern buildings have artistic interest, and it is desirable not merely that they should be noted for the use of the traveller and student, but also that their better features should be photographed and the names of their designers preserved. Unless there is somebody alert to this need the facts even of remarkable enterprises may be obscured or lost. Benjamin Ives Gilman, secretary of the Boston Art Museum, pointed out in an address last year, to the American Association of Museums, that our record of the Albany decorations by William Hunt is sadly incomplete. It was the first serious attempt at monumental decoration by a competent American artist. It heralded a new development in our artistic activities. Through the bad construction of the ceiling, the work promptly perished, and except for the scant evidence of Hunt's drawings and for wholly inadequate photographs, that interesting chapter of American art can never be illustrated.

Naturally, the information bureau of a museum would concentrate primarily upon national, State, municipal, and corporate works of art within its territory; but a very useful feature of the work would also be the registration of works of art in private possession. In cases where the city has fully listed public works of art, as New York has done through the Art Commission, the labors of the museum would be so much the lighter. In recording private possessions, nothing could be done without the consent and good will of individual collectors; but when it appeared that the purpose of such registration was simply that of record and not that of criticism, the necessary consents would surely be forthcoming. In Europe such work is systematically carried on under the Ministry of Fine Arts. As in so many other cases among us, private enterprise and loyalty must effect what elsewhere is done by official sanction.

Such a list as we have imagined would serve no merely academic purpose. It would be immensely valuable to students, but it should also encourage visiting of local objects of artistic interest, pride in them, and ultimately a greater care for their maintenance. This centralized information would be a resource for all manner of local organizations—school leagues, societies of scenic, historic, or artistic scope—all bodies, in short, that are concerned with the seemliness of the land. That these proposed inventories are desirable nobody will, we think, question. Are they practicable? remains a fair challenge. As to this point, Mr. Gilman shows that such work fits in with the clerical activities of every museum, and involves a quite negligible increase in labor and expense. On the side of the public, the Boston Museum has found the readiest response to its appeals for information. Harvard University, the Society of Architects, the Catholic Archbishop O'Connell, Bishop Lawrence of the Protestant Episcopal Church, and other men of light and leading have promised their personal and official support. In short, there is every indication that the good will of our communities will meet the initiative of the museums half-way. We merely need to extend our notion of a museum as a repository to include all information relevant to museum aims.

In a recent number of the *Cicerone*, a Berlin art journal, Dr. Bode admits that the now celebrated wax bust of "Flora," bought by him in England as a work of Leonardo da Vinci, may be spurious.

John Macallan Swan, R.A., died in London on February 15 at the age of sixty-three years He had studied under Gérôme, Bastien-Lepage, Dagnon-Bouvert, and Frémiet, and had been awarded medals for his work exhibited in Paris and Munich. Some of his works are Orpheus, The Prodigal Son, Lioness Defending Her Cubs, and Polar Bear Swimming.

Henry Ulke, sometimes called the "Painter of Presidents," died in Washington on February 17 at the age of eighty-nine. One of his best-known portraits is that of President Grant, which now hangs in the long gallery of the White House. He had also painted portraits of Secretaries Sumner, Chase, and Stanton of Lincoln's Cabinet; James G. Blaine, John G. Carlisle, and John Sherman. He was born in Frankenstein, Germany, and came to this country in 1849.

Finance.

PROPHETS OF REACTION.

Two weeks ago, President Earling of the Chicago, Milwaukee and St. Paul startled Wall Street a bit by saying:

I have just learned that the West is cancelling orders. Merchants who have right along been buying in large quantities are slowing up on their commitments, and those who have ordered shipments of manufactured goods for delivery during the

spring are countermanding them. A business recession may be on the way, and it may not, but certainly no favorable construction can be placed upon the fact of cancelled orders.

On Wednesday of last week, President Reynolds of the Continental Bank of Chicago added this:

> I think there are indications of a business reaction in the West. It has not gone far, and there is nothing whatever to cause alarm. I see, however, a lessening in business activity, and a tendency to await developments before making new commitments.

These statements or predictions were not left unchallenged. James J. Hill on Monday of last week, summing up his own observations, said: "I have seen no evidence of business being on the wane." President Hughitt of the Chicago and Northwestern added to this, on Tuesday:

> If there has been any cancellation of orders, it has not come under my observation. Business is good and the prospects for the future are bright.

And, finally, on Wednesday, the *Iron Age*, reviewing the iron market, said:

> In the iron trade there is thus far no evidence of cancellation of orders, nor, except as railroad blockades have been responsible for delays, has there been any appreciable holding back of shipments. Not in many years have snows and severe cold interfered so seriously with transportation. This and the slowing of the buying pace that was so rampant four months ago are temporary causes.

Now, the man who listened to this series of deliverances judged them according to his temperament. He might pooh-pooh the whole discussion. He might—and this was more likely—say that a 20-point break on the Stock Exchange ought traditionally to have foreshadowed something unfavorable elsewhere. Even if he dismissed that inference, he would possibly suggest that when specialists are feeling the pulse of trade with such sudden assiduity, they must suspect something.

People with a taste for precedent and reminiscence remarked that past experience has produced a number of instances where, in the second year after a great financial panic, business recovery went ahead so rapidly that it was found necessary, in the next year, to slow up. Of this the classic case in point was 1895. In support of this view of the case, they pointed out the recent abnormal expansion of our import trade, the shrinkage of our exports, and the outcry from consumers against exorbitant cost of living, as being, each in its special field, a series of indications that supply and demand have got out of joint.

It will certainly be worth while to inquire just what force there really is in the various popular arguments summarized above. The argument, from the stock market to general trade, is familiar. Wall Street has often been a trustworthy guide. But even if the course of stocks is a guide to the general character of the subsequent industrial phenomena, it is by no means as safe a guide to the scope and magnitude of those phenomena. In 1903, it was; in 1901 it certainly was not. There was no such outright collapse in general industry, after the 9th of May, 1901, as occurred on that day in the Stock Exchange. "Black Friday," in 1869, was a day of panic in the Gold Room; unsettled industrial conditions followed, but no industrial collapse. The reason was, on both occasions, that the excessive disorder on the Wall Street markets resulted from conditions wholly peculiar to the institutions where speculation came to grief.

To some extent, disquietude over the fact of the consultation of the specialists may be regarded similarly. The doctors rush to seize the pulse of general industry, because they think that the heavy break in stocks must betide industrial disorder. Yet it may be possible that the pulse which ought to have engaged their attention was the pulse of the Stock Exchange itself.

The precedent of 1895 is extremely interesting. Sudden revival; active buying of merchandise; prediction of another "boom time"; spectacular rise in stocks, with Europe's capital enlisted; iron production surpassing all monthly records—these things were witnessed in the second year after 1893, as in the second year after 1907. Along with them, in the earlier as in the later year, came piling up of domestic stocks of merchandise; "rush orders" to Europe which raised our monthly imports above the export total; loss of our export trade to foreign competitors, because of our obstinate high prices; unseasonable movement of foreign exchange against New York, and heavy export of gold at a time when we should have been importing.

Granting all this analogy, what should be the outcome? Readjustment of prices, will be the common answer. The Stock Exchange itself showed this at least—that when its own prices had been raised so high that real buyers turned away, leaving holders of stocks tied up in the money market, there was nothing left but for prices to come down. It may be so in certain industries. To what extent such readjustment, supposing it to come, would upset or interfere with a season's plans for trade, is doubtless a debatable question. It could not be wholly without effect on industrial activity; but it is always open to question whether a fall in prices, in any market which has deadlocked itself through fixing them too high, is not the shortest road to genuine trade activity. The problem is, to find in what industrial markets the artificial conditions have prevailed, and in what they have not.

Farm Land the Basis of Value

In making investments the first consideration should always be the character of the security. Every investor to whom income is important should learn the facts about Irrigation bonds. They form, in our estimation, the safest way to earn 6 per cent.

Secured by a Thousand Farms

Irrigation bonds are secured by first liens on good farm land—sometimes a thousand farms. The farms are worth usually at least four times the loan.

The farms are exceedingly fertile, and are not subject to crop failures. Any one season's earnings are generally sufficient to repay the whole loan.

The bonds are additionally secured by a first mortgage on an irrigation system, in which the investment is often twice the bond issue.

Some Irrigation bonds are municipal securities, which form—as do School bonds—a tax lien on the district. Some are issued under the "Carey Act," where the State supervises the project.

They are issued in denominations of $100, $500, and $1,000, so one may invest either little or much. All are serial bonds, part of which are paid annually, so one may make long-time or short-time investments.

78 Issues Sold

In the past 16 years we have sold 78 separate issues of Reclamation bonds, all based on farm liens. Not a dollar of loss has resulted to any investor.

Our dominant place now gives us the pick of these projects. They are passed on by our own engineers and attorneys. And an officer of our Company constantly resides in the irrigated sections, watching the projects we finance.

We have issued a book based on all this experience—a book which every investor should read. Please cut out this coupon as a reminder to send for it. (16)

PUBLISH THIS WEEK

Grant Showerman's
WITH THE PROFESSOR

Holmes was a professor, but we do not ordinarily expect professors to irradiate their philosophy with humor. Another one who does it has been discovered by readers of the *Atlantic Monthly*, the *Educational Review*, *Harper's Magazine* and *Scribner's Magazine*, in Professor Showerman. These cheerful and sane essays include: A Prelude on Pessimism; The Strange Case of Dr. Scholarship and Mr. Home; Mud and Nails; The Professor's Salary is Saved by Grace; The Professor Travels in the Realms of Gold; The Professor Laughs at Education; The Professor Misses the Sermon, and Midnight on the Roof-Garden. ($1.50 net; by mail, $1.63)

Then Have Just Published

Miss Gertrude Hall's
THE UNKNOWN QUANTITY

A novel of New York to-day by an author whose short stories have appeared in our best magazines. A tale of love, moral struggle, and baffling mystery. It contains vivid character sketches. ($1.50)

E. Lawrence Dudley's
THE ISLE OF WHISPERS

A highly picturesque yarn suggested by rumors of a mysterious "No Man's Land," near Nantucket. Full of action and suspense. ($1.50)

BOOKS OF PERMANENT VALUE.

A History of Architecture
By RUSSELL STURGIS
Volume II (now ready, Volume I already published) covers the later Romanesque, Asiatic architecture, and Moslem architecture. These fields are illustrated by a wealth of half-tones, line cuts, and handsome photogravures—400 in all. Imperial 8vo. 480 pages. Cloth. $5.00 net per volume. Carriage extra.

Medieval Architecture
By ARTHUR KINGSLEY PORTER
Presenting the early history of architecture, with special relation to the Gothic. Two vols. Quarto. 289 illustrations. Per set $15.00 net.

Modern Artists
By CHRISTIAN BRINTON
A brilliant study of recent art, biographic and critical. Imperial 8vo. 270 pages. 60 illustrations. Net, $6.00.

Retrospections of an Active Life
By JOHN BIGELOW
A record of long and arduous public service in historic setting on two continents. A piece of the history of the past fifty years. 8vo. Three vols. 48 illustrations. Net $12.00. Carriage extra.
Portrait catalogue, in preparation, on application.

THE BAKER & TAYLOR CO

The Master Builder of a Great Commonwealth

"I look upon Porfirio Diaz as one of the greatest men to be held up for the hero-worship of mankind."—Elihu Root.

Porfirio Diaz
President of Mexico.
BY JOSE F. GODOY,
author of "A Few Facts About Mexico," etc.

This biography is an impartial history of the life of Diaz, and practically a *resume* of that of Mexico for the last half century. A notable feature is the record of the opinions of some of the most prominent men in the United States and Canada, written especially for this book, on the life-work of Diaz.

8vo. *Profusely Illustrated.* $2.00 *net*.

RECENT ISSUES

Pierre Loti
"EGYPT" (La Mort de Philae)

Translated by W. P. Baines, and with eight plates in color from paintings by A. Lamplough. $2.50 net; postage, 14c.

A wonderfully fascinating book, conveying vivid pictures of the charm of Egypt and the marvels of its antiquity.

Franz Blei
"THE POWDER PUFF: A Ladies' Breviary"

Translated by Lillian Coursolles Jones. $1.25 net; postage 8c.

"He owes something to Mr. Meredith, something to Wilde and Aubrey Beardsley, very much to French models of all periods, and very little to Ibsen."—*The London Times.*

Anonymous
"DIARY OF A DALY DEBUTANTE"

Passages from the journal of a young woman who was a member of Augustin Daly's famous company of players some thirty years ago. Contemporary portraits of John Drew, Ada Rehan, Catherine Lewis and many others add interest to a convincing narrative.
$1.25 net; postage, 12c.

H. de Vere Stacpoole
"THE CRIMSON AZALEAS"

A Japanese story full of charm and color, by the author of "The Blue Lagoon." $1.50.

"GARRYOWEN," by the same author, ready shortly.

Fiona Macleod
"COLLECTED EDITION"
Vol. I. "PHARAIS" and "THE MOUNTAIN LOVERS"

With frontispiece in photogravure; $1.50 net; postage 10c.

The works which William Sharp wrote under his pseudonym between the years 1894 and 1905 are here first presented in a complete edition by Mrs. Sharp, as editor, according to the wishes and instructions left with her.

Ready shortly: Volume II. "THE SIN EATER," "THE WASHER OF THE FORD." Volume III. "THE DOMINION OF DREAMS," "UNDER THE DARK STAR."

Alice Perrin, author of "Idolatry," "East of Suez," etc.
"THE STRONGER CLAIM"

A novel, dealing in a striking way with the problem of inter-racial marriage in India. $1.50.

Charles A. Lasar
"PRACTICAL HINTS FOR ART STUDENTS"

With many illustrative sketches and diagrams by the author. $1.00 net; postage, 6c.

Ellery H. Clark
"PRACTICAL TRACK AND FIELD ATHLETICS" New and revised edition, $1.00.
A systematic handbook for the modern athlete.

READY SHORTLY

H. G. Wells **"THE HISTORY OF MR. POLLY"** (*Ready March 12*)

After "Tono-Bungay" and "Ann Veronica," Mr. Wells in another brilliant piece of fiction gives us, out of ordinary human materials, a romance brimming with humor and significance.

". . . As a matter of fact all the elements of his troubles had been adequately diagnosed by a certain high-browed, spectacled gentleman living at Highbury, wearing a gold pince-nez, and writing for the most part in the beautiful library of the Reform Club. This gentleman did not know Mr. Polly personally, but he had dealt with him generally as one of those ill-adjusted units that abound in a society that had failed to develop a collective intelligence and a collective will for order, commensurate with its complexities. . . ." $1.50.

Geraldine Bonner
"THE EMIGRANT TRAIL" $1.50.

A remarkable novel dealing with the romance of a characteristic feature of American life and history. "The Emigrant Trail" is the trail chosen by the Argonauts of 1849, as distinguished from the Santa Fé trail.

M. G. D. Bianchi,
author of "The Cuckoo's Nest," "A Modern Prometheus," etc.
"RUSSIAN LYRICS AND COSSACK SONGS"

Including verses from Lermontoff, Pushkin, Tolstoi, Maikow, Nikitin, Nadson, and many others. Compact biographical notes add to the value and interest of the volume. $1.20 net; postage, 8c.

Elsa Barker, author of "The Son of Mary Bethel."
"THE FROZEN GRAIL and OTHER POEMS"

A collection of verses by a poetess whose name has been growing more and more familiar to lovers and seekers of good poetry. $1.25 net; postage, 6c.

Helen Marshall Pratt
"CATHEDRAL CHURCHES OF ENGLAND"

An extremely compact and thorough book, which has the advantage of being the only volume extant dealing with the entire thirty-two cathedrals, or cathedral churches, of the United Kingdom.
Illustrated, $2.00 net; postage, 10c.

Letters and Memorials
OF
Wendell Phillips Garrison
Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait. It likewise preserves the notable letter of appreciation addressed to Mr. Garrison by more than two hundred contributors to the *Nation* on the completion of his fortieth year of service, and his acknowledgment thereof.

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps, $5.00 *net*. Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle.*

L. C. PAGE & COMPANY'S NEW SPRING BOOKS

NOW READY.

IN UNFAMILIAR ENGLAND

By THOMAS D. MURPHY.

A companion volume to Mr. Murphy's successful BRITISH HIGHWAYS AND BYWAYS FROM A MOTOR CAR published a year or two since. A record of a trip through the less frequented and accordingly more fascinating parts of rural England. *8vo, cloth decorative, boxed.* $3.00.

SUSAN IN SICILY

By JOSEPHINE TOZIER.

A sprightly volume, part fiction and part travel, told in the letters of a vivacious American girl, travelling thru the land of the Sicilian, to her sister Betty at home. A realistic and authentic work which compares most favorably with Miss Tozier's first work, "Among English Inns." *8vo, decorative cloth, boxed.* $2.00

READY IN MARCH.

MY HEART AND STEPHANIE

By REGINALD WRIGHT KAUFFMAN.

A goodly tale of love and mystery dealing with the intrigues and *causes célèbres* of the Austrian Court. It continues also the stirring career of Miss Frances Baird, the heroine of Mr. Kauffman's detective story of that name. *Cloth, decorative, illustrated.* $1.25.

A CAVALIER OF VIRGINIA

By THEODORE ROBERTS.

A story of the old chivalry of colonial Virginia. It is a strong romance with characters admirably drawn and is easily the finest story that the author of "Captain Love," "Hemming, the Adventurer," etc., has yet given the reading public. *Cloth decorative, illustrated.* $1.50.

READY IN APRIL.

KILMENY OF THE ORCHARD

By L. M. MONTGOMERY, author of the "delightful and irresistible ANNE books," ANNE OF GREEN GABLES and ANNE OF AVONLEA.

A charming love story which has again for its setting the author's favorite Prince Edward Island. Kilmeny Gordon, another unusual heroine, is certain to prove as dear to the hearts of old and young readers alike as did her predecessor, Anne Shirley. *Cloth decorative, illustrated.* $1.25.

COMMENCEMENT DAYS

By VIRGINIA W. CHURCH.

A college story with the real college "flavor," based on the well-known play of the same name which had such a successful run last season. American girlhood types are well portrayed, from the roly-poly Freshman, Polly, to the dignified Senior, Kate Wells, and the serious and hilarious sides of college life are delightfully contrasted. *Cloth decorative, illustrated.* $1.50.

THE BOSTON MUSEUM OF FINE ARTS

By JULIA DeW. ADDISON.

A second volume in our series dealing with the principal art galleries of America, inaugurated successfully last season with the publication of Preyer's ART OF THE METROPOLITAN MUSEUM. Its author, Mrs. Addison, already has a number of successful art books to her credit, including ARTS CRAFTS IN THE MIDDLE AGES, etc. *Cloth decorative, illustrated, boxed.* $3.00.

OTHER RECENT IMPORTANT TRAVEL VOLUMES

IN WILDEST AFRICA

By PETER MacQUEEN, F.R.G.S.

Says Elbert Hubbard in the February *Philistine*: "Mr. MacQueen tells a great deal of truth in his book and backs it up with many superb pictures. The price is just three dollars—but it is worth five." *Cloth decorative, illustrated, boxed.* $3.00.

INNS AND TAVERNS OF OLD LONDON

By HENRY C. SHELLEY.

"The coffee house and the inn and the tavern of the olden time are only picturesque memories now, but Mr. Shelley's research brings out much that is delightful in revelation of the literary and other notables of the time." *Cloth decorative, illustrated, boxed.* $3.00.

CASTLES AND CHATEAUX OF OLD BURGUNDY

By FRANCIS MILTOUN.

"Mr. Miltoun's book is a monument of scholarly industry."—*Rochester Post-Express.*
With many illustrations and decorations by Blanche McManus. *Cloth decorative, boxed.* $3.00.

THE SPELL OF ITALY

By CAROLINE ATWATER MASON.

"Mrs. Mason gives new life even to familiar bits of Italian history and tells vivid stories of her own delightfully fresh experiences."—*New York World.*

Cloth decorative, illustrated, boxed. $2.50.

From Page's List

GUATEMALA and Her People of To-day

By NEVIN O. WINTER

"The general ignorance and misapprehension in the United States about our sister republics makes this a book of real value."—*Brooklyn Eagle.*

Cloth decorative, illustrated, boxed. $3.00.

L. C. Page & Company Publishers - Boston

The Nation.

NEW YORK, THURSDAY, MARCH 3, 1910.

The Week.

For entirely frank and naïve expression of his feelings at any given moment, there has probably never been a President like Mr. Taft. He was touched by the cordiality of his reception the other day at Newark, and the contrast—suggested by the chairman's reference to the newspapers—with the cold-blooded criticisms of the press found instant expression when he began to speak. Mr. Taft must know that the fault-finding to which he is subjected is but one of the inevitable incidents of his office. Moreover, he may well solace himself with the reflection that much of the misunderstanding has been due to the difference between his own handling of the press and that to which his immediate predecessor had accustomed the newspaper men and the country. Mr. Roosevelt was a past master in the art of getting whatever he wanted to make conspicuous "featured" to his heart's content in the newspapers; Mr. Taft is a man who could not play that game as Mr. Roosevelt did, and would not if he could. That his course on the tariff was a deep disappointment to the country cannot be denied, and this has had much to do with the conditions of which Mr. Taft complains; but these are also in great part due to his own indifference to little devices for securing public attention at just the right time—an indifference by no mean to his discredit, though it may be to his disadvantage.

Senator Root's letter read before the New York Senate Monday night is an able presentation of his reasons for differing from Gov. Hughes's view of the income-tax amendment. Mr. Root maintains with great force of argument and judicial citation that the amendment would not give Congress the power, it it had the will, to tax the incomes derived from tax-exempt bonds of States and municipalities. He arrives at this conclusion, however, by virtually treating the words, "from whatever source derived," as negligible. In the form as originally submitted to the Finance Committee, they did not appear, the language being: "The Congress shall have power to lay and collect direct taxes on incomes, without apportionment among the several States according to population." The obvious intent was to meet the decision of the Supreme Court that an income tax was direct, and also to abrogate the existing Constitutional rule of apportionment. No one denies that the form of words chosen would have accomplished the ends desired. Unfortunately, the additional phrase was put in. Senator Root treats it as of no effect. But can he be sure that the courts will do so?

It is obviously not for a layman to thrust in his opinion on a law point. He may, however, properly state the facts as he sees them. One fact is that high Constitutional authorities and good lawyers are evidently at odds on this subject. Against Senator Root we have ex-Senator Edmunds; in opposition to Senator Borah we have Gov. Hughes, who is followed by many State Executives. In other words, there has to be admitted an uncertainty regarding what the income-tax amendment means or will be held by the courts to mean. The question is, then, whether we want a lawsuit of doubtful issue, or whether we want an indisputably safe amendment. If it is the latter we really desire, we know how to get it. All that is necessary is for Congress to turn back to the first form of words before it, and submit to the States an income-tax amendment so drawn as to relieve them of all fear that their own securities might be taxed and their credit impaired.

One act at least of Secretary Ballinger's will be warmly commended by those who believe in the conservation not only of our national resources but of scenic beauty. He has just taken steps to revoke the permit granted by Secretary Garfield to the city of San Francisco under which the famous Hetch-Hetchy valley could have been flooded and virtually destroyed in order to afford a water supply. The Secretary proceeds upon a report made to him by the Geological Survey, to the effect that an ample water supply is available to San Francisco without invading the Hetch-Hetchy, and calls upon the authorities of that city to show cause why the order of his predecessor should not be cancelled. This will bring joy to the heart of John Muir and the others who have been working incessantly to save the Hetch-Hetchy.

Of the two coal land bills for Alaska introduced by Senator Beveridge, that which provides for the leasing of the coal deposits, together with the reservation by the government of title to the surface of the land, is in closest accord with the recommendations made by the National Conservation Commission. That body laid special emphasis upon the need of separating the surface from the underlying minerals, so that homes might be made on the agricultural soils while the minerals should be developed under lease on terms that would prevent monopoly and "bring about seasonable and economical exploitation." Heretofore the known presence of coal deposits beneath agricultural lands has made it impossible to secure a home under the homestead law unless the coal was purchased; and since the surface rights go with the coal, while the miner desires the coal only, the land and the settler were foolishly fenced apart. Another example of the evils which follow upon faulty land classification is furnished by the workings of the Timber and Stone Act, under which some 12,000,000 acres have been disposed of, timber and land together, for a sum ridiculously below the value of the timber alone. A third evil, of even greater proportions, was discovered by the Department of the Interior in 1906; vast areas of coal lands were being taken up under the various non-mineral laws. The enormous waste of the public property in coal, under existing laws, has been forcibly thrust upon the attention of the country. The Alaska coal deposits should be provided with stout defences against destructive use, monopoly, and fraud.

Vardaman's defeat for the United States Senatorship is an event upon which the people of the State of Mississippi are to be heartily congratulated, even if the result carries with it the continuation of Vardaman's residence in their midst. Fortunately, such a setback is bound to react on the man's influence within the State and to limit his

future power for harm. We say this in full consciousness of the fact that during his last year as Governor of the State, Vardaman on one or two occasions displayed commendable firmness and courage in dealing with outbreaks of the lynching spirit. Such merit, however, will not go far to redeem the mischief he has done the South and the country at large in fomenting race-hatred and that very violence which, in his official capacity, he was active in suppressing.

Jersey justice has once more vindicated its reputation for celerity, and the Trusts have been wounded in the house of their friends. The indictment found by the grand jury of Hudson County against six Chicago packing concerns, and no less than twenty-one individuals with them connected, covers the ground thoroughly; monopoly, oppression, extortion, fraud, are all in the count. Whatever be the outcome of the proceedings in court, there can be no doubt that we shall have valuable light thrown on Trust methods, Trust profits, and even Trust personalities. From Packingtown a state of some uneasiness is reported. The indicted men probably do not fear the worst, but they have full reason to fear a goodly dose of publicity and considerable bother. New Jersey, from a great convenience as an asylum for the Trusts, may become a nuisance, if at the instance of every Jersey grand jury, Trust officials may be dragged thousands of miles from home to stand trial in a State which without close acquaintance they have regarded as their natural protector.

Two of the Stock Exchange houses which were identified with the so-called "Hocking Coal pool," whose manipulation of values came to grief some weeks ago, have now been disciplined by the Stock Exchange authorities. The general facts of this now famous scandal were that, a year ago, an obscure stock, selling around 24 cents on the dollar and with wholly doubtful intrinsic value, was taken in hand by this "pool" of half a dozen Stock Exchange houses; that it was bid up, first to 60 and then to 92½; that on the 19th of January the stock broke suddenly from 88½ to 21½, and that three houses identified with the operation had to suspend. The affairs of one of these firms have subsequently come into court, and James R. Keene, a well-known professional manipulator of prices, has been compelled to testify as to his management of the "Hocking Coal pool." His testimony deepened the conviction of all experienced observers that the "pool" created the absurdly fictitious prices of last autumn through the unpleasantly familiar process of executing, on a large scale, buying and selling orders which were to all intents and purposes "matched," and hence in reality fictitious. Barely 10,000 shares of Hocking Coal were sold on the Stock Exchange in the month before the "pool" began to operate. The next month, 136,000 shares were dealt in—although, by Keene's admission, the bona-fide purchases for the pool were only 20,000—and the price was doubled in that time.

The Stock Exchange authorities have suspended the Stock Exchange members of two of these firms, and have declared the suspended members "ineligible for reinstatement." The ground on which the governors formally based both sentences is "reckless and unbusinesslike dealing," in regard to which the Exchange's constitution confers disciplinary powers. The language of the committee's report was not wholly clear as to what reckless and unbusinesslike act was thus punished. In one paragraph it appeared to be defined as the undertaking of "a task beyond their means, resulting in their failure." This scarcely touched the phase of the scandal in which the public at large was interested. Another paragraph, however, set forth that "the acts of the Stock Exchange firms in subscribing to the Columbus and Hocking Coal and Iron pool, . . . thereby practically lending their names to this undertaking, merit severe condemnation." That has a plainer ring, though still, unfortunately, lacking in any clear specification of the real offence. But the important fact in the matter, after all, is the precedent for Stock Exchange discipline.

Litigation over the basic principles of aeroplane construction should be pushed to a final conclusion as soon as possible in the interest of progress, and herein lies an opportunity for the various aero clubs. Part of their combined energy and resources might be advantageously directed toward obtaining an early decision which shall determine once for all the status of the fundamental legal rights at issue. It would be unfortunate to prolong the grumblings of those, here and abroad, who protest that they are harassed by a combination with funds sufficient to stifle competition by means of expensive suits-at-law which cannot finally be upheld. Equally deplorable it would be to deprive any owner of a valid patent or the benefits to which, by virtue of pluck and perseverance, he may be entitled. Wireless telegraphy and the automobile industry have been hampered already too much by these basic patent contests. The future of aerial navigation, however hazy, is of such wide possible importance that it should not be interminably obscured in a legal fog.

We seem on the threshold of an epoch when, like so many Charles Surfaces, we shall be knocking down our ancestors with their own family trees. A second thundering blow at the portals of the past comes from Boston University, where some one has recalled that "the men who were considered saints a hundred years ago, would not be tolerated now; they were drunkards, many of them, and slave traders." A formidable catalogue of ancestral crimes can be drawn up by receding far enough into the storied past. What would some leading families on upper Fifth Avenue say if it were pointed out to them that their forefathers three hundred years ago ate their meat without forks, and, traced back two hundred years more, were in the habit of going to bed either in their street clothes or without clothes at all? What, indeed, can be said on behalf of a benighted, unenterprising generation like Benjamin Franklin's, which was content to creep along by stage-coach instead of taking the train, and dozed over its books by tallow-light instead of switching on the simple and convenient incandescent lamp?

It is a tradition in England, at least as old as Pitt, that coalition Governments are unpopular. That they are also very difficult may be inferred from the vacillation and lack of confident vigor with which Mr. Asquith is making his beginnings. His plans have varied from day to day, and the order of business in Parliament upon which he has finally determined is all too evi-

dently the work of a Prime Minister whose hand has been forced by rebellious followers. The pressing needs of the Treasury are to be met by a series of makeshift resolutions, while the budget is to be put off until after the close of the fiscal year. When Lord Lansdowne urged such stop-gap financial measures upon Mr. Asquith last November, the Premier took a high tone. The Commons, he declared, could not stoop to such a compromise. If the Liberals were returned to power, their first act would be to pass the budget again without a single change. But now that programme is entirely abandoned. Yielding to the demands of the radical wing of his own party, and to the insistence of the Labor members, Mr. Asquith is to adjourn the budget, and possibly to tie it up with next year's, putting first the bill to abolish the veto of the Lords not only in finance but as respects any measure upon which the Commons have resolutely set their hearts. There will be a certain strategic advantage in this course, but even if the Government is able in that way to rally its full majority, it can hardly overcome the bad impression already made by its shuffling and timidity.

On such questions as the prosperity or distress of the masses of a nation, sidelights thrown by collateral facts are often quite as instructive as statistics seeming to bear more directly on the matter. We constantly hear nowadays of the sad condition of the English masses and the wonderful growth of the Germans in prosperity, but facts crop up every now and then which show that there must be a great deal of exaggeration in the statements. An instance in point is furnished in a report read at a recent meeting of the Royal Statistical Society by Mr. A. W. Flux, of the Board of Trade, the figures being given by him, of course, as mere statistics and without any inference such as we are making. His paper was on "Urban Vital Statistics in England and Germany," and one of its results is that the infantile death-rate in English cities is from 25 to 30 per cent. below that in German cities of equal size. This is a true statistical result, and not one of those crude inferences made from a superficial comparison of figures; it refers not to the ratio of infantile deaths to the whole population, but to the ratio of infantile deaths to the infantile population. Many other interesting statements are contained in Mr. Flux's paper, among them the fact that, in spite of the excess of the German birth-rate over the English, the number of children per family in German cities is less than in English cities of like population. But the point that we wish to make is that an infantile mortality decidedly less in English cities than in German cities is hardly compatible with the existence of a state of misery in the former and of comfort in the latter. And, indeed, the very low death-rate of London as a whole has always afforded a warning against taking without question that gloomy view of progressive deterioration in the condition of the masses of its people.

The sentencing of Gustave Hervé, the French high-priest of anti-militarism, to four years in prison on the charge of having preached sedition and murder in his paper, *La Guerre Sociale*, once more draws attention to what is undoubtedly one of the most picturesquely Quixotic personalities of our time. Gustave Hervé represents in the highest degree the Frenchman's capacity for seizing upon an idea and carrying its implications to the logically bitter end. Once this unknown schoolmaster had decided that the idea of patriotism, of fatherland, was only a device employed by the ruling classes in every country for reconciling the downtrodden to their fate or frightening them into submission, it was natural that he should make his appearance before the world by calling upon his countrymen to plant the national flag in the dunghill. His followers, on one occasion at least, have carried out his behests in a painfully literal spirit. But if Hervé is a fanatic, he has worked out a philosophic theory and a platform for his ideas. His influence among the French Socialists has grown steadily. At their recent congress his party lost to the more moderate Jaurès faction by only a handful of votes. His condemnation, by exalting him as a martyr, may lead to the capture of the next congress by his followers.

Prime Minister Canalejas of Spain is now about to dissolve the Cortes and appeal to the country. Unless all Spanish precedents are broken, he will come back with a majority for the Government. In Spain the Government always wins at the polls. If Señor Canalejas returns with the approval of the voters, he will first, as he explained to the Madrid correspondent of the London *Times*, take up the two questions of ecclesiastical and educational reform. He will seek to come to a friendly understanding with the Vatican, but if that fails will not hesitate to proceed independently. In school matters he will demand larger appropriations for new buildings and for teachers, but will lay especial stress upon technical education, of which there is so great need of extension in Spain. Moreover, Premier Canalejas means to do something for reform of taxation, proposing to adopt the principle of taxing the unearned increment in land, and to suppress the *octroi* duties—always odious and burdensome. On the whole, we may expect interesting political developments at the hands of this democrat called to the helm by a King supposed to be devoted to absolutism and reaction.

The Russian Government has given heed to foreign intercession in behalf of an open trial for Nicholas Tchaikovsky and Catharine Breshkovsky. Cards of admission to the trial, which is to begin in a few days, are now being distributed. From the few details that have reached this country concerning the Government's case against Tchaikovsky, he appears to be in a much more favorable position than his fellow-prisoner, whose condemnation is spoken of in the dispatches as a certainty. Against Tchaikovsky, on the other hand, the prosecution seems to have waived the more serious offences contained in the preliminary indictment, and the trial may centre about the general charge of affiliation with a revolutionary party. His chances of acquittal are also improved by the decision of Madame Breshkovsky's counsel to present only a perfunctory opposition in her case, in order that all the resources of the defence may be concentrated upon the weaker of the two Government cases. It is tragic that such a sacrifice should have to be resorted to. It is perhaps not impossible that the Russian autocracy may decide to be generous at a moment when it can afford to be generous at home, and is more than usually anxious to court sympathy abroad.

THOSE ARGENTINE SHIPS.

The fact that the contracts for two Argentine warships have been secured by an American shipbuilding company seems to be causing varied emotions in England. One embattled protectionist organ in London declares that this is the final blow to free trade. If protected shipbuilding rivals can underbid the English firms, there is nothing for the latter to do but to go in for high duties in order to be able to build cheap ships. This logic falls a little queer on English ears, no doubt, but how must it sound to Americans? For years they have been told that our higher rate of wages and better standards of living and greater cost of materials under protection effectually disable us from competing with foreign shipbuilders. It is on that basis that subsidy bill after subsidy bill has been introduced and urged in Congress. By a grant of money from the Federal Treasury the fatal handicap under which we labored in the building of ships was to be removed. But here we have an American company carrying off a contract for two Dreadnoughts at a price $900,000 below the English bids. Are we afloat or ashore when such things can happen?

How laughably wide of the mark the English neo-protectionists are in ascribing this "triumph" of ours to our system of high duties, may be seen in the fact that the effect of those high duties will be nullified, so far as possible, in the building of these Argentine ships. They will be constructed, as it were, in a bonded warehouse. Every imported article entering into them will be relieved of customs duty, since the finished product is intended for export. The battleships will be "dumped" upon Argentina. Patriotic Americans cannot have cheap ships, for that would make them feel cheap, but they can build ships cheap for the foreigner. He has not been bred to our luxurious standards, and does not fear that his national flag will droop in shame if flown at the masthead of a vessel on which needless tariff duties have not been paid.

One would think, however, that even those Americans who have been taught to thrill over their own costly products —like Mrs. Carlyle's maid-servant exclaiming in the National Gallery, "How expensive!"—would begin to have a certain suspicion of the promoters of ship bounties and subsidies after this winning of the contract for the Argentine battleships. We cannot compete without a bonus. From that assumption the whole subsidy argument starts. Yet here we are successfully competing, but where is the bonus? For a time it was denied that the ships for Argentina were to be built in this country on a strictly business basis. The cost might be higher, but in some way the thing would be made up to the Argentine government. There were hints of financial arrangements and of diplomatic guarantees. The preposterous theory was even put about that Secretary Knox had offered to protect Argentina from attack by any other nation while her ships were building, provided that the contracts for them were placed in this country. This would be a novel application of the Monroe Doctrine—noble guarding of a sister American republic on the basis of cash. But all these absurd explanations are blown away by the statement of Admiral Garcia, who signed the contracts on behalf of the Argentine government. The only reason the American bidders got the preference was that their figures were the lowest. The job did not follow the flag, but the lowest price. The fact that the Americans were able to underbid their English rivals is accounted for by the head of the Thames Iron Works, writing to the *Daily Mail*, on the ground of the existence of "powerful rings" in this country, able to "control the supply of armor and armament." But this, if true, certainly would not prove that it is protection which enables a country to build ships cheaper than under free trade.

The incident illustrates once more the way in which the obsession of the battleship maintains its hold. Argentina has to see the Brazilian navy and go it one or two better. Secretary Meyer thinks that if he could only get a 34,000-ton battleship into the water our superiority would be so clearly demonstrated that no naval power would attack us. Yet it is easy to see that if Japan should think it necessary to plan a Dreadnought of 36,000 tons, the whole Pacific Coast would at once begin to see phantom ships and we should immediately have a full-fledged "war scare" on our hands. Chairman Tawney, of the House Committee on Appropriations, already sees such a scare in the making, and protests against the coming strain on the Treasury, which, he declares, will threaten national bankruptcy if the ambitious shipbuilding programme is carried out. His comment on the whole naval situation is forcible:

> We are at peace with all the world. There is not even a prospect of our becoming involved in war with a foreign nation. It seems almost incredible that any one would suggest the adoption of a naval programme which will involve the expenditure of more money than we have under existing revenue laws, and a policy, too, which will virtually put out of commission at least half our war vessels by making them inferior in size in comparison with those giant battleships now proposed.

THE SPIRIT OF THE ANTI-TRUST LAW.

Mr. Wickersham's memory plays him false in his explanation of the origin of the anti-Trust laws. "We, like our ancestors of Revolutionary days, raised our arms by the peaceful method of legislation against a power which we perceived rising cloudlike on our economic horizon." It is impossible to say what Mr. Wickersham saw in the period preceding the passage of the anti-Trust law in 1890, nor even whether he was then taking observations for use now. But the conditions of that time are known. The enemy then was low prices, just as the enemy is now high prices. The Trusts then existent of any size could be counted on the fingers, where they are now counted by hundreds. Yet it was popular then, as now, to attack capital as the cause of hard times.—[New York *Times*.

It will be news to most people that the Trusts were attacked in 1890 because they made prices low, and it will also take something of an effort to identify that year as belonging to a period of hard times; but the particular reason for quoting this criticism of Mr. Wickersham's speech is that it involves a curious omission. The Attorney-General had just pointed out that Trust control had "not yet resulted in that absolute power which the patentees of Elizabeth possessed over the sale of salt, vinegar, and the like," and he proceeded as follows:

> But, mindful that eternal vigilance is the price of liberty, and, in Webster's immortal phrase, "While actual suffering was yet afar off" we, like our ancestors of Revolutionary days, raised our arms by the peaceful method of legislation against a power which we perceived rising cloudlike on our economic horizon. We saw the rapid concentration of power over our great industries in a few hands, a power which no free State can long suffer to endure; the power of fixing prices at will, determining the amount of production, dictating the terms on which thousands of our fellow countrymen might pursue their means of livelihood; the power to exclude or to permit competition; all the elements of those monopolies which so stirred the

generation of Englishmen from whom the Pilgrim Fathers came.

So far, then, from Mr. Wickersham's memory playing him false, he was mindful of the exact conditions under which the Sherman act was passed; the conditions of a time when the number of formidable Trusts was indeed small, but when the elements existed of precisely those grievances, precisely those offences against economic liberty, which, in these later years, have so seriously engaged the attention of the whole nation. Above all is his parallel with the action of our Revolutionary ancestors justified; and the less the "actual suffering" experienced in 1890, the truer is the analogy. The fight against the British taxes was against the principle of them, and its intensity was never proportioned to the burden they imposed on the colonists.

It is not necessary to rest upon impressions or conjectures in order to determine the spirit that actuated the framers and supporters of the anti-Trust bill. The preservation of competition was then, as now, the object of its advocates. In his speech in support of the bill, Mr. Sherman used language precisely in key with that of Mr. Wickersham's speech. So far from objecting to the Trusts because they overdid competition, he dwelt on the benefits of legitimate corporate activity in cheapening production. "Corporations," he said, "tend to cheapen transportation, lessen the cost of production, and bring within the reach of millions comforts and luxuries formerly enjoyed by thousands." But he went on to say that enterprise and capital had not been "satisfied with partnerships and corporations competing with each other, and have invented a new form of combination commonly called Trusts," "the sole object" of which is "to make competition impossible." These combinations, he declared, "already defy or control powerful transportation corporations and reach State authorities"; and if Congress is unable or unwilling to deal with them, "there will soon be a Trust for every production and a master to fix the price for every necessity of life." Nowhere in the speech is there any attempt to estimate the harm done by those combinations in dollars and cents, either by cutting prices for the purpose of destroying competition, or by raising prices after competition has been destroyed. The tyranny of monopoly is the centre and substance of the whole plea. "If we will not endure a king as a political power, we should not endure a king over the production, transportation, and sale of any of the necessaries of life"; and what the bill sought to declare unlawful under the Federal statutes is "unlawful by the code of any civilized nation of ancient or modern times."

From that day to this, there has been no change in the animating spirit of the fight against monopoly. There have been, of course, excesses and aberrations; and there have been times when the idea of manifest destiny, which always finds ready acceptance by multitudes of our people, has seemed to prevail over any purpose of sturdy resistance. But the main line of the fight has been the same throughout; and never has its purpose or its method been so firmly or clearly outlined as in the present Administration. Mr. Roosevelt kept public interest alive by the ardor of his attacks, the appealing quality of his moral exhortations, and the spectacular interest of his own personality; but he played sadly into the hands of the enemy with his doctrine of good and bad Trusts. The distinction that he was understood to draw, and that he doubtless meant to draw, was the distinction between a Trust that imposed burdensome prices on the community and one that exercised moderation; but on no such issue can a great public policy be permitted to rest. Not the apparent immediate fruits of the doings of a given corporation, but the inherent and permanent consequences to be expected from the toleration of its methods, must be the test by which the law shall decide whether its acts are to be permitted or forbidden. The distinctive development of the past year has been the remarkable sharpening of this issue, both through the decisions of courts and through the utterances of the Executive. And on a clear issue of principle the country can be depended on for a kind and degree of support which no mere balancing of real or pretended gains and losses, however plausible, can command.

THE CARNEGIE FOUNDATION AND ITS PENSION SYSTEM.

The Fourth Annual Report of the President and Treasurer of the Carnegie Foundation for the Advancement of Teaching, published this week, covers a number of matters of unusual interest. The functions that have come to be exercised by this institution in relation to the educational system of the country are so important that both the spirit in which they are performed and the details of the actual conduct of the Foundation give occasion for serious thought. In the present instance, the most noteworthy points discussed are the principles governing the inclusion or retention of institutions in the "Accepted List" of the Foundation, and the change that has been made in the rules governing the bestowal of pensions. This change has been the occasion of not a little adverse criticism, and deserves to be taken up in some detail.

The primary fact in regard to the change in the Foundation's system is that, while pensions at the age of sixty-five are to be given as before, and indeed with some additional liberality, pensions based simply on twenty-five years' service as a professor are no longer to be granted. The rule originally promulgated on the subject, and in force until a few months ago, declared that "any person who has had a service of twenty-five years as a professor, and who is at the time a professor in an accepted institution, shall be entitled to a retiring pension computed as follows," the remainder of the rule being a statement of a purely arithmetical character. The new rule, adopted by the trustees at their annual meeting on November 17, 1909, substitutes for this the following:

> Any person who has had twenty-five years of service as a professor or thirty years of service as professor and instructor, and who is at the time either a professor or an instructor in an accepted institution, shall, in the case of disability unfitting him for the work of a teacher as proved by medical examination, be entitled to a retiring allowance computed as follows.

It will be seen from this that, except in case of serious disability, twenty-five years' service as professor no longer entitles a member of a college or university faculty to a Carnegie pension.

This revision of the rules opens up two questions of wholly distinct character—first, the ethical propriety of making such a change, as affecting persons who have based expectations on the rule as originally promulgated four years ago, and, secondly, the desirability of the

BURLINGAME PUBLIC LIB.

new rule as compared with the old, taken in itself.

On this latter point, much interesting light is thrown by the report. The discussion, marked by an acuteness of thought and skill in expression which characterize the report as a whole, might be taken as an instructive exhibit of the complexity of the consequences that flow from any important innovation in human affairs. On the purely fiscal side of the case—the question of the amount of pecuniary strain which the carrying out of the original rule was imposing on the Foundation—the long and the short of the matter seems to be that a gross miscalculation was made; but of the incidental consequences, some were such as could not easily have been foreseen. As the result of an inquiry addressed to each of the professors who have thus far availed themselves of the service pension, it appears that a considerable proportion were either expressly or virtually forced out by the college administration, and this fact seems to have made a great impression on the president of the Foundation. "It has been urged," he says, "that one of the benefits of the Foundation consists in the opportunity thus afforded the colleges to get rid of teachers who have worn out their usefulness, or who have lost interest. Whatever there may be in this claim, it is evident that it is more than counterbalanced by the opportunity which is thus opened to bring pressure to bear on the teacher, or by the tendency of the teacher assured of a retiring allowance to become ultra-critical toward the administration. The situation is not a good one either from the standpoint of academic freedom or of academic contentment. Furthermore, it is no part of the function of a retiring allowance system to care for the disagreements of college life. These are problems of administration." Whether the abuses of the system or its benefits would have proved the more weighty is a question of judgment, and the presumption is that the conclusion deliberately arrived at by President Pritchett in this regard is justified by the facts.

The ethical question involved in the change, however, stands on quite a different basis. We do not find that anything in the report breaks the force of the criticisms made in the letters that have appeared in the *Nation*, one from Professor Lovejoy of the University of Missouri, the other from Professor Weeks of Columbia. Nothing could be clearer or more unqualified than the statement in the original rule that professors of twenty-five years' service were "entitled" to the pensions. There is no telling in what degree the plans of professors and of colleges, for the past four years, have been based on the well-grounded expectation that this promise would be carried out. It is true that the Foundation gave notice that its rules might be modified "in such manner as experience may indicate as desirable"; nobody can charge it with breach of contract. But to abolish completely, at a stroke, without notice, one of the cardinal features of the system is not the sort of thing that anybody had the slightest reason to expect.

Dr. Pritchett says that "the expectation that this rule would be taken advantage of almost wholly on the ground of disabilities has proved to be ill-founded"; but if this is meant as a defence against the charge of want of good faith, it betrays a misty notion of the nature of moral obligations. If disability was meant to be the basis from the beginning, nothing would have been easier than to say so; if it was not, then it was absolutely honorable, right, and proper for any man to avail himself of the retiring allowance offered him without reference to any question of disability. If an error was made in the first place, rectify it by all means; but first stand by the consequences of your error, to the extent demanded by the ordinary standards of honorable conduct between man and man. An absolutely essential requirement of a properly constituted university pension system is that it shall not place upon the professor any sense of obligation other than what is inevitable and inherent in such a system; he must feel that he has earned his pension, just as he has earned his salary, by his past services. If to retire under a pension is to mean to retire under a censorship, the Carnegie Foundation may conduce to the material comfort, but will certainly not conduce to the dignity or the self-respect, of the profession of university teaching. And, to come back to the main point, the homely obligation of fulfilling in a reasonable measure substantial expectations that have been raised by one's own declared intentions is a duty antecedent even to the high purposes to which the Carnegie Foundation is dedicated.

KIND WORDS AND SIMPLE FAITH.

There must be many people in New York, of those that travel by subway, "L," or surface car, and no doubt travellers in other cities, who are going about their work these days under the weight of considerable anxiety regarding the present state of Mr. Irving Bacheller's health. The author of "Eben Holden" and "Vergilius" is himself responsible for the prevailing uneasiness. Over his own signature he has caused to be widely advertised a statement to the effect that he had recently tried to make his way through life without his regular copy of a certain weekly publication which we may designate as the *Reader's Guide*, and had found, to use Mr. Bacheller's own phrase, that he was "only half alive." From the buoyant tone which characterizes the rest of the statement, we gather that Mr. Bacheller speedily abandoned his foolhardy experiment, and that he is now consequently enjoying the best of health and spirits. But while this is a matter for sincere congratulation, what guarantee have our author's admirers against the recurrence of conditions calculated to reduce his vitality by one-half? What would happen if one week's copy of the *Guide* should go astray in the mails? Worse still, fancy Mr. Bacheller lost in the depths of his favorite Adirondacks and by mischance deprived of his copy for two or three weeks at a stretch. Would the effect on his health be cumulative, or would it be only the first blow that counted? We shudder to think of such a contingency as a strike on the *Reader's Guide*.

It is a disconcerting topic that we fain would leave, but cannot. Anxious thoughts will come. There is, for instance, the reflection that, besides the *Reader's Guide*, Mr. Bacheller's reading must cover a pretty wide field. We have no doubt he likes his Shakespeare and his Milton. We are sure that he is a loving student of the Bible. The homely wisdom that falls from the mouth of his simple characters suggests a fair acquaintance with the classic moralists, with Epictetus and Marcus Aurelius, with Carlyle and Ruskin. It is not to be supposed that Mr. Bacheller could be deprived of any one of these books

without a corresponding decrease in his general vitality. We call up the dread hypothesis of Mr. Bacheller's being deprived of all his reading at one swoop, as, for instance, by a telegram from his publisher requesting him to catch a midnight train for New York. Our author's physical condition as he boards the train may perhaps be best represented in tabular form:

Book Missed.	Loss of Vitality.
The Reader's Guide	50 per cent.
The Bible	12 per cent.
Shakespeare	10 per cent.
Milton, Pope, Carlyle, Ruskin	8 per cent.
Emerson	10 per cent.
Thoreau, Whitman, etc.	8 per cent.

Our readers need only add up the column of figures for themselves to find out in what a pitiful state Mr. Bacheller will arrive to do business with his publisher.

Under such circumstances, perhaps it is best to hope that the *Reader's Guide* is not so essential to Mr. Bacheller's continued welfare as in his exuberant kindliness he has made it out to be, but that our author has only yielded to the fast-spreading national habit of speaking about our likes and dislikes with a hurrah. We confess that we find it hard to accept it in its universal manifestations. What does Mr. Lincoln Steffens mean by saying of a certain contemporary series of useful political articles, that "on my knees, if I could, I would beg the people of this country to read ————'s story"? Mr. Steffens knows well enough that the people of this country, whom he has served so well in his capacity as militant journalist, would be very much surprised to see him in an attitude of genuflection, and would probably snicker, even as some of them do at the mere expression of Mr. Steffens's melodramatic intentions. We are face to face here with an old subject—the emotionalism of the unemotional Anglo-Saxon. Is it true that when we once let go of our traditional reserve we are in danger of slopping over? Is it characteristic of our people that when father and son meet after long years of separation they shall content themselves with clasping hands, but that when the same father's endorsement is requested for a new breakfast food he shall write, "Dear Sirs: I have used Leguminosa for a year and can only say this: If your wife and children refuse to have Leguminosa in the house, leave your wife and children."

Now, emotionalism is, in very many ways, a desirable and beautiful trait. But emotion, to be tolerable, must have at least one of two qualities, sincerity and propriety. Frenchmen, as we generally believe, are apt to go off at half-cock over trifles; but at least there is no denying the genuine nature of the psychic storm while it lasts. The best emotionality has both sincerity and fitness: such is the spirit of a Civil War and a French Revolution. The worst thing imaginable is an inherently stolid person breaking out into a hurrah over an absurd and inadequate object. The man looks awkward and should feel awkward; if he does not, it is because he is an extremely sophisticated person instead of a highly emotional one. The author of the "Reflections of a Bachelor" some years ago wrote of a new book he was pleased with that "when you cut the pages, they bleed." How a man of such high-powered susceptibility ever remained a bachelor after the age of twenty-one, is almost impossible to comprehend.

Kindliness, optimism, the desire to say a good word for somebody or something, the national inclination to "boost" and not to "knock," are admirable virtues. But the virtues must always keep a weather-eye open for the sense of the ridiculous. For instance, if it were John Keats or David Copperfield instead of the *Reader's Guide* that Mr. Bacheller could only half live without, we should feel much better about it.

NEWS FOR BIBLIOPHILES.

"George Meredith as a Publisher's Reader" is the title of an article by B. W. Matz, connected with the house of Chapman & Hall, which was published in the *Fortnightly Review* for August last, and which was noticed at the time in some of the American papers.

For many years Meredith was literary adviser or manuscript reader to Chapman & Hall. Once or twice a month parcels of authors' manuscripts were sent to him, accompanied by a list of the titles, numbered, with three or four inches of blank space below in which he was to write his criticism or opinion as to the literary or more primarily the commercial value of the manuscript. A number of these sheets, comprising upwards of three hundred pages, containing reports on more than a thousand manuscripts, has come to New York and lies before us. The earliest list is dated February 5, 1886, and the latest December 2, 1893. Mr. Matz states that in the earliest days the criticisms were written into a blank book in the publishers' office by Meredith himself.

If these sheets exhibited all the manuscripts submitted to Meredith (and they seem to be virtually complete for the period covered), either the quality of literary material was extremely poor or Meredith was a most critical critic. Indeed, as we read these criticisms the most interesting feature of the lists is the large number of ways in which he is able to present an adverse decision. On the list sent September 24, 1890, he has written "A List of MSS. to cause despair." And on the list dated January 24, 1890, "Not one to be recommended."

Of the following piquant, short criticisms a few only were quoted by Mr. Matz in his *Fortnightly* article: "The authoress cannot write. I have rarely worked at any MSS. so absurdly crude." "Shallowest of stories: & same of the style, which however has the merit of flowing." "Written by a man of simple mind with a juvenile vocabulary." "The style of the writing provokes laughter when it is not weariness." "The grammar, spelling & style may be excused on the plea of craziness. That is patent." "I should think it would be rejected by farming magazines." "Very pretty writing, but it has no substance either in story or character." 'Worn and old style of autobiography—verbiage—nothing graphic—poor incidents." "Mainly done in dialogue in the female tongue." "Their burglar dialogue would damn any book." "The lady cannot write and she twaddles with her story." "As impossible for acceptance as a book can be." "Might gain a prize for dullness."

Sometimes the authors asked for advice and such requests were sent on to Meredith. The following are a few specimens of his notices of such manuscripts: "A little above the present average, but hopelessly dull, and the writing is poor. The authoress asks for criticism. There is no bringing it to bear upon work on so low a level. She should read for another year before trying her hand at a fresh story." "He asks for the reasons of rejecting of his MS. But one could not furnish them without offending. The work, by comparison with what is required of a novelist in these days is infantile." "The writer asks to be counselled. He should make a study of epistolary composition before embarking on it."

Of "Squire Hentail," by John Countryman, he wrote: "This would not be read. But the writer has a certain latent cleverness, and should be encouraged." Of "Ella Carthew," by Miss Kent: "Thin, very gentle and delicate writing, next to no story. Pray speak kindly to the author, in strong expressions of regret, etc. She writes flowingly, she is remarkable for good feeling. Her requirement is in strength of tone and in a tale to tell." Of "At Love's Brim," by Bernard E. J. Capes: "Will not do at all. There is a faint indication of ability for better in time, and with discipline. The author seems to be afflicted with excessive self-consciousness."

Authors submitting manuscripts to publishers may benefit by some of Meredith's comments on the handwriting and condition of manuscripts: "MS. sent in confusion of pages. I have read a part backward, a part forward, enough to assure me of the prolonged feebleness of the work." "The MS. is a specimen of wonderful and terrible orthography. I have spellt a short

way through it, but stopped to save my sight. It seemed to me that the matter is commonplace." "MS. looking as a survival of a dozen shipwrecks."

Poetry was generally turned down with slight comment. Volumes of verse financially worth publishing have not been offered in recent years. The following are some of Mercdith's criticisms: "The verse is often musical, but has not substance enough to attract the public. There is no public for poetical matter short of first-rate, or cleverly made to resemble it." "It is not verse. The deficiency in sense is naked of that clothing. And yet it is not prose." "The writer has no knowledge of verse." Of "A Ramble in Rhyme": "Rhyme—but a drunken shamble for metre. Sketches good."

Of "The Cruise of the Juno," by F. William, the publishers wrote, "Author is willing to pay for production." Meredith says: "Harmless. The writer is, we will say, careless of spelling and indifferent as to his English; in fact, he can barely write. But the printer's reader might assist. He has no ideas. If published, let it be as privately as possible." Of "The Chumplebunnys," by Beatty Kington, he wrote: "I do not know what to say. Personally I have no taste for this humor of the preceding generations, which is built on the doings of imbeciles worthy of their names for absurdity. But I am bound to add that our public still welcomes it—and the author is clever—and he has a following." Of one of "Carmen Sylva's" volumes of stories: "The Queen 'Carmen Sylva' has ambition and flatterers. But not even a Queen can make the English swallow these tales—and even good work would have no chance in such a translation." Of a book by C. Hannon: "The author at one moment doubted whether he should continue it, and disobeyed the wise monition. There is no public for it. Such works are the issue of undigested thoughts." Of "The Old Parliamentary Hand," author not given, he says: "A skit on Gladstone. A sort of kicking of the dead lion. Gladstone at present is dead for all purposes of satire," etc. Of "A Flight to Florida," by Mrs. M. E. V. Creagh, he says: "The authoress offers to 'eat her best bonnet' if one does not laugh at her humor. I could not."

Correspondence.

THE TEACHING OF ENGLISH.

To the Editor of The Nation:

Sir: There are still a few questions, besides the proper nurture of children and the merits of Dr. Eliot's pentapodal culture, about which the educated man reserves the privilege of a personal opinion. One of these is the teaching of English. The once very general belief that "anybody can teach English" has, in recent years, given place to the belief that nobody can teach English, and this, in its turn, is now yielding to the belief that anybody can teach the proper method of teaching English. A symposium of all the suggestions that have been offered by those who do not teach English would make a merry book for the English instructor, and a valuable one for the progressive college president.

The latest suggestion of this kind (by W. F. in the *Nation*, December 30), is concerned with the "unsolved problem" of teaching English composition. The argument is somewhat as follows: If the student has nothing to say, it is impossible to teach him to say it well. He should be required to find, not a "meaning for his expression," but an "expression for his meaning," since "meanings are born and not made." Therefore let the English instructor content himself with those meanings (in history or physics or philosophy) which the student already has. An old examination paper or essay in any department will best serve the purpose, "for there is no more profitable exercise for the practical or artistic ends of composition, than to take something you have already tried to say, and said badly, and say it again, so as perfectly to express your meaning."

This is epigrammatic, and part of it, at least, is sound psychology. But closer scrutiny shows the reasoning to be fallacious, the remedy impracticable. If meanings are, indeed, born and not made, whence came the student's meanings in history or physics or philosophy? Are there innate ideas about Pragmatism, fluorescence, and the Diet of Worms? If not, why may not the student acquire "meanings" in those subjects which the English instructor is supposed to know something about? Is it true that the tactful teacher of English fails more signally than other teachers to arouse in the student a genuine impulse to express a meaning of interest and worth? Is it safe to assume that in history or physics or philosophy the student more frequently has meanings that are ripe for expression? Would anything short of omniscience suffice for the task of teaching the student "perfectly to express" what he meant to say about any subject in the college curriculum? Would it be possible to conduct a systematic course of composition and rhetoric that was dependent upon such an intermittent and heterogeneous subject matter?

Until satisfactory answers can be found for all these questions, let us give over the search for fanciful remedies and face the facts. College English is bad, incredibly, intolerably bad. Why? There is an unbroken circle of causation of which the lay critic seems wholly or partly ignorant. Bad English is bred in the bone of the average American boy. He hears bad English at home and at school; he reads it in the newspapers and the cheaper magazines. He studies grammar at an age when he should be taught elementary composition, and composition and literature alone when he should also be taught grammar. In the high school his teacher is always overworked and frequently half-trained. When he enters college his education in English has reached the half sophisticated stage of "Give it to John and I." His interests are incredibly narrow; his ignorance, apart from football, is impartial and catholic. The "unsolved problem" that confronts the college instructor is a heterogeneous class of thirty such boys, the unchallenged product of "affiliated" schools. He does what he can with them in one short year, "fails" as many as college tradition will permit, and passes the rest on to graduate, and, if they teach, to perpetuate in the high schools the conditions which he is powerless to change.

If this rapid sketch be approximately true, it is clear that the search for new remedies is worse than futile. The teacher of English understands this and plods on; the impatient critic is sure that the "solution of the problem" depends upon the discovery of some novel and brilliant "method." There is but one remedy, so obvious and commonplace that no one has the hardihood to propose it. Place at the head of the department of rhetoric a forceful man who does not aspire to become a professor of literature; give him an adequate corps of trained assistants, not a job lot of transient tyros whose compelling recommendation is their cheapness; let him have a free hand in fixing the requirements for entrance, unhampered by the politics of affiliated schools, and an equally free hand in setting the standard of excellence in his courses. Then let the other members of the faculty give him their moral support, according to their lights, by making it clear to the student that the requirements of the rhetoric department are not whimsical, but essential to success in every department of study.

To this plan there are only three fatal objections: it is unoriginal, unpopular, and costly.

THE DECAY OF EMPIRES.

To the Editor of The Nation:

Sir: To those who are watching with the deepest interest the destiny of England, and who cannot help wondering whether her imperial glory, threatened by foes without and dissensions within, may not be on the verge of decay, the following lines of D'Avenant, written about 1630, must have a certain significance. Whether prophetic or not, they have a large sweep of poetry. The Duke (in "The Cruel Brother," ii, 1) speaks first of the French:

> Fruit that is ripe
> Is prone to fall, or to corrupt itself:
> According to the age of Monarchies,
> They now are fully ripe: they reach
> The height and top of mortal faculties.
> Nature in them doth stand upon the verge
> Of her own youth. The English want
> Three hundred years of that perfection.
> And as the moon ne'er changes but i' th' full,
> Even so the mighty nations of the earth
> Change in their greatest glory. First, their strict
> And rugged discipline to vain delights,
> Their solemn marches next to wanton jigs,
> Their battles fierce to duels spleuative,
> Or witty quarrels of the pen.

THE CARNEGIE FOUNDATION AND SECTARIANISM.

To the Editor of The Nation:

Sir: Before agreeing with those who condemn the Carnegie Foundation for encouraging the colleges to leave sectarian boundaries, it might be well to consider what sectarianism does for us.

Among its effects may fairly be reckoned the lack of moral and religious teaching in the public schools. Each sect says to this question: "My faith or none!" and all work together to resist any efforts that may be made in that direction. But to the lack of such teaching must be laid in part the great excess of crime in our country compared with that in other civilized nations.

After all, why have the theological beliefs of any one any more vital relation to religion proper, or, let us say, to right living or to worship, than his theory in regard

to the constitution of matter, or the nature of electricity? The physical as well as the moral world is the work of the Creator, and why should the one any more than the other be a field for dogmatism or intolerance? I have my own theological beliefs, as tenaciously held as any one's, but why should I not be willing to suppress them in public, as I do my political and scientific and other beliefs, for the sake of meeting my differently minded fellows, for benevolent and moral purposes, and even for the purpose of worship of the same Creator? If it is our Christian duty to love our enemies, we certainly ought to be equal to uniting without quarrelling with those of different beliefs, who not only are not enemies, but, in a different way, are striving for the same ideals.

The world do move, but it cannot be hurried. Yet is it possible that we cannot yet see that perfect tolerance is Christianity, and that nothing less is true Christianity?

There may have been a time when sectarianism accomplished something for the world. Now it seems to me wholly evil. If there is anything good to be said for it, I should like to hear it.

Princeton, N. J., February 14.

JARED BEAN.

To the Editor of The Nation:

Sir: I have too much reverence for the memory of Jared Bean (some time curator of the Connecticut Society of Antiquarians), and too much respect for the *Nation*, to ask you to lend your columns to any controversy about Bean himself. Yet my copy of the *Nation*, which has just arrived, contains a letter from Miss Helen E. Haines which tends to throw doubt upon the compiler of "The Old Librarian's Almanack."

If this were the first of such occurrences, I might remain silent. But, when an anonymous correspondent in the Boston *Transcript* seeks to transfer Jared Bean to Pennsylvania, and to give him descendants in the shape of two living writers on fishes (why fishes?); when the New York *Sun* endeavors to connect him with a "Rev. Calabar Bean of East Haddam, Conn." (who probably is purely fictitious); when other persons have suggested his relationship to Mrs. Veal of Canterbury; and still others have made irrelevant and childish allusions to "Jared and the Bean's Talk"—when all these things happen, it hardly becomes one who is, in a sense, the literary executor of Mr. Bean to say nothing in his defence.

I shall not attempt any detailed proof of the obvious fact that Jared Bean existed. I am perfectly sensible of the compliment which Miss Haines's letter indirectly conveys, but I have read "The Giant's Robe," and I know that it is wiser to be content with the simple fame of the antiquarian and bibliographer than to snatch laurels from the silent dead. I wish merely to refute two of Miss Haines's assertions, and mention two bits of evidence tending to establish Jared Bean more firmly in the estimation of all lovers of the past.

Jared Bean was not related to Sairey Gamp's friend, Mrs. Harris. Moreover, he never married. This is beyond question, and I challenge Miss Haines to produce one iota of reliable evidence to prove that he did marry.

On July 21, 1907, a few months only after the death of Nathaniel Cutter, Esq., I made a quotation from "The Old Librarian's Almanack" in The Librarian column of the Boston *Transcript*. It passed unnoticed at the time, but on February 26, 1908, I quoted the book again, as a contribution to a discussion of "the old-fashioned librarian" then raging in the *Dial*. It was instantly recognized by one of the participants, who replied that he had "repeatedly read the passage quoted again by the *Transcript*" (see the *Dial*, March 16, 1908). I presume, of course, that he had access to the copy of the "Almanack" owned by Dr. Morris Kimball of St. Louis. Further references to the matter can be found in the *Dial* of April 16, 1908. What will your correspondent say to this?

Furthermore, although Jared Bean left no descendants, his colleague, Enoch Sneed, had a niece, who in due time inherited certain trinkets which her uncle had treasured for many years. One of these, a snuff-box which belonged to Mr. Bean, contained a lock of that gentleman's hair. It is now in the possession of the Hon. Horatio N. Sneed of New Haven. It bears the initials "J. B." on its cover. Mr. Sneed has informed me that it will come to me on his decease. I shall, of course, turn it over to the Newburyport Antiquarian Society, where it may be inspected by all—believers and unbelievers. Edmund L. Pearson.

Newburyport, Mass., February 24.

"WAMMS" AND "WARMUS."

To the Editor of The Nation:

Sir: In your issue of February 10, "E. V. M." in suggesting an origin for the term "cuss" speaks of the fact that men in rural communities use the word "wammus" without ever suspecting that it probably came to us from the German "Wamms." How completely the origin of this word has been lost sight of I have had occasion to notice repeatedly in western Indiana. Although "wammus" and "wampus" (and "jimmy-slinger") are the forms usually heard, one frequently hears "warmus"; and those who thus pronounce the word regard it as a compound of "warm" and "us."

Rollo W. Brown.

Crawfordsville, Ind., February 19.

VIDEO MELIORA.

To the Editor of The Nation:

Sir: Your correspondent, Mr. Axon, in the *Nation* of February 17, evidently assumes, like his New England poetess, that Horace wrote the famous lines: "Video meliora proboque, Deteriora sequor." If a list were to be made of those who have given Horace the credit of this passage, which has the stamp of his style though the sentiment is not Horatian, Mr. Axon would find himself in distinguished company. For instance, the late Prof. Lewis Campbell, a scholar of the first rank made the same slip in his "Tragic Drama" (1905). It was, of course, Ovid who, in the "Metamorphoses" (vii, 20), gave us the picture of Medea debating the conflicting claims of love and duty:

> Sed gravat invitam nova vis, aliudque cupido
> Mens aliud suadet. Video meliora proboque
> Deteriora sequor.

Take the quotation from its context, and it is Horace's trick of phrase and will still seem his to the general reader. Just so nine people out of ten will turn to the Bible for the reference to the wind and the shorn lamb.

Wilmer Cave Wright.

Bryn Mawr, Pa., February 19.

Literature.

THE FUTURE OF DEMOCRACY.

The Promise of American Life. By Herbert Croly. New York: The Macmillan Co. $2 net.

This is an eminently notable book. It is one of the best examples in recent years of a long-sustained flight in the region of realistic philosophical politics. The amplitude of discourse which the author allows himself is fairly warranted by the profoundity of his analysis. His eventual programme is one of extensive State Socialism, but he appraises justly the indispensability of individual initiative and the value of individual distinction.

The title of the book may direct attention to the author's point of departure, but it does not indicate the book's central theme. The real theme is two-fold. There is, first, a disclosure of the bankruptcy of our political theorizing in the past, when a vital national problem like slavery could be solved only by a courageous doctrine which shattered the sacred formulas of all political creeds. There is, secondly, an application of what the author regards as an adequate political theory to the baffling questions in whose toils we now writhe. The first, or historical, part is conceived and executed with penetration and ability; the second, or constructive, part is more vulnerable.

Mr. Croly begins by pointing out quite truly that Americans have commonly entertained the conviction that a better future awaits their country, a future to come about *automatically* by adherence to traditional policies. This better future is conceived to include widespread economic prosperity, and plentiful economic opportunity, as well as political freedom and equality. The conditions which for a time worked to this end—the abundance of free soil and immunity from foreign foes—have altered rapidly of late years. For the future, we must abandon hope in automatic melioration, and must substitute conscious effort to realize social improvement. The distribution of wealth must be made to conform to the interests of the whole society, and the national ideal must embrace higher ends—social and moral—rather than confine itself to economic prosperity for the individual, if the "Promise" is to be fulfilled. To this preliminary overture there is no exception to be taken.

The only adequate political creed, ac-

cording to the author, includes two essential points. There must be a realization of the end to be sought, the establishment of a true democracy. There must also be employed to this end a strong responsible government consciously bent on a process of "constructive discrimination" to attain the democratic ideal. He shows conclusively that neither the Hamiltonian nor the Jeffersonian theory sufficed for both of these purposes. Hamilton, it is true, endowed the central government with substantial power to act in the national interest. But Hamilton distrusted democracy. He buttressed property rights in the Constitution, so as to make them invulnerable to popular attack or control. Jefferson in this point alone shines by contrast, for Jefferson trusted the people. But Jefferson's fatal error was that he made "faith in the people equivalent to a profound suspicion of responsible official leadership" (p. 170). Jefferson sought "an essentially equalitarian and even socialistic result, by means of an essentially individualistic machinery." In his mind, "democracy was tantamount to extreme individualism" (p. 43). Thus throughout our whole political history, until 1861, effectual political power was used only for equipping the national government with adequate authority and was exerted only in behalf of privileged classes. The adherents of Jefferson consigned themselves to virtual impotence by forswearing the employment of the essential means to benefit the people as a whole. Not until slavery had become the dominant issue was the sterility of our political thinking realized. Here Mr. Croly mercilessly dissects the programme of the Whigs, the Democrats, the advocates of Squatter Sovereignty, the slave-owners, and the abolitionists. The last come in for castigation by reason of their separatist tendencies and their natural-rights philosophy. Of this philosophy he declares: "Of all perverted conceptions of democracy, one of the most perverted and dangerous is that which identifies it exclusively with a system of natural rights" (pp. 80-87). In Lincoln, he finds the first responsible American statesman to proclaim "that American nationality" is "a living principle rather than a legal bond." In Lincoln's attitude upon slavery, he discerns the concrete exemplification of the fundamental requisite of political theory—the purposeful and conscious use of national power for realizing essentially democratic ends.

There is not a little that is novel in this review of our past political history. The concession that from the standpoint of legal tradition, secession by the South had more in its favor than coercion by the North will doubtless provoke denial. But Mr. Croly handles his case with power. Moreover, his point is the stronger in that he upholds enthusiastically the North's attempt to put its nationalistic interpretation upon the Constitution. In a general way, the marshalling of the facts of our past political history in the light of the Jeffersonian and the Hamiltonian prepossessions of our politicians is discriminatingly done.

The contemporary situation is depicted as mainly due to the economic and constitutional changes that followed quickly upon the civil war. In commerce the business specialist, the "Captain of Industry," promptly appeared. Almost simultaneously the political specialist, "the Boss," emerged. Absorption in exceptional commercial opportunities explains the former; the necessity for political power and responsibility in the States explains the latter; and each accelerated the other's growth. There can be no doubt of the keenness of Mr. Croly's analysis upon this point. In the various commonwealths the new Constitutions under the stress of the Jeffersonian distrust of government had exalted the check and balance system. The executive, the legislative, and the judicial departments had been so divorced from one another that they each and all lost "genuine independence and efficiency." The more "democratic these Constitutions became, the more clearly the Democracy showed its disposition to distrust its own representatives, and to deprive them of any chance of being genuinely representative" (p. 119). This paralysis of the constitutional depositories of power created the opportunity for "the Boss." The corporation chief wanted some one with whom he could "do business" in franchises, in legislation, in administration. The man needed was found in the man who dictated nominations from the outside, to wit, the Boss.

This, according to Mr. Croly's analysis, is the heart of the situation to-day, and, according as the difficulty is or is not realized, the various reforming movements will succeed or fail. "The plain fact is that the traditional American political system, which so many good reformers wish to restore by some sort of reforming revivalism," is in reality "responsible for the existing political and economic abuses . . ." (p. 141). "Reform exclusively as a moral protest and awakening is condemned to sterility. . . . Reform must necessarily mean an intellectual as well as a moral challenge" (p. 150), and "no leading reformer has sought to give reform its necessary foundation of positive political principle" (p. 153).

The most piquant part of the volume is found in the succeeding section which tries the "star" reformers by the canon just enunciated. Bryan, Hearst, Jerome, and Roosevelt are successively brought before the bar. The Jeffersonian tradition of distrust of government condemns the first three to incoherence and virtual impotence. Bryan's sentence is mitigated by acknowledgment of his genuine patriotism and his many admirable personal qualities; Jerome's candor and plain speaking are offset against his fiasco; "Hearst and Hearstism" are pronounced "a living menace to the orderly process of reform and to American national integrity," and his "methods of agitation and his popular catchwords" are declared to be "an ingenious adaptation of Jefferson to the needs of political yellow journalism" (p. 164). Mr. Roosevelt is allowed to have revived "the Hamiltonian ideal of constructive national legislation" and to have evinced a thoroughgoing and absolute devotion to "the national and to the democratic ideals"; but to have "done little to encourage candid and consistent thinking" beyond preaching the paramount duty of being "a sixty-horsepower moral motor car" (p. 170).

The author next fetches a very wide compass in chapters 8, 9, and 10, intended to show what he regards as the inseparable connection between democracy and nationality. For Socialism of the international or cosmopolitan type he has no use. The appraisal of the Monroe Doctrine is made with unmistakable penetration. That its eventual maintenance may spell war rather than peace is rather a remarkable concession. For Mr. Croly has little or no faith in international disarmament, as is evident from his cold-blooded remark that "in America, as in Europe, the road to any permanent international settlement will be piled mountain-high with dead bodies . . ." (p. 307). But these chapters constitute a rather irrelevant excursus in his general argument, and their result is inconclusive.

When, finally, he attempts the problems of reconstruction, he has put behind him either an individualistic or a provincial democracy in favor of a national policy to be realized eventually by aggressive action. His sanity of judgment, however, does not desert him here. Instead of reshaping the Federal Constitution at once, he would alter the arrangements of State Constitutions. He is undoubtedly right in thinking that to the State Executive should be given a greater share of responsibility and power. Mr. Croly would permit the Governor to submit legislation to the State Legislature. "The best reform legislation now enacted usually originates in executive mansions" (p. 331). In case the Governor's measures are not accepted by the Legislature, Mr. Croly would arrange for an appeal to the electorate. The Governor, it is proposed, is also to be subject to the Recall—this in order to temper irresponsible exercise of executive authority. The author rejects the direct primary as eventually requiring more assistance in managing elections from the professional politicians than at present, and thus strengthening their grip upon power.

So far as the Federal government is

concerned, Mr. Croly would enlarge its power over commerce and industry. He does not favor commission control of industry except as a passing device. Its fault he finds in the double deposit of power, and therefore the ambiguous location of responsibility for efficient industrial administration. The eventual acquisition by the national government of those essential elements in corporate property which make for monopoly—such as railway terminals, rights of way, mineral deposits, and the like—he regards as finally inevitable; but administration and operation are to be left to individual initiative. So long as this is not pressed by the author as a possibility for several generations, it may be passed over as not of immediate concern.

Most open to question is his general conception of the purpose of democracy. Rightly insisting that democracy cannot be defined in terms of machinery alone, he contends that the "salutary and formative democratic purpose consists in using the democratic organization for the joint benefit of individual distinction and social improvement" (p. 207). To this it seems a fair rejoinder that democracy, whether compatible with individual distinction or not, is simply not concerned with individual distinction. Democracy in Switzerland is perhaps more completely realized than elsewhere in Europe. But in politics as in art and literature individual distinction is markedly absent in the Swiss republic. One recalls Whistler's chaff at the "sons of patriots" who in the domain of art are content with inventing "the clock that turns the mill, and the sudden cuckoo, with difficulty restrained in its box."

A fair verdict upon the book would couple a commendation of Mr. Croly's analysis of our political history and of the political conditions requiring reform with a caveat at his project of "constructive discrimination." He is doubtless right in holding that the abstract doctrine of "equal rights for all" is without constructive power. Neither as a party amalgam nor as a political engine is the doctrine efficient. But the policy of "constructive discrimination," "the ceaseless creation of a political, economic, and social aristocracy, and their equally constant replacement" is fraught with peril. Mr. Croly contradicts himself in this matter. On page 209 we are told that the "democratic state should never discriminate in favor of anything or anybody." On page 357 is urged the policy of legally recognizing the large corporations. This recognition, Mr. Croly himself admits, "amounts substantially to a discrimination in their favor." On page 209 we are taught that the democratic state can "only discriminate against all sorts of privilege." But on page 386 there is advocated a legal recognition of the privileges of labor unions with the express admission that "this legal recognition means, in their case, also, substantial discrimination by the state in their favor." One may well shrink from endorsing a programme, even though conceived in the public interest, which begins by according special privilege to particular classes. The state has about all it can do in exerting adequate control in the public interest when the weed of class privilege has shown its head in the national garden, without going to the further extreme of sowing thistles, even if the ultimate purpose be cherished of making them serve a useful end.

CURRENT FICTION.

The Isle of Dead Ships. By C. Marriott. Philadelphia: J. B. Lippincott Co.

The Living Mummy. By Ambrose Pratt. New York: Frederick A. Stokes Co.

Old Clinkers. By Harvey J. O'Higgins. Boston: Small, Maynard & Co.

Are many good "yarns" written nowadays? The publishers promptly assure us there are, and even venture to specify the particular quality of breeziness, or tenderness, or colorfulness that constitutes the charm of the particular "yarn." As a matter of fact, we have too much breeze, love, and color in our stories. The conscious striving after them robs the type of its pleasantest characteristic, reality, even if it is only the reality of an hour's excitement. The desperate attempt at style tends still further to hamper illusion. The three books we have brought together in the present notice adhere to the simple standards of other days. They tell impossible or improbable stories in a straightforward manner. Of all three it may truthfully be said that few readers will lay them down unfinished.

Mr. Marriott lives up to the promise of his title. He imagines in the centre of the great drift of seaweed and wreckage that goes by the name of Sargasso Sea a nucleus made up of countless ships which the winds and currents of the Atlantic have shepherded together during the last four hundred years. It is Mr. Marriott's theory that, sooner or later, all derelicts of the Atlantic arrive in that grass-locked haven. What more natural than that hero and heroine shall be shipwrecked and conveyed to the isle of dead ships, where a little colony of castaways live contentedly under an Irish Superman of a king? And how the heroine is saved from the tyrant's amorous designs, and how the tyrant is overthrown, and how all the good people in the colony escape from the isle in a Spanish submarine brought thither by the storms, is told clearly, unaffectedly, veraciously.

Mr. Pratt's book is packed with thrills. The living mummy is just what it purports to be—the mummy of a high priest of the days of Amenhotep, who is brought to life through a wondrous charm discovered by a wicked Egyptologist, who proceeds to use the priest for the destruction of a good Egyptologist, who is young, Herculean, and in love with the bad Egyptologist's beautiful and caustic daughter. On two or three occasions the hero engages in deadly combat with the reinvigorated high-priest. And if a 4,000-year-old mummy were not bad enough, what shall we say when that mummy, by means of a very rare dye, succeeds in making himself invisible? The present reviewer confesses to looking twice over his shoulder in a dark hall at night.

Mr. O'Higgins's book is a collection of stories of the New York Fire Department, and so comes as a sequel to his "Smoke Eaters." They are the idealized record of a series of every-day events, presented with a fine simplicity and vigor. The first story tells of a fire crew penned up in the iron entrails of a burning steamship, and for a page or two holds one actually breathless. There is humor and character-drawing and a bit of moralizing; a readable book.

Testimony. By Alice and Claude Askew. New York: John Lane Co.

In this day of facile travel, one is amazed to find authors writing of America from such abysmal depths of ignorance. The scene of the story is laid in New England, and although the life depicted evidently lies well beyond the bounds of the writers' personal experience, the local color is applied with no niggardly hand. Unfortunately, they have not gone to such writers as Mary Wilkins Freeman or Alice Brown for their text-book, but to some early insular authority, whence they have gleaned the fact that all Americans, of whatever class or education, invariably preface all remarks with either "I guess" or "I reckon," whether such prefix be germane to the subject matter or no. As the offering of writers who have presumably passed their novitiate, the story is incredibly naïve in its banality. Gillian Lyons, a magnificent type of the primitive man, in spite of his feminine cognomen, marries, against the will of his masterful mother, a delicate butterfly called Althea May, a super-refined exotic of New York culture, who uses "ain't" and kindred locutions. The family, thus augmented, tends to discord as the sparks fly upward, the sparks being furnished by the mother and the wife. After the death of her baby, Althea finds life on the farm intolerable, and flees to join a rich uncle in England, who has sent for her in ignorance of her marriage. The husband, blaming the mother for all the miserable imbroglio, takes up a Peggottyesque search for the runaway, and the story ends with their reunion at the farm and a general outburst of forgiveness and

embraces. There is an English interlude where the authors demonstrate their fine vein of unconscious humor quite as ably as in the New England scenes.

Alexandrian Romances: Alexander the Prince; Alexander the King; Alexander and Roxana. By Marshall Monroe Kirkman. Chicago: Cropley Phillips.

Mr. Kirkman says in his prefaces that these books owe their origin, not to his desire to write an historical romance, but to the interest excited in his mind by studies of the times of Philip of Macedon and Alexander. The historical part, he observes, is merely incidental, and his exalted personages are introduced because they form a part of the love story. Nevertheless, although this disarms criticism of the historic features and bespeaks attention to the romantic ones, we venture to say that the chief interest for the reader lies in the suggestions of history. Like the conquering army itself, we walk buoyantly where the footing has a foundation, but flounder on reaching the spongy morasses of invention. The exalted personages talk in a language which combines the most flowery eloquence known to fiction with the "Tut! tut!" and "Whew!" of the average man. The style, in other words, is preposterous, the romance mushy, and the history over-decorated.

Yet the studies of the men and manners of the time, of marches, and battles, and sieges, insist on infusing life into the pages. The little historical compends at the end of each volume are good and suggestive reading, and the maps whereby one follows Alexander from Macedon to Asia Minor and Persia and Egypt fill full the sense of satisfaction for those who have the map habit. All told—and much of it poorly told—extravaganza where it would be romance, romance where it would be history, it, nevertheless, holds its course within hail of fact or tradition, and pictures vividly, even hauntingly, the day and the deed. To some extent it informs, and even more it stimulates.

The Tyrant. By Mrs. Henry de la Pasture. New York: E. P. Dutton & Co.

The popularity of Mrs. de la Pasture's novels is due in part, no doubt, to the faithfulness with which she clings to the old-fashioned heroine. Stories of the new woman, and the newer maiden, the creature of cigarette and latch-key, who undertakes to prove her equality with male creatures by aping their follies, have palled upon an at first curious public. The type threatens to become familiar in real life, and romantic persons must look with relief upon such pictures as this writer paints for us of the sweet and modest and yielding, and altogether feminine little lady, who was our grandmother. Mrs. de la Pasture is not content with half measure. Most men prefer a Viola to a Rosalind, at least in the hour of calf-love. But the meekness and sensibility of the crinoline period, the quivering affections which delight to be trampled upon, the slender frame which faints beneath the slightest exertion—all these, we suspect, are for the admiration of the feminine reader of a certain age. "Catherine of Calais" was Mrs. de la Pasture's typical heroine: the attempt to portray a girl of more modern type, in Philippa, "Catherine's Child," was not very successful. The two heroines of "The Tyrant," mother and daughter, are reversions to the older order. Annette, the mother, is the later Catherine, the woman of forty who has ceased to regard her own happiness, and lives in the fact of her children, and the hoped-for eventuality of her grandchildren. For their sake, she does revolt (during his absence), from the rule of the tyrant. But her fear and compunction for having done the right thing rob her of all satisfaction in the feat. Her one impulse of independent action exhausted, she is ready to grovel at the feet of the oppressor, begging his forgiveness for having wronged him. In short, she is a rather abject little person. Her one happiness is in marrying her daughter to a lord. The daughter merely repeats her mother's youth—lovely and sweet and yielding and nothing more. The "tyrant," the brutal husband and father, who according to the English novelist is so common a British type, is drawn somewhat coarsely for the American imagination. He is useful to the story, but seems two-thirds bogy.

A REVOLUTIONARY COURT.

The Tribunal of the Terror: A Study of Paris in 1793-1795. From the French of G. Lenôtre. Translated by Frederic Lees. Philadelphia: J. B. Lippincott Co.

In an admirable work published nearly thirty years ago, H. Wallon analyzed *all* the cases tried by the Revolutionary Tribunal. This has been properly regarded by students as the definitive work on the subject. The author of the volume under review has not attempted in any way to supersede Wallon's work, but rather to supplement it by drawing a picture of the Tribunal in action. In an opening chapter, with detailed plans of the old Palais de Justice and Conciergerie, he lays the foundation for his study by showing precisely the rooms occupied at different times by the Tribunal when sitting, the jurymen's apartments, the *buvette*, where judges and jury refreshed themselves (sometimes to excess); Fouquier-Tinville's sleeping-room with its bed of straw, and the iron bars through which he grinned down at his victims in the courtyard below. To reconstruct vividly the surroundings and daily life of the Tribunal, the author has turned over in the Archives Nationales many hitherto unexplored sources. A line in a report, a phrase in a *procès-verbal*, the estimate of a contractor, or even the bills of tradespeople and workmen have supplied him with materials which he has ingeniously put together in his re-edification.

The Revolutionary Tribunal was established on March 10, 1793, by the Convention, in answer to the clamor of the mob of Paris. The Convention could not forget the massacres of September, and sought this means to avoid a repetition of them. "Let us be terrible," said Danton, "to spare the people being so. . . . Let us organize a tribunal, not well, for that is impossible, but *in the least ill manner possible.*"

At the first sitting Guyot de Maulans, a nobleman of Poitiers, who had been found in possession of two passports and a white cockade, was tried on the charge of having emigrated—a capital offence. Fouquier-Tinville, the public prosecutor, delivered a speech which, in the words of a contemporary, "was full of force, full of energy, and which at every moment breathed forth the scorching, electrical fire of the purest patriotism." The jury retired to deliberate while the crowd of inquisitive spectators discussed among themselves the chances whether a man who had harmed nobody would be punished with death. Suddenly the ringing of a bell announced the return of the jury with a verdict of "Guilty." When the president arose, wearing the new short black gown and the black hat with a large plume, *à la Henri IV*, which had been adopted for the Tribunal, and pronounced in a terrifying silence the sentence of "Death," a moan came from the spectators. At first they sobbed silently. Then they wept aloud. Their increasing emotion spread to the judges and jurymen, who tried in vain to hide their tears. Thus, at the outset, the officials and spectators of the Tribunal were not utterly without human sympathy. But they hardened their hearts as the weeks went on, for the almighty public prosecutor demanded daily a larger and larger number of victims. He kept ten copying clerks busy preparing warrants of arrest, and he so intimidated the jurymen that they did not dare bring in acquittals. If they did so he would shout at them in rage, "You are not on your good behavior!" or, "Give me the names of those *bougres* of jurymen; one can no longer count on such men." One day a clerk looked over his shoulder at breakfast and saw him with a list of jurymen marking against certain names "f" (*faible*). The clerk, who had just refused to sign the con-

demnation of Danton, asked him what he was doing. The public prosecutor gave him a sly look and continued his work, muttering half to himself: "This one is a little reasoner. . . . We don't want people who reason; we want things to go." Two days later that clerk had disappeared. He had been secretly imprisoned.

After the fall of Robespierre, Fouquier made a servile speech before the Convention and sought to save himself by trimming to the new wind. But even his clerks foresaw his doom. When he stormed at one of them on the 12th of Thermidor for being insolent to him, the clerk replied with a brazen but significant shrug of the shoulders: "I am not insolent. I am merely no longer in fear of death." On the 14th of Thermidor, upon the demand of a deputy that "Fouquier be sent to hell to expiate the blood he has spilt," he was placed under arrest. At his trial more than four hundred persons appeared to give evidence of his iniquitous methods. It was shown that when fifty or sixty persons were tried in a morning, as was the case in the last weeks before the fall of Robespierre, the prisoners had been permitted to make no defence; they had even been sent to the tumbrils with such haste that they were not properly identified. A boy of sixteen, for instance, had been condemned and executed by mistake instead of his father of fifty. Before such overwhelming evidence of irregularity and in spite of a very clever defence, Fouquier was finally sent after the 2,625 persons whom he had already dispatched to the guillotine. He left no property for his penniless wife and children except a complete file of the *Moniteur*.

This volume is not only a description of the daily life of the Revolutionary Tribunal, but is also in part a biography of its terrible public prosecutor. It is a valuable piece of historical work and has the same dramatic interest which has characterized the earlier studies of "G. Lenôtre" (pseudonym of the academician Gosselin).

Nelson and Other Naval Studies. By James R. Thursfield. New York: E. P. Dutton & Co. $4 net.

"Imperial Defence" has long received the close attention of certain thoughtful British writers who form a class almost without example in this country, where such questions happily remain academic. Among these writers is James R. Thursfield, who is well known as one of the authors of "The Navy and the Nation," as a frequent contributor to Brassey's Naval Annual, and as the British correspondent of our American periodical, the *Navy*. A number of his essays and addresses have now been issued in a handsome octavo volume. Most of the articles relating to Nelson, comprising about one-third of the text, were written at the time of the Trafalgar centenary, in 1905. In spite of all the arguments to the contrary, Mr. Thursfield makes a strong case for the theory that the battle was actually fought on the lines laid down by Nelson in his famous memorandum, written twelve days before the action. In his diagnosis of the Lady Hamilton episode he differs somewhat from Mahan, the review of whose "Life of Nelson" (published in 1898) is here reprinted, with all its highly appreciative encomiums.

Other essays, on Duncan (the victor of Camperdown), the Dogger Bank Affair, Commerce-Destroying, and the Higher Policy of Defence, are uniformly distinguished by this author's conservatism and breadth of view, and by his clarity of style. Here is a book which will prove an excellent guide to the topics discussed, and which gives the grounds upon which sober, peace-loving Englishmen justify the apprehensions aroused by Germany's disturbing naval development. It is a pity, however, that Mr. Thursfield was unaware of the grave doubts cast upon Mr. Buell's good faith in the "Life of John Paul Jones," to which he admits heavy obligations. The estimate of Paul Jones would doubtless have been the same, but the story would have been differently told. A new curiosity of literature is introduced to the reader in a rare life of Jones, published in 1825, which, on the authority of John Murray, Mr. Thursfield attributes to Disraeli.

Entzweit-Einsam. Von August Strindberg. München: G. Müller.

The translation of this latest volume in the German edition of August Strindberg's complete writings is the work of Emil Schering; and is masterly. With all the condensed force of the original, it rises at times to a greater pathos than the Swedish itself has. The collection is planned to be complete in thirty-six volumes, issued in six divisions: Dramen, Romane, Novellen, Lebensgeschichte, Gedichte, and Wissenschaft. The new volume belongs to the "Lebensgeschichte" and covers two periods in the author's life: 1892-1894, the years of his second marriage; and 1899-1900, his first winter in Stockholm after an absence of ten years. Between the two lies the "Inferno" period. "Entzweit," as the former story is called—the original was simply "the second story of the Master of Quarantine" in the collection, "Fagervik och Skamsund"—contains some significant utterances which light up, as it were, the hidden source of Strindberg's view of life. Here, for instance:

> Have you seen a face like mine? Where I come I carry misery and ruin with me.
>
> At bottom we hate each other because we love each other. We are afraid to lose our personality through the assimilating power of love, and that is why we must break out occasionally, so as to know that I am not you . . .

With his knowledge of the human soul, he had included among his few principles of life this: never make allowance; never look back, only forward. And when she, in the beginning of their acquaintance, would refer to what he had said on an earlier occasion, he cut her short with "never look back, ever forward! One says so much, and most of it is improvisation. I have no views, only impromptus; life would be pretty monotonous if you should think and say the same thing each day. New it must be; life is only a poem, and it is more fun to flit over the swamp than to slip your feet down and feel for terra firma, where there is none . . . I make no decisions. I have never seen that a decision leads to anything. The course of events may guide my fate as heretofore."

"Einsam" is the diary of the sage who retires from the world and looks on at the motions of the shadows that pass him on the way. It ends: "Glad that I had come so far as I had, that I could feel joy over the happiness of others without mortification, regrets, or fancied fears, I went out from the torture chamber of my youth."

The Face of China: Travels in East, North, Central, and Western China. With some account of the new schools, universities, missions, and the old religious sacred places of Confucianism, Buddhism, and Taoism. The whole written and illustrated by E. G. Kemp, F.R.S.G.S. New York: Duffield & Co. $6 net.

A very attractive picture, with pen and brush, which will bring most readers under the spell of that marvellous land and people. Miss Kemp was not a mere chance traveller; she had spent a year at a medical mission in the interior, and writes intelligently of what she saw and experienced in her extensive journeys. The peculiar value of her narrative lies in its testimony to the change which has come over the whole land in recent years. Her first journey described was in 1893, to the capital of the province of Shansi, and the contrast of her experiences in this and in one from Peking to Burma in 1907-08 was very great. In the first she "was always conscious of a certain hostility in the attitude of the people towards foreigners." Quite the reverse was the case in the latest, for, though accompanied only by a woman friend, the Chinese, she says, "responded unhesitatingly to the call we made on their chivalry, by placing ourselves unreservedly in their hands. . . . In no European country could we have been more courteously treated, and in very few have I travelled so happily, and so free from care." The great awakening is so universal that in all the journey from the

northeastern to the southwestern part of the empire, some two thousand miles, she found no village untouched by it. The desire for education is its principal evidence, especially by the girls, schools for whom in the villages even are in great demand. In Chengtu, the capital of the extreme western province of Szechwan, the girls were dressed as boys, so as not to attract notice, when going to school. This place stands in the front rank of Chinese cities educationally, for it has a university in which English, French, German, and Japanese are taught, a large military medical college with three French doctors, and among the schools a large one for the children of beggars, "boys neatly dressed," who are taught trades at the expense of the municipality. Anti-foot-binding has been making good progress there, for "at the recent athletic sports, the students put up a notice that no lady with bound feet would be admitted to the ground, and this notice is now being put up everywhere throughout the empire on such occasions." Writing of Tsinan, an eastern city, in which there are fifteen schools for boys and girls, and colleges with about 2,500 students, she says "the most popular book both here and elsewhere is 'Little Lord Fauntleroy.'"

The most interesting part of Miss Kemp's narrative is that descriptive of her journey on the Yangtze in a house-boat, and through Szechwan and Yunnan by sedan chair. She was everywhere deeply impressed by the industry of the people. "The whole land is one great ceaseless field of labor, where every one works from early childhood to extreme old age." The varied character of the products of this industry is shown by the loads on the mules on the mountain roads separating the two provinces: "Copper, tin, coal, salt, skins, spices, chillies, armadillo skins, paper, bowls, opium, and later in the season large quantities of the wax insect larvæ." Of the wonderful beauty and variety of the flowers of this region—the hill slopes, for instance, being bright with rose-colored camellias—she writes: "This is the part of the world from which the majority of our flowering shrubs have originally come." We are surprised at one statement, which she makes when describing a review of some regiments of the army. "In the past, military service was one of the two only ways in which it was possible in China to climb the social ladder." All the authorities with which we are familiar place the farmer next to the scholar, and the soldier lowest in the social scale. The attractiveness of the book is greatly increased and much light is thrown upon the text by the sixty-three reproductions in color of her sketches. Some of them are of scenes of rare beauty. An excellent map enables the reader to follow her easily in her journeys.

Notes.

Popular editions of Ernst Haeckel's "Evolution of Man," and Elie Metchnikoff's "Prolongation of Life" are soon to be published by the Putnams.

The Yale University Press announces that it will publish during the coming autumn "The Records of the Federal Convention of 1787," under the editorship of Max Ferrand of the department of history at Yale.

"Our Search for a Wilderness," an account of two ornithological expeditions to Venezuela and British Guiana, by Mary Blair Beebe and C. William Beebe, curator of birds in the New York Zoölogical Park, is soon to be published by Henry Holt & Co.

The revision of Dr. W. J. Rolfe's "Satchel Guide for the Vacation Tourist in Europe" (Houghton Mifflin Co.) is out in good time for the earliest plans of travel. We have the pleasure of recommending this little guide annually.

Blümner's "Home Life of the Ancient Greeks," translated by Alice Zimmern, comes to us from Cassell & Co. in a third edition. It is a book which may be used either for consecutive reading, or, owing to its full index, for reference.

Duffield & Co. have issued the first volume, containing "Pharais" and "The Mountain Lovers," of a uniform edition of the writings of "Fiona Macleod." Mrs. Sharp contributes an introduction in which she touches on the dualism of her husband as William Sharp and "Fiona Macleod." We shall have something to say of this aspect of the Celtic revival when the edition is further advanced. A bit of minute information may not be out of place here. Fiona is often mispronounced; it should be Féona.

We have received a plan of celebration of the one hundredth anniversary of the incorporation of the Salem (Mass.) Athenæum, and of the one hundred and fiftieth anniversary of the founding of the Social Library of that city. The exercises will include a reception on March 29, and a meeting on the following evening, to be addressed by Prof. Barrett Wendell, whose topic will be "Literary Conditions in America, especially in Massachusetts in 1760." The Athenæum is one of the oldest of of American literary landmarks. It represents a combination in 1810 of the Social Library, founded at Salem in 1760, and the Philosophical Library, founded there in 1781. The present library building, which, as regards its exterior, is an exact copy of the old southern manor "Homewood," near Baltimore, one of the best examples of Georgian architecture in this country, was dedicated in 1907.

At the meeting of the Yale corporation last week Bertram Borden Boltwood, Ph.D., of Professor Rutherford's laboratory, at the University of Manchester, England, was elected professor of radio-chemistry; Charles McLean Andrews of the chair of history of Johns Hopkins University was elected Farnam professor of American history, and Albert Tobias Clay, Ph.D., assistant professor of Semitic philology and archæology at the University of Pennsylvania, was chosen for the William M. Laffan professorship of Assyrlology and Babylonian literature recently founded by J. Pierpont Morgan.

Dr. Henry M. MacCracken has announced his intention to resign his office of chancellor of the New York University next month, and to retire definitely on September 28 next, which is his seventieth birthday, and a fitting time, he thinks, for him to relinquish his responsibilities as an educator. Dr. MacCracken is a native of Oxford, O., and was pastor of Presbyterian churches in Columbus and Toledo, O., from 1863 to 1881, when he became chancellor of Western University, at Pittsburgh, where he remained for three years. In 1884 he became professor of philosophy, and vice-chancellor, and, in 1891, chancellor of New York University.

Prof. Stanley Lane-Poole might have omitted his apology for discussing in the *Fortnightly Review* for February "The Alleged Marriage of Swift and Stella." It is probably true that Swift is read to-day more for the power and mystery of his own character than for what his writings themselves contain, and curiosity in regard to the acts and motives of such a man, if decently exercised, is part of the proper study of mankind. Professor Lane-Poole subjects the evidence for Swift's marriage to a searching analysis, and brings in a verdict of not proven. So far we go with him, although, on the other hand, his positive argument against the marriage still leaves us hesitating. That is to say, the riddle is still unsolved. In regard to the relation of Swift to Vanessa he is more convincing. Quotations from the letters of Swift to her when she was living near Dublin, with Professor Lane-Poole's interpretation of some ambiguous phrases, show that he had become further involved with her than has commonly been supposed, and that she had genuine claims upon him. Professor Lane-Poole sees in that relation a strong but, on the man's part, ephemeral passion, whereas Swift's feeling for Stella was always a refined friendship and admiration, and nothing more. The whole article is well worth reading.

The prose rendering of the "Nibelungenlied" by D. B. Shumway (Houghton Mifflin Co.) inevitably recalls the judgment executed by Matthew Arnold on Francis Newman's Homer. Newman was an admirably equipped philologist; so is Professor Shumway. But the Germanist, like the Hellenist, fails singularly to render the original he knows so well, and fails for precisely the same reason: the use of a peculiar vocabulary that serves only to distort the epic manner that it seeks to interpret. Professor Shumway tells us that the language of his version "has been made as simple and Saxon in character as possible." So far his programme is obviously good. But, he continues, "an exception has been made in the case of such Romance words as were in use in England during the age of the romances of chivalry." In that sentence lies the secret of Professor Shumway's fundamental mistake. For the "Nibelungenlied" belongs only by virtue of a late redaction (circa 1,200) to the ages of romance. It has none of the warmth, the fluidity, the brightness of Gottfried or Hartmann. Of chivalry it has but the external trappings, overloaded as it doubtless is with these. Its spirit is that of the ancient sagas of the Germanic race, blended with memories

of the monstrous welter of life during the great migration. A bleak wind blows through the monotonous clang of its stanzas; the sorrows depicted are hard and savage; the pathos, where it occurs, bare and cruel. And this poem Professor Shumway tricks out in a verbiage which—whether genuinely archaic or not—has been degraded to the English taste by the third-rate historical novel of several generations. "I' faith," "methinks 'twere well," "hied them hence," "full fair," "well I wot"—with such locutions Professor Shumway recounts the story of the fierce Kriemhilt and the granite-souled Hagen of Troneg. It is quite doubtful, finally, whether any prose translation could do for the "Nibelungenlied" what Lang and Myers have done for Homer. For the very tags of the Greek poem have loveliness and energy; its language falls into some beauty of rhythm in the rudest version. Not so the northern epic. It is often harsh, often tedious. It has vigor but no charm, and the movement of verse is needed to carry the reader to the laconic tragedy of its final line:

> Here hath the tale an ending; this is the Nibelungs' woe.

Sir A. Conan Doyle, in "The Crime of the Congo" (Doubleday, Page & Co.) presents the case against the Leopoldian régime in Central Africa with undeniable skill. In the brief compass of one hundred and twenty-odd pages he has brought together the essence of all that has been written about Belgian misrule ever since the world's attention was first directed to the question, more than fifteen years ago. The burden of the tale is a familiar one; yet repetition makes the recital of King Leopold's beneficent activities in the Congo the more horrible. There is no denying that one of the most shameful pages in the history of humankind has here been written. Where room for difference of opinion appears is on the question how far the people of Belgium can be held responsible for the system established and maintained by their late King. Our writer insists that no distinction between Leopold and his subjects can be made; and he devotes himself particularly to showing that with Leopold out of the way and the Congo transformed into a Belgian colony, there is not the slightest room for supposing that the natives of the Congo are at last to be restored to their rights. So long, he maintains, as the state retains ownership of the lands she has seized and adheres to the iniquitous system of a forced labor tax, misgovernment and depopulation will go hand in hand. The prime requisite is to wipe out Belgian rule in the country and either place it under international control or partition it among France, Germany, and Great Britain. But we may take it as certain that European statesmanship, after bearing with the iniquitous Leopold's personal rule for a quarter of a century, will not interfere until Belgium has had a fair chance to establish decent government in her colony. That the worst abominations of Leopold's rule have already disappeared, even Sir Arthur Conan Doyle admits.

Maude M. Holbach, the author of a pleasant book on Dalmatia, has treated an even more fruitful subject in her "Bosnia and Herzegovina: Some Wayside Wanderings" (John Lane Co.). Intending English and American visitors of a most picturesque region, practically unknown even to the experienced tourist, will thank Mrs. Holbach for her interesting glimpses of glorious mountain scenery, roaring cataracts, periodically disappearing lakes, feudal Bosnian castles, Moslem mosques, and Old-Servian churches and monasteries. Her facile pen revels particularly in description of the multi-colored costumes of the land, but she is equally observant of bazaars, minarets, and churchyards, of military casinos, watering places, wayside coffee houses, and schools and colleges. Her opportune visit to the Sandjak of Novibazar, just as the Austrian soldiers were finally leaving it, affords her the chance of paying a well-deserved tribute to Austrian tact and administrative ability. The book disarms criticism by its kindly spirit and well-directed enthusiasm. The reader enjoys all of it—and particularly the numerous admirable photographs taken by Otto Holbach (which show an unusual eye for picturesque grouping, and really illustrate the text)—in spite of slips of various kinds, indifference to the rules of transliteration of Serb names, and a loose and large way of dealing with mountain heights. There is, however, no excuse for the publishers' labelling two plates "Sarajivo," instead of Sarajevo, and the great Austrian administrator of Bosnia and Herzegovina, Herr von Kállay, deserved a better fate than to be spoken of both as "Kally" and "Kalley."

Gordon Home's "The Motor Routes of England; Southern Section" (Macmillan) suggests its use in a well-groomed look, abundance of color prints, and business-like brevity of style. It gives sufficient information for the average tourist ranging south of London and Bristol, and it lays out courses of very moderate length. On the whole, the color prints are superfluous—in the car we should find them offensive—while the antiquarian hints are the merest indications. Motorists who really go in for churches, if such there be, will use Baedeker or some of the many county guides. About Mr. Home there is no nonsense; he doesn't write for dawdlers. Winchester is pretty fully described because many roads lead to it. Salisbury, we read, has a fine early English cathedral. No more is vouchsafed, for it lies off main roads.

To their color books on the English counties Messrs. A. & C. Black of London (New York: Macmillan) have added "Worcestershire," painted by Thomas Tyndale, described by A. G. Bradley. This county, although it boasts the Malvern Hills, famous alike as scenery and as examples of eccentric geology, is on the whole of a mild and monotonous comeliness. For this reason, perhaps, Mr. Tyndale's sketches, as reproduced, seem to lack character and variety. Mr. Bradley is a pastmaster of the arts required in this sort of compilation, and he makes the most of a rather slender theme, bearing down upon the civil war. In this county literary associations are singularly sparse. But William Langland, a native of neighboring Shropshire, was educated at Malvern Priory, and there planned his "Vision of Piers Plowman." With a few exceptions, Worcester has enjoyed the happiness of a county without a history. Mr. Bradley's enthusiasm should persuade leisurely pilgrims to seek the Malverns and loiter along the Severn.

The guild of trappers will undoubtedly be satisfied with two modest volumes just issued by the A. R. Harding Publishing Company of Columbus, O., and entitled, respectively, "Wolf and Coyote Trapping" and "Science of Trapping." They are the work of A. R. Harding and E. Kreps, and both are written more from the practical than the scientific side. Beyond saying that the books are excellent of their kind, we will only take occasion here to protest against the use of steel traps in any other manner than with the sliding-pole, so that the animal, when taken, goes to the bottom of the stream or pond and speedily drowns. Any contrivance in which an animal is caught by the leg, compelling it to wait in agony, often for several days, before the trapper reaches it on his round, should be prohibited by law.

The author of "Confessions of a Railroad Signalman," James O. Fagan, in his second book, entitled "Labor and the Railroads" (Houghton Mifflin Co.), has passed out of the stage of confession into that of reproof and correction. The series of articles from which this book was made were called "The Industrial Dilemma," an accurate title for the situation in which the author finds himself involved. Trade unions, as he views them, are thoroughly subversive of discipline. They deaden initiative, reduce efficiency, and check the development of a spirit of loyalty on the part of the individual employee toward his work. Yet their power to dictate is such that the superintendent is at their mercy; he must make all agreements with them in secret; he dares not throw himself upon the public for protection. Hence we have a recklessness in railway management which has no parallel elsewhere, and a stirring of public sentiment only when some frightful catastrophe forces the conditions imperatively upon public attention. Mr. Fagan's suggestion for relief seems to lie in the direction of greater publicity for the negotiations between employer and employee, which shall bring the salutary influence of public opinion to bear directly upon the question of railway discipline and efficiency. His attitude does not impress one as being wholly unprejudiced. He is, perhaps, somewhat harsh towards the trade union, and he fails to take into account sufficiently the frequent selfishness of railway officials, and their often demonstrated indifference to the problems of safety in travel.

The sixth volume of "The New Schaff-Herzog Encyclopædia of Religious Knowledge" (Funk & Wagnalls Co.) includes titles from "Innocents" to "Liudger." A larger proportion of doctrinal and Biblical subjects, in comparison with historical and biographical topics, is found in this volume than in its predecessors, and, since the excellence of this encyclopædia is in the field of church history rather than in Biblical criticism or in doctrinal theology, the general impression it leaves is less favorable. The articles on Israel, Jacob, and Joseph are not at all adequate in the light of recent knowledge of early Semitic history and legend. They are based on the German articles of the precursor of the work, Hauck's "Realencyklopädie," and it is safe to say that no German scholar would now care to be responsible for the form in which they are

here given to English readers. The weighty considerations advanced in Gunkel's "Commentary on Genesis," of a very different tenor, should at least be presented. The spirit of the American editors is catholic and tolerant. They allow Volck's statement that Joel preceded Amos to stand, but follow it up by a few paragraphs by Professor McCurdy, in which the compelling reasons for a fourth-century date are set forth. Dr. Warfield is permitted to declare that any other than a miraculous birth of Jesus would "seem strange and unnatural," while a few pages over Professor Bacon asserts that the narrative of the virgin birth "has no significance for the history of Jesus." In Biblical criticism this encyclopædia is behind Cheyne and Hastings, but the large number of excellent articles on topics connected with ecclesiastical history, with their careful bibliographies, give it an independent value.

The thirteenth and fourteenth parts of Prof. Morris Jastrow's "Die Religion Babyloniens und Assyriens" (Giessen: Alfred Töpelmann) now lie before us. These two parts continue the discussion of omens and signs (*Vorzeichen und Deutungslehre*) begun in the ninth part. Jastrow's treatment of this subject is the most complete and satisfactory in existence. He presents virtually the whole literature on liver omens, and his interpretation of the texts has made these really intelligible. Forecasting the future by inspection of the liver rested on primitive folk ideas, and formed a link between the religion of the laity and that of the priests. The determination of the future by the heavenly bodies, the discussion of which occupies the greater portion of these two parts was, on the contrary, a pseudo-science in the hands of the priests. In his introduction to the discussion of the latter theme, Jastrow points out that the theory on which this pseudo-science rested was the belief in the correspondence of heaven and earth: that to the divisions of the world, its lands, mountains, etc., correspond similar divisions in heaven, the latter being the original which is reflected, so to speak, in the things of earth. If, therefore, one can understand the heavenly things, one may explain and foreshadow the earthly. He notes, in the discussion, that the earlier observations of the heavenly bodies, which we can trace back at least to the time of Gudea, about 2700 B. C. are merely astrological, their purpose being to determine what is to happen to the king and the country. About 700 B. C. we find the beginnings of astronomy, as these observations result in a perception that the movements of the heavenly bodies are governed by laws. So out of a religious superstition grows gradually a science; but it is not until the time of the Seleucids that a real astronomy can be said to have come into existence.

James Platt, jr., an English philologist, who had contributed extensively to *Notes and Queries*, and had done much valuable work on the proof-sheets of the Oxford English Dictionary, died recently. In 1883-1884, he contributed to German periodicals a series of articles on old English grammar and phonology, and he had also contributed to *Notes and Queries* and other magazines discussions of the etymology of words adopted in English from the languages of the American Indians, and from Africa, fields in which he also worked with much effect for the Oxford Dictionary.

Dr. Richard Paul Wülker, professor of the English language and literature at the University of Leipzig, died recently, at the age of sixty-four years. He was a native of Frankfort-on-the-Main, and had been a professor at Leipzig since 1873. He had published "Das Evangelium Nikodemi in der abendländischen Literatur," "Übersicht der neuangelsächsischen Sprachdenkmäler," "Altenglisches Lesebuch," "Fünfzig Feldpostbriefe eines Frankfurters," "Kleinere angelsächsische Dichtungen" (with Glossary), "Grundriss zur Geschichte der angelsächsischen Literatur," and "Geschichte der englischen Literatur von den ältesten Zeiten bis zur Gegenwart." In 1877, he founded the magazine *Anglia*, for the study of English philology.

Science.

In "Nerves and Common Sense" (Little, Brown & Co.), Annie Payson Call preaches anew the gospel of relaxation which some have called flippantly the "flop cure." It must be admitted, however, that Miss Call once more shows a very clear understanding of human nature and presents her argument in a way well suited to meet the needs of a large number of persons. It is not necessary to be in full agreement with her interpretation of the fundamental trouble or of the process of cure to understand that the treatment proposed will lift a certain class of sufferers from the depths which mean much misery for them and unlimited anxiety for their friends. The central doctrine is that, except in case of organic disease, nervous strain is caused by bad habits, by defect of character inborn or acquired. The cure lies in ceasing to be ashamed to recognize the badness of certain habits, and in relaxing, that is to say, in lessening the strain of mental opposition and resistance. Annoyances cause some sort of a physical contraction, as, for example, when even the thought of a food which is believed to disagree with us causes the contraction of the stomach. If we drop the contraction we open the way to dropping mental and moral strain; when something gets on our nerves we must drop it off our nerves. This, however, can be effective only when we have a sincere desire to get rid of the resistance, and a conscious dependence on a higher power must be behind it all. This general idea is enlarged upon and illustrated in a variety of ways in its application to the conduct of life, where the neglect of the right of those we love to independence and the strain of bossing the members of the household and others are sources of harm quite on a level with fright, hurry, fussiness in eating, nervous talk, restless work, and even sewing, which has a whole chapter to itself. Much of the book has already appeared in the columns of the *Ladies' Home Journal*, and has the earmarks of its origin. The example is often a certain "little lady," sometimes a "little woman," suggesting physical limitations of nervousness not altogether in accord with the experience of the reviewer.

"Girl and Woman" (D. Appleton & Co.), by Caroline W. Latimer, deals with the upbringing of the girl rather than the life of the mature woman, and deals with it well. The general bodily functions are briefly, often incidentally, but quite sufficiently discussed, with no formal details about the structures involved. Dr. Latimer's chief concern is the care of the body, with particular reference to the limitations imposed by sexual development, and, taken all in all, her advice is excellent and given in admirable fashion. She is a strong advocate of simple hygienic measures, urging rest and dietetic treatment rather than drugs, and has very clean cut and just objections to the far too ready and frequent appeal to the specialist. What she has to say about the psychic side of girlhood ought to be very helpful to any mother of even quite moderate intelligence. A failure to recognize the apostle of multimastication as a good American, and a little slip in calling acetanilid and antifebrin different substances are almost the only things that invite criticism. The book has an introduction by Dr. H. A. Kelly, in which he neatly outlines his views concerning the life and work of woman.

The "Quiz Book of Nursing," by Amy Elizabeth Pope and Thirza A. Pope (Putnam), professedly for teachers and students, reawakens our doubts concerning the knowledge which many nurses wish their fellow-nurses to have. It is an exasperating book in which much that is really good, even very good, is spoilt by many loose and futile questions, and, in places, by statements that are erratic or ridiculously wrong and misleading. To say, taking a few examples almost at random: that cocci are called micrococci when they are single (p. 203); that the hand placed on a stove will be immediately withdrawn with no intimation that the stove must be hot or very cold (p. 263); that rennet solidifies fluid proteids (p. 284); that meat is composed of hollow muscular fibres (p. 296); that the principal salts of the food are sodium, potassium, iron, and so on (p. 282); that ether was first used by Morton "a Baltimore dentist" (p. 358), is to lay up misinformation for future trouble, and there is more of the same type. The chapter on foods is rather good, one of the best; but that on drugs contains far more than a good nurse needs to know, and has many slips, of which the worst is the assertion that an ounce of morphine sulphate contains one grain of morphine (p. 350), probably an erratic allusion to the *Liquor morphiæ sulphatis* of an earlier pharmacopœia. Of quite a different character are the three last chapters, rather less than a quarter of the book, carrying information of some value to those who are interested in hospital problems without being nurses. Here we have a brief essay on Visiting Nursing by Margaret A. Bewley, a rather fuller discussion of the planning and construction of hospitals by Bertrand E. Taylor, and, finally, directions by Frederic B. Morlok of the Presbyterian Hospital of New York concerning Hospital Bookkeeping and Statistics, by which is meant merely the enumeration of the hospital population, not medical statistics.

Professor Amos Emerson Dolbear, widely known as the inventor of telephone and telegraph appliances, died on February 23, at Medford, Mass. He graduated at Ohio Wesleyan University in 1866, was assistant

in chemistry there for a few years, and then professor of chemistry at the University of Michigan until 1874, when he became professor of physics at Tufts College, where he remained until his ill-health forced him to retire in 1902. Professor Dolbear claimed the invention of wireless telegraphy and brought suit against Marconi in 1899, but did not establish his claim. He also claimed priority in the invention of the telephone, and for a long time contested in the courts the legality of the Bell patents, but was finally defeated. He invented a writing telegraph, a spring balance ammeter, and apparatus for the converting of sounds into electricity and photographing through a solid body with the aid of electric waves. He had published "Art of Projecting," "The Speaking Telephone," "Matter, Ether and Motion," "Modes of Motion," and "Natural Philosophy."

Edward W. Very, for a long time a distinguished naval officer, and known the world over as the inventor of the Very night signal, died suddenly in New York, on March 1, at the age of sixty-three. He was particularly known in this country, and in Europe as an expert on large ordnance, and several of his inventions are still in use in the United States navy, and elsewhere. Mr. Very graduated at the Naval Academy in 1867, became an ensign in December, 1868, and a lieutenant in 1871. Later he was attached to the United States legation in Paris. He entered Paris with Marshal MacMahon at the head of the latter's army in the days of the Commune, following the siege of Paris by the Prussians, having been entrusted with letters to Minister Washburn. He resigned from the navy in 1885, and became allied with the Hotchkiss firm and interests, and subsequently he became vice-president of the American Ordnance Company.

Reid Barnes, professor of plant physiology at the University of Chicago, died February 24 at the age of fifty-one. He was professor of natural history at Purdee University in 1880-1886, and of botany at the University of Wisconsin in 1886-1898, when he accepted the chair at Chicago which he occupied at the time of his death. He had been co-editor of the *Botanical Gazette* since 1883, and (with J. C. Arthur and J. M. Coulter) was author of "Keys to the Genera and Species of North American Mosses," "Plant Life," and "Outlines of Plant Life."

Col. Claude Reignier Conder, an English explorer of Palestine, died on February 16, at the age of sixty-one years. He had long been associated with the Palestine Exploration Fund, and between 1874 and 1876 surveyed about 4,700 square miles of western Palestine, which gave him the material for his book, "Tent Work in Palestine." The remaining 1,300 miles of the survey was completed by Lieut. (now Lord) Kitchener in 1877. Conder again commanded the Palestine survey in 1881 and 1882. Besides the work mentioned, his books and memoirs on Palestine include "Heth and Moab," "Memoirs of the Surveys of Western Palestine," "The Bible in the East," "The Latin Kingdom of Jerusalem," "The Hittites and Their Language," "The Rise of Man," "Primer of Bible Geography," "Palestine" (which was published in 1891, and contains a summary of what was known of the geography of the country up to that year), and "The City of Jerusalem," published last year.

Emile Cheysson, professor at the Ecole des Sciences Politiques, and a distinguished disciple of the great French economist, Le Play, died in Paris recently at the age of seventy-four years. He was especially interested in the improvement of the dwellings and the general conditions of the French working classes, and since the year 1870 he had frequently prevented the adoption by the friendly societies of unwise schemes which might have hindered social betterment. As an old-school Liberal he resolutely opposed stato intervention, and championed individualism. His publications include "Cent Budgets de familles ouvrières," "Albums de statistique graphique," "L'Alcoolisme," "Les Accidents du travail," "La Mutualité et le rôle de la femme," "Les Taudis," "L'Ingénieur social," and "Les Méthodes de statistique."

Dr. Wilhelm Krause, professor of anatomy and head of the laboratories of the Anatomical Institute of the University of Berlin, died recently in that city at the age of seventy-six. With Professors His and Waldeyer, he had published a "Handbuch der Anatomie des Menschen."

Dr. Franz von Jauraschek, the Austrian statistician, died recently in Vienna, at the age of sixty. He had been professor of statistics, and also of public and international law, in the University of Vienna, and had published "Personal- und Realunion," "Uebersichten der Weltwirtschaft," and "Die Staaten Europas, statistische Darstellung," and since 1884 had edited Otto Hübner's "Geographischstatistische Tabellen aller Länder der Erde."

Drama.

NEW SHAKESPEARE DISCOVERIES.

The chances are that any active man who lives fifteen years in one community will at least once appear in some capacity in court. It was this probability that heartened Prof. Charles William Wallace of the University of Nebraska to read through the court proceedings of Shakespeare's London, in the hope of unearthing some document concerning the dramatist. Only one who has breathed the air of the London Record Office can appreciate the magnitude of such a research. Merely to manipulate the skins on which the records are kept, merely to guess the sense of the various crabbed scripts, requires uncommon patience. Professor Wallace and his wife handled more than a million documents, in order to find one case involving Hemings, Shakespeare's publisher, and one in which "Wr. William Shakespeare, gentleman," deposed in person. It was a gigantic labor for what looks like a small result.

But independently of the value of the new data on Shakespeare, the kind of pertinacity shown by the Wallaces deserves high commendation. They have not merely the faith that seeks a needle in a haystack, but the courage that joyously rummages through a stack where no needle may have been mislaid. In a somewhat similar spirit, Mr. Theodore H. Davis's expedition in the Valley of the Kings goes down to bedrock. Whatever Pharaonic tombs exist under the desert sands must come to light. And here it must be admitted that even if no palpable Shakespeareana had emerged from the early Jacobean parchments in the Record Office, the heart-breaking work of the Wallaces would not have been wholly in vain. To have proved that no documents existed would, at least, have prevented future sporadic and futile examination of these archives. The bedrock method, however costly to the investigator, is, though the results be negative, always valuable to the science.

The results which Professor Wallace attained are set forth in *Harper's* for March. They will look large or small, according to the imagination the reader brings to their scrutiny. In May of 1612 "William Shakespeare of Stratford vpon Aven" testified in a suit concerning dowry brought by Stephen Bellott against his father-in-law, Christopher Mountjoy. In the testimony, it appears that Shakespeare had been a lodger with the Mountjoys since 1598. It was he who, at the request of Mme. Mountjoy, deceased, had arranged the marriage between the daughter, Mary, and the brisk young prentice, Stephen. This was in 1604. The Mountjoys were French Protestants, the father's profession that of wig maker. After the mother's death, father and son-in-law unhappily fell into the way of "wigging" each other at the expense of the business. The young folks went to lodge with George Wilkins, a mediocre playwright, whose dramas of "Pericles" and "Timon of Athens" Shakespeare amiably retouched, the latter considerably. Stephen sued for his wife's dowry, and other matters connected with the shop. Clearly Shakespeare had interested himself deeply in these young people, for pretty much all the other witnesses as to the terms of the match simply quote "one Wm. Shakespeare." He himself played a diplomatic part, spoke well of both parties to the suit, and by what seems a most opportune lapse of memory absolutely failed to recall the dowry stipulated in the match he himself had made. Apparently, he intended that his old landlord should suffer no financial distress in addition to the desertion of a daughter and an active associate. Mr. William Shakespeare's non-committal ways left the suit in such shape that the court passed it on to the French Protestant Church for arbitration.

So much for the bare facts, and now what are they good for? We think it at least a sentimental gain to be able to stand at the corner of Silver and Monkwell Streets and say, "On this spot

were written, 'Henry V,' 'Much Ado,' 'As You Like It, 'Twelfth Night,' 'Hamlet, 'Julius Cæsar,' 'Troilus and Cressida,' 'Macbeth,' 'Measure for Measure,' and 'Othello.'" For associations less precious men have travelled farther. Professor Wallace wishes the tavern which now occupies the site to be converted into a museum. Whether or not such a destination seems natural for a building that Shakespeare never saw, it is certain that some memorial should cry *Siste viator!* at what must become one of the most sacred spots known to literature. One likes better to speculate on the reasons that drew Shakespeare to take refuge with a French family. We catch the cheerful babble that must have passed between the lodger and young Mary Mountjoy in the broken French of King Hal and the entrancing English of his French Kate. As a compliment to the author's landlord, the name Mountjoy was conferred upon a herald in the play of Henry V. Apart from such literary echoes of the lodging in Silver Street, one welcomes the picture of Shakespeare as the friend and confidant of the family, their counsellor at difficult turns, and later the would-be adjuster of their quarrels. The witnesses in the obscure suit of Bellott *vs.* Mountjoy, mostly people of humble estate, evidently knew Shakespeare familiarly. In short, without straining hypothesis, the scanty records of this trial present the author of the "Sonnets" and "Hamlet" in a positively neighborly and serviceable light. It is pleasant also to think of Ben Jonson, Nathaniel Field, Thomas Dekker, and others around the corner in St. Giles's, Cripplegate. Nor is it a trivial bit of antiquarianism to show that in passing from Mountjoy's to the Globe Theatre Shakespeare had to pass the house in which lived the lad John Milton, later to be the author of the finest tribute in verse that Shakespeare has yet received.

If, on the whole, we glimpse our greatest poet in a new and homely light, we also get unexpected confirmation of that strangely exotic quality which makes him less of England than of the world. It is paradoxical and yet appropriate that the protagonist of the "Sonnets" should be an exemplary lodger in a God-fearing Huguenot family. The Parish of St. Olave's contained many foreigners. To settle there was as if one of our rising playwrights should elect for the lower East Side. It was here, in contact with swarthy and vivacious visitors from afar, that Shakespeare achieved a more poignant vision of the romance of Italy than ever was granted to those professed Italianates, his apparent betters, who had made the pilgrimage in person.

"A Son of the People," which was produced in the New Theatre on Monday evening, is an English version, derived through the German, of "A Revolutionary Wedding," by Sophus Michaelis, the Danish dramatist. It has created some stir in European theatres, probably by its lurid coloring rather than its inherent dramatic worth. Briefly, a French marquis, an émigré, is surprised at his wedding breakfast in his bride's château, by a revolutionary force, tried by drum-head court-martial and ordered to be shot. His newly-made wife, moved and partly disgusted by his abject fear, summons the leader, Marc Arron, who already has impressed her by his sturdy manliness, and blankly asks him for her husband's life, offering herself as a bribe. Arron, knowing that his acceptance will mean his own execution at six o'clock the next morning, nevertheless takes her at her word, exchanges clothes with the marquis, sets him free, and remains to be shot in his place. Then the bride begins to repent of her bargain, but Arron's forbearance and courage inspire her with passionate admiration and she pays the price. In the morning, Arron—after a brief interval of weakness in which he would evade his fate—refuses to accept release or pardon and gallantly meets death, leaving the heroine in a most unfortunate situation. This skeleton synopsis is enough to show that the piece is devised chiefly with a view to thrilling theatrical situations, without much reference to nature, reason or credibility. The incidents are as violent as the characters are theatrical and inconsistent. Professedly, of course, the tale is supposed to be illustrative of the substantial virtue of the representative democrat as compared with the vicious effeminacy of a profligate aristocracy, and symbolical of the working of the revolutionary spirit in men and women. But a dramatic parable of this sort, that ignores the plain facts of nature, is not valuable. The performance, which was by a special company supporting John Mason, was not up to the general standard of the New Theatre, whose credit will not be increased by this particular enterprise.

The Sicilian players are back again in London. Marinella Bragaglia has taken the place of Mimi Aguglia and Signor Grasso now stands at the head of the company. It is said that he will play "Othello" in the course of his engagement.

Mr. and Mrs. Kendal have retired from the stage, stepping quietly into private life without any preliminary fuss of testimonials or farewells. They have earned honorable repose by half a century or more of work, which, on the whole, has been in the best interests of the theatre and the public. Mrs. Kendal first appeared on the stage in the old Marylebone Theatre, in London, when five years old, in one of the melodramas of the time. But it was in 1868, at the old Haymarket, that she was recognized as one of the leading actresses of the day. She made a great hit in "The Romance of a Poor Young Man," in which the elder Sothern played the hero. After she was married to William H. Kendal the two acted together and shared in the triumphs of the Bancrofts, in "Peril," "Diplomacy," and the rest, and afterward won renown and wealth for themselves at the St. James's, in "The Squire," "The Queen's Shilling," "Impulse," "The Ironmaster," "A Scrap of Paper," and many other plays. Their success in this country is known of all. At first Mr. Kendal was only the husband of his brilliant wife. But he grew slowly but surely in artistic stature, until he became one of the best comedians of the day.

Mme. Vera Komisarzhevsky, the Russian actress (in private life, the Countess Muravieff), died at Tashkent on February 23, of smallpox. She had a fine voice and was trained in music by her father, but made her début as an actress in 1894, and in 1896 made a decided impression in Sudermann's "Battle of the Butterflies," after which she played for several years at the Imperial Theatre in St. Petersburg. Thereafter, she built, in that city, a fine theatre, which bears her name. She visited the United States in 1908, and appeared, unsuccessfully, on Broadway in dramas by Ibsen, Tolstoy, and Ostrovski, after which she played a short engagement at the Thalia Theatre, on the Bowery. She was married at the age of sixteen years, to Count Muravieff, from whom she obtained a divorce when she discovered that he was in love with her sister.

Music.

César Franck. By Vincent d'Indy. New York: John Lane Co. $2.50 net.

Some of the greatest composers, among them Bach, Mozart, and Schubert, were not recognized as such by their contemporaries. Effort is made at present to prove that another of these neglected heroes was César Franck. Romain Rolland calls him "the greatest educational force in contemporary French music." Bruneau refers to him as one of the three regenerators of modern music, the other two being Berlioz and Wagner. In the same vein, others have written of him. "Thus we see Franck, for so many years misunderstood and slighted by his official contemporaries, becoming surely and steadily recognized as one of the chief artistic influences of the nineteenth century," writes Rosa Newmarch in the introductory chapter to her admirably lucid and idiomatic translation of Vincent d'Indy's book on Franck.

The book is the most important document on this composer so far published, and it was well worth translating. Its pages give a glimpse of a serious aspect of music in France of which little is known outside of that country. "A veritable artistic gospel," Mrs. Newmarch calls D'Indy's book; it preaches of one who worked for pure art, regardless of fame or profit. D'Indy is the best-known of his pupils, and if we may believe him, Franck did some very remarkable things, personally and through his pupils. Among these were Massé, Reber, Bazin, Pierné, Duparc, Benoît, Chausson, and Augusta Holmès, while others who came under his influence were Guilmant, Dukas, Chabrier, Fauré, and Ysaye. In 1896, D'Indy, Guilmant, and

Bordes founded the Schola Cantorum, "a kind of second and more modern Conservatoire," which, starting with twenty-one pupils, now has more than three hundred. There are branches in ten other cities, and one of the functions of the institution is to issue fine editions of old works and new. The aim of the Schola is, in the words of D'Indy, to continue and apply Franck's method of teaching.

Vincent d'Indy is not an idolater; he does not believe that everything his master composed was noble and perfect. He divides his career into three periods (every respectable composer must apparently have three periods in his evolution, just as every decent sonata must have four movements), and admits frankly that the works of the first period are inferior to the later ones, the pianoforte pieces, *e. g.*, being all written on a single plan and "rendered monotonous by the entire lack of modulation." He admits, further, that Franck's sacred music is inferior to his other works. But the operas, also, are of no great value as operas; they are, "to tell the truth, less dramatic than his oratorios." It is chiefly for the works of the third period that the author claims preëminence, and among these he singles out the quartet in D major, the chorales of 1890, and "The Beatitudes," to which he devotes pages of admiring analysis.

These are certainly the best of Franck's compositions; but, to be as frank as D'Indy, we think they do not establish his claim to a place among the immortals. They doubtless do avoid for the most part, as claimed, the Wagnerian influence which, for some years, threatened to paralyze national creative effort in France as in other countries; they betray the influence of Bach, Gluck, Beethoven, and some other old masters; but they lack almost entirely that which alone can give lasting life to music—original, individual melody; and because of this lack the world will never welcome these works in concert programmes and rank them among the masterpieces. Nearly all of Franck's works are dull and dry, and the attempt to foist them on the public will only help to deplete the concert-halls.

One regrets to have to say this, for Franck was so exemplary as man and musician that it would be a comfort to write nothing but praise of him. D'Indy's chapters on his personality and habits may be read with pleasure and profit even by those whom his music bores because its scholarship is unleavened by inspiration. There is pathos in the story of the hard work he was forced to carry on for a living. All day he was obliged to give lessons, and he could find time for composing only by rising before six o'clock in the morning. Sometimes he would jump up in the midst of a lesson and write down in a corner of the room a few bars that had come into his head and that he feared he might forget. He was famous as an organist and noted especially for his improvisations. Most extraordinary was his method of obtaining the themes for his compositions. He required some excitant, and that excitant was—noise! Often his pupils found him pounding away on the piano in a jerky and continually increasing fortissimo the overture to "Die Meistersinger," or something by Bach, Beethoven, or Schumann. After a time the deafening noise sank to a murmur, then silence—"the master had found his idea."

It is announced that in all probability Andreas Dippel will retire from the management of the Metropolitan Opera House, in this city, on May 1, and that the programme for next season will be exclusively under the direction of Giulio Gatti-Casazza. Mr. Dippel will probably become impresario of the new opera in Chicago.

Art.

THE PAINTING OF SOROLLA.

As a permanent memorial of the Sorolla exhibition, the Hispanic Society has reprinted eight of the chief appreciations of this conquering painter of sunlight, adding also the tributes of the press, and what is more welcome a complete catalogue of the show illustrated by 350 halftone cuts.* This record of an unexampled popular and critical enthusiasm, has evident documentary value. The future may take it very seriously as a literary and psychological curiosity. To the present writer it is a disconcerting chorus of praise for a kind of work that he cannot believe has enduring stuff in it. One may agree with everything that is said about Sorolla's athleticism of the brush, and ready command of the primary colors, one may accept his gusto without cavil, and yet question whether the zeal that took nearly 160,000 people to see his pictures had much to do with the more permanent qualities of art.

Since the critics in this volume have done full justice to his extraordinary powers, we feel the freer to point out his obvious limitations. A lack of reflective quality in his work has been generally admitted, but the implications of this criticism have not been fully drawn. Keen as is his vision and amazing as is his executive talent, they both have a kind of commonness. These canvases, upon which, in the words of his pupil, Mr. Starkweather, he has made "a furious assault" in the open air, are, to begin with, casually composed. Their pictorial arrangement is either *nil* or of the most obvious sort. A great relish has gone into them, but no thought and little selection. They are random sections of a vivid and continuous panorama. He sees much as the kodak or picnicking mankind see, and that is surely the ground of his enormous popularity.

What French critic it was that said "where there is no delicacy there is no art; *Où il n' y a pas de finesse, il n-y a pas d'art*"—I do not now recall, but I am sure that the saying is just, and that its application to the work of Sorolla will be something like a condemnation. But first I must apologize for using so old-fashioned and unpopular a word as delicacy, in connection with art, or, rather, I must explain away the invidious associations of the word. The rude fret with which a rug-maker of the Caucasus adorns a border is also highly refined. With pious care the worker has tied thousands of knots under equal tension, has scrupulously followed the proper lines of the warp, has cautiously and with delicate urging pressed down successive rows of knots upon the solid pile, finally has clipped each tuft daintily that the fabric may lie even. Only through such thoughtfulness—such refinement of workmanship, let me insist—will the bold pattern come out with all the crispness of a design in mosaic. If any part of the process is shirked or abridged, the rug, for its barbaric color, may still delight a careless eye; but no collector will want it on his floor. So the early and apparently crude enamels of Limoges are really most delicate, the relation of exposed metal to vitreous color being instinctively well calculated, and the broad masses of flaming enamel being adjusted to form an harmonious whole. So is the most casual scrawl of Daumier refined. Before moving the crayon he has been sure of the feeling and the stroke. The judgment may have been instantaneous, but it is a judgment, and not a chance shot.

Because the work of Sorolla has almost nothing of this quality of judgment and reflection, it seems to me, in spite of its indisputable gusto and force, to take a rather low place as art. To the most obvious effects of motion, blazing sunlight, physiognomy even, he has willingly sacrificed all those delicacies of contour, texture, and rhythm which to a patient eye nature offers so royally. Or rather he has not sacrificed, could not sacrifice, what apparently he has not even seen. Four of his most admired pictures are at the Metropolitan Museum. One is a huddle of red oxen under the swelling sail of a stranded barque; another, three graceful girls poised in the iridescent whirl of a broken wave; still another shows a girl with her rosy form glowing under a

**Eight Essays on Joaquin Sorolla y Bastida.* By Aureliano de Beruete, Camille Mauclair, Henri Rochefort, Leonard Williams, Elizabeth Luther Cary, James Gibbons Huneker, Christian Brinton, and William E. B. Starkweather. 2 vols. in 8vo. 350 cuts. New York: The Hispanic Society of America. $7.50 net.

diaphanous wet robe while a lad places the mantle about her shoulders; the last picture is of boys swimming froglike in green water—a technical triumph, for neither land nor sky is admitted to explain the subject. What of these pictures? Each and all they have the radiance of our badly tied rug. On inspection the impetuosity of the workmanship is seen to be coarse and obvious, the vision that of the camera, not of the sensitive eye. The beautiful form of the nearest girl in The Bath, Javea, is marred by the rude strokes that are to mean reflected sunlight. Generally speaking, this insistence on the bleak reflection of the sun is the painter's foible, and the formula of the yellowish splotch becomes as tiresome as that of the crimson shadow. In all four of these pictures the arrangement is casual, or rather wanting entirely. The lines of breakers in the background cut the charming group in After the Bath in a way to interrupt and impair the swing of the composition. The Boys Swimming is simply a brilliant sketch. The picture of oxen hauling up a boat, despite its heroic proportions, is a snapshot. It curiously lacks the dignity and vitality that would justify the scale. The brisk and efficient facture wholly lacks style. The picture gives a thrill, and one is content never to see it again. There never will be anything more in it than one has grasped in the twinkling of a casual eye. To illustrate the possibility and value of style in such a subject, let me recall Besnard's famous canvas of two bay horses kicking off flies. Here we have the same scale and almost the same blond color scheme. But in Sorolla there is a dispersion of interest, while in Besnard there is a concentration of nervous energy that makes his restless beasts memorable and almost monumental. The Parisian has fundamental fineness of vision and a sense for economy of workmanship, while the Valencian has the genial, roving vision of every man, and either thinks not at all or paints faster than he thinks. The Bath, Javea, comes very near to being a fine picture, and fails only for lack of thought. The vigorous swirl of the broken wave has none of the lovely quality of moving water. It is as untranslucent as a breadth of watered silk. The rocks, which might have lent stability to the motive, are realized neither in the energy of their forms nor in the interest of their textures. The delightful pictorial motive of the poised bodies of these children has been actually attenuated in the working out.

"But nobody paints sunlight like Sorolla," I hear a hundred devotees exclaim indignantly. This, I think, is a misconception. He merely paints it big and paints it all the time. In actual coruscation I think Tarbell equals him; Besnard surely does. But it is time we got over the idea that it is necessarily a merit to make a picture look hot and blinding. Technically, such an accomplishment goes for what it is worth; pictorially it may come to very little. I am not wholly of the late Burne-Jones's mind that such impressionists "don't make anything else but atmosphere—and I don't think that's enough; I don't think it's very much." My regret about Señor Sorolla is that, making cubic miles of atmosphere, he seems to me to make it speciously and badly. He knows shrewdly all the short-cuts to expression. His methods are those of the scene-painter or the contriver of panoramas. But I am glad to take Sorolla's art quite on its own terms, and my regret is not that it is dazzling, but that to this minor quality have been sacrificed accuracy of atmospheric construction, fine linear quality, and general equilibrium.

Disequilibrium, in fact, is the especial characteristic of his art. Where there are several of his pictures present the eye does not rest so contentedly upon one that is loath to leave, but moves rapidly from one to another. It is like looking out of so many windows, with no reason for choosing any one. And here is not an embarrassment of riches, but simply the disorderly impression that nature makes before it has been sifted through an artist's temperament. The conditions of this painting preclude such sifting. The subject is chosen quickly and as swiftly executed. A few hours of intense labor in the open air and one of these big canvases is done. A despairing disciple is reported to have groaned: "He [Sorolla] paints as a cow eats." The compliment was just but excessive: a cow is a ruminant. Only by reflection does the artist impose fully upon outer appearances that inward harmony the possession of which is his title of nobility. If an artist has no fine individual forms and works on no instinctive geometry, then he is scarcely an artist at all, and his work, however brilliant in executive quality, becomes at bottom copyistic, purposeless, and, except as it may supply memoranda to a really creative spirit, null. When one has said that Sorolla's paintings are huge sketches one has admitted a great excellence of a small kind—their freshness and spontaneity, qualities once universal, and now rare only because painting has almost ceased to be a significant art; and one has equally denied to these brilliant improvisations all the more lasting and serious attributes.

"Why shouldn't a man make big sketches, since they evidently please him and delight us?" I hear any one of the legion that sought Sorolla at the confines of Manhattan protesting. There is, indeed, no reason why any one should not make any socially innocuous thing he likes to make and sell it for what he can get. The reasons for not making big sketches which seem to be pictures but are not, is not chiefly moral—though on that ground, too, something might be said—but æsthetic. John La Farge has somewhere stated the issue, and I paraphrase him freely from memory. The sketch is a mere transfer from reality, an episodical memorandum, an unrelated thing. We know it is a sketch from the fact that it has no bounds, but simply occurs upon the paper or canvas. If we frame it, that is a mere matter of convenience; it does not thereby become a picture. If, however, it is calculated with respect to bounds, the sheet of paper, a frame, then it is already a picture. And this is the meaning of Whistler's famous epigram that the fine work of art is finished as soon as it is begun. If what purports to be a picture is not calculated with regard to its bounds then, however robust the work or attractive the theme, it is a pretence. The maker has lightly usurped an alien glory the severe terms of which he has evaded. It is the absence of thoughtful arrangement and of real fineness of execution that makes me feel that the work of Sorolla is, in a sense, outside of art, as a certain kind of writing is outside of literature; of elocution, outside of oratory.

I could wish his method far finer, for then we should have had in his career a positive test of the value of the impressionistic attitude. As it is, his achievement, being far out of the common, is exemplary in this regard. As strenuous executant, always face to face with nature and resolutely minimizing the part of memory, that is, of accumulated individual intelligence, in his art, he has been the impressionist *à outrance* of our times. And over the Giverney school he has had the advantage of proceeding without theory or convention, as of dots, juxtaposed primary pigments, or the like. But, of course, impressionism has never rested on such formulas. It is not a procedure, but a theory of vision. The transaction by which an artist transcribes into his favorite medium the impression made by nature is required to be brief, concentrated, isolated from memory of similar transactions. Brief because nature and the impressions she causes are constantly in flux; concentrated because only so can the momentary impression be converted into the work of art; isolated because otherwise the impression becomes contaminated with alien experiences. The true impressionist theoretically should have no emotional stock-in-trade—merely the necessary executive habits. Every transaction with nature is a new beginning, though it be the twentieth sketch of the same haystack or cathedral façade. The point is to see with the innocent eye, and not let your cerebral accumulations trouble either your naïve

vision or your unhesitating hand. Such, in brief, is the Impressionist gospel. Extraneous dogmas are the sanctity of sunlight and of atmosphere. The real point is always the inhibition and total distrust of memory. Paint always before the object; paint nothing that you cannot carry off in a single impulse—these are the main precepts. Forget all previous work, including your own, is the watchword.

It is inconceivable that a habit of work and vision demanding the severest concentration, and at least half-based on inhibitions—a most disciplinary regimen, in short—should have passed for a kind of slovenly insincerity. The fact that the drawing of Manet and the painting of Monet should have been accounted merely odd, showed how much the revolt was needed. The world was truly in a state deprecated centuries before in China by a painter who bewailed the fact that people wished to see his pictures with their ears. We needed a revolution of a violent kind to restore to the eye its simple rights as first counsellor for the graphic and plastic arts.
